Social Compliance Audit Report

Project Number: 53376-001 October 2020

IND: DBL Highway Project

Prepared by Setu Resources and Livelihoods Solutions Pvt Ltd.

The social compliance audit report is a document of the borrower. The views expressed herein do not necessarily represent those of ADB's Board of Directors, Management, or staff, and may be preliminary in nature. Your attention is directed to the "Terms of Use" section of this website.

In preparing any country program or strategy, financing any project, or by making any designation of or reference to a particular territory or geographic area in this document, the Asian Development Bank does not intend to make any judgments as to the legal or other status of any territory or area.

Final Report

Social Audit for Widening of Anandapuram-Pendurthi-Anakapalli Highway

Submitted to DBL Anandapuram-Anakapalli Highways Pvt Ltd

Prepared By

Setu Resources and Livelihoods Solutions Pvt Ltd

October, 2020

Executive Summary

Background

The Government of India has entrusted the National Highway Authority of India (NHAI), the Development, Maintenance and Management of Anandapuram – Pendurthi – Anakapalli section of National Highway (NH)-5 (renamed as NH-16) from km 681.000 (existing km 681.000) to km 731.780 (existing km 742.400) in the state of Andhra Pradesh. NHAI has selected M/s. Dilip BuildCon Limited for execution of this work for augmentation of the 50.780 km long project road on Design, Build, Operate and Transfer (Hybrid Annuity) basis. The Concession Agreement for this project was signed between NHAI and DBL Anandapuram Anakapalli Highways Pvt. Ltd. (SPV) on 13th April 2018.

The project road passes through the plain terrain falling across 35 villages of four mandals (sub district level administrative units) in Visakhapatnam district of Andhra Pradesh. The project road starts at Anandapuram (design chainage km 681.000) and ends at Anakapalli (design chainage km 731.780).

M/s. DBL Anandapuram Anakapalli Highways Pvt Ltd (hereinafter referred as 'DBL' or 'Client') is seeking project financing from Asian Development Bank (ADB) to support execution of project works. A social audit study was commissioned on process documentation of land acquisition (LA) and involuntary resettlement (IR) activities undertaken by the project (so far) to assess its alignment with ADB safeguard policy statement (SPS), 2009 and compliance with statutory requirements. This report is documentation of the study and findings and also way forward on gaps identified with respect to the applicable requirements

Land Acquisition and Resettlement Process

The land acquisition for the project was initiated in 2016 as per the provisions of NH Act, 1956. The notification under section 3A (notification declaring state's intent to acquire) was issued in July 2016, followed by 3D notifications (notification that declares final list of land parcels to be acquired, upon submission of objections by interested parties) published between February 2017, May 2018 onwards. Award declaration (under section 3G of NH Act, 1956) was published from February 2018 onwards.

The determination of compensation value for asset loss was carried out in accordance with Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement (RFCTLARR) Act 2013, as per guidelines of MoRTH, Government of India. The valuation of land and other assets (trees, structures) were determined as recommended in section 26 to section 31 of RFCTLARR Act, 2013. The valuation of land was made by the Competent Authority for Land Acquisition (CALA) office while the Horticulture/ Forest Department was responsible for valuation of trees and Road and Building (R&B) Department was responsible for valuation of the structures.

Land Acquisition and Resettlement Impacts

The project land requirement is estimated to be 335.68 Ha out of which 80 Ha land was already available with NHAI as RoW of the existing road. The balance land requirement of 255.68 Ha has necessitated private land acquisition of 196.05 Ha and transfer of Government land of 59.63 Ha. Of these, 178.92 Ha of private land has already been acquired. The balance private land acquisition

(of 17.13 Ha) pertains to Saripalli village (7.30 Ha) and 15 other villages accounting for 9.83 Ha. Further, NHAI is yet to get the possession of 6.25 ha of government land. In summary, 23.38 Ha of land is yet to be handed over to NHAI due to pending land acquisition and transfer of government land. NHAI though has the provision of descoping project's land requirement (in the context of pending land handover to project), if facing delay in land acquisition or other technical difficulties.

Land acquisition has been carried out on 2368 number of land parcels, affecting 4700 persons which includes 4571 titleholders (with possible duplication in count of affected persons as some of the titleholders owned multiple affected parcels) and 199 non-title holders (118 encroachers and 81 assigned landholders- landless/poor families who were assigned government land in the past for use without transfer of ownership title). In addition to these, pending land acquisition will affect 254-304 families in 16 villages, which if completed will add to existing tally (4571 persons) of affected persons.

The Census and Inventory of Loss (IOL) survey conducted during March 2020 for the project road (on a as is basis) has identified existing encumbrances within the Right of Way (RoW). Key findings from the survey are:

- 104 structures currently exist in the RoW that include 88 privately owned structures (Appendix 1A), 3 government buildings and 13 community structures (Appendix 1B);
- Privately owned structures belong to 95 families. Of these, 6 families are anticipated to face loss of income/livelihood, 36 will face loss of residential structure and 1 will face both loss of income/livelihood and residential structure. The remaining families (52 in number) will face partial/minor impacts.
- The affected private structures include, 2 that are on assigned land (government owned land assigned to poor/landless families for use without transfer of ownership title), 24 on private land and rest 62 structures are encroachments, existing on government land;

Compensation and R&R Benefits

As on date, compensation award of Rs 5.7428 billion have been made of which Rs 3.995 billion (69.56%) has been disbursed. Field survey findings confirm similar disbursement pattern. Compensation disbursement for remaining PAPs is under process.

Discussions had with NHAI and CALA officials suggest that in the project there is no provision for providing R&R benefit to the affected persons as per NHAI Land Acquisition Act 1956 and hence no such benefits were extended by the project. A review of RFCTLARR (Amendment) Ordinance, 2014 and the NHAI manual of guidelines confirms exemption from SIA, whereas, with respect to Second Schedule of the RFTLARR Act 2013, it is understood that NHAI projects prior to the issue of "A manual of guidelines on Land Acquisition for National Highways under the National Highways Act, 1956" (refer Appendix 12) were executed with the interpretation that R&R benefits as prescribed under the Second Schedule were not made applicable to the project.

The assessment of determination of compensation and its adequacy suggests:

• The compensation for land includes augmentation of market value by applicable multiplication factor, addition of 12% interest on said value subject to time delay in award declaration. An additional solatium of 100 percent of the market value of land after

multiplication factor (as determined for the land parcel, under the provisions of RFCTLARR Act) is added to arrive at the final compensation amount.

- In case of structures, a solatium of 100 percent is added to the value of structure determined by R&B department for titleholders and assignee land holders (D-patta). The nontitleholders on government encroached land are paid only for the loss of structure value as certified by R&B department without addition of solatium.
- The review of compensation process (based on the structure valuation estimates prepared by R&B department for 33 sample structures 18 structure owned by titleholders and 15 structures of non-titleholders on encroached government land) for the affected structures confirms that the structure loss compensation for land titleholders and assignee land holders have been adequate and matching market values. However, in case of non-titleholders (encroachments on government land), the review suggest that the structure loss compensation is not adequate or matching the market value. This gap is primarily due to compensation approach of not adding solatium to structure value, unlike the approach adopted for loss of structures owned by titleholders and assignee land holders.
- Compensation/ex gratia payment is pending for 67 out of 104 existing encumbrances. The details of these for both titleholder and non-titleholder (encroached on government land) have been given in Appendix 14A and Appendix 14B. CALA has confirmed that compensation order is under process of finalization and it has been delayed due to the recent COVID-19 pandemic.
- Compensation has been paid for loss of other assets such as well, bore well, trees etc. However, retrospective assessment of adequacy of compensation could not be done as these assets were found to have been cleared. The feedback from the PAPs during consultations also confirm that the PAPs are being compensated for these assets.

As per the available information, 156 arbitration cases (Appendix 6) filed by the PAPs, are pending with the appointed arbitrator in District Administration. Of these, hearing has been completed for 96 cases and orders are reserved. About half of the cases are related to appeal for enhancement of compensation rates. The PAPs are free to seek legal recourse in case they are not satisfied with the outcome of arbitration. The final decision of the court will be binding for parties involved. The final decision here does not create any liabilities for DBL.

Livelihood Restoration and Gap Closure Measures

The project was exempted from application of R&R benefits to PAPs. At the time of conducting this study, land acquisition of 17.13 Ha of private land and transfer of 6.25 Ha of government land is only pending. The social compliance audit report has discussed findings related to land acquisition process and the compliance aspects. While retrospective assessment of livelihoods impacts is found not feasible, a set of livelihood restoration measures (to be further detailed based on consultation with affected persons and mapping of skill set and available opportunities), stakeholder engagement activities and other community development activities have been suggested in this plan as key gap closure measures. Gap closure includes measures for compensation gap closure that has been assessed for encroachment structures during the audit. Any additional liability arising out of project's non-compliance with ADB SPS that may get identified during the project life will be met by the company. The document also suggests arrangements for compensation related information gap closure, implementation arrangement for livelihood restoration, GRM, implementation plan, monitoring and reporting requirements.

A mechanism for implementing livelihood restoration measures is to be setup by the project which will help in identifying the potential beneficiaries based on the key principles envisaged for gap

closure. In order to create sustainable long-term livelihood support, non-cash based livelihood restoration activities have been suggested. These activities may be implemented inhouse or with the support of an NGO appointed by the client. The proposed GRM is aimed at reducing instances of grievances, receiving, registering and resolution of grievances, with responsibilities of monitoring, training & capacity building and review/update of GRM processes. A two tier GRM under the safeguard cell, PIU have been proposed. The safeguard cell of the PIU will be committed to compliance and closure of gaps that have been reported in this study.

A budget envelope of Rs 5,88,00,000 has been proposed, to be allocated by the project for implementation of livelihood restoration and gap closure activities.

I. Project Background

A. Overview

1. The Government of India has entrusted the National Highway Authority of India (NHAI) with development, maintenance and management of Anandapuram – Pendurthi – Anakapalli section of National Highway (NH) - 5 (renamed as NH-16) from km 681.000 (existing km 681.000) to km 731.780 (existing km 742.400) in the state of Andhra Pradesh. This section of NH-5 (renamed as NH-16) is being upgraded to 6-lanes under the 'Bharatmala Pariyojana', a centrally sponsored project of government of India. NHAI has selected M/s Dilip Buildcon Limited for execution of this work i.e. augmentation of the project road (50.780 km) on design, build, operate and transfer (Hybrid Annuity) basis. The concession agreement for the project was signed on 13th April 2018.

2. M/s Dilip Buildcon Limited has formed a special purpose vehicle named M/s DBL Anandapuram Anakapalli Highways Pvt. Ltd (Concessionaire) as a limited liability company under the companies act 2013. M/s DBL Anandapuram Anakapalli Highways Pvt. Ltd. is a wholly owned subsidiary of M/s Dilip Buildcon Limited and will be responsible for the development of the project i.e. six laning of the project road section of length 50.780 km.

3. M/s DBL Anandapuram Anakapalli Highways Pvt Ltd (hereinafter referred as 'DBL' 'Company' or 'Client') is seeking project financing from Asian Development Bank (ADB) to support execution of project works. A preliminary Environmental and Social Compliance Audit to assess environmental, social, health, and safety risks of the project was earlier carried out by an external consultant to identify major red flags to ADB's investment decisions. The audit, in one of its recommendations, suggested a study on process documentation of land acquisition (LA) and resettlement activities undertaken by the project (so far), to assess its alignment with ADB safeguard policy statement (SPS), 2009 and other statutory requirements, and to provide/suggest remedial measures for gaps identified. Setu Resources and Livelihoods Solutions Pvt Ltd (hereinafter referred as 'Setu' or 'Consultant') was appointed by the client to undertake this study.

4. The assignment was carried out on behalf of the client and accordingly the report (this document titled "Social Audit for widening of Anandapuram-Pendurthi-Anakapalli Highway") is owned by the client. The report documents the process of land acquisition (LA) and the resettlement and rehabilitation (R&R) undertaken by the project and assesses it's alignment with existing central and state government legal and policy frameworks, ADB SPS 2009 and other relevant international guidelines. The report presents existing and legacy status of land acquisition and R&R activities by the project. Based on assessment findings and gaps/ pending closure issues with respect to LA and R&R processes, the report recommends sets of compliance/gap closure measures and related institutional arrangements that are aligned to ADB SPS 2009 requirements.

B. Project Description

5. The Concessionaire was appointed on 4th January 2019 while the commercial operation date (COD) i.e. commencement of commercial operation, is scheduled for 1th July 2021. The concession period includes 910 days of construction period and 15 years for operation, commencing from COD.

C. Objective and Scope of Assignment

- 9. The objectives of the assignment as per the terms of reference (ToR) are as follows:
 - a. To review the land acquisition (LA), rehabilitation and resettlement (R&R) process, assess its adequacy and alignment with ADB SPS, identify land acquisition and involuntary resettlement risks, if any;
 - b. Develop a Resettlement Action Plan (RAP)/Livelihood Restoration Plan (LRP) aligned to the applicable framework requirements in view of compliance gaps and risks identified.

10. In fulfilment of the above stated objectives, the scope includes detailed review of the LA and R&R process aimed at identifying the legacy issues and current status (with respect to LA and R&R implementation) and the process followed by the project for the same. The review shall be carried out against the local regulatory framework and ADB SPS and identify key social risks and impacts and non-compliances, if any, associated with LA and R&R.

11. Assignment objective also includes suggesting required gap closure measures and establishing the need for a detailed RAP/LRP. In case the need for a detailed RAP/LRP arises, consultants are required to prepare the same based on applicable reference framework. The preparation of RAP/LRP is guided by the outcomes of review of various applicable state and central legal and policy frameworks, ADB SPS, assessment and validation of land acquisition processes, census and inventory of loss surveys, stakeholder meetings and public consultations. Specific focus includes income and livelihood restorations plan for identified vulnerable project affected persons (PAPs) requiring special assistance. The Plan should further suggest institutional arrangements, implementation schedules, monitoring and reporting frameworks and budgetary requirements, needed for its implementation. This document has been prepared in fulfilment of above stated requirements.

D. Approach and Methodology

a. Approach and the reference framework

12. The approach followed by the consultant in preparation of this Plan document is described in brief below:

a. Detailed review of the land acquisition process and legal provision under which land acquisition was carried out;

² Section of National Highway Act,1956 under which land acquisition compensation awards (for private land) are declared, and possession taken over thereupon

³ As per summary of 52 declared awards, shared by the office of 'Competent Authority for Land Acquisition (CALA)

- b. Assessment of adequacy of the land acquisition process including identification of gaps (if any with respect to governing legal framework and ADB SPS) and risks identification;
- c. In depth assessment of current status of the right of way (RoW) including evidences and reasons for any encumbrances in the RoW, identification and assessment of involuntary resettlement impacts and measures to avoid, minimize and mitigate such impacts on the Project Affected Persons (PAPs);
- d. Social compliance audit process diligently focused on identifying any legacy issues or ongoing risks to the project and its successful implementation (including any legal challenges);
- e. Vulnerability lens has been used to identify if any PAP is vulnerable and suggest measures to reduce project induced vulnerabilities;
- f. Stakeholder consultations with the affected community/persons, and documentation of the same;
- g. Documentation and assessment of site visit findings, review of secondary data to present overall findings to identify compliance gaps and suggest measures for mitigation of these gaps/risks that include potential livelihood restoration measures, an effective grievance redress mechanism and related implementation arrangements to manage the same.

13. The assessment has considered the following standards and guidelines, in addition to the applicable local legislation and standards:

- a. ADB Safeguard Policy Statement (SPS), 2009;
- b. ADB Social Protection Strategy, 2001;
- c. ADB Gender and Development Policy, 1998;
- d. ADB Access to Information Policy, 2019;
- e. World Bank Group/IFC EHS Guidelines interpreted and applied through requirements under the applicable screening criteria in the categorization for each road, Specifically, the following World Bank Group EHS Guidelines, published on April 30, 2007:
- f. International Covenant on Economic, Cultural and Social Rights and relevant ILO Core Labour Standards Conventions; and
- g. Other relevant good industry practice guidelines and related documents

14. The local Legislations and Standards that were applicable and complied with for the road project were reviewed for this assignment and includes:

- a. The Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement Act (RFCTLARR), 2013
- b. The National Highways Act (NH Act), 1956
- c. Andhra Pradesh RFCTLARR Rules, 2014
- d. Guidelines for land acquisition under the NH Act 1956
- e. Rehabilitation and Resettlement (R&R) Policy of Government of Andhra Pradesh, 2005
- f. Andhra Pradesh Assigned Lands (Prohibition of Transfers) Act ⁴,1977
- g. Latest Scheduled Rates for Building Works, Government of Andhra Pradesh

⁴ Assigned land or D-patta is a term used for government land assigned to landless households in Andhra Pradesh. It originates from the D-form which provides an extract copy of the land records which has been assigned by the government of Andhra Pradesh to the landless poor.

b. Methodology

15. This assignment comprised of two broad sets of activities. First set of activities included assessment of land acquisition process and its validation through detailed review of secondary data and comprehensive stakeholder consultations. The second set of activities relate to preparation of livelihood restoration plan (LRP) for eligible and willing PAPs based on census and inventory of loss survey, secondary data and stakeholder consultations. A schematic representation of the activities undertaken is given below in figure 2.

Figure 2: Schematic representation of activities undertaken

16. The first set of activities included conducting a detailed review of land acquisition process, assessed against ADB SPS 2009, RFCTLARR Act 2013 and NH Act 1956 requirements. Further, secondary research and data collection was carried out from available resources and stakeholders. This information was analyzed to assess land acquisition process and compliance gaps therein. The findings and observations were further discussed with the NHAI, CALA⁵ and DBL offices for validation before concluding on the assessment.

17. In the process, the consultants have also reviewed the status relating to compensation payment to affected persons in compliance with their entitlements.

18. The second set of activities pertains to conduct of census and socio-economic survey and preparation of inventory of loss (IOL). Census and inventory of loss survey (March 2020) was carried out for all affected persons who continue (as on date of survey) exist within the RoW or are yet to vacate their claims. 104 such structures (refer section E, chapter IV) were identified during census and IOL survey. In addition to this, socio-economic survey was carried for a sample 89 PAPs (refer Appendix 2) from amongst the PAPs who at the time of survey had already vacated the RoW (possession of land handed over). The IOL survey assessed anticipated loss of assets (for encumbrances that still exist in the RoW), compensation status, replacement cost of asset loss etc.

19. It may also be noted that since its appointment and prior to conduct of this audit, the client has made significant progress in terms clearance of encumbrances from the RoW upon handover of acquired/transferred land parcels to it by NHAI/ Government. Hence, project affected persons, include PAPs who have alreadycleared/vacated their claims and land is in possession of company and encumbrances if any have mostly been dismantled (leaving with no physically verifiable evidence for retrospective assessment) and the PAPs who are yet to vacate their claims and continue to exist within the RoW. Given the challenge in making retrospective assessment of asset and livelihood losses (as most of encumbrances were already cleared by the time this study commenced), the individual based livelihood restoration plan is not feasible/practical at this stage. However, a set of measures are proposed in this document, which can be further finetuned and made individual specific at the time implementation of the LRP for all eligible and willing PAPs, who wish to avail LRP measures.

20. Review findings and suggested risk mitigation and management measures are presented in the following chapters. Chapter II of the report provides an overview of applicable legal frameworks and policies, Chapter III presents the findings of assessment of LA and R&R process adopted by the project, alignment gaps against ADB SPS, 2009, Chapter IV discusses project's LA and involuntary resettlement impacts and Chapter V presents suggested risk mitigation measures and management arrangements, including an outline of LRP. Relevant supporting information are included as appendices.

c. Limitations of the study

21. The compliance review and data collection exercise were constrained by a set of limitations as mentioned below.

⁵ CALA refers to 'Competent Authority for Land Acquisition (CALA)', designated by the State Government. Joint Collector (JC) is designated CA in this project.

