

Social Monitoring Report

Project No.: 47017-003
November 2016

Tajikistan: Wholesale Metering and Transmission Reinforcement Project

Prepared by: AF Mercados EMI for Barki Tojik for the Asian Development Bank (ADB)

This social monitoring report is a document of the borrower. The views expressed herein do not necessarily represent those of ADB's Board of Directors, Management, or staff, and may be preliminary in nature. Your attention is directed to the "terms of use" section of this website. In preparing any country program or strategy, financing any project, or by making any designation of or reference to a particular territory or geographic area in this document, the Asian Development Bank does not intend to make any judgments as to the legal or other status of any territory or area.

List of Abbreviations

Abbreviations	Description
ADB	Asian Development Bank
AF	Affected Family
agric.	Agricultural
AP	Affected Person
BT	Barqi Tojik
CBO	Community Based Organization
CC	Civil Code
DMS	Detailed Measurement Survey
ECD	Europe and Central Asia
ESD	Barqi Tojik PMU Environment and Social Department (now Monitoring Department)
GRC	Grievance Redress Committee
IOL	Inventory of losses
IR	Involuntary Resettlement
ha	hectare/s
hh	household/s
HVTL	High Voltage Transmission Line
kg	Kilogram
LA	land Acquisition
LARP	Land Acquisition and Resettlement Plan
LC	Land Code
MEWR	Ministry of Energy and Water Resources
NGO	Non-Governmental Organization
p.y.	per year
p.p.	per person
p.m.	per month
PAP	Project Affected Persons
PMU	Project Management Unit
ROW	Right Of Way
RT	Republic of Tajikistan
SME	Small and Medium-sized Enterprise/s
t	Tower
TJS	Tajik Somoni
TL	Transmission Line
USD	United States Dollars
ZOI	Zone of Influence

Local Terms	
Aryk	Irrigation channel
Dekhkan farm	Farm under private management organized either individually, by a family or collectively
Hakim	Chairperson of District
Hukumat	District Administration
Jamoat	Sub-District, Sub-District Administration
Kolkhoz	Soviet time collective farm
Land committee	Responsible body of District for all land related questions
Mahalla	Village / Neighborhood
Mahalla committee	Board of Mahalla Organization (with all citizens in the Mahalla area as members)
Oblast	Region
Rais	Chairperson (Tajik term, e.g. Raisi Mahalla)
Rayon	District
Sotih	100 m ²
Sovkhoz	Soviet time state owned farm

CURRENCY EQUIVALENTS

Currency Unit – TJS (Tajikistan Somoni)

As of 2015

US\$1.00 = TJS 6.9902

As of 2016

US\$1.00 =7.8696

NOTE

In this report,

- i. "\$" refers to United States Dollars (USD)
- ii. "TJS" refers to Tajikistan Somoni

In preparing any country program or strategy, financing any project, or by making any designation of or reference to a particular territory or geographic area in this document, the Asian Development Bank does not intend to make any judgments as to the legal or other status of any territory or area.

GLOSSARY OF TERMS

Affected Persons	Term used to describe all people that are affected by the project impacts. In the context of a RP it refers to those that are economically or physically displaced by the project. It is increasingly being replaced by the term —Displaced Personll following ADB Safeguard Policy 2009 – but is still in common use in the field.
Compensation	Payment in cash or kind for an asset to be acquired or affected by a project at replacement cost at current market value.
Displaced Persons	Sometimes referred to as Affected Persons (APs). In the context of involuntary resettlement, displaced persons are those who are physically displaced (relocation, loss of residential land, or loss of shelter) and/or economically displaced (loss of land, assets, access to assets, income sources, or means of livelihoods) as a result of (i) involuntary acquisition of land, or (ii) involuntary restrictions on land use or on access to legally designated parks and protected areas.
Economic Displacement	Loss of land, assets, access to assets, income sources, or means of livelihoods as a result of (i) involuntary acquisition of land, or (ii) involuntary restrictions on land use or on access to legally designated parks and protected areas.
Entitlement	The range of measures comprising cash or kind compensation, relocation cost, income rehabilitation assistance, transfer assistance, income substitution, and relocation which are due to/business restoration which are due to APs, depending on the type and degree nature of their losses, to restore their social and economic base.
Hukumat	District administration
Jamoat	The Sub-district administration
Land acquisition	The process whereby a person is compelled by a public agency to alienate all or part of the land s/he owns or possesses, to the ownership and possession of that agency, for public purposes, in return for fair compensation.
Meaningful Consultation	A process that (i) begins early in the project preparation stage and is carried out on an ongoing basis throughout the project cycle; (ii) provides timely disclosure of relevant and adequate information that is understandable and readily accessible to affected people; (iii) is undertaken in an atmosphere free of intimidation or coercion; (iv) is gender inclusive and responsive, and tailored to the needs of disadvantaged and vulnerable groups; and (v) enables the incorporation of all relevant views of affected people and other

stakeholders into decision making, such as project design, mitigation measures, the sharing of development benefits and opportunities, and implementation issues.

Non-titled

Those who have no recognizable rights or claims to the land that they are occupying and includes people using private or state land without permission, permit or grant i.e. those people without legal title to land and/or structures occupied or used by them. ADB's policy explicitly states that such people cannot be denied compensation.

Poor

Official government statistics for share of people living under poverty line is not available. The method used to determine poverty, based on the World Bank's under \$41 per person per month measure. This figure was calculated with respect to climate conditions and other set of factors. The local equivalent was calculated based on the official exchange rate.

Physical Displacement

Relocation, loss of residential land, or loss of shelter as a result of (i) involuntary acquisition of land, or (ii) involuntary restrictions on land use or on access to legally designated parks and protected areas.

Replacement cost

The method of valuing assets to replace the loss at current market value, or its nearest equivalent, and is the amount of cash or kind needed to replace an asset in its existing condition, without deduction of transaction costs or for any material salvaged.

Significant impact

200 people or more will experience major impacts, which are defined as; (i) being physically displaced from housing, or (ii) losing ten per cent or more of their productive assets (income generating).

Vulnerable

Any people who might suffer disproportionately or face the risk of being marginalized from the effects of resettlement and includes; (i) female-headed households with dependents; (ii) disabled household heads; (iii) poor households (within the meaning given previously); (iv) landless; (v) Elders households with no means of support; (vi) households without security of tenure; (vii) ethnic minorities; and (viii) marginal farmers (with landholdings of five acres or less).

EXECUTIVE SUMMARY

1. This LARP implementation compliance report has been prepared to assess whether the implementation of the entire Land Acquisition and Resettlement Plan for the Construction of 220 kV OHL between SS Ayni 220 kV and SS Rudaki complied with the stipulations of the approved LARP and ADB Involuntary Resettlement safeguards. The document includes overall information on APs, weight of impacts, provided compensations and entitlements to the project APs implemented to restore and/or make better APs livelihoods. This compliance report, which refers to the Project overall LARP implementation, was prepared between October - November 2016.
2. The LARP was created to guide the PMU and the Contractor in the project implementation taking care to minimize impacts on the communities. It also aims to provide proper compensation to the people who will be affected as a result of the construction and rehabilitation works on the Line project.
3. This final social monitoring report provides a summary of the LARP implementation throughout the duration of the whole project cycle.
4. Final monitoring conducted has taken into consideration all identified APs. Based on the original LARP as well the updated LARP, the total APs were 309, 219 in the area of Penjikent and 90 in the area of Ayni. In the list of APs confirmation of receiving compensations and a separate AP receipt the number of APs increased by two. The reason is that two APs in the list and the separate payment receipt are the same person with two parcels of lands each. For more information, see **Appendix 7**: List of APs received compensations and a receipt of additional payment.
5. There were no grievances reported concerning the LARP implementation. Based on informal interviews the APs were satisfied with compensation received.
6. The compensation and other related resettlement costs due to overall Line LARP was budgeted to **TJS 217,637** out of which **TJS 36,273** is LARP implementation/support costs. Direct cost of LAR of the Line Project is **TJS 181,364** that has been paid to APs according to the censuses certified by the local district authorities and the EA 'Barqi Tojik'. It comprises 83.3% of the planned budget as direct costs of the entire Line Project LARP.

INTRODUCTION

1. General

7. This report has been prepared to complete the implementation of the Land Acquisition and Resettlement Plan (LARP) of Rehabilitation of Substation Rudaki and Extension of Substation Ayni 220 kV and Construction of 220 kV OHL between SS Ayni 220 kV and SS Rudaki . See figure 1 below.

Figure 1: Project location Map

8. BT, ADB and the Consultant has agreed on a preliminary alignment of the 50 m wide right-of-way (ROW) of the TL based technical considerations and the need to avoid traversing human settlements and private landholdings. Consequently, the preliminary TL alignment, prepared in September and on which is based in the LARP, required minimal land acquisition (LA), as it crosses only some agricultural areas and barren hills and causes no displacement of people from their homes. Based on the requirements of the Laws of Tajikistan and of ADB's Involuntary Resettlement Policy, as amended in ADB's Safeguard Policy Statement (2009) and Operational Manual (OM), Section F1 / BP (2010), BT has prepared the LARP in order to assess the probable adverse social impacts of the Project. The last update of the LARP was prepared in 2016 by Consulting Company AF Mercados EMI and updated in September 2016.

9. Conclusions from field visits are that the line construction, as described in LARP, does not require neither shifting of buildings nor the households to be resettled.

10. In general, the line will cross the productive used lands in six locations with a total length of 22 km:

- i. mainly between AP 36 and AP 37,
- ii. between the AP 39 and AP 41,

- iii. between AP 42 and AP 43,
- iv. between AP 45 and AP 47,
- v. between AP 47 and AP 48,

11. The corridor of the line shifted to less populated areas to the south of the old OHL corridor 110kV, which in several places crosses the villages on right and left sides of the river Zarafshan.

12. The Administrative structure of the TL Ayni-Penjikent consists of two rayons (districts) with 10 jamoat (subdistrict):

I. Ayni District (from SS Aini) with Jamoat

Dar Dar
Urmetan;

II. Panjakent District (in the western sectors) with jamoats of

Woru,
Rudaki,
Loiq Sherali,
Shing,
Amondara,
Khalifa Hassan,
Sujina and Chinor.

13. In accordance with the final profile, for the construction of a new transmission line Ayni – Rudaki, require the installation of 244 transmission towers (84 angle towers and 156 suspension towers and 3 transposition tower and 1 portal). The main negative impact on the local residents are caused by the 88 foundations of these TL towers (20 angle and 68 suspension towers) which will be constructed on productive lands. The remaining 156 towers (64 angle, 88 suspension, 3 transposition towers and 1 portal) will be built in a mountain areas on the empty barren hills and land corridors, roads and wasteland, and will not cause a direct social impact. However, based on the Tajik legislation, the areas taken for the TL towers on public lands may be compensated to hukumats, too, based on an inter-governmental nominal price. Temporary impacts on farmlands during the construction of the TL towers have also been into accounted for.

