Annex 3: Gazetteer Trees Prices

The Malawi Gazette Supplement, dated 3rd December, 2010, containing Regulations, Rules, etc. (No. 13A)

GOVERNMENT NOTICE NO. 23

FORESTRY ACT
(CAP. 63:01)

FORESTRY (AMENDMENT) RULES, 2010

IN EXERCISE of the powers conferred by section 86 of the Forestry Act, I, GRAIN WYSON MALUNGA, Minister of Natural Resources, Energy and Environment, make the following Rules—

Citation

1. These Rules may be cited as the Forestry (Amendment) Rules, 2010.

Replacement of the Second Schedule to the Forest Rules

2. The Second Schedule to the Forestry Rules (hereinafter referred to as the "principal Rules") is revoked and replaced by the following new Schedule—

"SECOND SCHEDULE (r. 13 (1))
ROYALTIES (para. 2)

1. INDIGENOUS TREES

	Botanical Name	*Vernacular Name*	*Price per cubic metre* K t
Class I	*Khaya anthotheca*	Mbawa, Muwawa, Bulamwiko	15,000 00
	Entandrophragma excelsum	Mukarikari, Mululu	15,000 00
	Adima microcephala	Mwenya, Chonya, Mwina, Mungwina, Mung'ona, Mgwenya, Mluona	15,000 00
	Chlorophora excelsa	Ngunda, Mvule	15,000 00
	Combretum imberbe	Msimbiti	15,000 00
	Trichilia enetica	Msikidzi, Msyunguti	15,000 00
	Colophospermum mopane	Tsanya, Sanya, Ntsano, Mopani, Mpani	15,000 00
	Dalbergia melanoxylon	Pingo, Kasalusalu, Nanyula, Kasarusaru	15,000 00
	Pterocarpus angolensis	Mlombwa, Mtumbati, Mtumbali, Mbira, Nawazi	15,000 00
	Pericopsis angolenis	Muwanga, Mubanga, Mabanga, Mwanga	15,000 00
Class II	*Ocotea usambarensis*	Bokoto	8,000 00
	Strombosia scheffleri	Mvivi	8,000 00
	Entandrophragram Caudatum	Nayalai, Naplalali, Gundang'oma	8,000 00
	Apodytes dimidiata	Mzaza, Katole, Mchima, Msuwi, Mtibulo, Mnyembedwe	8,000 00
	Burttdavya nyasica	Mbule	8,000 00
	Albizia gummifera	Mtangatanga, Bua, Chikwani, Chikololo, Mpepe, Msenjere, Mkalankhanga, Skapya	8,000 00

	Botanical Name	Vernacular Name.	Price per cubic metre K t

Kasito Lodge I	(*a*) per bed	2,500 00
	(*b*) exclusive use of room	10,000 00
Kasito Lodge II	(*a*) per bed	2,500 00
	(*b*) exclusive use of room	5,000 00
Mangochi Forestry Guest House	per bed	2,500 00
Chintheche Forestry Guest House	per room	2,500 00
	Children under 5 years of age	No fee
	Children 5 to 12 years	50% of the adult rate

3. BUSINESS OPERATIONS *Business Activities*	K t
(*a*) *Moble sawmill*	
(i) application fee	2,000 00
(ii) operational fee, per sawmill, per sawing season	20,000 00
(iii) yard/site fee	5,000 00
(iv) residential fee, as per 6 m^2, per hut	1,500 00

	K t
(*b*) *Permanent sawmill*	
(i) application fee, per sawmill	2,000 00
(ii) per annum	50,000 00
(iii) residential fee, per m^2, per annum	100 00
(*c*) *Logging*	
(i) application fee	2,000 00
(ii) logging fee	50,000 00
(*d*) *Construction of Lodges, camps, rest houses or huts*	
(i) application fee	2,000 00
(ii) operational fee, per annum	10,000 00
(iii) residential fee, per m^3, per annum	100 00
(*e*) *Beekeeping*	
(i) application fee	2,000 00
(ii) operational fee, per hive per year	200 00
(*f*) *Abstraction of water from a forest reserve*	
(i) application fee	2,000 00
(ii) forest management fee	To be negotiated
(iii) permanent structure fee, per m^2 per annum	100 00
(*g*) *Abstraction of water from a forest reserve for generating hydro electric power*	
(i) application fee	2,000 00
(ii) environmental levy, per annum	To be negotiated
(iii) permanent structure fee, per m^2	100 00
(*h*) *Water tank construction in reserve*	
(i) application fee	2,000 00
(ii) operational fee per tank per annum	50,000 00
(iii) residential fee	100 00
(*i*) *Dam construction for commercial purposes*	
(i) application fee	2,000 00
(ii) operational fee, per annum	20,000 00
(iii) Residential fee, per m^2 per annum	100 00
(*j*) *Dam construction, local communities*	
(i) application fee	Free
(ii) operational fee per annum	Free
(*k*) *Grocery*	
(i) application fee, per building	2,000 00
(ii) operational fee, per building per annum	7,500 00
(iii) residential fee per m^2, per annum	100 00