- a. Limitation on account of confirmation of updated status of compensation disbursement by CALA is noted. The challenge was further exacerbated due to financial closure and COVID-19 related ground situations. Hence, findings presented in this report are based on the data that was made available at the time of the visit and subsequent data that could be collected by the Company (from CALA office) during the intervening period of report preparation and finalization.
- b. At the time of the commissioning of this study, 93.03% of land acquisition (physical possession of land) was already completed. Retrospective assessment of loss of asset and livelihoods (person specific) could not be carried out for PAPs who have already vacated the acquired land and encumbrances cleared. Such assessment has only been done for PAPs that still exist in the RoW.
- c. During field survey team faced challenges in identifying concerned PAPs for some of the structures, yet to be dismantled. These are explained on the following grounds:
 - i) Tracking of owners was a challenge as several of them resided in a village different from where affected land/plot is situated
 - ii) Tracing them solely on the basis of survey numbers (of affected land parcel) and name of affected person was difficult, as in many cases, actual owners were different from those mentioned in official land records i.e. land records do not have updated details.
 - iii) Some of the landowners were also found to have migrated to other locations and their whereabouts could not be ascertained
 - iv) Even local village level revenue officials were found to be unaware about some of the landowners and hence could not help much in tracing them.
- d. Final award documents for most of the PAPs category (that still exist in the RoW) are yet to be formally declared by the CALA office. Award preparation for such PAPs is still ongoing and not available for onsite validation. However, award copies were available for PAPs who have already cleared the RoW to establish compensation entitlements and such details.

8

II. Applicable Legal and Policy Framework

22. The applicable legislations based on national and state laws applicable to Anandapuram - Anakapalli NH-5 project includes National Highway Act (NH Act), 1956, The Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement (RFCTLARR) Act, 2013, Andhra Pradesh (AP) RFCTLARR Rules, 2014, Rehabilitation and Resettlement (R&R) Policy of Government of Andhra Pradesh, 2005, Andhra Pradesh Government order on resumption of assigned lands. This chapter provides an overview of the of application of these legal frameworks to the project LA and R&R process along with its alignment with ADB's Safeguards Policy Statement, 2009.

A. Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement Act, 2013

23. The Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement (RFCTLARR) Act, 2013, provides for a transparent process and just and fair compensation to the affected families whose land is acquired or proposed to be acquired or are affected by such acquisition. This Act also provides for rehabilitation and resettlement of the affected families. The basic principle of the RFCTLARR Act is to ensure that the cumulative outcome of compulsory land acquisition should be such that, the affected persons become partners in development, leading to an improvement in the standard of living after acquisition. This Act came into effect on 1 January 2014 and the Land Acquisition Act, 1894 stands repealed. Salient provisions of RFCTLARR Act are discussed below:

24. The RFCTLARR Act applies to acquisition of land for a public purpose, as defined in the Act. The Act provides for consultation with and involvement of local self-government in undertaking a Social Impact Assessment (SIA). The SIA is reviewed by an expert group to assess if the potential benefits of the project outweigh the social cost and adverse social impacts. The expert group can recommend either for or against proceeding with the project. The appropriate government is not bound by the decision of the expert group and can decide otherwise. The RFCTLARR (second amendment) Bill 2015 proposes to empower appropriate government to exempt certain projects from "Social Impact Assessment" provisions of the RFCTLARR Act.

25. The Act prohibits acquisition of multi crop land for any project, however on exceptional cases allows acquisition of multi crop land, wherein the State specific threshold of acquiring such land is not exceeded and equivalent wasteland is developed for agricultural purpose.

26. Section 26 to 30 of the Act describes the process for determining market value of land and structures and other assets attached to the land whereas section 31 and 32 describe the rehabilitation and resettlement process.

27. The competent authority while determining the market value of the land has to consider the higher value of the land arrived at by either (i) market value as per Indian Stamp Act, 1899 for the registration of Sale Deed or Agreements to sell, in the area where land is situated; or (ii) average sale price for similar type of land, situated in the nearest village or nearest vicinity area, ascertained from the highest 50% of Sale Deeds of the preceding 3 years; or (iii) consented amount paid for PPPs or private companies. In case of rural areas, the market value of land so determined is multiplied by a factor, to be decided by the appropriate government. A solatium of 100% is payable on the market value of land multiplied by the factor and all immovable

properties or assets, trees and plants. In addition, an amount calculated at the rate of 12% per annum on such market value for the period commencing on and from the date of publication of notification of SIA study till date of award or date of taking possession whichever is earlier has to be paid.

28. A Resettlement and Rehabilitation award detailing the entitlements to be provided as per the Second Schedule of Act is passed by the Competent Authority. Possession of land can be taken only after payment of compensation and rehabilitation and resettlement entitlements as detailed in Second Schedule and Third Schedule.

B. National Highway Act, 1956

29. The Act empowers the state to carry out land acquisition as per provisions made under various sections for building, maintenance, management or operation of a national highway or part thereof. Key sections under the Act are (i) section 3A - power to acquire land; (ii) 3B - power to enter for surveys; (iii) 3C - hearing of objections; (iv) 3D - declaration of acquisition; (v) 3E - power to take possession; (vi) 3F - power to enter into the land where land has vested with the central government; (vii) 3G - determination of amount payable as compensation; and (viii) 3F - deposit and payment of amount. The Act requires that the processes must be completed within a year from 3A to 3D.

Application of NH Act, 1956 and RFCTLARR Act, 2013 for the Project

30. The date for determination of market value of land is the date of publication of 3A notification (which is corresponding to Section 11 of the RFCTLARR Act, 2013).

31. In alignment with RFCTLARR Act, 2013 requirements, the additional amount of 12% on market value (to be paid for time lapse between declaration of intent to acquire and declaration of award) is to be calculated from the date of publication of $3A^6$ notification to the date of publication of award under section 3G of the Act. Also, this additional amount is to be calculated as a standalone component.

32. Land can be purchased by the project implementing authority through consent of landowners preferably limited to 10% of total quantum of land to be acquired in the case of missing plots or additional land required for alteration of alignment at implementation stage.

33. The provisions of second and third schedule (on R&R benefits and resettlement site respectively) of RFCTLARR Act, 2013 are applicable in respect of land acquisition for construction/expansion/development of national highways only where it leads to dislocation and displacement of an affected family from the affected area. Before considering grant of any relief in terms of the Second Schedule, CALA is required to unequivocally certify that the affected family has been displaced and dislocated into another place⁷. It may be noted that benefits under Second Schedule of the RFCTLARR Act are not applicable in this project which is discussed in detail in section H, Chapter III of this report. Provisions under Third Schedule of RFCTLARR Act (requirement of developing resettlement site) is considered as applicable when there is large scale physical displacement involving concentrated settlements of project

⁶ RFCTLARRA requires the estimation to be done from the data of conduct of SIA. Since, land acquisition carried out for national highway projects (under NH Act of 1956) is exempted from SIA, date of publication of notification under section 3A of the NH Act has been adopted.

⁷ As per Manual of guidelines on LA for NH under NH act 1956.

affected families. Such displacement impacts are typically not observed in linear projects, including in this Project and as such resettlement benefits are not found to be applicable.

C. Andhra Pradesh RFCTLARR Rules, 2014

34. Exercising its power, as conferred under sub section (1) and (2) of section 109 of the RFCTLARRA, state of Andhra Pradesh has drafted and passed its rules for implementation of the said Central Act. In this respect the following may be noted from the Rules drafted by the state:

- a) The Commissioner, Rehabilitation and Resettlement shall create a dedicated userfriendly website to serve as a public platform on which the entire workflow of each acquisition case will be hosted, beginning with the notification of the SIA and tracking each step of decision making, implementation and audit.
- b) The multiplication factor to be applied while determining the compensation amount under First Schedule of RFCTLARR Act, 2013 for rural areas shall be 1.25 other than scheduled areas and 1.50 for scheduled (tribal) areas subject to any further notification as may be notified by Government.

D. Andhra Pradesh Government Order on Resumption of Assigned Lands

35. The GoAP vide its order G.O. Ms. No. 1307 of Revenue (Assignment I) Department, dated 23 December 1993 has stipulated that compensation for assigned lands⁸, that are resumed for public purpose, are paid the market value for land on par with similar *pattadhar* (titleholder) land and with an additional 30 percent as solatium. The assignee is also entitled for compensation for any structure or well erected in the land. The Order further explains that this payment is an ex-gratia payment and that the assignee will not have right to seek enhanced compensation through the Court.

36. Since the RFCTLARR Act, 2013 provides for an enhanced solatium of 100 percent, the same would apply to assignees too.

E. ADB's Safeguards Policy Statement, 2009

37. ADB's SPS, 2009 describes the policy objective, its scope and triggers and principles of (i) environmental safeguards; (ii) involuntary resettlement safeguards; and (iii) indigenous people's safeguards.

38. The objectives of involuntary resettlement safeguards are: (i) avoid involuntary resettlement where possible; (ii) if avoidance is not possible, minimize involuntary resettlement by exploring project and design alternatives; (iii) enhance, or at least restore, the livelihoods of all displaced persons in real terms relative to pre-project levels; and (iv) improve the standards of living of the displaced poor and other vulnerable groups.

39. The involuntary resettlement safeguards policy covers physical displacement (relocation, loss of residential land, or loss of shelter) and economic displacement (loss of land,

⁸ Assigned land or D-patta is a term used for government land assigned to landless households in Andhra Pradesh. It originates from the D-form which provides an extract copy of the land records which has been assigned by the government of Andhra Pradesh to the landless poor

assets, access to assets, income sources, or means of livelihoods) as a result of; (i) involuntary acquisition of land, or (ii) involuntary restrictions on land use or on access to legally designated parks and protected areas. It covers them whether such losses and involuntary restrictions are full or partial, permanent or temporary.

40. The three important elements of involuntary resettlement safeguards are: (i) compensation at replacement cost for lost assets, livelihood, and income prior to displacement; (ii) assistance for relocation, including provision of relocation sites with appropriate facilities and services; and (iii) assistance for rehabilitation to enhance, or at least restore, the livelihoods of all displaced persons relative to pre-project levels and to improve the standard of living of displaced poor and other vulnerable groups.

F. Comparison of Government and ADB Policies

41. A detailed comparison between Government Statutes and ADB's involuntary resettlement safeguards policy that provides gap-filling measures reflected in the entitlement matrix is presented in chapter III of the report. The RFCTLARR Act, 2013, which has integrated provisions of National Rehabilitation and Resettlement Policy with that of Land Acquisition Act 1894- the earlier applicable legal framework, recognizes titleholders and non-titleholders affected by land acquisition, wherein, the squatters, encroachers and those present in right of way and other government lands are excluded from the purview of the Act.

42. The RFCTLARR Act, 2013 has repealed the Land Acquisition Act of 1894 (as amended in 1984). This Act complements the revision of the National Rehabilitation and Resettlement Policy (2007) and decrease significantly the gaps between the Land Acquisition Act 1894 (the Act that was applicable earlier) and ADB's SPS. The Act also expands compensation coverage of the Principal Act by requiring that the value of structure, trees, plants, or standing crops damaged must also be included and the solatium being 100 percent of all amounts inclusive. The Act furthermore meets ADB requirement of all compensation to be paid prior to project taking possession of any land and provision of R&R support including subsistence grant and transportation cost.

43. The key differences between the national and ADB's involuntary resettlement safeguards policy are with regards to requirements of screening for past, present and future involuntary resettlement impacts and risks which are not required as per applicable government policies. Similarly, ADB safeguard policy requires monitoring of R&R implementation and its outcomes at regular frequency while no such requirements are specified in government policies. Another major gap is with respect to cut-off date, required to determine eligibility for compensation and R&R benefits. As per provisions of RFCTLARR Act, the cut-off-date for title holders is the date of SIA notification [Sec 4(2)] and for non-titleholders, the affected person should have been living/working continuously for three years or more prior to acquisition of the land. ADB SPS does not prescribe any such conditions for non-titleholders and recognizes them as affected, irrespective of the duration of stay/living/working at the affected land parcel. The cut-off date in this case is the date of census survey conducted at project.

III. Assessment of Land Acquisition and Resettlement process

A. Background

44. Review of land acquisition and R&R process adopted by the project was conducted to assess its compliance vis-à-vis statutory legal framework and alignment with ADB SPS, and identify gaps if any. Findings of this assessment is presented in this chapter.

45. Land acquisition for the project was carried out under National Highways (NH) Act, 1956. The schematic chart (in figure 3) below summarizes the process adopted for land acquisition.

Figure 3: Land Acquisition Process Chart

Source: Based on discussion and documents collected from the office of Competent Authority for Land Acquisition (CALA), March 2020

46. Land acquisition process was initiated in 2016 with issue of the notification under section 3A (notification declaring state's intent to acquire land) in July 2016. These were followed by 3D notifications (notification that declares final list of land parcels to be acquired, upon submission of objections by interested parties) published between February 2017 and May 2018. Award declaration (under section 3G of NH Act, 1956) was published between February 2018 and October 2019.

47. Determination of compensation value for asset loss, as per Ministry of Road Transport and Highways (MORTH) was carried out in accordance with RFCTLARR Act 2013 provisions. Valuation of land and other assets (trees, structures) were as per provisions made in section 26 to section 31 of RFCTLARR Act, 2013. Valuation of land was made by the office of Competent Authority for Land Acquisition (CALA) while horticulture/ forest department was responsible for valuation of trees and Roads and Buildings (R&B) department was responsible for valuation of structures.

48. The following sections provide a detailed overview of the land acquisition followed by detailed assessment related to determination and adequacy of compensation for loss of land, structures, trees, R&R benefits, status of compensation and arbitration and litigation issues. The chapter concludes with a summary of overall alignment of the process against ADB SPS requirements.

B. Overview of Land Acquisition Process

49. The total land requirement for the project land has been reported to be 335.68 Ha out which 80 Ha was already available (existing road) prior to land acquisition. Balance land requirement (255.68 Ha) was proposed to be met through acquisition of private land (196.05 Ha) and transfer of government land (59.63 Ha), as per data available from CALA office. Land acquisition process for project road was initiated in July 2016 and included the steps as described below:

50. **Institutional arrangement for land acquisition:** Competent Authority for Land Acquisition (CALA) was the designated body on behalf of Government of Andhra Pradesh to initiate and complete the process of land acquisition for the project, as per section 3(a) of NH Act, 1956. Special Deputy Collector - land acquisition (SDC-LA) was assigned to lead a team of revenue functionaries from government of Andhra Pradesh to carry out land acquisition activities.

51. **Declaration of section 3A notification:** Notification under section 3A of NH Act, 1956 declaring intent to acquire land for building, maintenance, management or operation of Anandapuram-Anakapalli section of NH-16 (project road) were issued by Ministry of Road Transport and Highways (MoRTH). The notification was published between July 2016 to January 2018 in 4 newspapers including 2 vernacular newspapers which is mandatory as per the Act. In all, 23 such notifications, accounting for an area of 307.48 Ha, have been issued till date. Notifications made under section 3A provide a 21 days window for interested persons to raise objections, if any about the proposed land acquisition.

52. **Hearing of objections:** The objections received after the declaration of 3A notifications were heard and addressed by the CALA, though exact number of objections received and resolved could not be readily made available to consultants. Objections received were considered or disallowed based on validation made against available records and or

justification presented by complainant to authorities. Amendments as applicable were subsequently made in records upon hearing and disposing of objections.

53. **Survey of land and measurements:** Land survey was undertaken by special surveyors appointed by the CALA. The special surveyors conducted inspection of land, carried out measurements, marked levels and boundaries to prepare records for 3D notifications. Survey findings were further verified by the Deputy Inspector of Survey (DIS). Survey exercise also included preparation of inventory of assets (other immovable assets), anticipated to be impacted, besides the loss of land parcels.

54. **Declaration of 3D notifications:** Notifications under section 3D of the NH Act were issued after objections were heard (considered or disallowed as per rules), survey of land parcels were conducted, and asset inventory was prepared. In all, 20 such notifications have been published by MoRTH. These have been published between February 2017 and May 2018, accounting for 272.71 Ha of land. These notifications were published in 4 newspapers including 2 vernacular newspapers as required by the Act.

55. **Public Consultations by CALA officials:** Upon publication of 3D notifications, CALA officials including Special Deputy Collector (SDC) – Land Acquisition conducted *gramsabhas*⁹ in each of the project villages to share and explain the entire process of land acquisition including process of valuation, compensation and grievance redressal mechanisms. Prior information through elected representatives and government staff were made to the affected persons in effort to maximize their participation in the meeting.

56. **Asset inventory and market valuations:** Asset inventory and market valuation processes were carried through surveyors and assessors of designated departments. CALA office were responsible for market valuation of land while valuation of structure (including building and other structures such as well, bore-well, etc.) was undertaken by Roads and Buildings (R&B) department through appointed valuators, and valuation of trees was carried out by horticulture department (for horticulture species) and forest department (timber and other species). The detailed review of adequacy of valuation process for calculating market value of the affected land, assets including horticulture and non-horticulture trees, other immovable assets such as borewell/open well, has been discussed later in this chapter.

57. **Preparation of award and declaration of 3G notifications:** The land acquisition process categorizes the affected persons as titleholders and non-titleholders. The titleholders are registered owners of the land having the land ownership title. Non-titleholders are categorized into encroachers, squatters and assigned land holders. The assigned land holders are those who have been allocated land by the government under state sponsored welfare schemes, however, this land is non-transferable, and the assignee land holders are not owners of the land. However, with respect to compensation policy for loss of assets (other than land), both title holders and assigned land holders are treated at par. Determination of compensation is based on market valuation (as per provisions laid out in the applicable land acquisition Act, RFCTLARR Act, 2013 in this context) of land and impacted assets. It may be noted that awards (as part of land acquisition process) are prepared only for affected titleholders while compensation for non-titleholders are made as ex-gratia payments only, considering that the affected non-titled persons are not owners of the land affected by the project.

⁹ Gramsabha is the village level meeting conducted in each village involving all the members of Village Councils.

58. Compensation award included the value of land, structure and other immovable assets. To this, 100% solatium and additional amount (equivalent to 12% of market value, as interest for time delay from the date of publication of 3A notification till the date of award declaration under section 3G) were added to the market valuation arrived for asset losses. Assigned land holders have been compensated on similar principles (i.e. for loss of land and other immovable assets, as per state rules on resumption of assigned land) as titleholders. In case of encroaches and squatters, they were compensated for loss of assets (except for loss of land) following similar principles for asset valuation as done for titleholders.

59. Upon finalization of Award amount, notices were issued (as required under section 3G of the NH Act, 1956) to affected persons. Available information suggests that 52 such notifications, corresponding to 178.92 Ha of land, have been issued between February 2018 and October 2019. These notices were displayed at easily accessible public places such as Panchayat Office, Mandal Revenue Offices (ref. Appendix 10), etc. In addition, announcements were made by the designated village representatives by beating of tom-tom or drums.

60. The table below provides a snapshot of Land Acquisition Notifications with timelines issued from time to time under the project. It may be noted that land area corresponding to Land Acquisition Notifications issued under sections 3A, 3D and 3G may not match with each other. This is on account of revisions made in the land requirement estimations based on objections raised by notified persons, design changes (to minimize land requirements), litigations etc. Further, for some land parcels the Award Notifications (under section 3G) are still awaited and figures may change slightly on this account.

