SUMMARY POVERTY REDUCTION AND SOCIAL STRATEGY

Country:	Republic of Tajikistan	Project Title:	Additional Financing of Central Asia Regional Economic Cooperation Corridors 2, 5 and 6 (Dushanbe– Kurgonteppa) Road Project
Lending/Financing Modality:	Project loan and project grant	Department/ Division:	Central and West Asia Department/Transport and Communications Division

I. POVERTY AND SOCIAL ANALYSIS AND STRATEGY

Poverty targeting: general intervention

A. Links to the National Poverty Reduction and Inclusive Growth Strategy and Country Partnership Strategy

The government has adopted a national development strategy to promote sustainable economic growth, improve public administration, and facilitate human resources development.^a As part of its efforts to reduce poverty, the government adopted the Living Standards Improvement Strategy, which prioritizes education and training as a means of improving low productivity and employment for women.^b The Asian Development Bank (ADB) country partnership strategy for Tajikistan, 2016–2020 emphasizes improving transport infrastructure and regional connectivity as drivers for increased trade, foreign investments, and poverty reduction.^c The overall project is given high priority in both the country operations business plan, 2017–2019 and the Central Asia Regional Economic Cooperation (CAREC) Transport and Trade Facilitation Strategy 2020.^d The overall project will support the national development strategy and indirectly contribute to poverty reduction, inclusive growth, and achievement of social development goals through improved efficiency and safer movement of goods and people on the Dushanbe–Kurgonteppa road.

B. Results from the Poverty and Social Analysis during Project Preparatory Technical Assistance or Due Diligence

- 1. **Key poverty and social issues**. As of 2017, approximately 32% of the Tajik population lived below the poverty line, with a per capita gross domestic product of \$819. Almost 70% of the population lives in rural areas, in territory that is 90% mountainous, with only 10% of land suitable for cultivation. Economic development and provision of basic services are hindered by limited access to deteriorating transport infrastructure and general remoteness. The additional financing will (i) improve portions of CAREC corridors 2, 5, and 6 by upgrading an approximately 40-kilometer (km) section of the Dushanbe–Kurgonteppa road; (ii) improve safety on priority sections of the national highway network, and (iii) continue strengthening the institutional capacity of the Ministry of Transport.
- 2. **Beneficiaries.** The project road section passes through Rudaki and Khurason districts, which have a combined population of 564,216. The population of the project area (additional financing) includes about 38,598 people located in 19 villages along the project road (18,286 males and 20,312 females), living in 5,475 households. The major economic activities in the project area are agriculture, fruit production, and animal husbandry. The unemployment rate in the project area is estimated at 23% for heads of households and 13% for other family members. The surveyed households have reported monthly incomes of TJS200–TJS1,000 (36% of surveyed households) and TJS1,100–TJS2,000 (40%).
- 3. **Impact channels.** The overall project will improve mobility and access to jobs, markets, and public services, most of which are located in Dushanbe. The overall project will also enhance trade between centers of production and centers of consumption by improving road conditions and thus reducing vehicle operating costs and travel time while also reducing the likelihood and severity of road accidents. Local unskilled workers will also gain employment opportunities during road construction. Further, increased traffic and numbers of travelers will bring more customers to small businesses along the project road.
- 4. Other social and poverty issues. Socioeconomic surveys were conducted during project preparation. Piped water is available in 13 of the 19 villages along the project road while the other 6 villages rely on wells, collection of rainwater in basins and cisterns, and the purchasing of water for daily usage. Facilities depending on a regular water supply—such as hot water and in-house flush toilets—are rarely available in the project villages. Electricity is available in all project villages. However, during the dry season, production of electricity is reduced and villages receive electricity supplies for only a few hours per day. The overall project will include installation of solar-based solutions to provide electricity for road lighting and backup systems for communities located along the road.
- 5. **Design features.** The completed road will have two carriageways, each with two traffic lanes 3.5 meters wide, separated by a median typically 2.0 meters wide in rural areas. The project road's alignment will follow the existing road alignment, because of terrain considerations and also to minimize land acquisition, with some adjustments to horizontal and vertical alignments to meet the required standards. The road design meets internationally accepted standards and practices in terms of road safety. The design will be subjected to detailed road safety audits prior to construction, during construction, and prior to final acceptance of the completed road. The design of the road reflects consultations with communities living adjacent to the road, as a result of which the project will provide several underpasses for people, livestock, and agriculture; pedestrian crossings with appropriate warning devices; and other community-relevant facilities.