2. LARP Background

14. Substantial parts of the Tajikistan transmission grid still suffer from disconnection from the Central Asian Power System in November 2009. Prior to the disconnection, the Penjikent region of Tajikistan, with population of 261,000 individuals (39,122 customers), was supplied from two 220 kV lines from Uzbekistan (through 2x63 MVA transformers). From Penjikent (substation Rudaki) electricity was further transmitted to Ayni region with population of 75,000 (2,100 customers). Peak demands of Penjikent and Ayni are 75 MW and 20 MW, respectively. From Penjikent to Ayni electricity was transmitted over 95 km through a 110 kV line built in 1965 and with maximum rating of 67 MVA. After 2009, these two regions became isolated from the main transmission grid of RT.

15. For that reason and in consideration of the expected growth of the power demand in the Penjikent region, the current project with its reinforcement of the transmission system, in combination with the loss reduction, expected from an improvement of the new metering system, is understood to be a further step informing an overall interconnected network within Tajikistan and to make the Tajik network more reliable. The focus of this report is the construction of approximately 95 kilometers (km) of 220 kilovolt (kV) overhead transmission line between the substation Ayni220 kV (Ayni District) and the substation Rudaki (Penjikent District) including construction of additional bays and rerouting of existing connections in both substations.

16. The Project finalized LARP has been elaborated during July and September 2016 based on finalized design and preliminary draft LARP prepared in 2014. During several field trips to the

reference area the most suitable line corridor has been identified and, under consideration of technical and economic aspects, harmonized. In addition, the socioeconomic situation of the affected population has been studied in order to adapt the assessment of losses and compensation process to the local requirements and to identify vulnerable households amongst the affected households and/or persons to allow for additional support measures.

17. BT, ADB and the Consultant has agreed on a preliminary alignment of the 50 m wide right-of-way (ROW) of the TL based technical considerations and the need to avoid traversing human settlements and private landholdings. Consequently, the preliminary TL alignment, prepared in September and on which is based this LARP, will require minimal land acquisition (LA), as it crosses only some agricultural areas and barren hills and causes no displacement of people from their homes. Based on the requirements of the Laws of Tajikistan and of ADB's Involuntary Resettlement Policy, as amended in ADB's Safeguard Policy Statement (2009) and Operational Manual (OM), Section F1 / BP (2010), BT has prepared this LARP in order to assess the probable adverse social impacts of the Project. This LARP has been prepared in 2016 by Consulting company AF Mercados EMI and updated in September 2016.

18. Conclusions from field visits are that the line construction, as described in LARP, does not require neither shifting of buildings nor the households to be resettled.

19. Overall project will have permanent impact on 92 parcels of agricultural lands since, 88 towers will be installed on agricultural land (in some cases here included abandoned land, for example unused hills, channels and paths, etc., in order to avoid damage to land and crops). The total length of transmission line stretched over agricultural lands is 22 km. These lands belong to 40 Family, 254 Individual, 12 Collective and 3 State owned Dehkan Farms. Out of these 92 APs will have permanent impact on their lands and remaining 217 APs will have temporary impact only during construction period.

Table 1: Basis assumption for land acquisition

Dis-t	Jamoat	No. of APs & terms of impact		Type of Ownership	Total land holding Ha	Affected land Ha		% of affected land

3. LARP Implementation

20. The original LARP, which was endorsed by the Government of the Republic of Tajikistan and approved by ADB on July 2014 was subsequently implemented, with payment of compensation to the affected people APs in November 2016. Its implementation was handled by the BARQI Tojik (PMU) in close coordination with the **Jamoats** which have administrative responsibilities on the affected line sections.

4. Compensations and entitlements;

21. The Line Project land acquisition and resettlement (LAR) is implemented based on relevant laws and regulations of Tajikistan and the ADB's involuntary resettlement safeguards requirements. Comparison of the LARPs information on the entitlements defined in the policy framework and the entitlements against reviewed safeguards documents proving provision of compensations to APs, confirmed that planned and delivered compensations quantities/amounts commensurate to the amounts and unit rates detailed in the approved LARP documents endorsed by the Government of Tajikistan and approved by ADB. The purpose of LAR to improve DPs living standards, which must not decrease as a result of land acquisition, has been met. The principles of the compensation and entitlements ensured during implementation of the LARP are:

- (i) compensation and entitlements were adequate to allow APs to at least maintain their pre-project living standard with the prospect of improvement;
- (ii) compensation and entitlements provided are based on replacement value;
- (iii) lands occupied and structures or attachments build after the Cut-off Date regulated by local government have not been subject to compensation¹;
- (iv) timely and adequate compensation provided to the APs;
- (v) all APs were adequately informed about compensation rates and standards, livelihoods and income restoration plans and progress; and
- (vi) close monitoring and timely actions carried out to identify and resolve any problems.

5. Compensation budget planned versus budget delivered;

22. The compensation and other related resettlement costs due to overall Line LARP was budgeted to **TJS 217,637** out of which **TJS 36,273** is LARP implementation/support costs. Direct cost of LAR of the Line Project is **TJS 181,364** that has been paid to APs according to the

¹ Cut-off Date was announced July 11, 2016, the construction of any facilities, trees plantation or any other activity on the Transmission Line route has to be abandoned. All those persons who construct or start any activity in the mentioned area after that date will not be compensated.

censuses certified by the local district authorities. It comprises 83.3% of the planned budget as direct costs of the entire Line Project LARP. See table below for more information on types of compensation and allowances provided to APs.

Table 2: Compensations and allowances delivered to APs

Type	Planned budget TJS	Actual Implementation TJS	% of APs compensated
Temporary impact on land (income losses from crops, trees) for access to construction sites	88,921	88,921	100%
Permanent impact on agricultural lands (towers installation)	91,404	91,404	100%
Allowance for vulnerable APs (additional 25% of total compensation)	1,039	1,039	100%
Contingency costs (20%)	36,273	0	
Total	217,637	181,364	100%

6. Public Consultations

23. EA/IA and the Project Implementation Consultant (PIC) has paid great attentions to public participation and held meeting to publicize the LAR policy and entitlements adopted for the Line Project, GRM and general information on the project and ADB as financial institution providing grants for developing Tajikistan Transmission Grid. Consultations have been conducted at different level of project implementation involving APs, local communities, CBOs and local government at district and jamoat (sub-district) levels.

24. Monitoring Team conducted round of consultation and meetings with individual APs and groups, jamoat representatives and other project stakeholders in the process and after implementation of LARP. Purpose of these consultations and individual interviews were to gauge level of APs satisfaction and participation of all stakeholders in the different levels of LAR planning and implementation.

7. Grievance Redress Mechanism

25. In line with the Policy Requirements, the Line Project has established a transparent GRM. APs were informed of the GRM and appeal procedures through public consultation meetings, the LAR information brochures and through an appointed GRM focal points at jamoat level. One Grievance Redress Committee (GRC) has been established at the district level to resolve complaints and grievances through community participation.

8. Disclosure

26. To maintain transparency in planning and for further active involvement of all stakeholders and the general community in the implementation of LARP, the Project information was disseminated through disclosure of the resettlement planning documents. Each AP was given a pamphlet (See Appendix 1) with information regarding the specific entitlements. The pamphlet specifically covers a brief Project description, compensation eligibility and entitlement including the entitlement matrix, schedule of LARP implementation and the compensation rates.

9. Assessment on Compliance

27. All LAR Plans of the Line Project were implemented in a manner that all potential adverse impact on APs crops sources have been fairly compensated to achieve APs satisfaction. LARP implementation complied with the ADB Safeguard Policy Statement requirements for involuntary resettlement and the principles adopted for the project, in terms of provision of compensation and impact validation.

APPROACH AND METHODOLOGY

28. In the preparation of the various stages of the LARP, various activities were conducted such as:

- i. a screening survey,
- ii. land census survey,
- iii. socio-economic survey
- iv. targeted consultation meetings with APs and local stakeholder organizations, government officials and individuals
- v. informal consultations with each affected person
- vi. wide consultations with affected people

29. Against this background the following set-up is assumed for the construction phase (18 months from the end of 2016 and during the year 2017):

- I. Land use patterns:
 - less than 20% of the cultivated land is used for cotton,
 - more than 25% of the land is used for wheat, barley and maize,
 - 15% of the cultivated land used for vegetables, oil seeds, melons, rice, etc.
 - 5-10% of the land is used throughout the year for fodder plants,
 - 15% of the land planted with fruit trees and wine grapes,
 - less than 2% of the land up home gardens with mixed cultures
- II. Compensation details:
 - Losses of non-perennial crops have been compensated fully already after preparation of the land and planting/sowing,
 - Fruit trees older than one year have been considered as fruit bearing even if they are not
 - For house-garden land, the highest value for crops have been adopted (i.e. TJS 40, 200/ ha the price has been calculated for onions),
 - Due to the low volume of compensation payments for irrevocable losses and the fact that the new towers constitute a constraint on all mechanical works in the fields, a base rate of 250 TJS have been paid additionally for every tower (TJS 20 500 in total).
 - Due to the fact, that irrigation water is scarce in some areas and not all farms are regularly serviced, provided if the irrigation water was available for at least two seasons in the last five years, the payment of full compensation has been given for permanent losses.
- III. Other conditions influencing the assessment of damages and the volume of compensation payments:
 - Up to the final construction work, it is likely to obtain data of the needed construction of approximately 17.8 km of lines for agricultural land (88 towers), it certainly damage crops. Some parts of the towers may also be constructed on public areas (waste land

or public infrastructure areas such as unused ground, borders of channels or of drainages, etc.), it does not change the fact that currently 88 towers have been compensated.

- The fact that construction work will also be done during late autumn and winter (15 November until 20 March) when crops haven't been damaged is not taken into consideration while calculating value of damages,
- Many trees in the project area have been planted only recently and at larger distances to each other than older plantations, and they are often intercropped with wheat. This could result in less damages than calculated in this chapter,
- The field survey shows that the permanent loss of house-garden land is not expected. All towers will be constructed outside of house gardens. Hence the category of house-garden land does not become a specific category for assessment of damages and compensation in this LARP. This was confirmed by the DMS;
- The volume of investments, which increases the cost of construction work (ie, the use of additional angle towers) is likely to reduce the volume and to the payment of the costs of refunds and vice versa. This was done at least three cases where additional towers could prevent intersection farmhouses.