Table 4: Snapshot of Land Acquisition Notifications									
Notification	Earliest Date	Latest Date	Total no of	Total Area (Ha)					
			Notifications						
3A	July 2016	January 2018	23 (6 main, 4	307.48					
		-	supplementary and 13						
			amendments)						
3D	February 2017	May 2018	20	202.33					
3G February 2018 October 2019 52 178.92									
Source: Data from	Competent Authority for	r Land Acquisition	(CALA) office, Visakhapat	nam. March 2020					

61. Final awards to PAPs: Upon finalization of Award, individual notices were sent to each of the PAPs, to inform about their Award amount as required by section 3E (1) of NH Act, 1956. These notices informed the PAPs to appear in person before the CALA within 60 days and produce original documents regarding ownership of the land and passbook details. After validation of mentioned documents, fund transfers was initiated by CALA office and compensation amount was transferred directly to the bank account of the PAPs.

62. Grievance management systems: Grievance management system adopted by the CALA had the following features, available to affected persons:

- a. Any person interested could lodge their complaint and be heard by the CALA within 21 days of issue 3A Notification (refer Figure 3),;
- b. Joint visits of notified plots was conducted by CALA officials that included special deputy tehsildar, special revenue inspector, special surveyors, licensed surveyors. This

provided occasion for onsite assessment of grievances/dispute/clarifications if any related to ownerships and land acquisition processes (refer Figure 3);

- c. The Mandal Revenue Officers (MRO) at the block/mandal level were the contact points for any grievance during the entire LA process. These officials were informed to direct aggrieved PAPs to the CALA office as required;
- d. At CALA office, officials were designated village wise to deal with grievances of the PAPs;
- e. Any grievance which could not be resolved at the above mentioned administrative levels, the matter was referred further up to special deputy collector (SDC)-LA for resolution;
- f. Apart from the above options PAPs also had the option to file an arbitration with CALA or go to court in case their grievance is not addressed suitably.

Figure 4: Institutional arrangement of GRM adopted in land acquisition process

63. **Budgetary provisions for land acquisition:** Fund requirement for acquiring land was estimated by the CALA through the market valuation process. The estimated fund requirement was then sanctioned by the state government and the requisition sent to the NHAI. In turn, NHAI officials after internal assessment of the fund requisition by CALA and resolution of queries, if any, release fund to CALA in tranches. The CALA offices submit a quarterly utilization statement to the NHAI offices before making requisition for next tranche.

C. Assessment of process and adequacy of market valuation for loss of land

64. Compensation Awards (as per letter number 11011/30/2015, Land Acquisition, dated 29-04-2015) made on or after 01-01-2015 for acquisition of land acquisition under NH Act 1956, were required to be done in accordance with the 1st schedule of RFCT LARR Act, 2013. For this project, the same approach was adopted by the CALA office.

65. As per the provisions under section 26 to 31 of the RFCTLARR Act, 2013 the market value was decided as higher of:

- a. The market value, if any, specified in the Indian Stamp Act 1899 for the registration of sale deeds or agreements to sell, as the case may be, in the area, where the land is situated; or
- b. The average sale price for similar type of land situated in the nearest village of nearest vicinity area.
- c. To the rate found out as above 1.25 (for rural areas) or 1 (for urban areas) was applied as multiplication factor which is as per state rules for implementation of RFCTLARR Act.
- d. Further, 100% solatium was added to the value arrived at upon application of multiplication factor, to arrive at the final compensation rate for land.
- e. An additional compensation equivalent to 12% of the market value was added to compensate for time lapse from the date of publication of 3-A notification to the date of passing the award. This amount was added to the market value of land obtained after the application of multiplication factor

66. Review of Award documents was done to assess land rates for various land types across affected villages, based on which compensations were made to affected persons. An assessment of the then prevailing (at the time of land acquisition) market rate for land was made by the consultants from various sources which included key informants in various villages, local property dealers etc (Refer Appendix 7)

67. Assessment of final land rate as per Compensation Award and the actual market rate (as assessed by the consultants) confirms that the two are comparable for project affected villages. For example, in Asakapalli village, the CALA office determined the market rate for land to be Rs 618 per sqm for land abutting the road, Rs 918 per sqm for agriculture land fit for housing sites and Rs 589 per sqm for dry/wet/garden land. These rates were further augmented by applying multiplication factor, and additional 12% over this value (for time lapse in award declaration since issue of LA notification under section 3A). In addition to this, a solatium equivalent of 100% market value (upon application of multiplication factor) was further added to arrive at the final compensation rate. These rates (upon application of multiplier, addition of solatium and compensation for time lapse in award declaration) have been assessed to be more than the market value prevailing at the time land acquisition. The prevailing market rate in this village was assessed to be about Rs 1200 per sqm for all categories of land which is clearly lower than final compensation rates for any land type as mentioned above. Details of village wise land rate comparison is appended (refer Appendix 7) to the report for reference.

From the above, it is evident that market rate assessment of land by CALA was carried out as per process laid out in RFCTLARR Act, 2013. Further, the final compensation rate thus arrived was comparable to the existing market rate and as such is aligned to the principle of replacement cost.

D. Assessment of market valuation for loss of structures owned by titleholders

68. Valuation of affected structures was carried out by R&B department on behalf of CALA. The Roads and Building (R&B) department carried out valuation of structures based

on dimension and type of each affected structure. The R&B department has defined type of structures as permanent, semi-permanent, temporary, compound wall, borewell/open well. A 100% solatium was added to estimated structure value (submitted by R&B department) by CALA before arriving at final compensation amount for the affected structure.

69. For assessment of adequacy of compensation paid for structure loss, the following approach was adopted:

a. Affected structures (owned by titleholders) have been considered of two types. In the first category, the structures refer to those that have been compensated by CALA and these no longer exist on ground as they have been cleared by the company. The second category refers to structures that still exist within the RoW and were physically verified by consultants during site visit. In the Table 5 below, serial 1-16 pertains to first category of structures and serial no. 17-18 pertain to the latter category. It may be noted that most of the affected structures (585 such encumbrances existed at the time of appointment of concessionaire) have been cleared or abandoned by the owner and only 104 structures (includes structures owned by non-titleholders as well) remain on ground, at the time of preparation of this report.

Table 5: Adequacy of structure (owned by titleholders) loss compensation										
	Village name	Survey no		value as per on sheet		tion calculated by sultant	Difference (A-B)			
			Net value as per R&B valuation sheet	Value after adding 100% solatium (A)		Market value upon adjusting for Inflation(B)*				
1	Asakapalli		50,527	1,01,054	1,46,724	1,26,746	- 25,692			
2	Asakapalli	196/22	11,20,113	22,40,226	23,17,460	20,01,909	2,38,317

*market rates applied for structure valuation were collected in March 2020 while R&B valuations were mostly carried out in early 2017, hence consultant's valuations have been adjusted backward @5 percent per year for 3-year.

- b. To assess adequacy of compensation for first category of structures (serial no. 1-16), sample valuation sheet prepared by R&B department was collected from CALA. Copies of sample valuation sheets is appended (refer Appendix 8) for reference. These sheets have been prepared for each affected structure which provide information on type of structure, dimension, detailed calculation for structure components and photograph of the structure. Using the available information (structures' image, dimension and other details provided in the valuation sheet), an independent estimation was carried out by consultant's engineer. In this case however, market value (unit rate) for structure components, as collected by consultant from local market, were applied to arrive at replacement cost. Details of process adopted for market value estimation by consultant is explained in Appendix 9. Then a comparative assessment on adequacy of compensation (between the two values) was made, as show in Table 5.
- c. A few of the structures (owned by titleholders) continue to exist within the RoW and some of these have been issued Award Notice as well. Two such structures (serial no. 17-18 in table 5) were identified during the field survey and Award value of the affected structures was noted from the notices issued¹⁰. Market valuation of structure by consultant's engineer carried out independently (based on physical measurement of structures, taken at site). A comparative assessment of award value and market valuation made by consultant is presented in table 5. It may be noted that the detailed valuation sheets could not be collected from CALA office for these structures, to verify the dimensions and areas accounted by R&B department for their estimations. Further, as discussed earlier, award values declared by CALA are sometimes challenged by affected persons in case they are not satisfied with valuations made and if considered, the Award may undergo revision.
- 70. In the context of comparative assessment presented in table 5 above, it may be noted:
 - a. Most of the structures no longer exist (reference comparison presented for structures in table 5) as these have been dismantled, hence an absolute retrospective estimation of loss for affected structures was not possible at this stage. Hence, comparison between consultant's estimation and CALA's valuation of affected structure are limited by differences in interpretation and judgment related to assumed project impact.
 - b. Structure valuation carried out by R&B department for CALA includes depreciation based on the age of the structure and future life. The market valuation carried out by the consultant is based on the principle of replacement cost. However, the provision for 100% solatium on the R&B valuation compensates for this gap as seen for most of the structures (14 out of 18 assessed structures) in table 5.

Review of compensation process confirms that affected structures (owned by land titleholders) were compensated as per the guidelines of the RFCTLARR Act, 2013. The assessment (analysis presented in table 5), further confirms that the structure loss compensations have been adequate and matching market values- calculated on the basis of input (replacement) cost. For over three fourth of sample structures (selected for the assessment), compensation amount has been found to be adequate and/or above the market value. For remaining structures (4 out of 18 assessed), the award value has been found to be

¹⁰ Refers to Notice of Award under Section 3E (1) of NH Act, 1956. One sample copy is appended as Appendix 11

marginally lower than assessed market value which can be attributed to the limitations in retrospective assessment. Hence, compensation for structure loss (owned by titleholders) is confirmed to be aligned with SPS requirement of replacement cost basis.

E. Assessment of market valuation for loss of trees

71. Valuation of fruit bearing and other type (non-horticulture) of trees was carried out by the horticulture and forest departments, respectively. These departments submitted their valuation reports to CALA which was adopted for payment of compensation to the landowners. This assessment process was in accordance with the guidelines of the RFCTLARR Act, 2013. Figure 5: Estimation of Non-Horticulture tree valuation

Source: Land acquisition valuation and award documents, CALA, March 2020

72. Figure 5 and Figure 6 are sample images of valuation of non-horticulture and horticulture trees respectively that was included in the final Awards declared for each PAP. In case of the non-horticulture trees, the Forest Schedule of Rates (FSR) was applied to timber volume (cubic meter) of the affected trees. In case of horticulture trees, the valuation has been provided as per the G.O. Ms. No. 357 dated 22.03.2006 for eligible plants. Available documents suggest that factors like age of trees and remaining life (for timber value and fruit bearing value) have been factored in while estimating compensation value. A 100% solatium has been added to this value as per the awards and compensation documents verified. The conversations held with PAPs during the census and IOL survey informed that they are being compensated for the loss of fruit bearing as well as other trees impacted due to land acquisition. However, retrospective assessment of adequacy of market valuation of horticulture and non-horticulture trees could not be done by the consultants due to clearance of affected trees at site and hence conclusive statement on principle of replacement cost being met by the compensation offered to affected persons cannot be made.

F. Compensation for other immovable assets

73. Review of Award statements and consultation with PAPs during field visit confirm that affected persons have been compensated for other immovable assets impacted by the project. Award documents (valuation sheets) mention items such as open well and borewell for which compensation estimations have been made. Sample of such valuations have been provided in Appendix 8. As per final Award documents obtained from CALA office and sample Award Notice (refer Appendix 11), a solatium of 100 percent of market valuation of such immovable assets (as done R&B department) was further added to arrive at final award amount. During

IOL survey, no such immovable asset was found within the RoW to physically validate adequacy of compensation made. Public consultations held during the visit has though not provided evidences to draw any conclusion suggesting inadequate compensation. Further, inferring from the assessment made for building structures (table 5), asset valuation of these structure types (borewell, open well) that deploy similar estimation principles, suggest compensation value to be meeting replacement costs. However, in absence any physically verifiable existing structures, a definitive conclusion cannot be made.

G. Compensation to Non-Titleholders

74. The CALA and NHAI officials, during discussions, confirmed that structure valuation for asset loss (other than land) to non-titleholders (encroachers, squatter and assigned land holders) have been similar to those applied for titleholders. However, the compensation award in the case of encroached structures is not augmented by addition of solatium (equivalent to 100 percent of structure value), as provided to titleholder and asignee owned structures It may be noted again that encroachers and squatters in the category of non-titleholders are not entitled for land compensation or replacement of land, whereas assigned land holders are provided compensation for loss of land and structure on same principles that are applied for titleholders

75. At the time of project award to the company, information made available by CALA (to company), there were 110 PAPs on government land (encroachers/squatters) associated with 105 structures (refer table 12 in chapter IV) and 81 assignee land holders (refer table 13 in chapter IV). Of these, 42 PAPs (encroachers/squatters on government land) and 40 assignee land holders have been compensated (Refer table 12 and 13 in chapter IV)¹¹. During IOL survey conducted as part of this audit, 104 structures (upon excluding abandoned structures) were assessed to be existing in the ROW of the project road. Of these 71 structures that include 62 privately owned structures (64 PAPs) and 9 community structures, were assessed to be encroachments, while 2 structures (2 PAPs) were identified to be on government assigned land. Of the 71 encroachments identified during the IOL survey, 28 encroachment structures (26 privately owned and 2 community structures)were traced to be overlapping with the non-titled encumbrance list (referred above) prepared at project start. Compensation payment to existing encumbrances is under process as per discussion with CALA officials. The delay in compensation has been mostly noted due to the COVID-19 pandemic.

76. Based on sample of 15 encroachment structures identified during IOL survey (refer Appendix 14A for further details on existing encumbrances and compensation gap assessment) and information available from award documents, an analysis (similar to assessment presented in Table 5 earlier) for compensation adequacy was carried out. As mentioned earlier, solatium is not added to compensation amount for loss of encroachment structures. Summary findings are presented in Table 6, below.

¹¹ Structure valuation and award declaration has been made for remaining PAPs as well. Compensation disbursement is understood to be under process. The process is learnt to have been delayed also because of declaration of lockdown due to COVID-19. Information related to compensation disbursement is included as part of monitoring and reporting arrangement, discussed later in this document.

Table 6: Assessment of valuation of structures for non-titleholders (encroaching on government land)

14	Amruthapuram		19,283	1,81,212	-1,61,929	
15	Amruthapuram		7,49,984	3,54,555	3,95,429	
Source: Award Document, CALA, March 2020						

*similar to estimation made in Table 5, figures were adjusted backward for inflation @5 percent per year for 3years

Assessment (referring to the analysis presented in table 6), suggests that the structure loss compensations for encroachment structures is not adequate or matching market values-calculated on the basis of input (replacement) cost. The gap is primarily explained by compensation approach of not providing solatium, unlike the approach adopted for titleholder and assignee owned structures

H. Rehabilitation and Resettlement assistance

77. As per the section 10A (e) of RFCTLARR (Amendment) Ordinance, 2014¹², infrastructure and social infrastructure projects including projects under public private where the ownership of land continues to vest with the government are exempt from Social Impact Assessment (SIA). Further, the NHAI manual of guidelines¹³ on land acquisition under the NH Act, 1956 states on page 35, 75 & 193 that the national highway projects being infrastructure projects are exempted from SIA.

The project has provided compensation for loss of land, structures, standing crops, trees and other assets. The RFCTLARR Act has provisions for R&R benefits to the affected families which is described under Section 31 and further elaborated in Second Schedule of the Act. As per provisions in this Act certain benefits in addition to the market value of land and other assets such as provision of housing unit, land for land, choice annuity/employment, subsistence grant, transportation allowance, etc. are to be provided to the affected families.

 $^{^{12}\} https://dolr.gov.in/sites/default/files/RFCTLARR\%20Act\%20\%28Amendment\%29\%20Ordinance\%2C\%202014.pdf$

¹³ https://morth.nic.in/sites/default/files/A_Manual_of_Guidelines_on_Land_Acquisition_for_National_Highways_File3449.pdf

78. "A Manual of Guidelines on Land Acquisition for National Highways under The National Highways Act, 1956" uploaded by NHAI/MoRTH (refer Appendix 12) provides clarity of application of provisions of the Act (under second Schedule) is applicable, at least from the date of issue of this clarification (December 2018). As per this information, select provisions of the second schedule are applicable to NHAI project. It was learnt from NHAI office that projects prior to the issue of above guidelines were executed with the interpretation that schedule II of the RFCTLARR Act, 20013 (considering applicability exclusions provided initially under schedule 4 of the Act and subsequent ordinances passed by central government) was not applicable to NHAI projects. Given the above context and the project timeline (land acquisition initiated in 2016), R&R benefits as prescribed under schedule II of the RFCTLARR Act 2013, were not made applicable to the project.

I. Arbitration and Litigation

79. One of the grievance redressal option available to affected persons is to appeal to Arbitrator for any dispute related to claims. CALA office has provided a list of 156 arbitration cases pending with the arbitrator regarding land acquisition under the project. Of these, 18 have been filed by PAPs from Anakapalli mandal, 35 from Anandapuram mandal, 48 from Pendurthi mandal and 55 from Sabbavaram Mandal. Detailed village wise number of arbitrations is appended (Appendix 6) to the report.

Table 7: Status of Arbitration Cases filed by PAPs						
Sr. No.	Mandal	Number of Arbitration Cases				
1	Anakapalli	18				
2	Anandapuram	35				
3	Pendurthi	48				
4	Sabbavaram	55				
	Total	156				

Source: CALA office, March 2020

80. Out of the 156 cases, majority of the cases i.e. 57.44% were filed for enhancement of compensation rate, on the ground that acquired land though classified as agriculture land as per land records, was fit for house or abutting to existing roads. Further, 5 of the PAPs have asked for enhanced rate claiming impact to their livelihood while 6 other PAPs have demanded higher rate as the land use of the acquired land had already changed from agriculture to non-agriculture prior to start of land acquisition process.

81. Of 156 cases, orders have been reserved for 96 cases by the appellate authority, implying that appeals have been heard and final arbitration orders are awaited. The PAPs are free to seek legal recourse if not satisfied by the outcome of arbitration and the final decision of the court is binding on all parties.

J. Gap Assessment, Compliance with ADB SPS and Closure Measures

82. Based on the assessment of land acquisition process and review of adequacy of compensation and benefits provided to affected persons, observations on project's process alignment with ADB SPS requirements are summarized in Table 8 below. It may be noted that the land acquisition process for this project, initiated during 2016 was not carried out in anticipation of ADB's financing for the project. The table 8 also suggests gap closure/mitigation measures that are further elaborated in chapter VI of this document.

