

CONTRIBUTION TO THE ADB RESULTS FRAMEWORK

Level 2 Results Framework Indicators			
No.	(Outputs and Outcomes)	Targets	Methods / Comments
1	GHG emission reduction	87,968 tCO ₂ e to be annually avoided from 2023	Avoided GHG emission was estimated using the grid emission factor for electricity import from Russia.
2	Installed renewable energy generation capacity	41 MW of total renewable energy installed capacity by 2023	Comprised of 40.5 MW of new installed capacity in the distributed renewable energy system development subcomponent and 0.5 MW in the shallow ground heat pump demonstration subcomponent.

GHG=Greenhouse gas, MW=megawatt, tCO₂e=ton of carbon dioxide equivalent