30. Joint group discussions with APs, local government and, community leaders were conducted in jamoat offices to elicit information about performance in various resettlement activities. All documents related to LARP approved by BARQI Tojik and ADB, data on asset registration and valuation methods, type and scope of impacts were reviewed and analyzed.

ASSET INVENTORY AND COMPENSATION PAYMENTS

1. Compensation and entitlements matrix

31. All APs are entitled to various types of entitlements according the Entitlement Matrix used in the LARP of the Line Project. The following Project-specific Entitlement Matrix details the entitlements agreed for this Project:

Table 3: Project specific Entitlement Matrix

CV	Asset	Displaced Person	Compensation Entitlements
Permanent Loss			
1	Agricultural land (all losses irrespective of severity)	Individual land-use rights holders	<ul style="list-style-type: none"> • Cash allowance for loss of land use rights equal to net income in the last 5 years generated from the affected land area at market rate at the time of taking; or • Provision of alternative land plot of equal value / productivity to plot lost. If the remaining portion of the plot to be taken is too small to use, the whole plot is compensated or exchanged.
		Collective land-use rights holders	<ul style="list-style-type: none"> • Cash allowance for loss of land use rights equal to net income for the last 5-years generated from the affected land area at market rate at a time of revocation; or • Provision of alternative land plot of equal value / productivity to plot lost. If the remaining part of the plot to be taken is too small to use, the whole plot is compensated or exchanged.
		Renters and leaseholders	<ul style="list-style-type: none"> • Rental allowance in accordance with the conditions of the rent agreement, but not less than the cost of rent for 3 months; or

CV	Asset	Displaced Person	Compensation Entitlements
			<ul style="list-style-type: none"> Continuation of rental agreement on alternative land plot or cash allowance for the lost income equivalent to 1 year of average crop productivity.
		Informal (if any) ²	<ul style="list-style-type: none"> Provision of opportunity to lease a plot on state land. Relocation allowances.
2	Residential and commercial land	Owners	<ul style="list-style-type: none"> Cash allowance for loss of land use rights in cash equal to current annual land lease rates at the time of acquisition multiplied by 25; or Provision of alternative land plot of equal value / productivity (similar conditions and facilities) to plot lost. If the residual portion of the plot to be taken is too small to use, the whole plot is compensated or exchanged.
		Renters	<ul style="list-style-type: none"> Rental allowance in accordance with the conditions of the rent agreement, but no less than the cost of rent for 3 months, or Continuation of the rental agreement an alternative land plot.
		Informal (if any)	<ul style="list-style-type: none"> Provision of opportunity to lease a plot on state land. Relocation allowance if applicable.
3	Buildings and structures	Owners of structures including “informal” and encroaching	<ul style="list-style-type: none"> Cash compensation at replacement rate for affected structure / other fixed assets (without deduction of depreciation, taxes, costs for salvageable materials and other transaction costs). All buildings and structures will be compensated in their entirety; or According to the owner’s choice, if feasible, a building for building / structure for structure exchange.
		Renters	<ul style="list-style-type: none"> Rental allowance in accordance with the conditions of the rent agreement, but not less than cost of rent for 3 months; or Continuation of the rental agreement for an alternative building/structure.
4	Crops	All DPs, including “informal” and encroaching	<ul style="list-style-type: none"> Crops affected by the towers and by stringing or tower transport will be compensated by default at market rate.
5	Trees	All DPs, including “informal” and encroaching	<ul style="list-style-type: none"> Fruit-bearing trees: Compensation in cash based on one year yield x the number of years needed to re-grow the tree at productive stage. Not yet productive fruit trees: Compensation in cash based on inputs x average age of trees. Seedlings: Based on seedlings cost plus inputs x 1 year. Wood trees: cash compensation based on wood volume x market value of the wood
6.	Business and employment (temporary)	All DPs (including workers of affected businesses	<ul style="list-style-type: none"> Owners of shops / commercial establishments: <ul style="list-style-type: none"> In case of permanent loss, compensation equal to 1 year net income (lost profits) plus cost of lost certificates / licenses / patents. The income is based on the official

² Landless DPs without any rights-to-use land living on income from the illegally used land plot. The DPs owning land adjacent to the illegally used parcel will be compensated for losses from the illegally used part as per the entitlement matrix.

			land must be restored to the original status, or as per the agreement with the land rights holder ⁴ .
Unanticipated impacts			
12.	Other unanticipated assets loss or impact on livelihood	All DPs residing in the project corridor before the cut-off-date.	<ul style="list-style-type: none"> Compensated as per the Project specific entitlement matrix.

2. Income Losses Compensation Costs

32. The results of the initial calculation of the extent of land acquisition and the census of AFs are provided below.

i. Permanent land acquisition for tower construction:

33. The estimated 20 angle towers on cultivated land have required the permanent acquisition of 2236,25 m² of farmland while the estimated 68 suspension towers have required the permanent acquisition of 7394,25 m² of farmlands. In total, permanently affected land to be acquired by the project is 9630,5 m² or roughly 0.96 hectare.

Table 4: Area of Cropland to be Acquired Permanently

Kind of Tower	Estimated Number of Towers on Cultivated Land	Area Required per Tower (m ²)	Total Area Required (m ²)
Angle	20	100-144	2236,25
Suspension	68	81-144	7394,25
Total			9630,5

ii. Crops, which will be affected by the construction of towers

34. Crops grown at the tower's foundation area have been compensated by default regardless of whether or not the land user is able to collect the harvest before the impact. Before the contractor identifies the final places for the towers we can only provide data regarding average yields and their values.

Table 5: Crops Affected on Permanently Acquired Land

Crop/ Perennial	Total affected land area (m ²)	Average yield (kg) per Cropping per ha	Volume of crop lost (kg)*	Unit Rate (TJS) per kg	Number of trees, seedling, or vines*	Cost of seedlings (TJS)
Potatoes	194,2	23050	1448	1,3		
Lucerne	1047,5	7260	760	1		
Sunflower	385,5	1700	64	5		
Corn	821,5	7760	667	1,6		

⁴ In the case that the Contractor and Land-use rights holder both agree in writing to leave the land area in a state precisely described in the agreement.

Crop/ Perennial	Total affected land area (m2)	Average yield (kg) per Cropping per ha	Volume of crop lost (kg)*	Unit Rate (TJS) per kg	Number of trees, seedling, or vines*	Cost of seedlings (TJS)
Wheat	4118	3630	1496	1,5		
Beans	81	500	4	8		
Pepper	100	32030	320	1,3		
Linen	110,25	800	9	10		
Grass	493,5	7840	387	1		
Nuts	81	10	10	10	2	
Apricot	423	15	212	3	14	6
Pear	25	12	24	3	2	6
Apple	162	22	374	2	17	7
Grapes	1539,5	3	1659	3	563	2
Cherry	9	12	12	3	1	9
Willow	144			52	4	2
Jigda	446			104	14	
Canker-rose	9			104	1	
Mulberry	25			104	1	2

iii. Crops, affected by temporary land acquisition:

35. Construction of each 20 towers would require the workplace of 18 000 m2, including area under the foundations. In general, for the construction and foundations will need about 85,200 m2. Likewise, during the conductor tensioning at the entrance to site will be used strip of 22 km, between the 88 towers in cropland will be used as an access road (4.0 m wide access roads or 4000 m2 per km) and, therefore, temporarily will be used approximately 88 000 m2 or 8,8ga in the cropping season. These figures for farmlands affected by crop loss due to temporary occupation during the construction and conductor tensioning, and do not include the losses of the access of machinery on construction sites.

36. AF's have been compensated by default for crop losses according to the market value at the time of land acquisition. It concerns to both kind of crops: which is grown at the time of construction / stringing towers and also, that crop of AP, which will not grow due to the harm. The actual crop on the affected land has been determined during DMS and compensation has been calculated accordingly. Dominating sources of cash for farmers are perennial, apricot, trees and vineyards.

37. Prior to the fruitfulness of the apricot tree, apple tree or citrus tree (mainly lemons) will take seven years, for pomegranate it is about 5 years before the tree becomes productive. In one hectare (10,000 m2) can have an average of 300 fully grown apricot trees, 400 citrus and pomegranate 625.

38. Citrus trees bear fruits for several months during a year. Until the full productivity of citrus should pass up to seven years. Citrus and apple trees are planted at a distance of 5 meters from each other. In this case, there are very few citrus and apple trees in gardens, that's why just a few trees have to be cut down in the Project purposes.

39. Pomegranate bear fruit once a year. It takes about five years before a young tree bears fruit. We believe that the situation with pomegranates, which have a distance of 4 m from each other, will be the same situation as citrus and apple. On the overhead line corridor there are very few pomegranate gardens, so only a small amount is expected to be cut down.

40. Vineyards bear fruit once a year. Only four years later, young vineyards are starting to bear fruit. In the project area, the vineyards are already, eight, ten years, and every year they bear fruit. One hectare land may include more than 1,650 vines (ie, approximately 33 rows each

with 50 of vines, or approximately 41 rows each with 41 vine). In practice, the two rows of 82 to 100 vines could be damaged per 100 meters from line route. The field surveys has shown that, as for other perennial crops, almost no affected regions with vineyards, as grape vines in the project area is mainly planted near houses and in house gardens.

41. Farmers who grow crops and fodder plants such as lucerne can grow only one crop due to lack of irrigation water.

42. While potato and cotton (its production has almost ceased in the project area) require a full growing season, vegetables, beans, sunflowers and melons (watermelons and melons) can be grown after cereals, so the farmers will have an average of two crops per year. As it is very unlikely that the construction of one OHL tower will require more than 90 days, it is assumed that only one crop will be damaged.

43. Compensation for the losses has been paid only if the construction works fall in the cropping season. If the implementation of work is carried out in winter period, the construction company will only reconstitute the land with all it's infrastructure or pay its value in cash.

For the assessment of losses, it is important whether the farmer has already planted / sowed or not, and, if the answer is positive, compensation should be paid in full.

iv. Other loss:

44. After approval of the project and a detailed inspection, the completion of detailed design and layout of the site. According to the field investigations, the following losses could be:

- Concrete poles for vineyards (almost none in the project area)
- Simple or barbed wires (rare)
- Simple or grid fences (rare)
- Irrigation channels,
- Drainage channels,
- Field paths, etc.