Table 8: Gaps between project compensation against ADB's SPS requirement						
Sl No	ADB SPS policy requirements	Gap/Compliance Status	Mitigation Measures			
1	Carry out meaningful consultations with affected persons, host communities and concerned non- government organizations ensuring their participation in planning, implementation, and monitoring and evaluation of resettlement programs	Project was exempted from the provision of conducting SIA, therefore no such consultations were carried out prior to initiating of land acquisition process. However, consultations have been held in villages (upon declaration of notification under section 3D of the NH Act, as required by the NH Act) with affected persons/ communities to brief them about the land acquisition process, valuation procedures, GRM etc. Such consultations are also understood to have provided opportunities to affected community in raising their concerns/grievances/suggestions to authorities. However, such consultations are understood to be lacking specific focus on vulnerable families (including women). There is no provision of affected community in monitoring or evaluation of resettlement/livelihood restoration program.	 DBL will engage with communities on ongoing basis based on four parameters of meaningful consultations i.e. it should be participatory, timely, socially inclusive and open. A local NGO/ in house LRP and safeguard implementation cell will be engaged to conduct public consultations with the focus to get their input in planning, implementation and monitoring of LRP interventions. Further, such public consultation will also be used as platform to identify LA related issues that remain unaddressed and facilitate its resolution through GRM arrangements under the project. 			
2	Establish a grievance redress mechanism to receive and facilitate resolution of the affected persons' concerns.	As described in this chapter, a formal GRM exists for conduct of LA process which provides opportunities to the PAPs to lodge their grievances that addressed by competent authorities. In addition to the above, PAPs have option to take legal recourse, as permitted under the Act.	A grievance redressal mechanism will be set up by client that shall facilitate affected persons in addressing land acquisition related residual grievances that may have remained undressed or any other grievance related to project operation. For grievances related to land acquisition matters, the project level GRM will act as facilitator, linking them to formal GRM that exists at CALA level and facilitate its resolution. On other matters such as project operation, LRP implementation,			

26
	Table 8: Gaps betwee	n project compensation against ADB's SPS requir	ement
Sl No	ADB SPS policy requirements	Gap/Compliance Status	Mitigation Measures
			GRM shall address and resolve these issues independently at its own level.
3	Provide physically and economically displaced persons with needed assistance	Applicable legal framework provided compensation (cash based) only. Assessment of adequacy of compensation provided suggest that these meet replacement cost or are higher (specifically land compensation).	A retrospective assessment of physical and economic displacement may not be feasible. Measures have been proposed in this plan document, which shall carry out consultation amongst affected community and accordingly finalize on livelihood restoration activities which shall be based on interest and willingness of PAPs, skill and opportunity mapping.
4	Ensure that displaced persons without titles to land or any recognizable legal rights to land are eligible for resettlement assistance and compensation for loss of non-land assets	Non-titleholders have been recognized to be eligible for compensation for loss of assets (expect for land). The project was exempted from R&R assistance and hence no such assistance have been provided to this PAP category as well	
5	Improve, or at least restore, the standards of living of the displaced poor and other vulnerable groups, including women through land bases resettlement strategies wherever possible, prompt replacement of assets, prompt compensation at full replacement cost and additional revenues and services through benefit sharing schemes where possible	Only cash based compensations were provided that meets replacement cost and no other benefits were provided to the affected persons including those targeted at vulnerable groups. Assessment of compensation provided for loss of land, structure and other assets suggests that these were adequate to meet replacement cost.	LRP planning and implementation will lay special focus on PAPs (including women) who have been rendered vulnerable due to land acquisition by the project. GRM and public consultations to be carried out by LRP implementing agency will facilitate in this objective.
6	Prepare a resettlement plan elaborating on displaced persons entitlements, the income and livelihood restoration strategy, institutional arrangements, monitoring and reporting framework, budget and time-bound implementation schedule	As the project was exempted from Schedule 2 benefits, as outlined in RFCTLARR Act, 2013, which provides for rehabilitation and resettlement benefits. No such plan was prepared	Preparation of resettlement plan based on retrospective assessment of project impacts may not be feasible. Instead, a livelihood restoration plan (this document) has been prepared which is aimed at assisting affected persons' livelihood restoration. The plan (refer chapter 5) also provides for institutional

27

	Table 8: Gaps betwee	n project compensation against ADB's SPS requir	ement
Sl No	ADB SPS policy requirements	Gap/Compliance Status	Mitigation Measures
			arrangement, implementation schedule. M&E arrangements etc.
7	Disclose a draft resettlement plan, including documentation of the consultation process in a timely manner, before project appraisal, in an accessible place and a form and language(s) understandable to affected persons and other stakeholders. Disclose the final resettlement plan and its updates to affected persons and other stakeholders	Not applicable	
8	Pay compensation and provide other resettlement entitlements before physical or economic displacement. Implement the resettlement plan under close supervision throughout project implementation	Compensation was paid to affected persons prior to their displacement. Final award documents for encumbrances that exist within the RoW was not available (in most cases) at the time site visit. award in such cases are understood to be in the process of finalization.	In alignment with the ADB policy, DBL has its own internal policy that no one from the ROW is displaced without adequate compensation. In adherence to the outlined policies, DBL will facilitate the process of compensation disbursement from CALA office, and confirm payment of compensation prior to any displacement.
9	Special consideration for indigenous people	Not Applicable for this project	•
10	Monitoring and assess resettlement outcomes, their impacts on the standard of living of displaced persons, and whether the objectives of the resettlement plan have been achieved by taking into account the baseline conditions and the results of resettlement monitoring. Disclose monitoring reports.	No resettlement plan was prepared for this project and hence no such arrangement exists.	LR measures have been recommended in this document (chapter VI) which also suggests M&E arrangements to monitor and report its implementation progress.

28

IV. Land Acquisition and Resettlement Impacts

A. Land requirement

83. The project on 6-laning of Anandapuram-Anakapalli section of the NH-16 has total land requirement of 335.68 Ha of land. Of 35 villages that fall along the project road, there was no additional land requirement for the project in 2 villages. Out of total land requirement (335.68 Ha), 80 Ha (as right of way of existing road) was already available to NHAI. The balance 255.68 Ha of land requirement was distributed across 33 villages. Additional land requirement constituted 196.05 Ha of private land 59.63 Ha of government land. In 2 of the 33 villages namely Gidijala and Pydivada only government land transfer was required. Compensation award (3G notification under NH Act of 1956) has already been published for 30 out of the 31 villages where private land acquisition has been carried out.

84. As on date, based on the 3G award documents collected from CALA office, and subsequent update (July 2020) shared by the company, award has already been announced for 178.92 ha of private land. The remaining balance of 17.13 ha of private land is yet to be acquired and handed over to DBL. Including the government land, total 23.38 ha of land is yet to be handed over to the company. Table 9 below gives a brief overview of the land requirement and present status of acquisition/land transfer.

	Table 9: Land requirement and land acquisition status				
1	Total land required for the Project Road	335.68 Ha			
2	Land already available with NHAI (Existing RoW)	80.00 Ha			
3	Land area proposed for acquisition/transfer under the project road (1-2)	255.68 На

B. Land Acquisition Timeline

85. Land acquisition process for this project was initiated in 2016. The earliest 3A notification¹⁶ was published in July 2016. A total of 23 3A Notifications were published for 392.12 Ha land area. Similarly, 20 Notifications under section 3D¹⁷ of NH Act were published between February 2017 and May 2018, corresponding to 263.05 Ha of land.

86. Award declaration (under section 3G of NH Act, 1956) was published between February 2018 and October 2019 onwards. Till date 52 Awards have been published corresponding to 178.92 ha of private land. Further details on land acquisition notifications are

¹⁴ Section of National Highway Act,1956 under which land acquisition compensation Awards (for private land) are declared, and possession taken over thereupon

¹⁵ As per summary of 52 declared awards, shared by the office of 'Competent Authority for Land Acquisition (CALA)

¹⁶ Preliminary Notification under NH Act, 1956 to express intent of the government to acquire land

¹⁷ Notification under NH Act, 1956, declaring final list of land parcels to be acquired

DBL Social Audit for Widening of Anandapuram-Anakapalli Highway

provided in Appendix 3. As explained earlier (paragraph 60, chapter III), area corresponding to Notifications issued under different sections i.e. 3A, 3D and 3G may not match due to subsequent revision in land requirements on account of design changes, community objections, subsequent corrections and other reasons.

Table 10: LA Notification Timelines					
Notification	Earliest Date	Latest Date	Total no of Notification	Private Land (Ha)	
3A	July 2016	January 2018	23 (6 main, 4 supplementary and 13 amendments)	307.48	
3D	February 2017	May 2018	20	202.33	
3G	February 2018	October 2019	52	178.92

C. Overall Project Affected Persons and Compensation Disbursement Status

87. Land acquisition has resulted in involuntary resettlement impact to approximately 4770 persons¹⁸ as per land acquisition records. This includes 4571 titleholders and non-titleholders comprising 118 encroacher/squatters (on government land) and 81 assignee land holders. As per available records, 3068 affected persons (64.32 percent of the total) have been compensated as of July 2020.

88. As presented in table 11, land acquisition as of July 2020 has involved 2979 survey numbers affecting 4571 title holders out of which 2979 PAPs (65.2%) have been compensated.

Table 11: Number of PAPs (Titleholders)						
Sr. No	No Mandal Total PAPs Total land Survey		Total PAPs	% of PAPs		
			Numbers	Compensated	Compensated	
1	Anakapalli	655	314	493	75.3%	
3	Anandapuram	1097	683	936	85.3%	
3	Pendurthi	1155	631	676	58.5%	
4 Sabbavaram 1664 835 874 52						
Total 4571 ¹⁹ 2463 2979 65.2%						
Source: Updated data from CALA (sourced by DBL), July 2020						

89. As per information made available by CALA (to company) at the time of project award, , there were 110 PAPs on government land (encroachers/squatters) associated with 105 structures, falling under 35 land survey numbers (refer Table 12). Of these, 38.2% PAPs have been compensated. IOL survey found a total of 71 structures (62 privately owned and 9 CPR structures) encroached on government land (refer section E to this chapter). Out of these, 28 encroachment structures identified during IOL survey, have been traced to be overlapping with encroachments (105 in number) listed at project start. (refer Appendix 14A and 14 B).

Table 12: Number on Non-Titleholder PAPs on Government Land (Encroachers)

DBL Social Audit for Widening of Anandapuram-Anakapalli Highway

¹⁸ Figures are an approximation as number of affected titleholders has been taken as the count of names appearing against each affected plot. Duplication of names i.e. same name appearing against multiple plots cannot be ruled out.

¹⁹ Few of title holders name may be repeated if they are owners of multiple affected plots. Accordingly, the figure may be slightly inflated on account of duplication in counting.

Sr. No	Mandal	Total PAPs	Total Number of Structures	Total Survey Numbers	Total PAPs Compensated	% of PAPs Compensated
1	Anakapalli	42	41	10	42	100.0%

3	Sabbavaram	7	1	14.3%
	Total	81	40	49.4%
Source: 1	List of encroachme	nts provided by	DBL sourced from CALA, July 20	020

91. Information collected from CALA office during the site visit is presented in Table 14 below. As per information shared with the team, Total compensation amount sanctioned for Award for acquisition of land under the project was Rs 561.65 crore (5616.5 million), corresponding to 179.74 Ha of land. Out of this amount, Rs. 388.56 crore (69.18%) was disbursed till February 2020. Appendix 4 can be referred for further details on disbursement

Source: Documents collected from CALA, March 2020

92. Further update on compensation sanctioned Award and compensation disbursement status was collected from CALA (sourced by DBL) in July 2020. As per available information (refer table 15 below), total compensation has been sanctioned for Rs 574.28 crore (5742.8 million). NHAI has so far deposited Rs. 545.99 crore to CALA. Of the sanctioned amount, Rs 399.50 crore (69.56%) has already been disbursed till date. It may be noted that Award

²⁰ Few of the PAPs may be repeated as the count of total PAPs is derived from the number of structures impacted. Some survey numbers have multiple plot/structure counts.

preparation and disbursement is still ongoing and figures may change with further updates. This document will be updated based on disbursement details received from CALA from time to time in future.

Table 15: Updated Status of Compensation	disbursement to PAPs
Item	Value (in crore)
Total Sanctioned Award Value	574.28
Total amount deposited by NHAI to CALA	545.99
Total amount disbursed by CALA till date	399.50 (69.56%)
Balance amount to be disbursed	174.89 (30.45%)
Source: CALA (sourced by DBL), July 2020	· ·

93. Consultant's field team conducted a survey of 87 PAPs (randomly sampled) as part of socio economic survey and to collect information about land acquisition process including compensation disbursement status. In their response, 57 (65%) PAPs reported that they have already received the compensation which is in line with the compensation disbursement status reported by CALA.

94. Some of the reasons cited by the CALA office for tardy progress in disbursement of compensation are:

- a. Frequent changes in Approval Authority within CALA office and related procedural delays has resulted in slower disbursement of compensation. The office also shared that post October 2019 there was no signing authority due to change of office in-charge. The CALA officers belong to revenue department and management of land acquisition process is an additional charge to them. There is no exclusive team set up for land acquisition tasks for projects.
- b. Funds were not received from NHAI office for about 2-3 months due to procedural reasons.
- c. CALA officials also informed that the compensation disbursement could not be completed for several PAPs due to non-submission of required supporting documents substantiating their claims.
- d. Further, outbreak of COVID-19 pandemic has accentuated the delay in the ongoing processes of Award finalization, declaration and compensation disbursement.

D. Pending Land Acquisition

95. At the time of the study land acquisition was pending for 17.13 Ha of private land which is besides pending handover of 6.253 Ha of government land. Therefore, 23.38 Ha (9%) of total requirement of 335.68 Ha land is pending for acquisition/transfer. Of these, 9.53 Ha is pending in in Saripalle village and rest are distributed across 15 villages.

96. In Saripalle village, acquisition of 7.29 Ha of private land and transfer of 2.23 Ha of government land is pending, as detailed out in table 16. Delay in land acquisition in this village is due to an ongoing court case. The main contention as submitted in the court (also verified during discussions with local community) was that disproportionately higher scale of land acquisition (as compared to other villages) has been proposed in this village. NHAI, however, maintains that the higher land requirement is due to the proposed interchange in the village.

	Table 16: Land acquisition status in Saripalle village

Source: Data from competent authority for land acquisition (CALA) office, Vishakhapatnam

97. Remaining area of land pertains to missing extent across 15 villages. The 3D notification for these plots was published vide SO number 3370 (E) dated 18.09.2019. Award calculation process for these land parcels are presently under process by the Competent Authority for Land Acquisition (CALA) office. Details of the 3D notification is appended (Appendix 5) to the report for further reference. These relate to 120 land parcels, as per the 3D notification, of which 111 plots are private land. In these affected land parcels, 12 structures (10 privately owned and 2 CPRs) were identified during the IOL survey. Further details are provided in the following section (section E) of this chapter.

98. During the discussions (February, 2020) with Special Deputy Collector for Land Acquisition and other officials of CALA, the consultants were informed that the office is in the process of preparing 3G Awards for missing extent across 15 villages which will be completed by 31st March 2020. However, given the COVID-19 outbreak, the process is yet to be completed and may possibly take another 4-5 months for closure in current circumstances.

99. In case of Saripalle village, there are total of 64 survey numbers out of which 51 are related to private plots. These private plots are associated with 54 families. Whereas in case of remaining missing plots in 15 villages, there are total 111 private plots (as per the mentioned survey numbers listed in 3D) which is owned by 181 families. Considering the missing names that have not yet been specified for about 19 survey numbers in the 3D document, the number of affected persons is estimated to be in the range of 200-250 for the missing plots in 15 villages. Summing it up, about 254-304 families are anticipated to be affected in 16 villages (including Saripalle) for the remainder of the land.

100. It may be noted that NHAI has inbuilt provisions to de-scope proposed land acquisition in case there is any design change on account of alternate design option or due to issues such as objections/suggestions by local community. Such measures can be taken without reducing the construction period for BOT (build, operate, transfer) – HAM (Hybrid Annuity Model) projects. NHAI has issued a standard operating procedure pertaining this option. Past experience suggests that such steps can be taken for projects facing land acquisition issues in specific sections, or technical design challenges identified at later stage, allowing for descoping in the proposed RoW.

E. Existing encumbrance/encroachment within RoW

101. A detailed exercise involving transact walk, identification of structures standing within RoW, (facilitated by land acquisition team of DBL), conduct of detailed Inventory of Loss (IOL) survey followed by further validation of data with the DBL team, was carried out to assess present status of encumbrances.

102. Encumbrance status: 585 structures (includes both titleholder and non-titleholder owned structures) existed at the time of appointment of Concessionaire. A listing exercise was done by the company at this stage which was shared with the consultant at the time of field survey. During IOL survey (1-15 March 2020), 139 structures were found to be still existing in the RoW. The balance has already been cleared by the company. Discussion with DBL and consultations with affected persons have confirmed that encumbrances are cleared only after payment of compensation.

103. Structure Usage Status – IOL survey assessed 35 of these (139) structures to be abandoned and no longer in use. 33 of these abandoned structures were privately owned structures, whereas 2 were government buildings. PAPs do not reside or use these structures any longer and have vacated these upon receiving compensation (sample images below). As summarized in table 17, the balance 104 structures are in use at present.

Table 17: Structure usage Status

105. Out of the 88 private structures (corresponding to 95 affected households), 2 are located on assigned land (government land- D-patta²¹), and 62 structures are encroachments on government land. Remaining 24 structures are standing on private owned land. IOL survey has identified that 54 of the privately owned structures are used for residential purposes, 18 structures are used for commercial purposes, 5 structures are used for both residential and commercial purposes and the balance 10 structures are cattle sheds/storage huts etc

Table 19: Type	of Private	Structure

Grand Total	34	54	88	95
Source: Census and IOL Survey, March 202	20 and data	received fr	om DBL	•

106. Construction type: 69 of the privately owned structures are of permanent construction type, 6 are semi-permanent, and 8 are temporary. The assessment of permanent, semi-permanent and temporary is based on the classification adopted by CALA for structure valuation (Refer Appendix 8A to 8C).

Table 20: Construction type of privately owned structures		
Side of the Road	Type of Construction	Total

²¹ Assigned land or D-patta is a term used for government land assigned to landless households in Andhra Pradesh. It originates from the D-form which provides an extract copy of the land records which has been assigned by the government of Andhra Pradesh to the landless poor persons.

107. The privately owned structures are compensated through the process of Award preparation and a formal Declaration and Notification of Award (as prescribed under NH Act, 1956; discussed in detail in chapter III) to the PAP. In case of the assigned land holders or encroachers, an ex-gratia payment order is declared and notified. Based on the available primary survey information (including discussion with affected households at the time of survey) and subsequent update (by DBL land acquisition team, sourced from CALA office, July 2020)²², it is assessed that as on date, 3G awards or ex gratia payments have been declared and notified for 14 structures (table 21). These 14 PAPs have been compensated for acquired land and loss of assets. There are 14 structures which were awarded during land acquisition carried out earlier and no other payment will be made to these structure owners. These 14 structures are in Vellanki and Vemulavalasa villages of Anandapuram mandal/block from chainage 681+000 to 683+200.

108. A total of 67 PAPs associated with 60 structures are yet to be compensated. The award preparation is under process for 13 structures (includes 2 PAPs who are assigned land holders). In case of 6 PAPs, award has been approved but the disbursement is yet to be done due to lack of submission of required land records. Structure valuation for 40 structures (40 PAPs, all non-titleholders in the encroacher category) is approved, however the disbursement of payment is pending. One PAP has declined to take the awarded compensation and has demanded higher compensation to CALA. The matter is under consideration/deliberation in CALA.

	Table 21: Status of Award or ex gratia payments	for the private struct	ures
	Status of award/ex gratia payments	Number of private structures	Number of PAPs

3	Pending formal award/ex-gratia and compensation	60	67
	a. Award preparation under process	13	18
	b. Award approved and compensation disbursement is pending	6	6
	c. Structure valuation approved and compensation disbursement is pending	40	42
	d. PAP has declined compensation for demand of higher compensation	1	1
	Total	88	95
Sc	urce: Census and IOL Survey, March 2020 and Data update received	d from DBL	1

²² final award documents for the standing structures in the RoW, were not available at the time of the site visit. It was under preparation for most of the structures. Compensation payment status for all existing encumbrances will be confirmed /validated (with evidence of payments) for all existing encumbrances, as part of monitoring/progress reporting to ADB. This is further elaborated in Chapter VI in detail.

109. Census and IOL survey suggest (table 22) that amongst existing encumbrances, the land acquisition will result in loss of residential structures to 36 families while 6 families will face loss of income/livelihood. One family will face both type of impacts while impact to 52 PAPs will be minor.