arrangement

No action

II. PARTICIPATION AND EMPOWERING THE POOR				
1. Participatory approaches and project activities. Consultations with local authorities and communities were held during project preparation to provide project stakeholders with adequate information on project scope, benefits, and impacts Consultations and engagement with local communities will continue during project implementation through training on roal safety awareness and maintenance of power backup systems. These activities, reflected in the project administration manual, will be facilitated by the project implementation unit for road rehabilitation (PIURR) and the project management and contract supervision consultant (PMCSC).				
2. Civil society organizations. Civil society organizations and community-based organizations were consulted during project preparation on the potential environmental and social impacts and the project's expected benefits. Consultations with affected people will continue throughout project implementation. To ensure that affected people and stakeholders are informed of these consultations, the dates and venues of consultations will be announced in local newspapers and through local self-government bodies. Representatives of nongovernmental organizations will be involved in the grievance redress committee to ensure that discussions are free of intimidation and that affected people are allowed to speak.				
3. The following forms of civil society organization participation are envisaged during project implementation, rated as high (H), medium (M), low (L), or not applicable (NA): ☐ Information gathering and sharing (H) ☐ Consultation (M) ☐ Collaboration (L) ☐ Partnership (NA)				
4. Participation plan. ☐ Yes. ☐ No. The PIURR and the PMCSC will promote the participation of communities, civil society organizations, and poor and vulnerable people in project implementation through activities on road safety awareness and safeguards monitoring. This is reflected in the PMCSC's terms of reference.				
III. GENDER AND DEVELOPMENT				
Gender mainstreaming category: some gender elements				
A. Key issues. Tajikistan ranked 102 out of 142 countries in the World Economic Forum's 2014 Global Gender Gap Index with a score of 0.665, indicating limited progress from its 2007 score of 0.658. During project preparation consultations, women voiced clear priorities and concerns about road safety and improvement of facilities along the project road, and these have been included in the project design. Women in the project area will benefit from better access to facilities and social services, and increased opportunities for small trade and jobs during construction.				
B. Key actions. The project design will address some of the factors that inhibit female mobility by increasing safety features (road signs and street lighting), enhancing connectivity of villages (pedestrian crossings and livestock underpasses), constructing bus stops, improving rest areas and road bazaars, and promoting confidence in the new road configuration through road safety awareness training and workshops.				
☐ Gender action plan ☐ Other actions or measures ☐ No action or measure				
The PIURR and PMCSC will also include sex-disaggregated information and indicators when reporting on the project performance and consultations.				
IV. ADDRESSING SOCIAL SAFEGUARD ISSUES				
A. Involuntary Resettlement Safeguard Category: A B C FI 1. Key impacts. The census carried out during project preparation identified approximately 246 affected households, including private agriculture plots, owners and users of land and buildings, business owners, renters, and employees, with a total of 1,956 household members that will be affected. Out of the 246 affected households, 92 households with 766 members will experience severe impact on their livelihood and 66 households with 632 members were found to belong to vulnerable groups. A total of 18 residential buildings and 39 main business buildings will be permanently impacted.				
2. Strategy to address the impacts. A land acquisition and resettlement plan (LARP) has been prepared to mitigate and address all the associated losses in accordance with ADB's Safeguard Policy Statement (2009) and relevant national legislation. The project-specific entitlement matrix included in the LARP includes the following groups in its definition of displaced people eligible for compensation and/or rehabilitation: (i) all displaced peoples losing land covered by legal title; (ii) owners of buildings, crops, plants, or other structures attached to the land, regardless of their legal title; and (iii) displaced peoples losing their businesses, income, and salaries, regardless of their legal status. The LARP also sets details of consultations undertaken, the grievance redress mechanism, and disclosure and consultation requirements.				
3. Plan or other Actions. ☐ Resettlement plan ☐ Resettlement framework ☐ Environmental and social management system arrangement ☐ No other Actions. ☐ Combined resettlement and indigenous peoples plan ☐ Combined resettlement framework and indigenous peoples planning framework ☐ Social impact matrix				

B. Indigenous Peoples1. Key impacts. There are no indigenous peoples, a	Safeguard Category: ☐ A ☐ B ☒ C ☐ FI as defined in ADB's Safeguard Policy Statement, in the project area.			
Is broad community support triggered?	⊠ No			
2. Strategy to address the impacts. Not applicable	e.

rates; (ii) the number of households connected to training, awareness, and capacity-building activities social and environment impacts.	will include sex-disaggregated information on (i) crash and fatality solar power backup solutions; (iii) the number of people attending s; and (iv) the number of affected people attending consultations on			
2. Required human resources. The PIURR team will assign a social and environment officer to monitor the implementation of safeguards and social development activities. The PMCSC will monitor and report regularly on the project's poverty and social impacts.				
3. Information in the project administration manual. Quarterly and annual progress reports, including project performance, covenants compliance, and safeguards monitoring, will be prepared by the PIURR with support from the				

- PMCSC.
- 4. Monitoring tools. The project design and monitoring framework and annual progress reports will be the main tools for monitoring poverty and social issues. The PIURR and PMCSC will collect data through surveys and consultations in liaison with the project stakeholders and relevant government bodies.