45. The final TL alignment will ensure that no buildings and structures will be affected and there will be no relocation case incurred by the project.

v. Significant impact on the productive assets:

46. According to information of Land Committee of Hukumat, the average area size of land per household (already recorded or to be registered and provided with a certificate) is approximately half or two hectares. Unlike the LARP initial version, it has been identified that the farmer may in fact lose up to 1% of its land, if the angle tower will be installed on its registered plot. This amount is far from being a percentage, which constitutes a danger for the economic viability of most farms.

47. It is important to keep in mind that there are still some collective dekhan farms in Zerafshan area. Here, it is important to take into account that the farm in general cannot be endangered by the permanent loss of some few hundred square meters of land as the 12 collective farms have more than 50 ha land each. Considering installation of towers in 100 sq. meter, which take very narrow strip of land, permanent land loss of all types of land is below 1% even when the land loss is considered based on the shareholding of a single farm member. Thus project does not significantly impact any person in the whole project area.

COSTS SUMMARY

48. The compensation and other related resettlement costs due to overall Line LARP was budgeted to **TJS 217,637** including **TJS 36,273** of LARP implementation/support costs. Direct cost of LAR of the Line Project is **TJS 181,364** that has been paid to APs according to the censuses certified by the local district authorities. It comprises 83.3% of the planned budget as direct costs of the entire Line Project LARP.

49. As shown in Chapter 2.3, net of land withdrawn from circulation on an ongoing basis to angle and suspension towers (i.e 9 630.5 m²) given in the standard scope of 850 m² on tower will be needed an additional piece of 65 000 m² farm land, that will be affected only temporarily in one season harvest mounting angle 20 and 68 suspension towers (if the construction will be completed in one season).

50. Also, at the time of wire tension, for the corridor of four meters on the route approx. 17,808 m (= 17.8 km) to access to the 88 towers construction site, will need to use an additional 71,232 m² strip of cultivated land. This zone will be calculated on the reality of the hanging wires will be produced on existing routes and the earth between fields without crops or planted with crops (mostly near channels and large access roads). Consequently, our estimates, for greater fidelity, is increased.

51. Agricultural crops (cotton, corn and onions), trees (apricot, pomegranate, citrus, almond), and some vines grown in the temporarily an enabled the ground to be damaged or cut as in the case of trees, during construction of towers and stringing wires.

52. A total area of 88, 000 m² (including the areas of fruit trees) may be affected on an ongoing (9 630.5 m²) or temporary (71,232 m²).

53. When calculating the direct loss and long-term losses for farmers, the following figures are the most realistic:

- Penjikent, farmers have a short-term damage to **72,831 TJS**, and long-term damage to **79,239 TJS**
- Ayni, short-term damage to **17,129 TJS**, and the long-term damage to **12,165 TJS**
- All short-term damage is **89,960 TJS**, and long-term damage is **91,404 TJS**, the result of which is **181,364 TJS**.

54. The resettlement budget for LARP, based on the stakeholders' approved compensation rates for loss of land use rights and compensation for the loss of income from crops both for temporary and permanent impacts, and other specific provisions such as allowances for vulnerable persons, cost of services of a registered land valuator and 10% contingency. See **Table 6** below:

Table 6: Total loss and compensation payments

District	Temporary losses, m ²		Persistent losses, m ²	Compensation for the towers /TJS 250	Subtotal compensation in TJS	25% for vulnerable households	Total compensation in TJS
	Access (section)	Work areas					
Penjikent	54 912	54 633	7868,75	18 250	151 865	205	152 070
Ayni	16 320	10 367	1761,75	3 750	28 460	834	29 294
Total	71 232	65 000	9 630,5	22 000	180 325	1039	181 364

PUBLIC CONSULTATION / FOCUSED GROUP DISCUSSION WITH DPs

1. Consultation

55. The last version of the LARP has been prepared in close consultation with some of the possible AFs who have been informed about the Project and its likely impacts. Other stakeholders consulted during the preparation of the final LARP and the updated version of the

plan include Jamoat leaders in Ayni Rayon in Dar-Dar and Urmetan Jamoats, and in Penjikent Rayon in the Jamoats of Serazm, Khalifa Hassan, Zudhzina, Loikh Sherali, and Rudaki. In Penjikent there was also a very close exchange of information with the representatives of the Rayon administration (Hakim, vice-chairperson of the Rayon for energy and for land issues, members of the Land Committee, the Department of Statistics, the Department of Agriculture, etc.). Neighbours in the project zone of influence were also contacted. Consultations were carried out with individual households during the AF socioeconomic survey, and with local leaders and officers at Jamoat and Hukumat levels.

56. During project implementation, consultation with AFs will be ensured through regular meetings to be organized by the project management unit (PMU) and BT field offices. These meetings will be used to tackle resettlement implementation problems and to undertake timely remedial actions. This will also serve as a forum by which the contractor may keep AFs informed of the construction schedule, allowing for crop harvesting and steps both the contractor and the AFs can take in order to reduce impacts of construction on the environment and directly on the family (e.g. noise and dust reduction etc.).

Table 7: Community consultation meetings

No	Date	Location (Jamoat/Rayon)	No of participants		
			Males	Females	Total
1	12.07.2016	Panjakent	18	8	26
2	19.07.2016	Ayni	11	6	17
Total*			29	14	43

*Number of APs participated in community consultation is shown based on the actual number of APs attending consultation meetings. Never the less, 100% APs were consulted on the overall project information, Entitlement Matrix, GRM, etc. on their land plots in the process of detailed measurement surveys.

57. A number of formal and informal consultations with APs additionally affected by the project and other major stakeholders were conducted during assessment and the preparation of the LARP. Representatives of the local government at jamoat level, specialist from the agriculture department in Panjakent and Ayni districts, safeguards' team of PMU Barqi Tojik were consulting DPs on a daily basis during the assessment and preparation of final LARP. A brief summary of the major consultations with affected people is given below. See **Appendices 4, 5 and 6** for additional information on community consultation meetings.

Consultation meetings participants and major stakeholders:

1. All DPs additionally affected by the Project
2. Local Government LAR relevant departments representatives
3. Grievance Redress Committee's representatives in Panjakent and Ayni districts
4. Safeguards team of the PMU Barqi Tojik
5. Other community members, APs representatives and local authorities

Agenda of the consultation meetings:

1. Discussion and considerations of reasons and scale of additional impact of LAR on APs;
2. Analysis and discussion on the adopted entitlements and valuation methodologies adopted for the LAR of the project;
3. Disclosure of the valuation results of the assessment carried out by the agriculture department specialists from Panjakent and Ayni district, for each type of land and income from crops, loss of fruit trees and land use rights of the APs followed by receiving comments and consent of APs.

4. Other issues and questions raised by the participants.

58. Consultation meetings started with general information about the project and explanation of the reasons for land acquirement following impact on some of the households' agriculture lands and orchards along the transmission line. The temporary impact on additional required land during construction works was also discussed with APs and mentioned that APs will receive adequate compensation for the temporary impact as reflected in the entitlement matrix of this LARP.

59. Although majority of APs were present during assessment, measurements and registration of affected land and crops, once again all type of losses that were registered, were assessed with each individual owner during the consultations. Farther methods of identification of costs for each type of losses have been communicated to APs and samples cases were explained on way of lands, crops and trees valuation methods applied.

61. It was explained that in case of occurrence of any other extra damage and impact on land and crops created by machinery work that were not compensated, APs can submit their grievance to the GRC committee representative in jamoat and seek compensation for the damages. In addition, it was explained that contractor may have temporary impact on land of some community members during the construction work. In this cases project has to ensure registration of such cases and compensation should be provided to the owner before acquiring the land.

2. Resettlement and relocation options for AFs losing agricultural lands

62. Consultations have been carried out with some of the possibly affected households. Compensation options have been discussed including cash compensation, land for land or a combination of approaches. The dialogue partners prefer cash compensation for withdrawal of the land use in accordance with its cultivation value. As the socio-economic survey at Jamoat level and of the interview partners themselves indicate, most AFs are viewed as "cash-poor", thus cash compensation for crop loss is important. As in Khatlon Oblast, and also in Zerafshan, alternatives to cash compensation are precarious as even the Land Committees do not have land and water rights for future distribution to farmers.

3. Community Responses to the Project

63. Due to the fact that the old 110 kV line to Penjikent is old and damage occasionally occurs, there are some direct benefits to the affected households or communities along the TL route. This is known by the people and no protest at all against the acquisition of land for towers has been expressed during the meeting. The project may also stabilize the long term electricity fees for the population and support economic development (especially the SME sector in rural areas).

64. Given the immediate, potential impacts and benefits of the project, community response was different from the situation in Khatlon between Geran and Rumi. Those consulted generally accepted the necessity of the project. They also appreciated the efforts of the implementing agency to minimize adverse social impacts. In some cases people even declared that in order to support the project they would not ask for compensation payments "If our electricity supply was later made sustainable both in summer and winter".

65. Relevant Hukumat and Jamoat officials have provided valuable assistance for the conducting of the line survey and the socio-economic study and thus demonstrated their interest in improving the regional power supply situation.

DISCLOSURE

1. Information Disclosure

66. During the SES and consultations with communities, in addition to the information about the Project, LAR processes, bidding process and expected time for the beginning of the works, the participants received the Project Brochure, Project-specific entitlements, GRM procedure and information about the cut-off date. The PMU, with assistance of the Consultants' Resettlement Specialist, will update the Project Brochure if it becomes necessary. The Brochure has been delivered to all APs.

67. The information about the project and Cut-off Date was published in the local newspaper, aired on radio and forwarded to each rayon and jamoat authority. During the SES and DMS, all DPs confirmed that they were informed about the cut-off-date.

68. During the LARP implementation, the following information was disclosed:

- uploading of the LARP in English on the ADB website.
- distribution of copies of the LARP in the Russian language in the local authorities' offices
- posting of the approved draft LARP in the Russian language on the PMU 'Barqi Tojik' website
- in case of changes in project design, which may result in changes of resettlement impacts, measurement of additional impact, valuation and updating of the LARP will be undertaken. The updated LARP will be disclosed to the displaced persons, and submitted to 'Barqi Tojik and ADB for approval prior to the commencement of construction in the section(s) where the design has been changed. The updated and approved LARP will be uploaded on the ADB and 'Barqi Tojik; website.
- corrective action plans will also apply to design variations effected or any omission detected once the construction has commenced.

69. Barqi Tojik has prepared and distributed to affected communities a project information leaflet in Tajik (See **Appendix 1**). This has been distributed to the possible AFs for the first time end of 2014 and the updated version was given during SES in July to September 2016. The project information leaflet contains the following information:

- (i) a brief background of the Project, specifically the civil works to be undertaken and the adverse social impacts
- (ii) preliminary estimates of land acquisition;
- (iii) project entitlements;
- (iv) indicative schedule of resettlement activities;
- (v) grievance redress mechanism; and
- (vi) contact persons for any queries. Parallel to distribution of the leaflet, a summary version of the LARP in Tajik language was posted in Hukumat and Jamoat offices. The finalized LARP was also uploaded on the ADB website.

