

CONTRIBUTION TO THE ADB RESULTS FRAMEWORK

Level 2 Results Framework			
No.	Indicators (Outputs and Outcomes)	Targets	Methods/Comments
1.	Greenhouse gas emission reduction	1,299,000 tCO ₂ e to be avoided (per year)	Carbon dioxide reduction was calculated based on the coal savings of 848,500 tons of standard coal to be used for equivalent coal-fired heating boilers. The calculation method is aligned with the draft Guidelines for Estimating Climate Change Mitigation Investment and GHG Emission Reductions of ADB projects. ¹

tCO₂e = ton of carbon dioxide equivalent.