Table 22: Impact Type on PAPs				
Impact type	Number of PAPs	Number of Impacted Structures		
Loss of Income/livelihood	6	6		
Loss of residential structure	36	30		
Both loss of income/livelihood and residence	1	1		
Partial/minor impact not resulting in loss of income or significant loss of residential structure	52	51		
Total	95	88		
Source: Census and IOL Survey, March 2020				

110. Vulnerability status of the households was assessed based on the BPL status, SC/ST household, households with differently abled persons, elderly persons with no immediate members to support, widow member in household, women headed household with dependent members, and households with no legal title of land. The groups indicated in below table have been drawn from safeguard documents from earlier ADB financed projects in the past. Applying these criteria, it was found that 64 families currently existing in ROW are vulnerable. However, it may be noted that identification of vulnerable PAPs for the entire project level impact was not feasible at this stage. Therefore, a provision has been made in the grievance redressal mechanism which shall identify PAPs from the above mentioned social groups, specifically those whose livelihoods have been significantly impacted, rendering them particularly vulnerable. LRP benefits will be extended to such vulnerable PAPs, to assist them to restore/improve their living standard, which is discussed further in chapter VI of this report

Table 23: Vulnerability status of project affected households in ROW		
Vulnerability status	Number of households	
SC households	7	
BPL household	61	
Women headed households	5	
Households with widow member	12	
Households with differently abled member	4	
Households with elderly (60 year or more) member with no immediate family members to support	6	
Households with no legal title for land	1	
Total vulnerable households	64	
Source: Census and IOL Survey, March 2020		

111. Apart from the privately owned structures, there are a total of 13 community structures currently located within the RoW. These include 11 religious structures (temples), 1 statue and 1 memorial. The statue is located at chainage 706+900 on left hand side of the project road in Rampuram village of Pendurthi mandal. The memorial is located at chainage 710+340 km on right hand side of the project road in Sabbavaram village of Sabbavaram Mandal. Of these, 9

structures are encroachment on government land while 4 exist on privately owned land. The chainage wise details of these structures have been provided in Appendix 1.

Type of land	Side of the road		Number of structures	
	LHS	RHS		
On government land (Encroached)	4	5	9	
On private land	4		4	
Grand Total	8	5	13	

Compensation Payment status: Formal award/ex-gratia amount is pending for approval 112. for 1 structure while for 6 other structures, the award has been approved and payment is under process. NHAI has deposited funds to CALA account for structures for which award/ex gratia has been declared. However, these being community structures, it is mandatory to form the committee with Tehsildar as one of the committee members. Once this process is completed, disbursement of compensation amount will be carried out. In case of one community structure (a non-religious statue in government land), the structure can be easily moved to another location, community has voluntarily initiated shifting it to an alternate location and hence no claim has been made for compensation (also confirmed during site visit discussions in the community). The remaining 5 community structures were compensated during land acquisition carried out in past and hence not eligible for compensation. Local community has agreed to voluntarily shift these structures to another location. Public consultations will be continued with local community regarding shifting of the structures and any grievance will be resolved.. Outcomes of public consultations, held in this respect will be included in monitoring/progress reports submitted to ADB.

F. Summary of land acquisition and resettlement impacts

113. As on date, 93% of the total land requirement (355.68 Ha) for the project is in possession of the concessionaire and only 7% (23.38 Ha) of the requirement is pending for acquisition/handover. Pls say that this land is not for the carriageway and descoping is being explored. Discussion with CALA officials suggested that the office was initially targeting completion of land acquisition exercise by end of March 2020. However, the process has suffered further delay due to the outbreak of COIVD-19 pandemic. As it appears, except for DBL Social Audit for Widening of Anandapuram-Anakapalli Highway 38

the pending litigation at Saripalle village, there are no community led socio-political risks associated with the land acquisition process for the pending land required for the project. Further, NHAI has recently introduced provision for descoping of pending ROW, should land acquisition challenge persist for long. This should enable an early closure of land acquisition exercise.

114. Available land acquisition records suggest that project has required land acquisition/transfer of land parcels involving 2368 survey numbers. This has resulted in involuntary resettlement impact to 4700 persons/families. The figures are tentative due to possible duplication in count of affected title holders may be holding multiple plots. The number affected titleholders are 4571 and the balance are non-titleholders, either encroachers or assigned land holders. As per available update, project has so far compensated for 69.56% of the sanctioned award value

115. With respect to the existing encumbrances, the earliest available list of hindrances existing on the RoW at the start of the project was reported to be 585. Of these, 104 structures were found to be still standing within ROW at the time of IOL survey. 16 of these structures have been compensated during the earlier land acquisition carried out (chainage 681+000 to 683+200) and 3 structures were compensated during the two laning for NH-5 amongst the existing encumbrances, 14 structures have been compensated as per the available information.

116.	A summary of project's land acquisition requirement, current status, impact and the
status	of present encumbrances is given below in table 26.

	Table 26: Summary status of land acquisition		
Sl	Key Facts regarding land acquisition	Number	
no			
Α	Land Acquisition		
1	Total land required for the Project Road	335.68 Ha	
2	Land already available with NHAI	80.00 Ha	
3	Land to be acquired for the project road	255.68 Ha	
4	Government land	59.63 Ha	
5	Private land to be acquired	196.05 Ha	
6	Status of pending and acquired private land		
7	Land area (with awards declared) handed over	178.92 Ha	
8	Remaining private land to be acquired	17.13 Ha

6		

*Compensation gap has been assessed for encroachments (refer Table 6)) and will be eligible for mitigation support by this project. However, structures that have already been compensated during an earlier land acquisition will not be eligible for compensation gap closure assistance. 62 encroachments (privately owned structures) were identified during IOL survey of which 14 were compensated during earlier acquisition. Similarly, of the 9 community structures (encroaching on government land), 5 had already been compensated during earlier acquisition. Accordingly, the budget (refer Table 28) provision for compensation gap closure assistance has been made for 52 encroachments (48 privately owned and 4 community structures).

V. Socio Economic Survey and Stakeholder Consultations

A. Socio-economic profile

117. Visakhapatnam district is one of the north eastern coastal districts of Andhra Pradesh. It has a total area of 11161 sq km with a population of 42.91 lakhs according to census conducted in 2011. It has 4 revenue divisions, 46 mandal (blocks/revenue mandals), 925 grampanchayats, 3305 villages, 1 municipal corporation and 1 municipality. As per 2011 census, Scheduled Castes constituted 7.68% of the population while Scheduled Tribes account for 14.42% of the population of the district. The district has a work force of 18.90 lakhs constituting about 42.91 of the population besides the marginal workers to a tune of 4.08 lakhs as per 2011 Census. The cultivators constitute 7.51%, Agricultural Labourers 13.49% and the balance of 79% engage in Primary, Secondary and Territory sectors. The literary rate of the district is 59.8% (males -66.52% and females -53.23%).²³

Besides inventory of loss survey, was conducted for all PAPs whose structures are still 118. standing within the RoW, i.e. 88 structures with 95 PAPs. An impact profile was prepared based on survey outcomes which is appended (refer Appendix 1) to the report for reference.

119. Consultants have also conducted a sample socio-economic survey with 89 project affected families (incudes affected families who have cleared RoW) to understand their socioeconomic status. Findings of this survey is appended (refer Appendix 2) to the report for reference.

B. Stakeholder Consultations

	Table 27: Consultations with stakeholders				
Sl	Date	Location	Participants	Key discussion Points	
no					
1	23/02/2020	CALA office, Visakhapatnam	SDC-LA and CALA officials	The discussions were carried around social impact assessment and its applicability for the Anandapuram-Anakapalli NH5 project and provisions that call for its exemption. Further, the discussions also included the applicable central and state legal frameworks in land acquisition process. A general overview of land acquisition process, applicability for frameworks for structure valuation, processes for compensation with respect to titleholders and non-title holders and compensation were understood from the SDC-LA. Further, discussion with respect to status of pending arbitrations and litigations were also conducted with SDC -LA with inputs from other CALA officials.	

During site visit and data collection, the field team also conducted consultations with 120. various stakeholders. A summary of these consultations is provided below.

²³ Handbook of statistics Visakhapatnam District, 2016, <u>https://www.ap.gov.in/wp-content/uploads/2018/03/Visakhapatnam-2016.pdf</u> DBL Social Audit for Widening of Anandapuram-Anakapalli Highway

		Table 27:	Consultations v	vith stakeholders
Sl	Date	Location	Participants	Key discussion Points
no				
2	24/02/2020	Sankaram village	PAPs standing in ROW	Concerns regarding compensations for the structures in the RoW, was discussed with PAPs. The PAPs shared that they know that they are being compensated for the structures impacted, however they think that it may not match their expectations. It appeared that PAPs were apparently not very well versed with the entire process of structure valuation Further consultations with community is required to improve their awareness about the valuation approach. They have though confirmed that there have been visits by CALA officials who briefly explained their approach. They are also aware that CALA office can be approached if they have any grievance related to compensation or land acquisition process.
3	28/02/2020	CALA office, Visakhapatnam	CALA Officials	The discussions were centered around various type of grievance redressal mechanisms adopted during the land acquisition process. During the discussion following things were thoroughly understood 1. objections allowed after declaration of 3A notifications 2. Key contact points from CALA office for PAPs to raise their concerns 3. Designated officials at CALA office for resolution of grievances raised by PAPs. 4. Resolutions at the level of SDC- LA and 5. Process of arbitration and its results.
4	03/03/2020	Villages around Pendurthi and Sabbavaram	PAPs and construction material suppliers	A team of engineer and members from consultant team discussed and collected information regarding various type of structures/construction types in the area, rates of various materials to determine market valuation of current structures. They had initial discussion with PAPs to understand their expenses during construction followed by market assessment of present value of materials used during construction.
5	05/03/2020	CALA office, Visakhapatnam	CALA Officials	Detailed discussions were carried out with different CALA officials to understand the process of valuation for the loss of assets for PAPs. The discussion included information on process adopted for valuation of assets and the role of different departments such as R&B, Horticulture and Forest in determining the valuation and further steps

	Table 27: Consultations with stakeholders

no				
				by CALA for including them in the final
				valuation towards preparation of awards for compensation to PAPs.
6	06/03/2020	Sontyam	PAPs, yet to	The discussions were carried out with the
Ū	00/02/2020	Sontjun	receive full	PAPs including those whose houses were
			compensation	partially dismantled or yet to be dismantled.
				One of the PAPs shared that they have
				requested the dismantling staff of
				contractors to not carry out dismantling work as their structure was partially
				compensated. During the discussions, they
				said that they have no objection in removal
				of structures once they are compensated
				fully as per the final awards. The issue was
				conveyed up further by the contractors to DBL and CALA. This is being resolved at
				CALA office with facilitation by DBL's
				land acquisition and Liaising team.
				The PAPs willingly shared their book of
				land records and 3E notifications which
7	09/03/2020	Anondonurom	PAPs	they have received from CALA office. The consultations were carried out with
/	09/05/2020	Anandapuram Village	standing in	PAPs to understand the process of land
		Village	ROW	acquisition right from the beginning. The
				discussions focused on understanding the
				timeline of land acquisition activities,
				beginning from marking of the RoW and if
				they were made aware about various stages and procedures of land acquisition. The
				discussions included marking of ROWs,
				notifications, compensation status,
				satisfaction with respect to structure related
				valuations, any arbitrations or litigations
				that they may have filed. The PAPs during the discussion informed about LA
				procedures and various compensation
				components being awarded. The PAPs on
				government land (encroached) mentioned
				that they have been informed that they will
				be compensated for loss of assets such as structures and other immovable assets.
				None among those present during
				consultation expressed their preference for
				government led resettlement option. They
				further shared that they would want to
				exercise their discretion in case relocation is
				required and hence would not prefer any assistance by project in this regard.

no				have changed in the context of land acquisition for Anandapuram-Anakapalli NH5 project.
9	17/03/2020	Villages around Sabbavaram	PAPs from latest 3Ds for pending land acquisition	The discussion was carried out with PAPs in villages in & around Sabbavaram. The PAPS seemed very much satisfied with the declaration of land acquisition with the belief that this project will bring them lot of new opportunities for development & a much better connectivity with Visakhapatnam city. They informed that the compensation is yet to be provided and that could be a concern for few, but they are confident of receiving it in near future based on what they have heard from other PAPs who have already been compensated. The PAPs mentioned that they are hopeful of getting compensation for their land as per the current market value in Sabbavaram region. Further, participants expressed their preference to receive compensation for loss of residential structures than for government assisted resettlement options.

IOL survey and Measurement

VI. Livelihood Restoration Measures and Way Forward

121. The ADB SPS, for an existing or under construction project facility/activities, requires the borrower to undertake a social compliance audit including onsite assessment to identify concerns related to involuntary resettlement and indigenous people. In line with to the stated SPS requirement, this audit was conducted with an objective to determine whether land acquisition process for the project was in compliance with the ADB safeguard principles and if there are any outstanding compliance issues. Preceding sections of this report have discussed audit findings related to land acquisition process and the compliance aspects. This chapter presents a summary of outstanding compliance issues/gaps identified, along with retrospective gap filling/mitigation measures that are within the remit of the borrower. This further includes implementation arrangements and budget for successful execution of suggested action plan.

A. Gaps identified

122. The land acquisition for the project was initiated in 2016, well before the involvement of ADB for financing the project work. While the earlier sections of the report, ascertained that process is largely aligned with ADB SPS, with certain gaps identified as follows:

- a. Project has provided compensation for loss of land, structures, standing crops, trees and other assets. However, the land acquisition process did not include provision forR&R benefits to affected families. As discussed earlier (refer Section H Chapter III), such provisions were not applicable for this project and were exempted. Keeping this in context, the following gaps may be noted
 - i) Project induced vulnerability was not assessed and no additional benefit was provided to affected persons from such category (including women);
 - ii) Livelihood and resettlement impacts were not considered (for reasons mentioned above) and accordingly R&R plan (with R&R benefits) was not prepared;
 - iii) Consultation with affected local communities was designed and carried out as per the provisions of applicable Act (NH Act 1956). Consultations, as an ongoing and enabling activity to facilitate PAPs resettlement and rehabilitation, was missing in the land acquisition process adopted by the project. However, it may be noted that PAPs were adequately informed about land acquisition processes and inbuilt GR mechanism related to land acquisition issues.
 - iv) Land acquisition mechanism (government led) lacks provision for monitoring activities for assessing impact of project activities on local communities and PAPs.
- b. Compensation provided for loss of non-titleholder owned structures (on government land) was assessed to be not meeting replacement cost. Unlike the principle applied for titleholder owned structures, solatium (equivalent to 100 percent of structure value as assessed by competent authority) is not added to the compensation amount paid for structure loss in this category.
- c. Information gap has been identified in terms of compensation disbursement status, number of PAPs (both titleholders and non-titleholders) who have received compensation. Compensation payment records were not updated and evidences of payment (for existing encumbrances) were not available with CALA at the site visit. Further, consultations with CALA and the company suggest that award declaration is

DBL Social Audit for Widening of Anandapuram-Anakapalli Highway

under process for existing encumbrances including the non-titleholders. In summary, some of the PAPs are yet to receive compensation (refer section C in chapter IV).

B. Key Principles for gap closure

123. In view of gaps summarized above, there is a requirement to take up a set of measures to further assist the PAPs for mitigation of project impacts. These measures will be guided by ADB SPS requirements, the key principles of which will be underlined by as follows:

- a. In the context of existing encumbrances (structures/assets), displacement (economic or physical) of PAP will be caused only after compensation has been paid in full to them.
- b. Compensation for loss of assets should be adequate and meeting replacement cost of loss incurred. In case, compensation amount provided by CALA fails to meet replacement cost (as assessed for encroachment structures), the gap amount will be met by the company. Such cost gaps shall be mitigated by providing livelihood restoration support measures (suggested measures are mentioned in section of this chapter) to eligible PAPs which shall not be monetarily less than gap value identified. Compliance in this respect will be part of monitoring reports submitted to ADB.
- c. The scope of livelihoods restoration measures (detailed out later in this chapter) shall cover all PAPs. These include all 4571 titleholders and 199 non-titleholders. Identification of PAPs interested to avail such support will be ensured through an effective stakeholder engagement mechanism and safeguards implementation arrangement set up by the project. The following parameters shall merit special focus while identifying beneficiaries from amongst the PAPs:
 - (i) PAPs (both titleholder and non-titleholder) facing loss of structure, that is yet to be cleared/dismantled. This will be irrespective of compensation award receipt status.
 - (ii) PAPs facing loss of land for which compensation award is yet to be announced.
 - (iii) Interested PAPs from vulnerable groups such as women headed household, elderly headed household with no support, disabled, economically poor household (as per criteria defined by the state)
 - (iv) PAPs who have been rendered vulnerable such as homeless, significant loss of livelihood (loss of more than 25 percent of income generating assets/land, as per state policy on eligibility for R&R benefits under RFCTLARR Act)
 - (v) Any affected person (including non-titleholder) who claims to have been displaced without being paid the compensation. Claim veracity shall first be established by safeguards cell, PIU before confirming eligibility as beneficiary of livelihood restoration measures. Project GRM will be part of safeguards implementation arrangement in resolving such matters. It shall further facilitate/liaise with CALA for grievance redress related to claimed denial of compensation.
- d. A functional project level GRM will be set up at the start of the project. The GRM besides its typical role related stakeholder grievance redress during project construction and O&M phase, shall also be responsible for validation of claims related to project impacts that have not been formally recognized. Upon verification of these claims, such persons will be treated as project affected person and entitled for livelihood restoration support.
- DBL Social Audit for Widening of Anandapuram-Anakapalli Highway

- e. Preference will be given for non-cash based livelihood restoration support to PAPs;
- f. There will not be any discrimination in treatment of titleholders and nontitleholders in relation to compensation for non-land assets and assistance provided by project. GRM and livelihood restoration support will be accessible to all PAPs.
- g. Company shall ensure regular and healthy stakeholder engagement specifically with the affected community/persons. Public consultations will be carried out as an ongoing activity. Livelihood restoration activities will be planned based on inputs collected during public consultations that will encourage participation of vulnerable PAP groups as well. Gender focus will be ensured in conduct of these activities.
- h. For any unanticipated project impacts or emergent situations not identified in this document, project will address the same as per applicable legal framework which should be aligned to ADB SPS 2009 requirements as well. In principle, any obligation arising out of gaps with ADB SPS requirements will be met by the company.
- i. A monitoring mechanism for implementation of livelihood restoration activities and gap compliance shall be developed. Documentation and progress reports at proposed periodic levels for gap closure, GRM and livelihood restoration activities will be submitted to ADB. This will also include reporting on progress and closure of compensation disbursement related to land acquisition.

C. Compensation payment and information gap closure

- 124. Project will provide updated information with respect to the following:
 - a. Updated information with respect to compensation disbursement, affected person data base which shall include number of affected persons, their entitlements, compensation disbursement status. In this respect, individual level information will be reported for all existing encumbrances (both titleholder and non-titleholder identified during IOL survey) in the RoW and all non-titleholders (199 PAPs including 110 encroachers and 81 assigned land holders listed prepared at the start of project) while aggregate village level information will be provided for all 4700 affected persons/affected assets. Documentation and reporting will be carried out as part ongoing monitoring by the company.
 - b. This information will be included as part of regular monitoring report to be submitted to ADB and updated accordingly.
 - c. Referring to #a above, project will verify and confirm entitlement and compensation payment status of non-titleholders (encroachers). Appendix 14 provides the list of all such affected persons. Similar reporting will also be made for assigned land holders.
 - d. Regular monitoring report will include a tabular template listing all standing structures along with structure compensation value as estimated by consultant along with final award/compensation value (to be filled in as and when declared). For all standing encroachment structures, if the final award/compensation value is observed to be less by 20 percent (allowing for margin of errors in estimations) or

lower than the value estimated by the consultant, project shall confirm/establish adequacy of the final compensation award value (to meet replacement cost). Such deviation if justifiable, will be established in monitoring reports submitted to ADB. These will be part of monitoring and submissions to ADB with every reporting cycle. In case, no such plausible explanation, aligned to ADB SPS is available, identified compensation gap will be met by the project and reported to ADB accordingly. Relevant structure market valuation details and assumptions have been provided in Appendix 9 and 14 of this report.

e. Compensation gap closure assistance (encroachment structure loss), if established, will be applicable for all existing (at the time of IOL survey) encroachment structures (listed in Appendix 14A). In case, any of the non-titleholders whose structure has been dismantled by the project in past (listed in Appendix 14B), claims under-compensation and is able to provide evidence (e.g. admissible document establishing market valuation of affected structure), such claims will also be eligible for compensation gap closure benefits

D. Livelihood Restoration Measures

125. As discussed earlier most of the land acquisition for the project has already been completed. Hence a retrospective assessment of project's economic displacement impact and planning for impact mitigation may not be feasible. In this view, livelihood restoration measures are being suggested which shall cover all affected PAPs, both titleholders and non-titleholders. Potential beneficiaries will be identified by the safeguard cell, PIU in line with the principles discussed earlier (refer paragraph 123).