Date:	September 2016		

CUT-OFF DATE

70. A Working Group for land acquisition and resettlement planning, headed by the First Deputy Head of districts of Ayni and Panjakent, was established in May 2016 to guide LARP preparation and address compensation policy issues. The Working Group has representation from key Government agencies, PMU 'Barqi Tojik' and the jamoats of both project districts, who took part in a survey of APs and their assets. A notice of cut-off date relating to registration of affected assets was issued in July 2016.

71. The cut-off dates for compensation claims were announced by all districts through local newspapers. Compensation eligibility is limited by an approved cut-off date established at the start of the impact survey on July 2016. Copies of published notices of this date are given in **Appendix 2**. DPs who settle in the affected areas after the cut-off date will not be eligible for compensation. They, however, will be given sufficient advance notice, requested to vacate premises and to dismantle affected structures prior to project implementation.

72. Barqi Tojik regional staff have also distributed a revised version of the project information leaflet prior to the final engineering design by the contractor. In addition, the projected Operation Manual will provide a clear idea to all local stakeholders and especially to the affected households about the process of identification and assessment of damages, and of the compensation and grievance redress mechanism.

GRIEVANCE CASES

73. There were no grievances reported concerning the LARP implementation. Based on informal interviews the APs were satisfied with compensation received.

74. Great care is taken to prevent grievances. This will be done through careful land acquisition design and implementation, by ensuring full APs participation and consultation, and by establishing extensive communication and coordination between the community, the BT/PMU and the local governments. This notwithstanding, complaints are sometimes unavoidable and a grievance mechanism is being adopted for the project to allow the APs the opportunity to appeal against any disagreeable decision, practice or activity arising from compensation/rehabilitation process. Efforts to make APs fully informed of their rights and of the procedures, for addressing complaints, have continued during the updating of the LARP and at the time of compensation.

75. As per the Fig. 2 below, complaints and grievances is addressed through the following steps and actions:

First Step: One Project Grievance Redress Committee for each of concerned Hukumats has been established. It includes two members of the affected community (including AP's and non-APs), one representative of each concerned Jamoat and one representative of each of the two Hukumat Land Councils, to be chaired by one of the two Hukumat representatives (to be agreed upon internally by the two Hukumats). Grievances have been going to the local authorities of Grievance Redress Committee and were heard and resolved within 14 days of submission of the complaint.

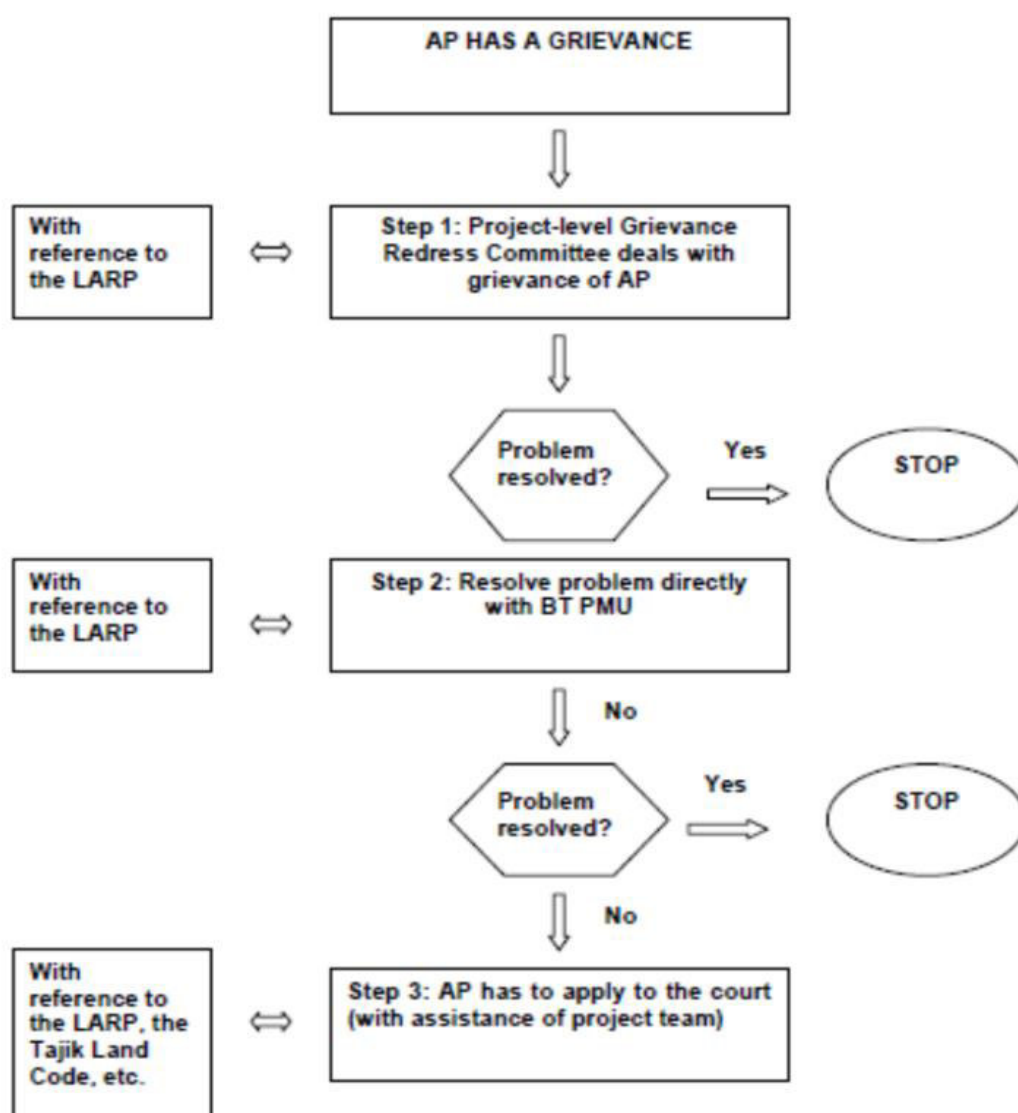

Second Step: If the Project Level Grievance Redress Committee was not able to resolve the grievance within a 14-day period, the complaints could be presented via the BT Rayon representative to BT PMU at a central level. The elected representatives of the AF will have the opportunity to mediate by providing their written comments and proposals to the PMU. A final decision would be made by the Director of the PMU after the assessment of the case and a careful preparation of the decision by the PMU resettlement

representative. Grievances must be heard and resolved within 7 days of submission of the complaint.

Third Step: If no solution is reached within 14 days at BT PMU level, the APs could further submit their case to the appropriate court of law. According to Tajik law, taking the case to court can be related only to the valuation of the losses and the determination of the level of compensation (payment). The question of the expropriation for the construction of a HVTL itself is not negotiable and a case in court cannot delay construction work.

76. While applying the Grievance Redress Mechanism, APs could seek support from the BT PMU resettlement representative who on his part might be assisted by the national and international consultants. The contact addresses/phone numbers will be available at the level of each concerned Jamoat. Grievance application form (see **Appendix 3**) was provided to jamoats for registration of APs and communities concerns and appeals.

Figure 2: Grievance Redress Mechanism established for the project

INSTITUTIONAL FRAMEWORK

1. Institutional Arrangements

77. The ME has been responsible overall for further LARP updating, implementation and financing and will exercise its functions through the Project Management Unit (PMU) at BT. Within the PMU, LARP tasks are handled by the resettlement representative, BT's Monitoring Department (formerly known as the Environment and Social Department – ESD), in consultation with concerned Hukumats and Jamoats, which planned and managed all land acquisition, compensation and rehabilitation action detailed in this LARP. Close cooperation was required with the State Committee on Land, which has the ultimate authority in the decision making process on land transfers in Tajikistan. To carry out activities in the field the resettlement representative of the Monitoring Department has also liaised with BT's district offices and mobilize their personnel as needed. In the implementation of the compensation/ rehabilitation program at the local level, the Monitoring Department will also coordinate with the district (Hukumat) governments (mainly the Hukumat Land Management Council), which have the ultimate authority on local land acquisition matters in consultation with the State Land Committee.

78. During project implementation, the project management consultants will include in their team an international and a local resettlement specialist. They will assist the Monitoring Department in updating, based on detailed design, and implementing the LARP. Due to the large number of AFs, the project organization for resettlement has required close cooperation between the PMU, the Rayon "Commissions on Assessment of Damages and Losses" and the local District Barqi Tojik offices. The AFs have been represented in the process and two representatives have become full members of the three Rayon based Commissions for the Ayni - Rudaki project.

79. BT, with assistance of the contractor (who has been responsible for assessing the land plots required and identifying the land usage title owners) and the Hukumat, have finalized agreements with the AFs on the compensation amounts due to them. Barqi Tojik physically delivered compensation to the AFs by its cash desk. BT has monitored the timely payment of compensation and its proper documentation. An account of this process, including amounts disbursed and verification of receipt by APs, is an integral part of the PMU's internal monitoring report.

2. Commission on Assessment of Damages and Losses

80. The assessment of all damages and losses has been done and valuation of compensation decided by the Commission on Assessment of Damages and Losses. According to the Decree No. 641 of 30th December 2011, the Commission consists of the following members:

- Deputy chair person of the Rayon (as chairperson of the commission),
- Chairperson of the Rayon committee of land resources and usage (incl. construction),
- Rayon architect,
- Representatives of the Department for Water Usage,
- Representatives of the District Environment Committee,
- Representatives of the Department for Sanitation and Fire Control,
- Representatives of the land users where lands are taken permanently or temporarily,
- Representatives of organizations, which have a stake in land distribution and other representatives of organizations according to the local authority's decision.

81. In accordance with the ADB and BT/PMU agreements on land acquisition, there have also been the local BT representative and the responsible person for resettlement issues of

BT/PMU in the Commission. Considering the large number of affected land plots and their owners, this commission cannot do all of the work. Therefore, a working commission as a sub-group of the Rayon Commission has been established with the following members:

- one representative of the Rayon Land Commission,
- one representative of the Jamoat administration concerned,
- one representative of a Community Based Organization (CBO) from one of the Jamoats concerned (preferably from a farmer's organization) or a representative of the affected farmers themselves (could be difficult to organize),
- one representative of BT/PMU land acquisition and resettlement team.

