standards, and the	health clinic on the island	lacks basic supp	Health services are poorly resourced and below basic plies and equipment. Major assistance in these areas is and the Commonwealth of Learning assists in education.

5. Design features. Key design features include a safe harbor with a jetty for the transfer of people and cargo from workboat to shore. Currently the transfer from the workboat to the existing facility requires walking about 30 meters on a coral reef and 50 meters on sand and dry coral to land. Passengers often negotiate this slippery surface barefoot or in flip-flops. Better safety will be ensured by the new jetty; public training on sea safety and first aid; a small first aid room equipped with a bed, chair, and the requisite supplies; and lifeguard equipment. A truck and crane at the site will facilitate the safe movement of cargo, which currently is carried by passengers and the local population. These movements will also be assisted by local stevedores and overseen by a security manager. The design includes training for workers and local communities on HIV/AIDS, other communicable diseases, sexual and reproductive health, and gender and cultural awareness, as well as measures to ensure the rights and equity of those who own land in the construction area with adequate compensation and grievance mechanisms. The felled trees and vegetation from the construction site will be made available to local women for use in handicraft production and to men for building and repairing homes, gardens, and pig pens. П.

PARTICIPATION AND EMPOWERING THE POOR

1. Participatory approaches and project activities. The government and civil society organizations (CSOs) in Funafuti-e.g., the Department of Lands and Survey, Department of Gender Affairs, Marine and Ports Service, National Council of Women, Disability Association of Tuvalu, Red Cross, and the Tuvalu Family Health Associationwere consulted during project preparation. The field mission to Niutao met several male and female Kaupule members and conducted focus group discussions with separate groups of older men, pregnant women, youth, landowners, fisherfolk, and women from the local council. In addition, an in-depth interview was conducted with an elderly man living with disabilities.^d These groups will continue to be consulted at various stages throughout the project cycle, with a specific focus on landowners, fisherfolk, poor women, and people living with disabilities. 2. Civil society organizations. CSOs were consulted during project preparation and will be consulted again during project design, construction, monitoring, and completion. CSOs will also be contracted to run the sea safety and first aid training as well as the training on HIV/AIDS, sexual and reproductive health, and gender and cultural awareness. 3. The following forms of civil society organization participation are envisaged during project implementation, rated as high (H), medium (M), low (L), or not applicable (NA):

H 🖾 Information gathering and sharing H 🖄 Consultation M 🖾 Collaboration 🗌 Partnership 4. Participation plan. 🛛 Yes. No.

The project administration manual contains a stakeholder communication strategy and plan involving national and local CSO groups.

III. GENDER AND DEVELOPMENT

Gender mainstreaming category: effective gender mainstreaming

A. Key issues. Compared with other islands in Tuyalu, women on Niutao are better represented in decision-making bodies, leading three of the six Kaupules. However, women still defer to traditionally assigned gender roles at home and in agriculture and fisheries. Women do not fish in offshore boats and are limited to collecting shellfish on the reef. The role of tending to animals and gardens is reserved for the men. Employment for women outside of government jobs is scarce in Niutao, and their main income comes from the sale of handicrafts. They receive A\$100 from the Kaupule-run local handicraft shop for a pandanus mat, which takes 3-4 days. This work provides the main income for many local families, who rely on local gardens and fishing for a lifestyle that is mostly on the edge of subsistence. Anecdotal evidence suggests that the improved harbor facilities will increase economic opportunities on the island for women and men. Niutao has one health clinic staffed by a midwife with diploma-level training, a nursing assistant, and a sanitation officer. All women attend the hospital in Funafuti for the birth of the first child, and the new harbor facilities will improve their access and make their transport safer.

B. Key actions.

\boxtimes	Gender action plan	Other actions or measures

☐ No action or measure

Women will be included in all community consultations, at a minimum rate of 40%. The new facilities will have lighting and safety and security features, which will give women and children safer access to transport to other islands, e.g., to use social services, attend school, or go to family gatherings. The passenger terminal will also include separate
toilets for men and women as well as priority seating for women and people with disabilities. Women will be
economically empowered by the development of a canteen at the harbor run by the women's council, an outlet for
handicrafts, and access to the trees felled to clear the construction site for use in their handicraft production. Women
will also get access to a minimum of 10% of the unskilled work during the construction period and to at least 30% of
work in the project management unit. As clan ownership of land is often in the name of men, it is essential that
women get full access to information and are aware of their rights to the equal distribution of funds.

IV. ADDRESSING SOCIAL SAFEGUARD ISSUES

A. Involuntary Resettlement	Safeguard Category: 📋 A 📋 B 🖾 C 📋 Fl
1. Key impacts. The project sites will be a	a combination of government and private lands owned by families or clans.
The government will establish an annual le	ease agreement with willing landowners where private lands are required.
The proposed sites are unencumbered,	except for crops and trees and potentially some graves. Failure of
negotiations with landowners will not result	in compulsory acquisition by the government.

2. Strategy to address the impacts. A due diligence report was prepared and confirmed the proposed land
agreement under negotiated settlement. A third-party verification will be required to ensure transparent, fair, and non-
coercive negotiations.
3. Plan or other Actions.
Resettlement plan Combined resettlement and indigenous peoples plan
Resettlement framework Combined resettlement framework and indigenous peoples planning for a second s

V. ADDRESSING OTHER SOCIAL RISKS
A. Risks in the Labor Market
1. Relevance of the project for the country's or region's or sector's labor market, indicated as high (H), medium (M),
and low or not significant (L). Low
L 🛛 unemployment 🗌 underemployment 🗌 retrenchment 📋 core labor standards
2. Labor market impact. Very few residents of Niutao have employment outside of government. Short-term unskilled work opportunities will include construction, food preparation, washing, and the selling of local supplies. Additional
income-generating activities will be derived from a canteen run by local women, and an outlet for handicrafts.
Ongoing employment at the harbor will include stevedores and a security guard.