126. In case of encroachers, compensation gap has been assessed (refer Chapter III.G) for loss of encroachment structures. Identified cost gap, if more than 20 percent of the estimated replacement cost with no plausible justification for variation, will be mitigated through one of the livelihood restoration support options described below which shall be equivalent to value of compensation gap identified. This assistance will be provided to affected person in addition to livelihood restoration support benefits accessible to PAPs in general. As mentioned above (paragraph 124.e), retrospective compensation gap claims for encroachments that have already been cleared, if established with supporting evidence, will also be eligible for gap closure support. In case of community structures (4 such encroachments on government land), gap closure measures will be taken in consultation with community. Support measures in this context should be aimed at restoring/reconstructing affected structure to a location preferred by the community or any other community level benefit, based on compensation gap value assessed.

Options for livelihoods restoration support

127. It is recommended to create sustainable long term livelihood support sources rather than providing one-time cash support and in view of consultations held with affected PAPs, following non-cash based R&R and livelihood restoration activity sets are suggested to be provided as benefits to the PAPs:

- a. Income and livelihoods restoration support
- b. Capital support/seed money
- c. Training and capacity building
- DBL Social Audit for Widening of Anandapuram-Anakapalli Highway

- d. Employment in project construction activity
- e. Community development and CSR activities for vulnerable and needy persons from project affected community
- f. Assist in accessing government supported livelihoods and welfare schemes

128. **Income and livelihoods restoration support** – The project proponent shall focus on livelihoods restoration or creation of additional livelihoods opportunities to support the PAPs. Livelihood restoration will not only be aimed at minimizing the impacts of displacement but also to maximize the benefits by providing the members of the affected households with long term and sustainable sources of earning. Income and livelihood restoration strategies for the project will be built around the principle of empowering people/affected communities to engage in sustainable income generating activities by providing them support in linking/providing capital for setting up their own enterprise and mentoring support. The end objective of these strategies/programmes would be to provide sustainable income and livelihoods, enabling them to not only sustain but also better their standards of living. Some of the suggested income generation options for which the PAPs can be supported are - roadside tea shops, small dhabas (restaurants), grocery shops, motor mechanic and puncture shops, tailoring, dairying, cash crop (mango, cashew nut, etc.) cultivation, etc. Financial assistance in the form of capital/ seed money can be provided to enable affected persons in taking up income generation/livelihood activities. Such assistance will be made more effective by providing training on technical know-how, linking them to credit agencies, establishing linkages with service providers, providing mentoring support, etc.

129. **Capital Support/Seed Money-** Related to the above financial assistance for purchase of goods/materials/instruments required to set up business or take up income generation activity, can be provided to affected person. Support through long term fixed deposits/investment schemes in the name of a female member of the family may also be explored.

130. **Training and capacity building** – Another option to support the livelihood restoration and/or strengthening is to provide training on various skills which have demand in local market and linked to proposed income generating activities wherever possible. A tentative list of suggested trainings is mobile repairing skill, beautician training, tailoring and designing, basic computer literacy, advanced computer application, motor mechanic, skilled labour for house construction, etc. The training and capacity building will be further optimized by extensive needs assessment study by the NGO (LRP implementation unit set up by the project).

131. **Employment in project construction activity** - The project will, to the extent possible, make aware and encourage employment opportunities (permanent, temporary or contractual) to the affected people, and engage them as per Company Policy. The construction phase of the project is likely to generate significant employment. Efforts will be made to maximize local content in employment in this phase. However, provision for employment is closely linked to skill/capacity and overall employability of the person and these aspects will play a key role in selection of the beneficiary. The construction phase employment will also mostly be through contractual and linked to construction contracts.

132. **Employment in project O&M activities** – The project will also aim to provide employment to affected communities in O&M activities of the project activities such as toll operators, regular O&M activity, drivers, plantation maintenance, etc. either directly or through vendors engaged for various O&M activities. This shall be in line with the capacity and skill

DBL Social Audit for Widening of Anandapuram-Anakapalli Highway

level of affected persons. The project proponent shall encourage employment of women (aim at providing 35 percent of employment opportunities) from project affected families in employment opportunities generated by the project such as toll operators, maintenance works etc. Livelihood restoration support activities in general will have vulnerability focus (including gender) in its coverage.

133. **Community Development Activities-** DBL is also recommended to plan for additional assistance measures for the larger community in the project area. Activities such as livelihood related skill building, educational awareness, community health and safety awareness measures may be taken up, as identified by the project.

134. Further, DBL shall assess its internal capacity and skilled resource availability to set up institutional arrangements for planning and implementation of livelihoods restoration activities. Alternately, it can engage a local experienced NGO partner in this role. The NGO/safeguard cell, PIU will be responsible to validate the list of PAPs, validate and reconfirm entitlement of PAPs, identify livelihood restoration support eligibility of PAPs where land acquisition is pending, finalize list of income generation/livelihood support based on skill and opportunity mapping in local areas, counsel and list down livelihood restoration preferences, identify PAPs as beneficiaries of other community development measure, prepare the detailed implementation plan and its execution, and reporting. Draft ToR for engaging NGO is placed at Appendix 13.

E. Budget and Financing Plan

135. The total budget proposed for livelihoods restoration and stakeholder engagement activities is Rs 5,88,00,000 (estimation details are mentioned in table 28 below). This budget includes

- a. Costs for Livelihoods restoration and other community development activities. As mentioned earlier, all affected persons including the non-titleholders and additional PAPs who may get identified by the safeguard cell, PIU in future;
- b. Compensation gap closure assistance (encroachment structures)
- c. Cost for implementation of stakeholder consultations and GRM operations;
- d. Implementation cost (gap closure and safeguard compliance);
- e. External Evaluation and Audit and;
- f. Project contingency.

136. It may be noted that this budget has been proposed as an envelope amount available for taking up livelihood restoration activities. While all project affected persons are eligible to receive this benefit, the safeguard cell (PIU) or the appointed NGO partner will identify interested PAPs with a special focus laid on affected persons in need of such support, based on parameters already discussed in section B of this chapter earlier.

137. Additional budget has been proposed for closure gaps assessed in case of compensation provided (as per available award document) for loss of encroachment structures. In all such cases where award value is less than 20 percent or lower than replacement cost valuation (prepared by consultant) and lacks plausible justification (aligned with ADB SPS) for observed variation, identified compensation gap will be closed through additional support measures by the project, as discussed earlier (paragraph 124.e).

138. Financial cushion in the form of contingency fund has been proposed to meet unforeseen costs, project impacts and liabilities that may get identified at later stage.

	Table 28: Project Budget				
	Item	Amount (Rs)	Remarks		
А	Livelihoods restoration plan and community development activities	3,00,00,000	Out of approximately 4700 PAPs (includes non- titleholders and additional PAPs that may be get added later due to pending land acquisition), it is assumed that maximum 50 percent of them may be interested in availing livelihood restoration benefits. Person specific cost will be subject to need and support provided. In case, higher number of PAPs express interest, activity costs will be adjusted within the allocated budget accordingly. Proposed budget includes cost for training and skill building inputs, non-cash-based livelihood support and other CDP activities.		
В	Compensation Gap Closure Assistance (encroachment structure loss)	2,00,00,000	Refer note below the table		
С	Stakeholder Consultation and GRM operation costs	20,00,000	Lumpsum budget for entire project life		
D	cost 30,00,000		Lumpsum (includes cost for engaging local NGO as implementing agency for 2 years)		
Е	External 10,00,000 Evaluation/Audit		Lumpsum		
F	Project Contingency	28,00,000	Calculated as 5% of sum of A, B, C, D and E		
	Total Project Cost	5,88,00,000			

Note:

*B: 71 encroachments (which includes 62 privately owned structures and 9 community structures) on government land were identified during IOL survey. Of these, 19 (14 privately owned structures and 5 community structures) are located on land parcels that were acquired in earlier land acquisition exercise (prior to this project) and have been compensated accordingly in past. They are hence not eligible for compensation. For the remaining (52 encroachments), award statements could be traced for 28 structures. Consolidated replacement cost for structure loss to these (28) structures has been estimated (by consultants) to be INR 1,73,71,356. As per award statements, the consolidated compensation value for these losses (corresponding to the same 28 structures) has been determined as INR 65,84,968, thereby indicating compensation gap. Replacement cost for all 52 structures (48 privately owned structures and 4 community structures on government land) has been assessed (by consultants) to be INR 2,72,70,785. Extrapolating the gap observed for 28 structures above, consolidated compensation gap for 52 structures has proportionately been estimated to be INR 1,69,33,236. To cover for possible retrospective compensation gap claims²⁴ for some of the encroachments that have already been cleared, the budget under this head has been enhanced to INR 2,00,00,000, and proposed accordingly.

139. The livelihoods restoration and community development budget accounts training and skill building inputs, and all non-cash-based support (towards livelihood restoration or

²⁴ Such claims will need to be supported with evidence to establish that structure loss compensation was not meeting replacement cost.

community development) to be taken up by the project. The implementing agency will identify the list of activities based on consultation with affected community/PAPs.

F. Stakeholder consultation, participation and disclosure strategy

140. Any infrastructure project may have a number of stakeholders who can influence, in a positive or negative way, functioning of the project. Therefore, it is important for any infrastructure project to identify relevant stakeholders and maintain a symbiotic relationship through continuous engagement with them all through the project life. Stakeholders for this project are the PAPs, NHAI officials, CALA officials, District Administration, Police, academic institutions, local transporters, local community, media persons, commuters using the road, etc. Project should, therefore, develop appropriate stakeholder engagement plan and implement them and maintain good relationship with them so that the project operates smoothly. In this section a strategy to deal with various stakeholders are discussed briefly that will be implemented during the construction as well as the operation phase.

141. As outlined above, stakeholders may have varying level of interest and influence over project activities. In the table below, list of stakeholders along with their impact on the project and associated concerns are provided.

		Table 29: Li	and impact		
SI No	Stakeholder	Impact of Project activities on Stakeholders	Influence of Stakeholder on functioning of the Project	Key concerns	Significance of Stakeholders
1	CALA	None	Most important role in Land Acquisition including identification of PAP, determining compensation, communicating to PAPs regarding compensation details, resolving grievances and finally acquiring required land	Timely determination of compensation amount Grievance redressal Timely deposit of compensation amount	High
2	NHAI	Achievement of target completion	Overall, in charge for approval of technical design, quality control, CoS works, release of money	Making available required land in time, provide timely feedback on work status, resolve grievances, timely release of money	Moderate
3	Legal title holders -	Reduced land holding, loss of	Land will be available for	Adequate compensation	High

4	Land and or Structure losers Encroachers	residence, physical/economic displacement, loss of earning sources, landlessness in some case, loss of livelihoods, temporary disruption in approach to their property, etc. Loss of residence,	project activities only if the land losers agree to provide the land against the compensation	Satisfaction of the land losers Quick redressal of grievance if any Adequate	High
	/ Squatters	loss of livelihoods, landlessness if on assigned land	available only when they agree to vacate the land	compensation Satisfaction of the land losers Quick redressal of grievance if any	
5	Mobile vendors, hawkers, etc.	Temporary / Permanent loss of livelihoods	No significant impact on the project	How to support / strengthen their livelihoods	Low
6	General community	Noise, air and other pollution Crossing the road from one side to the other will be a challenge Better connectivity Reduction in accident once project is completed Increased jo opportunity in O&M, toll plaza, etc. Temporary difficulty in accessing their property Damage to	General opinion about the project Availability of labour forces	Adequate provision for pollution control Providing enough number of underpasses, etc, Temporary safe alternatives to access their property Engaging the local people in project related jobs Establishing as before condition to temporarily damaged property	Low unless there is any particular opinion against the project
7	Road users /commuters	Frequent traffic jam Temporary road diversion Risk of accidents Lower travel time on completion of project	No significant impact on the project during construction phase and main source of fund in operation phase	Providing a well maintained road with adequate safety signages Providing grievance redressal system Adequate number of roadside facilities	Medium
8	Local transporters	May support their livelihoods / income	No significant impact on the project		

10	Local Media	None	5	How to provide	Medium
			· ·	correct information	
			thereby causing	about the project	
			hindrances in	How to get positive	
			project activities	coverage	
11	Local NGOs	None	May influence	How to provide	Low
			public opinion	correct information	
			thereby causing	about the project	
			hindrances in		
			project activities		

142. In order to deal with identified stakeholders, the following multi-pronged strategy is proposed:

- a. Rapport building
- b. Information sharing
- c. Stakeholder Consultations
- d. Documentation
- e. Monitoring and Reporting
- f. Grievance Redressal

143. Rapport building – It is important to build rapport with project stakeholders who might have certain influence on the project. In order to do so the project can undertake activities such as road safety awareness programmes, health camps, support local government school with small infrastructure support such as drinking water system, library books, etc. This will help in establishing a rapport with local communities.

144. Information sharing – Information sharing is not only a measure of transparency but also are tools for meaningful engagement with stakeholders of the project. Key project related information such as route alignment, infrastructure to be established, various rules and policies, livelihood restoration measures, etc. need to be shared with the stakeholders so as to keep them abreast of the project activities and efforts of the company to undertake activities in a transparent manner. This will be helpful in address any confusion and unrest among the affected people as well as other stakeholders such as local media, NGOs, etc.

145. Stakeholder consultations – Consultation with different groups of stakeholders such as affected community, local media, other stakeholders, etc. should be conducted from time to time bring in their views as well as to share project related information. One of the key consultations will be to engage with affected community regarding the livelihood restoration options and other community development activities so as to align these activities with the needs and concerns of the community. Project through its safeguard implementation staff and implementing agency will conduct consultations with affected communities to finalize livelihood restoration activities. Effective and meaningful role will be traced to involve affected community for planning and implementation livelihood restoration activities. These consultations will be carried out in all project villages which shall ensure that opinions of vulnerable groups (including women) are factored in while finalizing the plan.

146. Documentation – A formal documentation system shall be put in place to document all stakeholder engagement activities. This will help in to create a data bank for understanding external stakeholders. Documentation should keep information regarding stakeholders met,

DBL Social Audit for Widening of Anandapuram-Anakapalli Highway

place of meeting, key issues/concerns, response to these issues, photograph of events, report of the event, etc.

Monitoring and reporting - All activities conducted under the stakeholder engagement 147. process such as meetings, community development programmes, livelihood restoration activities, etc. should be properly monitored by the management and reported at relevant places for transparency as well as relation building.

G. Grievance Redressal Mechanism

148. Grievances are common in developing road projects. It can emanate from internal (employees) or external (community members, road users, other agencies) sources. It is important to have an appropriate grievance redressal mechanism in place so that all grievances can be resolved timely and effectively. The grievance redressal mechanism should provide for grievance identification process, recording, redressal mechanism, disclosure mechanism, institutional set up, etc.

149. Projects such as this brings in a considerable change in the landscape of the project geography affecting the local population living in and around this geography. Further user of the infrastructure created by the project have their own sets of experience. Also, the people involved in establishing and operating the infrastructure have their own level of interaction with the project. These people due to their level of interaction / engagement with the project infrastructure, may have grievances which may risk or adversely impact project activities. Therefore, it is important to place a grievance redressal mechanism in place to record, resolve and communicate back grievances raised internally by the project staff or externally by community. It is important to resolve the complains as early as possible and hence it is important to put in a formal mechanism in place. In the section below a grievance redressal mechanism for this project is proposed.

Purpose of this GRM is to receive and resolve any concern of internal or external 150. stakeholders which says that one or more of the project activities adversely affecting their quality of life or livelihoods or environment.

Category of grievance – There may be many types of grievances against a project. Some 151. of the major grievance category are:

- Internal grievance (employees related) a.
- b. Contractor and labour related grievances
- External grievances (PAPs, general community, commuters/road users) c.

Employees grievances may be related to wage/salary/other benefits, working condition, 152. discrimination, PF/ESIC, etc. It is assumed that these issues must have been addressed by the HR policy of DBL. Hence the proposed grievance redressal mechanism has excluded the employee related grievances to be addressed in accordance with the company's HR policy.

153. Contractor and labour related grievances may include issues related to wage rate, working condition, discrimination, working hour, facilities in labour camps, health condition, EPF/ESIC, etc. These issues are more or less similar to the issues/grievances raised by internal employees. It is assumed that the company HR policy is in place to deal with employee grievances. The same policy can be extended to the labourers hired directly or through DBL Social Audit for Widening of Anandapuram-Anakapalli Highway 56

contractors. These contractors may be asked, as part of contract agreement, to comply with relevant provisions of the company HR policy. Therefore, the proposed grievance redressal system does not take into account contract and labour issues.

154. External grievances – There are mainly 3 types of external stakeholders who may have grievances with the project. Key grievances of these stakeholders are:

- a. PAPs may have grievances related to land acquisition matters such as damage to land/structure/crop, inadequate/lower valuation of land/structure, issues related to income loss, adverse impact on common property resources, delay in compensation disbursement, denial of compensation, non-recognition of project impacts in claim settlement etc.
- b. General community living in and around the project area may have day to day interaction with the project and may have grievances related to safety issues, pollution/health issues, drainage/water logging issues, disruption in access to their property, temporary use or damage to their property, etc.
- c. Commuters / road users may have issues related to traffic jam, traffic diversion, safety issues, accident issues, pavement quality, toll rate issues, etc.

155. It is to be noted here that some of the issues/grievances raised by the external stakeholders may not be resolved through the proposed grievance redressal mechanism (few examples suggested as below). For all such grievances, the GRM will facilitate the affected person in approaching appropriate authority such as CALA, communicate their grievances to prompt resolution.

- a. Procedural issues related to compensation estimation, and disbursement of compensation amount;
- b. Internal conflict among PAPs related to stake over land/assets to be acquired for the project;
- c. Personal dispute between labour/employees and community members;
- d. Any other.
- 156. Proposed GRM will have the following key operational features:
 - a. **Reducing instances of grievances** Proactive engagement with external stakeholders on a continuous basis will help the project to assess if there is any problem/grievance brewing among the stakeholders. This will help in addressing the reason of possible grievance and thereby avoid potential grievance.
 - b. **Publicizing the GRM** Relevant GRM related information such as who can raise the complaint, where and how grievances can be registered, personnel responsible for receiving and responding to complaints, etc. should be displayed at prominent places so that the stakeholders can easily access them. Also, it should be in local language so that it is easily understood by stakeholders.
 - c. **Receiving and Registering grievances** All grievances should be received at designated placed and records of the same should be kept in the grievance register. Also, wherever possible the complainant shall be given a receipt of the grievance registered by his/her. The grievance register shall have provision for information including but not limited to date of grievance, complainant name and address

(anonymity options shall be given to the complainant, grievance type, mode of communication, acknowledgement receipt, concerned department/ person, status (Open/Closed), proposed resolution, date of closure, details of closure communication to complainant, and reasons for delay if any in the resolution process.