82. The representative of the contractor, responsible for the identification of losses, is a member of the sub-commission without right to vote.

83. The work procedures of the sub-commission and the Rayon Commission have been explained in detail in the Operational Manual. Work details will also be part of the training of the three commissions by BT/PMU and the consultant.

3. Barqi Tojik's Institutional Capacity Building in Resettlement

84. BT has a Project Management Unit (PMU) to deal with the implementation of projects funded by ADB and other donors. To date, the PMU has been responsible inter alia for the Power Rehabilitation II project and various CAREC-Projects. Resettlement activities are the responsibility of the PMU, with particular assistance of the Monitoring Department, which belongs to BT's PMU. Key capabilities and activities of the Department are social impact assessments, environmental impact assessments, initial social and environmental examinations, and other monitoring, auditing, and associated project studies.

85. Although some of the members of the Monitoring Department formerly received some training and the department manager participated in the implementation of an earlier LARP, theoretical and practical experience in socio-economic investigations and surveys is limited. Department and other PMU staff members have only limited experience in carrying out land acquisition and impact compensation/rehabilitation programs based on international standards. For this reason, the Project Management Consultant will carry out on-the-job capacity building training sessions for the responsible PMU staff members in preparation for LARP implementation. The on-the-job capacity building training will include:

- a. Definitions, principles and procedures of land acquisition;
- b. Public consultation and participation methods (including data collection requirements);
- c. Liaising with Hukumat and Jamoat level representatives; and
- d. Compensation and assistance disbursement mechanisms.

86. Other local stakeholders such as the members of the Commission for Valuation of Losses and Compensation have also received training prior to the start of their work. Training sessions will take place with the acceptance of the engineering design of the final HVTL by the contractor, i.e. one to three months before the assessment of losses and compensation requirements.

4. Resettlement Database

87. The PMU office in Dushanbe has computerized all information concerning land acquisition, socio-economic information of affected land and other assets structures, inventory of losses of individual APs, compensation and entitlements, payments and relocation. This

database has formed the basis of information for implementation, monitoring and reporting purposes and facilitate efficient resettlement management.

CONCLUSIONS

74. The LARP of the Line Project was implemented guided by the legal, institutional and implementation framework in accordance with the ADB Policy and legislation of Tajikistan. All type of economic losses such as loss of lands, income from crops and trees losses have been compensated to APs. The framework for the Project LARP is based on the ADB requirements on Resettlement as embedded in the Safeguards Policy Statement (2009) and on the ADB Operations Manual F1 on the Safeguard Policy Statement (2009), the Constitution of Tajikistan, and the Land Code of Tajikistan. Where differences exist between local law and ADB policies and practices, the resettlement for this project were resolved in favour of the latter through a reconciliation measures and special entitlement matrix designed for the Project LARP. Reconciliation measures took place through consultations and discussions among international IR consultants and experts from relevant state institutions involved in the planning and implementation of LARP. The RP was implemented considering the following aspects:

- 1) Detailed lists of Affected Persons showing loss of crops.
- 2) Determination of entitlements and remedial actions as per the SPS 2009, National Laws and preparation of LAR plans in consultation with DPs, relevant government institutions, districts' executive government, EA and PIU.
- 3) Entitlements by categories of losses i.e land, houses, assets, entitled persons, application guidelines and implementation issues.
- 4) Budget estimates for resettlement plan, including compensation, rehabilitation, other income restoration measures and assistance.
- 5) Grievance redress procedure to address complaints related to the planning and implementation of resettlement activities.
- 6) The LARP phases implementation schedule in coordination with the Line construction schedule.

75. The LARP of the Line Project was based on relevant Tajikistan laws and policies, as well as the ADB's SPS 2009. It was guided by the following key policy principles and objectives:

- Assist affected persons in improving their former living standards, income earning capacity, and production levels, or at least in improving them.
- Provide full information and carry out consultations with APs on resettlement and compensation so that resettlement becomes a participatory process.
- Provide assistance to APs regardless of legality of land tenure.
- Measures to protect socially and economic vulnerable groups, such as female headed households, people living in extreme poverty, marginal landowners and the landless.
- Compensation for loss of income form annual and perennial crops and trees.
- Implement LARPs after consultations with the affected people.
- Monitor and facilitate mechanisms for hearing, recording and resolving grievances.

76. Taking stock of the implementation progress of the LARP it is seen that the goals of the ADB's policy as well as Land Code of Tajikistan have been complied and met. All compensations, assistance and benefits adopted in the proposed entitlements matrix, corresponded to the APs received benefits that they were entitled for. Implementation of LARP has adequately met all requirements listed in the LAR planning documents, which were endorsed by the Government of Tajikistan and approved by ADB.

77. Consultations and enquiries with APs prevailed that their crops have been correctly enumerated and they have received compensation payments accordingly. The amounts of payments were equal to the amounts that was announced during consultation meetings organized for APs in each village to check the accuracy of crops inventory and cost calculations. No any case of fraud or corruption have been observed. There was an evidence of APs knowledge about compensation entitlements and losses estimation procedure, which is proving community involvement and participation in the process of preparation of LARP project that facilitated complete implementation of the LARP.

78. LARP was implemented in a manner that all potential adverse impact on APs lands, crops and trees have been fairly compensated to achieve APs satisfaction. LARP implementation complied with the ADB Safeguard Policy Statement requirements for involuntary resettlement and the principles adopted for the project, in terms of provision of compensation, impact validation, community consultations, disclosure of information, etc. No conflicts among the APs, project implementers and local authorities were reported. The Resettlement Plan was implemented guided by the legal, institutional and implementation framework in accordance with the ADB IR policy guidelines and legislation for compensation for affected assets and rehabilitation of the DPs.

APPENDICES

APPENDIX 1:

PUBLIC INFORMATION BROCHURE

220kV Overhead Line Ayni-Rudaki Project

(Funded by the Asian Development Bank)

Executing Agency: BARQI Togik

Expected start of Implementation Summer 2016

A. Project Description

1. The newly to be constructed 220 kV single circuit line from Rudaki (Penjikent) to Ayni is running south- eastwards from Rudaki Substation parallel to two out of operation 220 kV lines to Uzbekistan up to the village of Chorvodor where all three lines will turn more to the south to run through a gap between Chorvodor and Yalokdzhar to reach the southern side of the road from Penjikent to Samarkand (Uzbekistan). From there the line continues in open areas to the south and finally to the east. The line route passes north south of Zebon, Shurcha and Sabr, keeping a distance of approximately 8.5 km to the middle of the runway of Penjikent Airport and south of Kushtappa towards the east near to Gusar going around the agricultural area up to Navabad. From Navabad the line is running south of Dashthikazy and crossing the access road to a Tajik-Chinese Gold Mining Company. In this section the line should run parallel but south to the existing 110 kV line from Ayni to Penjikent and continues by crossing a valley to reach the southern border of Koshana. From Uata the line is crossing two ridges of hills and continues on the hills bypassing Yavan and following a track to reach the main road Ayni – Penjikent. In this region the line is following this road for approx. 10 km where it again meets the existing 110 kV line. The new 220 kV line will be kept always south of the existing 110 kV line to avoid unnecessary crossings. The line will be kept at the southern side of the river opposite side of Vishkent crossing two hills up to Khayrabat. From Khayrabat the route will be located again on the ridge of hills until it reaches Dardar. The route is going around of the southern edges of Zerabad up the hills to avoid unstable soil condition (landslides) through a valley and again uphill to come down to the Ayni –Panjikent road, which is just under reconstruction, and reaches after approx. 500 m the Substation Ayni 220 kV.

2. To compensate and/or rehabilitate these losses the provisions of relevant Tajikistan laws and of the Asian Development Bank (ADB) Policy on Involuntary Resettlement is being adopted. This has included the preparation of a Land Acquisition and Resettlement Plan (LARP) providing data on impacts and affected families and indicating in detail how the impacts will be compensated or rehabilitated. The LARP in Russian will be available for perusal to anyone interested both at the local and at Dushanbe offices of MOT.

3. This Leaflet summarizes the LARP provisions and is provided to all the families whose land, houses or other assets and incomes are affected by this Project. The objective is to inform them of the compensation and rehabilitation policy included in the LARP and of a few basic modalities of implementation of the Compensation and Rehabilitation.

4. Principles for the compensation/rehabilitation of families affected by this Project are:

- Involuntary resettlement is to be avoided, if unavoidable, minimized with all viable options.
- The AF should be compensated and assisted, so that their economic and social future would be generally as favorable as it would have been in the absence of the Project.
- The AF should be fully informed/consulted in resettlement and compensation options.
- Local socio/cultural institutions should be supported / used to the greater extent possible.

- Lack of formal legal land title should not be a bar to compensation or rehabilitation.
- Compensation will be provided to the AF at full replacement cost of the affected assets free of deductions for salvaged materials, depreciation or fees/taxes.
- Particular attention should be paid to AF headed by women and other vulnerable groups, and appropriate assistance provided to help them improve their status.
- Land/other compensation/rehabilitation provisions will equally apply to women and men.
- Land acquisition and resettlement will be conceived and executed as an integral part of the Project and related budgets will be included in Project costs.
- Compensation will be fully provided prior to ground leveling and demolition.

B. Compensation Policy

5. All families residing in affected areas, holding affected assets or incomes before the eligibility cut-off date, to be the final day of the impacts survey will be entitled to compensation for their losses, as per Table A1-2 below.

Table A1-2: Compensation Entitlements Matrix

No	Asset	Displaced Person	Compensation Entitlements
Permanent Loss			
1	Agricultural land (all losses irrespective of severity)	Individual land-use rights holders	Cash allowance for loss of land use rights equal to net income in the last 5 years generated from the affected land area at market rate at the time of taking; or Provision of alternative land plot of equal value / productivity to plot lost. If the remaining portion of the plot to be taken is too small to use, the whole plot is compensated or exchanged.
		Collective land-use rights holders	Cash allowance for loss of land use rights equal to net income for the last 5-years generated from the affected land area at market rate at a time of revocation; or Provision of alternative land plot of equal value / productivity to plot lost. If the remaining part of the plot to be taken is too small to use, the whole plot is compensated or exchanged.
		Renters and leaseholders	Rental allowance in accordance with the conditions of the rent agreement, but not less than the cost of rent for 3 months; or Continuation of rental agreement on alternative land plot or cash allowance for the lost income equivalent to 1 year of average crop productivity.
		Informal (if any) ⁵	Provision of opportunity to lease a plot on state land. Relocation allowances.
2	Residential and commercial land	Owners	Cash allowance for loss of land use rights in cash equal to current annual land lease rates at the time of acquisition multiplied by 25; or Provision of alternative land plot of equal value / productivity (similar conditions and facilities) to plot lost. If the residual portion of the plot to be taken is too small to use, the whole plot is compensated or exchanged.