- d. **Investigating grievances** The person responsible for handling grievances shall arrange to validate the legitimacy of the complaint and to ascertain that the complaint is related to the project or project activities.
- e. **Resolving grievances** The person responsible for grievance with the help of concerned department will find a response to the grievance and implement the required corrective measures. If the grievances are outside the powers of the company such as release of compensation amount, dispute in measurement, change of scope items, etc. then the company will facilitate engagement between the aggrieved parties and the concerned agency for speedy redressal of the grievance.
- f. **Reporting and Recording** Once the grievance is resolved and corrective actions are taken same should be communicated to the aggrieved party whenever possible. It should also be updated in the grievance register for closure of the complaint loop and for future reference. Further, the GM, Project should also report internally within DBL and externally to relevant parties such as NHAI the status of grievances received, and action taken in a fortnightly frequency. Summary documentation of grievances, nature of grievances, its resolution status will be maintained and shared as part of quarterly/six monthly LRP implementation progress reporting to ADB.
- g. **Monitoring** Grievance occurrence and handling shall be monitored in a regular basis to assess the effectiveness of the monitoring mechanism and make necessary changes. Some of the key indicators those can be tracked are : number of grievances received and resolved; community preference for any particular channel to register their grievances; average time taken in resolving grievances; effectiveness of solutions provided; repeat grievances of same nature if any, etc.
- h. **Institutional Arrangement** The social safeguard officer at the project level shall be the point person for management of GRM operations. S/he shall report to the GM, Projects and work under his/her direct guidance.
- i. **Training and capacity building** All the employees and contractors of the project shall be trained on the grievance redressal mechanism of the company. The training module shall include at least accepted behaviour and practices when interacting with employees and external stakeholders, routes available to lodge grievance, responsible person for managing grievances, tracking procedure, etc.
- j. **Review and Update** The GRM process shall be reviewed from time to time to assess whether it is responding to the grievances of employees and external stakeholder or not and make necessary changes in a timely manner.

157. As an additional scope under this project, the GRM will also facilitate the safeguard cell, PIU in identifying PAPs interested in benefiting from livelihood restoration measures and any other grievance related to operationalization of livelihood restoration measures. In this DBL Social Audit for Widening of Anandapuram-Anakapalli Highway 58

respect it shall support in eligibility claim verification of interested PAPs, grievance register and resolution related to implementation of livelihood restoration and other gap closure activities

158. The GRM shall have the following proposed architecture

Figure 9: Grievance Redressal Mechanism

Note:

- legal recourse will be available to PAPs for land acquisition related grievances which will be independent of project's GRM arrangements
- for land acquisition related grievances, project GRM will act as facilitator in resolving the issue by communicating and consulting with CALA

H. Institutional Arrangement

159. The implementation of livelihood restoration activities and other gap closure measures would require planning and coordination with multiple stakeholders at various levels. An institutional arrangement is proposed is proposed to manage these tasks.

At the corporate office level, a Social Safeguard Manager will be required to plan, 160. coordinate with project office and report land acquisition and livelihood restoration related activities. He will have to coordinate with the HR and Finance department for various activities. He will be reporting to the Head, Projects at the corporate office.

161. At the project level, a safeguard cell within the project implementation unit (PIU) will be set up for proper implementation of the livelihood restoration and gap closure activities. This shall comprise of:

59

- a. General Manager of the project will have the overall responsibility for implementation of livelihood restoration and gap closure activities at the project level;
- b. Social Safeguard officer will be deployed who under the supervision of general manager will be responsible for overall planning, coordination, implementation, monitoring and reporting of livelihood restoration, gap closure and social safeguard compliance measures. Related to livelihood restoration, specific role will be to plan and operationalize measures discussed earlier in coordination with the land acquisition team, resolve any issues hindering the progress and ensure achievement of all targeted activities and report the status;
- c. Land acquisition support team A land acquisition coordinator assisted by 2 field coordinators will liaison with the PAPs who are yet to receive compensation, CALA office and NHAI to expedite the Land Acquisition process. They will also be responsible for identifying and communicating the remaining land acquisition areas and issues.

162. Implementation agency for livelihood restoration activities– Implementation of proposed livelihood restoration activities are not among the core competencies of DBL. Therefore, it is proposed that a local NGO will be hired to plan and implement these activities in the field. For this purpose, the proposed agency (or alternately if implemented in house by the PIU) the implementation arrangement shall be constituted of the following team:

- a. Team Leader cum livelihood restoration expert (1) The project team leader will be responsible for overall planning and implementation of the livelihood restoration activities, coordination with PIU for grievance redressal and other gap closure measures identified in the audit report. S/He will also be responsible for identifying livelihood training providers and coordinating the training of PAPs on various skills.
- b. Community Mobilizer (3) The community mobilizers will be responsible for identifying PAPs interested in availing livelihood restoration support, collecting their baseline information and vulnerability status, stakeholder consultations and field level GRM operation, implementing the livelihood restoration activities and any other work assigned to them from time to time.
- c. Assistant cum data entry operator

163. The proposed institutional arrangement for implementation and reporting of the livelihood restoration activities is presented in the figure 10 below:

Figure 10: Implementation Arrangement

164. The Specific roles and responsibilities of the LRP team is summarized in the table 30 below:

	Table 30: Roles and Responsibilities			
Official	Roles and Responsibility			
Corporate Office Level				
Head, Projects	 In charge of overall planning and implementation of livelihood restoration activities and coordinating the Land Acquisition process Liaison with ADB Finance and Budget 			
Social Safeguard Manager	 Assist the Head Projects in implementation of the livelihood restoration activities Providing technical assistance to the project team and the partner NGO and build their technical capacity for implementation of the livelihood restoration activities and coordinating the Land Acquisition process Monitoring implementation of the livelihood restoration activities, Coordinate with implementation unit Review and prepare the progress report of the Land Acquisition status, livelihood restoration activities and gap closure status 			

DBL

	• Database management related to Land Acquisition, gap closure and livelihood restoration activities
Project Level	
General Manager, Project	 In charge of overall planning and implementation of activities in the field and head safeguard cell of the PIU Liaise with NHAI/CALA for update on Land Acquisition process Capacity building and dispute resolution of team members Progress reporting to head office
Social Safeguard Officer	 Assist the GM, Project in implementation of the livelihood restoration activities, updating the Land Acquisition and gap closure status Manage safeguard cell and ensure safeguard compliance at project level Providing technical assistance to staffs of partner NGO/implementation unit and build their technical capacity for implementation of the livelihood restoration activities Monitoring implementation of the livelihood restoration activities and gap closure measures, review and preparation of report Coordinate with NGO/implementation unit for implementation of livelihood restoration activities Database management of Land Acquisition, livelihood restoration activities Plan and implement other community development activities
Land Acquisition Support Team	 Identify areas where Land Acquisition is yet to be completed Identify PAPs who are yet to receive compensation Identify reasons for which Land Acquisition is pending Coordinate with NHAI/CALA for quick redressal of issues and release of compensation Periodically report to GM, Project the status of Land Acquisition
NGO Partner/implementation unit (in house) – Team Leader	 Primarily responsible for finalization and implementation of livelihood restoration activities Coordinate and report to safeguard cell, PIU for implementation of livelihood restoration activities, grievance redressal and other gap closure measures capacity building of team members, trainers Support safeguard cell, PIU in preparation of report preparation and documentation
NGO Partner/ implementation unit (in house)- Community Mobilizer	 Identify PAPs interested in livelihood restoration support Prepare a baseline of socio-economic information of the identified PAPs, vulnerability status Conduct stakeholder consultations and field level grievance redress activities Implement the livelihood restoration activities Report to the team leader progress of livelihood restoration activities
NGO Partner/ implementation unit (in house) – Assistant cum data entry operator	 Assist team members as per task assigned Data entry

Selection Criteria for the NGO
The selection of the NGO to assist and support the implementation of the livelihood restoration activities would be done by the GM, Project. The selection criteria for the NGO would include (but not be limited to)

- They should have local presence;
- They should have prior experience of implementing livelihood restoration/support activities;
- Should have a team with adequate experience;
- Prior experience of developing and implementing resettlement action plans will be a plus;
- Willing to deploy a full time team for the project.

It is envisaged that the NGO would be engaged for a time of 24 months.

I. Implementation Plan

Key Activities

165. The process of the implementation of the livelihood restoration, gap closure and community development activities involve the following:

- a. Setting up of project implementation unit and safeguard cell within it as per staffing propose
- b. Hiring of staffs and support agency (NGO)/mobilizing inhouse implementation unit
- c. Setting up of GRM
- d. Preparation and finalization of the list of affected Persons/families, updating information on compensation disbursement
- e. Training and capacity building of internal staffs and NGO staffs
- f. Discussion with related stakeholders, identification of interested PAPs and finalization of livelihood restoration options acceptable to them, conduct of public consultations
- g. Implementation of other community development activities such as road safety awareness drives, computer literacy programmes, community health and safety measures, health camps, etc.
- h. Implementation of livelihood restoration and gap lcosure activities; and
- i. Monitoring, reporting and Evaluation (internal/third party closure audit).

166. The above proposed activities are divided in to three broad categories based on the stages of work and process of implementation. The details of activities involved in these three phases, i.e. Project Preparation Phase, Implementation phase and Monitoring and Evaluation period are discussed in the below sections.

Project Preparation Phase

167. The major activities to be performed in this period include establishment of institutional mechanisms including hiring staffs to be deployed at Head office as well as project level and hiring of implementing agency (NGO)/mobilization of inhouse team for implementation of livelihood restoration.

168. The staffs need to be trained on the need and implementation strategy for livelihood restoration activities including the role and responsibility of individual staff members. The training will include understanding of the RFCTLARR Act and and stakeholder engagement strategy, grievance redressal mechanism, etc.

169. During this phase PAPs who are to be provided the benefits under the livelihood restoration measures will be identified and verified. Once the PAPs are identified the NGO staff/implementation unit will have discussion with them on a one-to-one or in groups to find out their preference of livelihood activity. While conducting these discussions NGO staffs will have the tentative budget and bouquet of activities with them but will not provide any lead to the PAPs so that their unbiased preference can be captured. Any other grievance related to land acquisition; information related to gap closure issues will also be collected in parallel.

170. Once preference of all the PAPs are captured a detailed plan of action along with plan and budget for each individual will have to be prepared, discussed internally and finalized. The detailed plan shall also consist of stakeholder engagement activities as well as other development activities proposed to be taken up by project. As part of rapport building exercise, activities such as traffic safety activities, health camps, etc. will be conducted

Implementation Phase

171. After the project preparation phase, the next stage is implementation of livelihood restoration activities which would include;

- j. Collection of baseline information of PAPs who are to be benefitted from the project;
- k. Implementation of stakeholder engagement activities over the full duration of the assignment;
- 1. Implementation of livelihood restoration and gap closure (example measures to meet cost gaps in compensation for encroachment structures) activities;
- m. Closure of the livelihood restoration and gap closure activities.
- n. Quarterly reporting

Monitoring and Evaluation Phase

172. The internal as well as external monitoring process including closure audit, impact assessment, etc. will be done at this stage. A third party external evaluation will be conducted to confirm gap closure and completion of livelihood restoration activities.

Implementation Schedule

173. Key activities described above for livelihood restoration and gap closure activities will be completed over a period of next 2 years. The proposed timeline is as follows:

Table 31: Implementation Schedule for Livelihood Restoration and Gap Closure									
Activity		Timeline							
Activity	Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	
Project Preparation Phase									
Hiring/mobilization of internal staff									
Setting up and operationalization of GRM

Reporting by NGO (Quarterly/Six-monthly)								
External Audit on closure of LRP								

J. Monitoring, Reporting and Audit

174. The project will put in place a monitoring, reporting and audit framework to assess the overall status of disbursement and other entitlements to affected persons, and implementation of livelihood restoration activities. These activities will be regularly monitored and reported periodically to ADB. An external audit shall be conducted upon completion of LRP implementation to assess it successful closure.

- 175. The suggested framework will have three components;
 - a. Monitoring;
 - b. Reporting and;
 - c. Completion Audit; and

These aspects have been discussed in the sections below.

176. The Monitoring Programme for the Project will include and be aimed at:

- a. Regular, on-going monitoring of disbursement of compensation and other entitlements to all affected persons (refer section #B and #C of this chapter on parameters to be monitored and reported) and implementation of livelihood restoration and gap closure activities
- b. Monitoring effectiveness of stakeholder participation and other engagement activities
- c. Monitoring of GRM
- d. To assess compliance against ADB SPS requirements
- DBL Social Audit for Widening of Anandapuram-Anakapalli Highway

e. Identify gaps against targets set and take corrective actions based on internal monitoring assessments.

177. Project office of DBL will be responsible for monitoring the performance and progress of the targeted activities at the project level and DBL's head office will be responsible for monitoring the performance at corporate level and reporting to ADB.

178. For monitoring, key parameters those will be monitored are (this is a tentative list and can be modified as per need):

- a. Status of Land Acquisition
- b. Compensation disbursement status;
- c. Livelihoods restoration activities initiated/in progress;
- d. Cost gap closure status
- e. Quality of the delivery mechanism/implementation process;
- f. Performance of the NGO/implementation unit engaged for livelihoods restoration activities;
- g. Functioning of the Grievance Redressal Mechanism;
- h. Information disclosure and transparency in implementation of livelihoods restoration activities.

179. Quarterly/half yearly progress reports will be submitted by the project to ADB. Reporting will be made based on parameters indicated above. Further detailing reporting parameters are provided in the table below.

180. On the completion of the livelihood restoration and gap closure activities external audit will be conducted which shall assess successful closure of planned activities.

181. A detailed listing of monitoring and reporting indicators is provided below. The list may be finetuned further in consultation and agreement with ADB.

Table 32:	Suggested List of Monitoring and Reporting Indicators
Indicators/Variables	Variables - All data should be disaggregated by gender, vulnerable
	groups as required and for different groups of PAPs
Resource Inputs:	• Number of persons/staffing deployed;
	 training and capacity building inputs- number trainings etc.;
• Staffing;	• Financial provisions to carry out livelihood restoration and gap closure
• Budget and Time	measures;
Frame;	• Availability and access to information related to LA&RR, PAP list,
• Basic information on	compensation disbursement data etc.;
PAP;	
Stakeholder	• Number and type of consultations carried out?
Consultation and	• Number and type of participants?
Participation:	• Venue, data, discussion agenda,
	• Were proceedings participative, inputs received, key concerns and
 Participation 	suggestions?
 Staff capacities; 	• Have inputs received during consultations incorporated in livelihood
• Adequacy and	and gap closure strategy/principles
effectiveness of Public	• Participation of vulnerable peoples- number, type, inputs/opinion
Consultation process;	received from these groups?
	• No. of General meetings (for both men and women);

• Effectiveness of the	• % of women out of total participants;
Internal Monitoring	• Number of meetings exclusively with women;
Mechanism;	 Number of meetings exclusively with vulnerable groups;
• Compliance with	• Level of participation in meetings (of women, men & vulnerable
Policy and framework	groups);
requirements;	• Number of Community Compensation Assessment meetings held;
• Transparency and	 Number of visits by DBL staff and NGO;
Accountability;	• Have any PAPs been made aware about GRM?
GRM	• Whether it is in place
	• Staffing
	 Number of grievances received- formal, informal
	• Number of grievances resolved, pending, timeframe of resolution
	• Number of grievances escalated
	• Type of grievances and type of complainant
	• Grievance related to LA and R&R aspects, whether facilitated in
	resolution
	• Grievances related to road construction, operation, maintenance,
	community safety etc.
	Any gender related grievances
Land Acquisition and	Status of land acquisition- disbursement of compensation
Delivery of	 Pending land acquisition- pending compensation status (details)
Entitlements:	• Compensation payment status of non-titleholders (refer Appendix 14
Linthements.	for template for updated information on status), cost gap status
	• Have compensation been adequate to meet replacement cost,
	specifically non-titleholders (refer Appendix 14A, to establish
	adequacy of compensation to encroachers)
	• Have PAPs received payments on time?
	• Have/are PAPs who were impacted by temporary land access been
	compensated?
	• PAP specific compensation disbursement status of PAPs identified
	during IOL and census survey, non-titleholders listed in the valuation
	sheet provided by tehsildar
	• Aggregate (village level) compensation disbursement status for the
	entire project
	• Has GRM identified any new person claiming to be affected but has
	been denied compensation?
LRP implementation and	• Number of PAPs as beneficiary (reporting quarter and cumulative)
other community	• Type of benefits provided (skill building, non-cash based support)
development activities	 Number and type of vulnerable PAPs benefited
	• Livelihood restoration and gap closure activities/support provided
	during reporting period, cumulative status
	• Case examples of impacts of livelihood restoration interventions,
	sustainable livelihood impacts/outcomes
	• Details of other community development activities, beneficiaries
Gender and vulnerable	• Participation and representations in activities carried out, support
groups	provided to PAPs;
	 Number as livelihood restoration beneficiaries
	• Number if any from these groups have been provided employment in
	opportunities created by the project
	• Grievances if any specifically from these groups
	She values if any specificarry from these groups

Appendix 2: Socio-economic profile of project affected households

(PAPs who have cleared RoW and PAPs existing in RoW)

A. Socio-economic profile of the PAPs in the Project who have cleared RoW

1. Based on the data made available by DBL, 89 PAPs, randomly sampled from 21 villages of four blocks, were covered for socio-economic survey. Village wise number of samples are presented in table A1 given below.

Table A1: Sample Size						
Sr. No.	Mandal/Villages	Sample Count

	Total	89				

2. The family size of the identified samples ranges from 1 member to 11 members. There are total 383 members in the 89 sample households surveyed during the study of PAPs. 50.56% of the households have 4-6 members in the family. 34.83% households have 1-3 members whereas only 14.61% households have confirmed presence of 6 or more family members in the household. There are 53% male and 47% female members in the households surveyed.

4. A total of 29.79% members in the households surveyed are illiterate whereas only 0.53% members have declared that they can only read and write. The rate of illiteracy among the female members in the households surveyed is high as 34.09% compared to 26% among male members. A total of 24.47% household members have studied upto class 10 followed by 11.44% members who have completed primary education. The percentage of female and male members differ by only 0.93% in the education completed up to primary level. A total of 7.45% members have studied up to class 12 where the percentage of female members is significantly lower compared to the male members. Only 15.96% household members have studied up to graduation, where female and male percentage stands at 10.23% and 21% respectively.

	Table A4: Education status of household members									
Education	Number of male members	Percentage of male members	Number of female members	Percentage of female members	Total memb ers	Percentage of total members

Source: Census Survey, March 2020							

11. Only 1 surveyed household has confirmed to have filed the arbitration case with respect to the lower compensation received against the losses due to land acquisition. There are about 4 households who have raised grievances related to lower compensation being offered but have not confirmed on availing the route of arbitration to address their grievances.

B. Socio Economic Profile of the PAPs in ROW

12. The IOL survey identified 139 structures in the RoW. Out of these 35 were abandoned. Remaining 104 structures were surveyed of which 88 are privately owned. There are 95 PAPs who have claims to these 88 privately owned structures. In the section below socio-economic information of these 95 families have been discussed.

Head of Household

13. The information regarding the head of households was available for 74 households. Out of these households 25 are headed by women, whereas 49 households are headed by men.

Table B1: Household Head in PAPs

Appendix 8C: Structure valuation sheet by R&B department – (Sample Structure – open well)

Appendix 9: Market valuation of Impacted Structure

- Qualified and experienced civil engineer visited the site to identify various types of • structure that are present in the RoW such as load bearing structure, frame structure, boundary wall, brick wall with AC sheet roof, brick wall with straw roof, etc. were identified to represent for all structures that exist in the RoW.
- Further, consultations were carried out with local contractors and construction material ٠ shops to get information about the cost of various types of construction material and labour to assess the prevailing market rates.
- This was followed by preparation of average cost sheet for each type of the identified structure. One such sample is presented in table below:

Sl No	Item	Qty*	Unit	Rate	Amount
1	Boring for pile-	36.60	mtr	55.00	2,013.00
2	RCC 1:1.5:3-Pile	2.59	cum	7,484.52	19,384.91

Social Audit for Widening of Anandapuram-Anakapalli Highway

Total Cost for 18 sqm plinth area	3,25,340.52
Average cost for 1sqm plinth area	18,074.47
Add for internal and external services@26% (Int.4%+ext.5%+int elt 12.50%+powering wiring 4%+lit cond 0.50%=26%)	4,699.36
Average cost for 1 sqm plinth area	22,773.84
Average cost for 1 sqft plinth area	2,116.53

*figures have been taken from CPWD standards.

• Appropriate adjustments were made based on the actual dimension, construction quality, construction status, etc. and final rate for a particular structure was determined. For example, the structure in Appendix 8A comes under the type explained in the table above but without the roof and internal and external services. Therefore, for estimation of market value for this structure, Rs 1433 per sqft was adopted as unit rate.

Appendix 10: Sample Public Notice as per section 3G of NH Act

Government of India MINISTRY OF ROAD TRANSPORT & HIGHWAYS PUBLIC NOTICE Rc.No.114/2016/SA dated: 03-10-2019. Appendix 12: Comments on MoRTH/NHAI's responsibility against Second Schedule provisions of RFCTLARRA

Adaptation and application of schedule II of RFCTLARRA, 2013 to NHAI projects.

Source: https://morth.nic.in/sites/default/files/A_Manual_of_Guidelines_on_Land_Acquisition_for_National_Highways_File3449.pdf, December 2018

Sl No (1)	Elements R&R Entitlements (2	of	Entitlement provision (3)	Comments on MoRTH/NHAI's responsibility (4)
1.	Provision housing units	of	 (1) If a house is lost in rural areas, a constructed house shall be provided as per the Indira Awas Yojana specifications. If a house is lost in urban areas, a constructed house shall be provided, which will be not less than 50 sq mts in plinth area. (2) The benefits listed above shall also be extended to any affected family which is without homestead land and which has been residing in the area continuously for a period of not less than three years preceding the date of notification of the affected area and which has been involuntarily displaced from such area: Provided that any such family in urban areas which opts not to take the house offered, shall get a one-time financial assistance for house construction, which shall not be less than one lakh fifty thousand rupees: Provided further that if any affected family in rural areas so prefers, the equivalent cost of the house may be offered in lieu of the constructed house: Provided also that no family affected by acquisition shall be given more than one house under the provisions of this Act. 	This benefit is envisaged for the "affected family" in case of displacement. It is an admitted position that certain residential units may come within the RoW or extended RoW in the process of Land Acquisition for a road project. The owners of such dwelling units are in any case entitled to the price of land situated under such dwelling units, as also the assessed value of the structure. In addition to the above, such land owners would also be entitled to a constructed house in terms of para (1) under Column (3) above, if the affected family is displaced and dislocated from the area. The "Indira Awas Yojana", as referred to in the Second Schedule, has been revamped as " Pradhan Mantri Gramin Awaas Yojana " now for the Rural areas. Similarly, the Ministry of Housing and Urban Affairs is implementing a scheme known as " Pradhan Mantri Awas Yojana- Housing for All (Urban)" for the Urban areas. Both the above Ministries have specified the size of the dwelling units being provided to the beneficiaries and the financial limits for construction/ provision of such units under the above schemes. It is natural that the costing of such units would also get suitably adjusted from time to time. It is, therefore, in order that a family, whose dwelling unit is lost in the process of acquisition of land for a NH Project and is displaced and dislocate from the affected area is also paid the amount prescribed under the two

Sl No (1)	Elements of R&R Entitlements (2)	Entitlement provision (3)	Comments on MoRTH/NHAI's responsibility (4)
		<i>Explanation.</i> —The houses in urban areas may, if necessary, be provided in multi-storied building complexes.	schemes at such time, subject to a minimum of Rs. 1.50 lakh, in addition to the compensation amount for the land and the structure paid to them. The possibility of an affected family being in unauthorized occupation of such land cannot be ruled out. In such cases, while the affected persons/ family would not be entitled to any compensation for the land and the assessed value of the structure (being in unauthorized occupation by way of encroachment on public land), however, the affected family, if displaced and dislocated, would still be entitled to the benefits as per para (vi) above under the Second Schedule if it has been in occupation of such place for a period of three years or more.
2.	Land for Land	In the case of irrigation project, each affected family owning agricultural land in the affected area and whose land has been acquired or lost, or who has, as a consequence of the acquisition or loss of land, been reduced to the status of a marginal farmer or landless, shall be allotted, in the name of each person included in the records of rights with regard to the affected family, a minimum of one acre of land in the command area of the project for which the land is acquired: Provided that in every project those persons losing land and belonging to the Scheduled Castes or Scheduled Tribes will be provided land equivalent to land acquired or two and a one half acres, whichever is lower.	Not attracted for NH Projects
2A	Offer for Developed Land	In case the land is acquired for Developed urbanisation purposes, twenty per cent of the developed land will be reserved and offered to land owning project affected families, in proportion to the area of their land acquired and at a price equal to the cost of acquisition and the cost of development:	Not attracted in the case of NH Projects

Sl No (1)	Elements of R&R Entitlements (2)	Entitlement provision (3)	Comments on MoRTH/NHAI's responsibility (4)
		Provided that in cases the landowning project affected family wishes to avail of this offer, an equivalent amount will be deducted from the land acquisition compensation package payable to it.	
3.	Choice of Annuity or Employment	The appropriate Government shall ensure that the affected families are provided with the following options: (a) where jobs are created through the project, 'after providing suitable training and skill development in the required field, make provision for employment at a rate not lower than the minimum wages provided for in any other law for the time being in force, to at least one member per affected family in the project or arrange for a job in such other project as may be required; or (b) onetime payment of five lakhs rupees per affected family; or (c) Annuity policies that shall pay not less than two thousand rupees per month per family for twenty years, with appropriate indexation to the Consumer Price Index for Agricultural Labourers.	The scheme of "Rehabilitation and Resettlement" is applicable in cases where the landowner, whose land is acquired, and the landless family whose source of livelihood is dependent upon such landowner, is dislocated and compelled to change his place of residence or business due to such acquisition. This situation normally does not occur in the case of acquisition of land for linear projects like National Highways, unless a person's entire landholding is acquired. The Second Schedule refers to Sections 31(1), 38(1), and 105(3) of the RFCTLARR Act and these sections do not contain any provision in respect of this component of "Choice of Annuity or Employment". Secondly, even if it is assumed that these provisions have a correlation with the overall scheme of RFCTLARR Act, 2013, this component has multiple options, which have to be specified by the appropriate government. It is beyond the Competent Authority or the Collector to make an Award in this behalf in the absence of any provision by the Appropriate Government.
4.	Subsistence grant for displaced families for a period of one year	Each affected family which is displaced from the land acquired shall be given a monthly subsistence allowance equivalent to three thousand rupees per month for a period of one year from the date of award. In addition to this amount, the Scheduled Castes and the Scheduled Tribes displaced from Scheduled Areas shall receive an amount equivalent to fifty thousand rupees. In cases of displacement from the Scheduled Areas, as far as possible, the affected families shall be relocated in a similar ecological zone, so as to preserve	This provision is attracted in the case of displaced families. This would be applicable in cases where the family whose land is acquired, or the landless family whose source of livelihood is dependent on such landowning displaced family. In each such case, an amount of Rs. 36,000 would be payable. Further, if such displacement of any family from the SCs and the STs takes place in the Scheduled Areas, an additional amount of Rs. 50,000/- would be payable.

DBL Social Audit for Widening of Anandapuram-Anakapalli Highway

Sl No (1)	Elements of R&R Entitlements (2)	Entitlement provision (3)	Comments on MoRTH/NHAI's responsibility (4)				
		the economic opportunities, language, culture and community life of the tribal communities.					
5.	Transportation cost for displaced families	Each affected family which is displaced shall get a one-time financial assistance of fifty thousand rupees as transportation cost for shifting of the family, building materials, belongings and cattle	Again, this would be applicable in cases where a family is displaced and is compelled to change its place of residence to any other location. This would not apply if the displaced family does not have to change its place of residence or business to any other village/town.				
6.	Cattle shed/petty shops cost	Each affected family having cattle or having a petty shop shall get one-time financial assistance of such amount as the appropriate Government may, by notification, specify subject to a minimum of twenty- five thousand rupees for construction of cattle shed or petty shop as the case may be.	The one-time financial assistance of Rs. 25,000/- or the amount as may be prescribed by the appropriate government, would be payable to an affected family if the land where its source of livelihood was existing (petty shop/ cattle), comes under acquisition.				
7.	One time grant to artisan, small traders and certain others	Each affected family of an artisan, small trader or self- employed person or an affected family which owned non-agricultural land or commercial, industrial or institutional structure in the affected area, and which has been involuntarily displaced from the affected area due to land acquisition, shall get one-time financial assistance of such amount as the appropriate Government may, by notification, specify subject to a minimum of twenty-five thousand rupees.	Applicable only in cases of involuntary displacement of the affected family from the affected area due to land acquisition.				
8.	Fishing rights	In cases of irrigation or hydel projects, the affected families may be allowed fishing rights in the reservoirs, in such manner as may be prescribed by the appropriate Government.	Not attracted in the case of NH Projects				
9.	One-time Resettlement Allowance	Each affected family shall be given a one-time "Resettlement Allowance" of fifty thousand rupees only.	This provision would apply only where an affected family is displaced and has to re settle somewhere else due to acquisition of his land.				
10.	Stamp duty and registration fee	(1) The stamp duty and other fees payable for registration of the land or house allotted to the affected families shall be borne by the Requiring Body.(2) The land for house allotted to the affected families shall be free from all encumbrances.(3) The land or house	This provision would be applicable only in rare cases where an alternate residence or land is allotted to the affected family. The amount of Stamp Duty would be paid only upon submission of documentary evidence to that effect.

Appendix 13: Terms of Reference for NGO to be hired for implementation of livelihood restoration measures

A. Project Background

1. Government of India had entrusted the National Highway Authority of India the development, maintenance and management of National Highway 5 (new NH-16) Anandapuram – Pendurthi – Anakapalli including the section from km 681.000 (existing km 681.000) to km 731.780 (existing km 742.400). NHAI had resolved to augment the existing road from Anandapuram to Anakapalli (approx. 50.650) of National Highway 5 (new NH-16) to six lanes in the state of Andhra Pradesh under the Bharatmala Pariyojana on design, build, operate and transfer (the Hybrid Annuity mode) basis. The Authority had adopted a single stage two envelope bidding process. After evaluation of bids, Dilip Buildcon Limited (DBL) was selected and the Concession Agreement was signed on 13th April 2018.

2. DBL, as part of the project, proposes to take up livelihood restoration measures for the affected person in an effort towards retrospective mitigation of project impacts. A social audit report with suggested livelihood restoration measures has been prepared. The document contains information about existing encumbrances, PAPs, eligibility criteria, bouquet of livelihood support activity, budget and timeline.

3. DBL seek the services of an NGO having local presence and experience in implementing livelihood restoration activities to implement these activities at the field level.

B. Objectives of the Assignment

- 5. The NGO shall be responsible for the following:
 - To verify eligible PAPs for livelihoods restoration support and prepare the final list;
 - To develop a communication strategy regarding how and what kind of information is to be shared with the PAPs;
 - To provide support and information to displaced persons for livelihood restoration;
 - To engage with the individual PAPs to find out their choice of livelihoods support and prepare final plan for implementation livelihood restoration measures;
 - To collect baseline information of the PAPs to be supported through livelihood restoration activities;
 - To prepare detailed implementation plan;
 - To implement the finalized plan livelihoods restoration activities;
 - To collect data and submit progress reports on a monthly and quarterly basis for the project to monitor the progress of implementation livelihood restoration measures
 - To attend to the vulnerable PAPs with targeted focus and assist them to come out of their vulnerability (where applicable)

C. Scope of Work

a) Administrative Responsibilities of the NGO

- To assist the displaced persons in redressing their grievances;
- Provide baseline data of the PAPs to be supported through the livelihood restoration plan;
- To submit monthly and quarterly progress report of livelihoods restoration activities to DBL including both physical and financial progress. The report should also cover implementation issues, summary of grievances and summary of consultations;
- b) Responsibilities for Implementation of the Livelihoods Restoration Measures
- NGO shall verify the information already collected and the individual losses of the displaced persons;
- NGO shall establish rapport with PAPs, consult with them individually or in groups, generate acceptable livelihoods support, prepare identity cards for eligible PAPs containing a photograph of the PAP, extent of loss suffered, livelihoods restoration support, and contact details of NGO and DBL;
- Prepare the final plan for individual specific livelihood restoration support and its implementation details;
- Prepare monthly action plans with targets in consultation with DBL;
- During the verification of the eligible PAPs, the NGO shall ensure that each of the PAPs is contacted and consulted either individually or in groups. The NGO shall specially ensure consultation with women from the PAPs especially women headed households.
- Participatory methods should be adopted in assessing the needs of the displaced persons, especially with regard to the vulnerable groups of displaced persons. The methods of contact may include village level meetings, gender participation through group's interactions, and individual meetings and interactions;
- The NGO shall explain to the PAPs objectives of the livelihood restoration measure, key provisions under proposed support measures. This shall include communication to the roadside squatters and encroaches;
- In all of these, the NGO shall consider women and vulnerable as special focus group, and deal with them with care and sympathy.
- Identify livelihood opportunities, assess interest, develop training plans, conduct trainings, establish linkages
- c) Supporting communities/PAPs in grievance redressal
- The NGO shall nominate a suitable person (from the staffs of the NGO) to assist the PAPs in registering their grievances specifically related to land acquisition matters.
- The NGO shall assist the DBL staff in validating the grievances and getting them registered with suitable officials.
- The NGO in collaboration with DBL shall help the PAPs in speedy resolution of the grievances.
- The NGO shall monitor and report the status of various land acquisition related grievances.
- d) Conduct of Public Consultation
- The NGO will be responsible for periodic consultation with the PAPs and other stakeholders for providing various project related information as agreed upon with DBL and assess status of grievances;

- Should organize meetings and appraise communities about the schedule / progress of civil works and resolve any issues in coordination with DBL;
- All consultations should be documented with photographs, attendance sheets and details of issues discussed. These should be submitted to DBL on a monthly basis.
- e) Monitoring and Reporting
- The NGO is responsible for progress reporting of livelihood restoration activities in a quarterly basis. Also they have to provide required baseline and other information required for audit and monitoring of the LRP by external agencies.

D. Documentation and Reporting by NGO

- 6. The NGO selected for the assignments shall be responsible to:
 - Submit an inception report within three weeks; on signing up of the contract including a work plan for the whole contract period, staffing and personnel deployment plan, and a withdrawal plan at the end of the period of contract. The withdrawal plan shall be detailed and reflect how the PAPs will maintain and continue to generate income from the livelihood generating options chosen by them.
 - Prepare monthly progress reports to be submitted to the project office, with weekly progress and work charts as against the scheduled timeframe of implementation of livelihood restoration measures.
 - Prepare and submit quarterly reports on a regular basis, to be submitted to DBL.
 - Submit a completion report at the end of the contract period summarizing the actions taken during the project, the methods and personnel used to carry out the assignment, and a summary of support/assistance given to the displaced persons.
 - All other reports/documentation as described in these terms of reference.
 - Record minutes of all meetings.
 - Four copies of each report shall be submitted to project social safeguard officer/manager together with one soft copy.

E. Data, Services and Facilities to be provided by the Client

7. The project will provide to the NGO the copies of this document, PAPs Census, the strip plan of final design and any other relevant reports/data. All facilities required in the performance of the assignment, including office space, office stationery, transportation and accommodation for staff of the NGO, etc., shall be arranged by the NGO.

F. Timeframe for Services

8. It is estimated that the NGO services will be required for about 24 months to undertake the assignment of implementation of livelihood restoration activities. The time schedule for completion of key tasks is given below:

SNo	Task Description	Time for completion
1	Inception Report	At the end of the 3 rd week after commencement of services
2	a. Hiring of Staff and setting up the teamb. Training and Capacity building	By the end of quarter 1
3	a. Rapport Building Activityb. Stakeholder Engagement	By the end quarter 2
4	a. Finalization of livelihood restoration activitiesb. Collection of baseline data for PAPs	By the end quarter 3
5	 a. Implementation of Stakeholder engagement activities b. Implementation of GRM c. Implementation of livelihood restoration activities 	Quarter 1 to 8 Quarter 1 to 8 Quarter 3 to 7
6	Reporting	End of each quarter, Final report at the end of project

G. Team for the Assignment

9. The Agency/NGO shall assign a team of professionals to assist the project social safeguard team in implementation of LRP. The Agency/NGO team should consist of 5 staff as proposed below. The core team should have a combined professional experience in the areas of social mobilization, community development, land acquisition and resettlement, census and socio economic surveys and participatory planning and consultations.

SNo	Key Professional	No. of Persons	Experience
1	Team Leader cum R&R/livelihood restoration expert	1	Postgraduate in Social Science with a minimum of 10 years' experience in R&R and livelihood restoration. Proficient in Telugu and English
3	Community mobilizer / Liaison officer	3	Graduate in Social Science with knowledge and experience in census and socio- economic surveys, livelihood implementation works, PRA Technique and fluent in Telugu and English.
4	Assistant cum data entry operator	1	Graduate with experience in data entry

Appendix 14: Monitoring templates for status of compensation disbursement

Appendix 14A: Monitoring template for compensation disbursement status of structures identified within the RoW

Note: The list below relates to existing encumbrances identified during IOL survey for which monitoring and reporting to confirm compensation disbursement shall carried out by the company. 104 such encumbrances were identified during the survey. Of these, 3 structures are government owned and another 19 structures (14 privately owned and 5 community structures) are those that have been compensated in the past during earlier land acquisition, These 22 structures do not require monitoring and hence have been excluded from this list.

The remaining **82** structures are included in the list below and comprise **28** structure on private land (24 privately owned structures and 4 community structures) from S.No. 1 to 33 (29 PAPs; some of the structures may have multiple associated PAPs), **2** structures (privately owned structures on assigned land) in S.No. 34 and 35 (2 PAPs), and **52** encroachment structures (on government land, that include 48 privately owned structures (50 PAPs) and 4 community structures) mentioned in S.No. 36 to S.No. 89.

Encroachment structures (52 in number) mentioned in S.No. 36 to S.No 89 have also been identified for compensation gaps (refer Table 6 of the report). These will be eligible for gap closure assistance as per the principles described in this document.

A list of 105 encroachment structures was prepared at the start of the project. 28 structures from this list were found to be still existing during IOL survey. Identity code for all such overlapping structures are suffixed with '' in the table below.

Appendix 14B: Monitoring template for compensation disbursement status of encroachers on government land (non-titleholders)

Note: This monitoring template is based on encroachers list of 105 structures prepared at the start of the project. Some of these still exist within ROW. 28 such structures were traced to be overlapping/matching with IOL survey list. Identity code for all such overlapping structures are suffixed with '*' in Table 14a. List of remaining 77 encroachments (upon excluding 28 structures) is provided below.

Monitoring and reporting will be carried out for these structures listed which shall confirm compensation payment status as shown in the template below. In case, any affected person associated with the structures listed below comes up with retrospective compensation gap related claims (supported with evidence of affected structure's valuation), project shall assess the veracity of such claims and if established compensation gap closure measures will be taken, as per principles laid down in this report.

Any grievance related to denial of compensation/non recognition of project impacts altogether, will be resolved through project GRM. Compensation gap, if any, arising out of such compliance gaps will be added to the scope of project monitoring and reporting.