⁵ Landless DPs without any rights-to-use land living on income from the illegally used land plot. The DPs owning land adjacent to the illegally used parcel will be compensated for losses from the illegally used part as per the entitlement matrix.

No	Asset	Displaced Person	Compensation Entitlements
		Renters	Rental allowance in accordance with the conditions of the rent agreement, but no less than the cost of rent for 3 months, or Continuation of the rental agreement an alternative land plot.
		Informal (if any)	Provision of opportunity to lease a plot on state land. Relocation allowance if applicable.
3	Buildings and structures	Owners of structures including “ informal ” and encroaching	Cash compensation at replacement rate for affected structure / other fixed assets (without deduction of depreciation, taxes, costs for salvageable materials and other transaction costs). All buildings and structures will be compensated in their entirety; or According to the owner’s choice, if feasible, a building for building / structure for structure exchange.
		Renters	Rental allowance in accordance with the conditions of the rent agreement, but not less than cost of rent for 3 months; or Continuation of the rental agreement for an alternative building/structure.
4	Crops	All DPs, including “informal” and encroaching	Crops affected by the towers and by stringing or tower transport will be compensated by default at market rate.
5	Trees	All DPs, including “informal” and encroaching	<ul style="list-style-type: none"> • Fruit-bearing trees: Compensation in cash based on one year yield x the number of years needed to re-grow the tree at productive stage. • Not yet productive fruit trees: Compensation in cash based on inputs x average age of trees. • Seedlings: Based on seedlings cost plus inputs x 1 year. • Wood trees: cash compensation based on wood volume x market value of the wood
6.	Business and employment (temporary and permanent)	All DPs (including workers of affected businesses	Owners of shops / commercial establishments: In case of permanent loss, compensation equal to 1 year net income (lost profits) plus cost of lost certificates / licenses / patents. The income is based on the official tax declaration, or (if tax declaration is unavailable) it is accepted as the official monthly average wage ⁶ multiplied by 12. In case of the temporary loss of a business, compensation equal to the net income for the period of disruption (<1 year). The income is based on the tax declaration, (or it is calculated based on the monthly average wage multiplied by the number of months since the operation was disrupted (less than 12 months).
			Workers indemnity for lost wages equal to 3 months’ income.
7.	Relocation	Physically displaced households	Transportation allowance (cost of labor and vehicle rent to transport materials of the house/business structures to a new location. Communal and site preparation cost for the alternative land plot (including connection to power grid, water supply system, installation of latrine etc). Severity /livelihood rehabilitation allowance in the form of cash compensation equal to the official monthly average wage for 3 months.

1. ⁶ Official average monthly wage for April 2016 is **931.90** TJS/month and reported within macroeconomic indicators by the Agency on Statistics under President of the Republic of Tajikistan. Available via: <http://stat.tj/en/macro-economic-indicators/> and <http://www.tradingeconomics.com/tajikistan/wages>

No	Asset	Displaced Person	Compensation Entitlements
8.	Public / common assets		Rehabilitation / substitution in kind or in cash at replacement cost of affected items and rehabilitation of their functions. Alternative service supplied, if cut off temporarily.
9.	Vulnerable households	DPs receiving government assistance for poor, single women-headed HH below poverty line, elderly households with no means for living, households with disabled head or other HH members.	One additional compensation for the crops in the affected plots to be set at 25% of the ascertained value.; Enrolment in Government social assistance, if not yet enrolled; Priority in project-related employment for members of vulnerable households (if at legal working age).
			Severity of Impact
10.		Permanent losses exceeding 10% of the total land per AF	Additional cash allowance equal to market value of 25% of the gross produce of affected land x 5 years
Temporary Loss			
11.	Temporary impacts	All relevant DPs	For other unforeseen and temporary impacts other than stated above, ADB SPS (2009) general principles and objectives will be used as the minimum benchmarks and appropriate impact mitigation measures will be sought to meet them. The payment for rented land during the construction, will be based on the market price under negotiated agreement. After discontinuation of land use, the land must be restored to the original status, or as per the agreement with the land rights holder ⁷ .
Unanticipated impacts			
12.	Other unanticipated assets loss or impact on livelihood	All DPs residing in the project corridor before the cut-off-date.	Compensated as per the Project specific entitlement matrix.

D. Grievance Mechanism during Resettlement and Construction Period

Complaints and grievances will be addressed through the following steps and actions (see Fig. 2):

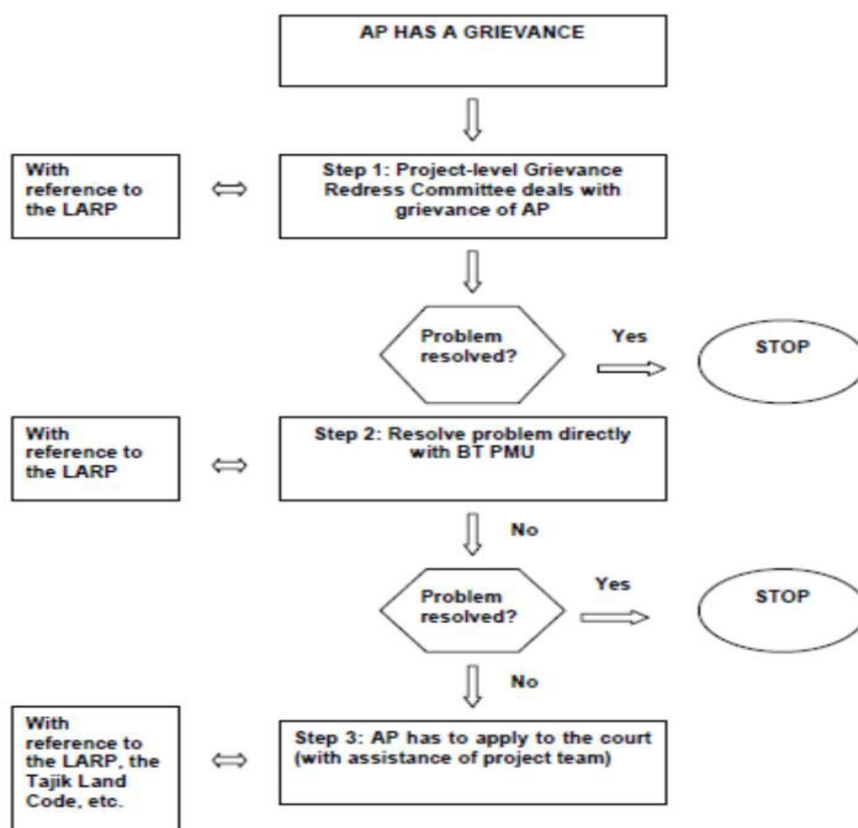

First Step: One Project Grievance Redress Committee for each of concerned Hukumats will be established. It includes two members of the affected community (including AP's and non-APs), one representative of each concerned Jamoat and one representative of each of the two Hukumat Land Councils, to be chaired by one of the two Hukumat representatives (to be agreed upon internally by the two Hukumats). Grievances will go to the local authorities of Grievance Redress Committee and must be heard and resolved within 14 days of submission of the complaint.

Second Step: If the Project Level Grievance Redress Committee is not able to resolve the grievance within a 14-day period, the complaints should be presented via the BT Rayon

⁷ In the case that the Contractor and Land-use rights holder both agree in writing to leave the land area in a state precisely described in the agreement.

representative to BT PMU at a central level. The elected representatives of the AF will have the opportunity to mediate by providing their written comments and proposals to the PMU. A final decision will be made by the Director of the PMU after the assessment of the case and a careful preparation of the decision by the PMU resettlement representative. Grievances must be heard and resolved within 7 days of submission of the complaint.

Third Step: If no solution is reached within 14 days at BT PMU level, the APs can further submit their case to the appropriate court of law. According to Tajik law, taking the case to court can be related only to the valuation of the losses and the determination of the level of compensation (payment). The question of the expropriation for the construction of a HVTL itself is not negotiable and a case in court cannot delay construction work.

ИНФОРМАЦИЯ ПО ПРОЕКТУ

Республика Таджикистан: Проект по внедрению системы учета оптовых поставок электроэнергии и улучшению системы электроснабжения

Финансирование: АБР

Реализация: Барои Тоҷик

Описание проекта:

Проект включает в себя строительство ВЛ 220 кВ от пс. Айни до пс. Рудаки (горада Пенджикент). В общем, длина линии составляет 94,2 км, около 22 км которых пройдет по сельскохозяйственным угодьям. Проект будет реализован с октября 2016 по март 2018 года.

Коридор линии: Новая одноцепная ВЛ 220 кВ от ПС Рудаки (Пенджикент) и до ПС Айни будет построена в юго-западном направлении от ПС Рудаки, параллельно двум отклоненным ВЛ 220 кВ на Узбекистан, и до кишлака Чорводор, где все три линии идут южнее, проходят между кишлаками Чорводор и Ялоқдаар и выходит к южной стороне дороги на Самарканд (РУ).

С этого места, линия проходит по открытой местности на юг и, далее, поворачивает на запад. Трасса ВЛ проходит вдоль северной части кишлака Зебон и южнее кишлака Куштуппа, далее, к западу от кишлака Гузар линия обходит сельскохозяйственную территорию возле кишлака Новобад. Отсюда, линия проходит вдоль южной части кишлака Даштпиказа и пересекает подъездную дорогу Таджикско-китайской золотодобывающей компании.

На этом отрезке линия пройдет параллельно, но чуть южнее от действующей ВЛ 110 кВ Айни-Пенджикент и, далее, пересечет долину, выйдя к южной части кишлака Кошана. От кишлака Кошана линия поднимается вверх на холмы и вновь спускается южнее кишлака Вота. От него, ВЛ пересекает два горных хребта и проходит по горам через Яван и выходит к основной дороге Айни-Пенджикент. На этом участке линия идет вдоль дороги, примерно 10 км и вновь пересекается с действующей ВЛ 110 кВ.

Во избежание пересечений, новая ВЛ будет построена южнее существующей. Далее трасса пройдет по южному берегу реки напротив кишлака Ваншкен и пересечет две горы до кишлака Хайрабад. От Хайрабада, линия вновь пройдет по гребням гор вплоть до Дардара. Далее линия обойдет Зерабад по южной части вплоть до гор, чтобы избежать нестабильных почв (оползни), пройдет по долине и вновь поднимется вверх по холму и спустится до дороги Айни-Пенджикент и, примерно через 500 м достигнет ПС Айни.

Ожидаемое влияние и причитающиеся выплаты:

Трасса ЛЭП и расположение опор будут спроектированы и более детально определены на стадии детального проектирования, с учетом затронутых домохозяйств. Ожидаемое влияние проекта и причитающиеся выплаты показаны ниже:

Актив	Описание	Затронутые лица (ЗЛ)	Компенсации
Постоянная отчужденная земля для фундаментов 88 опор	Затронута вся земля (т.е. между 81 и 144 м2, между 3 и 5 опорами на 1 км)	Все ЗЛ, включая частных владельцев, семей или фермерских хозяйств, имеющих сертификаты на землю	Выплата наличными по рыночному курсу (не обременяется ипотекой, регистрационными выплатами или выплатами за передачу) за 5 летний урожай.
Временное отчужденная земля - посевы	Затронутые посевы	Все ЗЛ, включая частных владельцев, семей или фермерских хозяйств, имеющих сертификаты на землю	Компенсация наличными за посевы по рыночной стоимости за один урожай (сезонный или летний), по умолчанию за вред, нанесенный фундаментами опор, строительством, натяжением проводов и поездами. Владельцы и держатели прав пользователей подлежат компенсационные выплаты согласно контрактам.
Временное отчужденная земля - деревья	Затронутые деревья	Все ЗЛ, включая частных владельцев, семей или фермерских хозяйств, имеющих сертификаты на землю	Фруктовые деревья будут компенсированы в размере одного урожая плодовоовощного на количество лет для повторного выращивания деревьев до того же уровня продуктивности, при котором деревья были потеряны. Нефруктовые деревья также будут оценены по рыночной стоимости сухого объема дров.

Механизм рассмотрения жалоб:

Пример рассмотрения и решения:

(i) Жалобы передаются в местные отделения Барои Тоҷик в районах проекта. Жалобы должны быть представлены в письменном виде проектному комитету рассмотрения жалоб, организуемым для каждого района и должны быть рассмотрены и решены в течение 3 дней со дня предоставления;

(ii) Если лицо, подавшее жалобу, не удовлетворено или не получило ответ от комитета, оно/она могут переслать жалобу через сотрудников БТ на имя менеджера ЦУП от Барои Тоҷик;

(iii) Если по истечению 14 дней с момента предоставления, жалоба не решена на уровне ЦУП/БТ, затронутое лицо, подавшее жалобу может передать свою жалобу в суд.

Контактные детали для предоставления жалоб на строительной стадии:

- Офисы джамоатов в Чиноре, Х. Хасане, Шинге, Амондаре, Косатароше, ЛШерали, Рудаки, Вору (городе Пенджикенте)
- Офисы джамоатов в Дар-даре и Урметане (Айнинского района)
- Офис БТ в хукумате города Пенджикента
- Офис БТ в хукумате района Айни

APPENDIX 2:

CUT- OFF DATE NOTICE

Announcement

For the attention of following jamoats population: Voru, Chinor, Rudaki, Loik Sherali, Amondara, Sujina, Khalifa Hasan and Sarazm of Panjakent, according to the Contract Agreement of "Wholesale Metering and Transmission Reinforcement Project" (Special Operation) is implemented between the Government of Republic of Tajikistan and ADB, the construction of SS Rudaki 220kV is scheduled. For this Transmission Line in Panjakent have been started the design works. There will be created the Special Committee, which will reveal the affected fields where the Transmission Line will cross, and the compensation payment amounts will be calculated as well.

Therefore, after July 11, 2016, the construction of any facilities, trees plantation or any other activity on the Transmission Line has to be abandoned. All those persons who construct or start any activity in the mentioned area after that date will not be compensated.

OJSC Barqi Tojik

PMU

Representation of Mahalla Government of Panjakent

APPENDIX 3:

GRIEVANCE REGISTRATION FORM

To: Representative of
Grievance Review Committee (GRC)
in _____ district

From: Mr/Mrs. _____
affected household by land acquisition and
resettlement activities in _____ village,
_____ jamoat, _____ district.

Letter of Complaint

Sincerely

Head of household: _____
(Full name)

Signature: _____

Date: _____

Complete the second part of the complaint letter and hand it over to the person complaining (cutting line)

This letter of complaint was received by _____,

(Full name) (Position)

Representative of GRC in _____ district, Line section No__

Signature: _____

Date: ____/____/201__

For records and further action taken by Grievance Redress Committee, keep this part of your complaint letter and bring it every time you are called for review/resolution of your complaint by the Grievance Redress Committee.

Letter of complaint of Mr/Mrs _____, who have been affected by land acquisition and resettlement activities, living in _____ village at Line section No__ was reviewed by the GRC members, local hukumat and jamoat and other representatives of the displaced persons.

Summary of the affected person' issue:
Resolution of the issue:

Representative of the GRC in _____ district, Line section #__

_____, _____ Signature:

(Full name) (position) Date: ___/___/201__

Displaced person Mr/Mrs _____(head of household) **agreed** / **disagreed** (please circle what appropriate) with the resolution of GRC.

(Signature) (Date)

In case of disagreement with the GRC resolution the affected person should lodge his/her complaint to Project Implementation Unit under MOTC for further review and recommendation.

Representative of the GRC in _____ district, Line section #__

_____, _____ Signature:

(Full name) (Position) Date: ___/___/201__

Displaced person Mr/Mrs _____(head of household) **agreed** / **disagreed** (please circle what appropriate) with the resolution of GRC.

(Signature) (Date)

APPENDIX 4:

SUMMARY OF COMMUNITY CONSULTATIONS

Various methods used for public consultation and consultations with concerned stakeholders during the preparation of Draft LARP are described in the following table:

Methods Employed for Consultations

Stakeholders	Purpose	Method
Local Community in Ayni and Panjakent district	To assess overall social perception about the importance of Line Project and local people's perceived need for improvement	Consultation and discussion with local people at different Project locations during reconnaissance walk over survey, cadastral survey, social survey and census survey.
District administration (Chairmen of both districts and First Deputy Chairmen) in Ayni and Panjakent and district level line agencies (Land Committee, District Architect, District Committee on Women and Family Affairs)	To assess the existing operational status of Line, to verify the land likely to be acquired based on preliminary design drawings, to carry out cadastral survey, to collect data on land, and to collect information on alternative livelihood programs and scope.	Individual meetings with the officials of respective offices.
Project affected people based on the preliminary design drawing	To prepare inventory of the affected assets and get measurement and conduct interview with the affected families about the affected assets and on the household matters	Individual interview of the affected households by means of a structured questionnaire
Customs Department and Border Management Department of Panjakent city	To conduct due diligence and identify possible LAR impact on relevant customs/border points area	Group discussion and individual meetings
Operational; businesses located along the Line in Dardar village of Ayni district	To assess daily transactions of the businesses that might be temporarily affected/closed during construction activities in the village. To find out their attitude and ideas regarding the project	Affected businesses were surveyed through structured questionnaire as well as by recording their daily transactions to find out net income per business. The survey was combined by series of informal meetings with the local community to get their views on the project.
Affected people from both districts, representatives of local government	To inform community about Project and compensation entitlements	Community consultations
	To discuss proposed loss of land use right	
	To get affected persons agreement on entitlement matrix	
	To inform affected persons about grievance redress procedure during the resettlement and the construction period.	

Project Stakeholders

The project consists of a number of stakeholders, all of whom will have some involvement in the RP process and mitigation of impacts. These were identified early in the RP process and targeted through a series of consultations. They include:

- Displaced Persons, businesses and institutions.

- Local officials from District and Province /Oblast and include cadastral, Line, environment, economic and rural committee members.
- Land and Resettlement Committee members (LARC).
- Women's Groups at district and jamoat level.
- Transport representatives – taxi, bus and truck drivers, owners and companies.
- Representatives from education and medical centers who will benefit from the improved Line.
- Local Non-governmental organizations/civil society organizations.

Women and Vulnerable Groups - have been fully included in the consultation and implementation process. They have had representation at meetings at Province, District and jamoat level; women had separate meetings during FGD's and the census process; and their numerous concerns and ideas have been reflected in the RP recommendations and the updated GAP.

Information and Consultation Mechanisms

A number of mechanisms are being used to undertake information dissemination and meaningful public consultation. These include:

Public Consultations – These are the formal public information campaigns undertaken in the Hukumat. They include environmental, social and resettlement presentations. The meeting is widely advertised in the media. Attendance is normally Government agencies, informed/identified AP's, village elders, civil society's representatives and concerned citizens. Additional public consultations may be conducted during the project implementation phase especially when additional LAR impacts are identified and after the finalization detail design is completed.

Project Census – The project census was also used as an information exchange with AP's. A more detailed outline of the project was provided to AP's at the beginning of each survey in the form of a verbal Q&A with the interviewer.

Public Information Brochure – Public Information Brochure was developed outlining details of the project, its location, potential impacts, entitlements and compensation for AP's, the grievance redress mechanism and contact persons for any queries on project activities. It was distributed to every affected household/business and available in the Jamoat office for other interested parties. It will be updated as the project progresses, incorporating new questions and more details on the implementation process.

In-Depth Interviews – are a follow-up from the official public consultations and are targeted at specific groups of stakeholders who may not have attended. They also target stakeholders who may not be aware that they are and should be involved in the project, and who would otherwise not be involved in the formal consultation or census process. For this project they include trucking/transport association representatives, women's groups, education and medical institutions, and Jamoat Resource Centers (JRCs). The interviews mainly assessed these groups' views on the potential project impacts (positive and negative), mitigation measures and suggestions for improvement.

Focus Group Discussions – are a follow-up from the AP census, and focused directly at the AP's – in particular the less powerful and poorer AP's who may not have the resources to attend the official public consultations due to distance, time and cost. The FGD format includes a detailed presentation of the RP process, separate discussions with women (using a female interviewer), confirmation of census figures and entitlements, and a detailed Q&A session. The

sessions are normally conducted in the local community (to reduce distance) and where possible, without outside influence (from Jamoat, rural committee members or nearby farmer) so as to reduce any feelings of intimidation or coercion.

Summary of Project Consultations

The key issues raised during the extensive consultation process can be summarized as:

- Discussion and considerations of reasons and scale of additional impact of LAR on APs;
- Analysis and discussion on the adopted entitlements and valuation methodologies adopted for the LAR of the project;
- Disclosure of the valuation results of the assessment carried out by the agriculture department specialists from Panjakent and Ayni district, for each type of land and income from crops, loss of fruit trees and land use rights of the APs followed by receiving comments and consent of APs.
- Other issues and questions raised by the participants.

Community consultation meetings