	K t
(*l*) *Maize mill*	
(i) application fee	2,000 00
(ii) operational fee, per annum	5,000 00
(iii) residential fee, per m^2	100 00
(*m*) *Private school*	
(i) application fee	2,000 00
(ii) operational fee, per annum	10,000 00
(iii) residential fee	100 00
(*n*) *Church or mosque building*	
(i) application fee	2,000 00
(ii) residential fee, per annum per m^2	100 00
(*o*) *Regular religions ceremonies in a forest reserve*	
(i) application fee	2,000 00
(ii) residential fee per m^2 per annum	100 00
(*p*) *Installation of telecommunication equipment*	
(i) application fee	2,000 00
(ii) operational fee per annum	50,000 00
(iii) residential fee, per m^2 per annum	100 00
(*q*) *Installation of electricity grid*	
(i) application fee	2,000 00
(ii) operational fee per km, per annum	1,000 00
(*r*) *Installation of telephone lines*	
(i) application fee	2,000 00
(ii) operational fee, per km, per annum	1,000 00
(iii) residential fee per m^2 per annum	1,000 00
(*s*) *Tour operations in a forest reserve*	
(i) application fee	2,000 00
(ii) operational fee, per annum	7,000 00
(iii) temporary structure fee, per m^2 of the structure	500 00
(*t*) *Picnic, sight seeing or trekking*	
(i) students and pupils of Malawian origin	Free
(ii) others, entry fee, per head	200 00
(iii) vehicle entry fee	100 00
(*u*) *Hunting (Sports)*	
(i) application fee	2,000 00
(ii) operational fee, per day	10,000 00
(*v*) *Ranching*	
(i) application fee	2,000 00
(ii) operational fee, per animal, per annum	1,000 00
(iii) residential or structure fee, per m^2, per annum	100 00

		K t
(w)	*Grazing, adjacent communities*	
	Fee per head	Free
(x)	*Road construction in a forest reserve*	
	(i) application fee	2,000 00
	(ii) environmental rehabilitation fee	Based on number of trees felled or damaged
(y)	*Collection of forest biodiversity resources for scientific purposes*	
	(i) application fee	2,000 00
	(ii) operational fee, per collection	5,000 00
(z)	*Ornamental tree collection*	
	(i) application fee, per collection	2,000 00
	(ii) operational fee, per annum	10,000 00
(aa)	*Gemstone, mining or quarry operation*	
	(i) application fee	2,000 00
	(ii) operational fee, per annum	10,000 00

Minister of Natural Resources Energy and Environment

(FILE NO. 14/11/10)

Annex 4: TORs for the RAP, LRP and M&E Monitoring Agents/Consultants

1. TERMS OF REFERENCE FOR THE RAP/LRP IMPLEMETING AGENT

Background

It has now been generally recognized that the task of successfully implementing a Resettlement Action Plan and Livelihoods Restoration Plan (RAP/LRP) requires special attitude, experience and skills in dealing with the grassroots level people, which are available among some reputed NGOs in the country. Therefore, it has been adopted as a government policy to commission the services of such an NGO to assist in the implementation of the RAP/LRP.

In the process of the implementation of all resettlement activities in regards to RAP/LRP partnering with an Implementing Non-Government Organization (RLIA) comes of immense help. This RLIA being a third party in the process of project implementation support both the beneficiaries of the plan at one hand and on the other, carry out implementation activities to meet up with the targets set by the project proponent. Thus, Blantyre Water Board (BWB) needs to partner with an RLIA for implementing all activities related to RAP/LRP and ESMP (Environmental and Social management Plan) s such as Livelihoods Restoration Plan and HIV/AIDS Prevention and Control Plan and also coordinating with Grievance Redress Committee (GRC) for smooth implementation of all these developmental activities.

Objectives of the Services

The objectives of partnering RLIA have been envisaged as follows:

a. To ensure identification of all PAP and their properties for compensation and other required entitlements.
b. To assist BWB in overseeing disbursement of payments of compensation and other entitlements due to the PAP.
c. To ensure the implementation of livelihood restoration program designed under the project.
d. To ensure usage of the project communication strategy put in place for effective implementation of RAP/LRP, livelihoods restoration and HIV/AIDS programs.
e. To involve PAP in the process of grievance redress.
f. To ensure catering of support provisions for the benefit of women and vulnerable categories of PAP.

Scope of Work

i. The principal task of the RLIA will be to identify the project affected households/business enterprises and persons relating to the enterprises, confirm their losses and dislocations, and processing their entitlement as per the RAP/LRP.
ii. The next main task would be to assist BWB in disbursing entitlements in association with DC's Office.
iii. Considering stakeholder engagement being critical for this project, the RLIA will be responsible for implementation of the communication strategy to ensure that all key stakeholders are meaningfully engaged in the overall project implementation.
iv. One of the key focuses is participation of women in all stages of the project. RAP/LRP will be implemented by the RLIA to ensure women have equal access and opportunity to participate and benefit from project interventions.
v. Through the use of communication strategy project affected households will be made aware of the entitlements proposed in RAP/LRP and related provisions.
vi. To support creating awareness of HIV/AIIDS programs adopted by the project proponent for the benefit of PAP and construction workers in order to prevent and control the spread of this deadly disease.

Proposed Activities of RLIA

The proposed activities of the RLIA for the implementation of the project related plans and programmes will include, but not limited to the following:

1. To carry out monitoring activities that PAP' compensation and entitlements are paid on time by Blantyre District Council (BDC) and BWB.
2. Detect any form of corruption by VHs, PAP and DCs personnel who can collude to inflate entitlement rates and report regularly on such issues to GRC.
3. RLIA will also be involved in sensitizing the PAP to use the funds prudently to restore their livelihoods and this could also be achieved through training in various aspects such as business management etc.
4. The RLIA will also be tasked to sensitize the PAP on the proper channel of registering their grievances and assist them to make follow-ups for amicable conclusion of the grievance and that PAP rights are not violated.
5. In case of vulnerable and backward PAP, the RLIA will represent grievances on behalf of PAP to GRC and expedite resolution engaging positively with LWB, DAs and other stakeholders.

The task of disbursing compensation and other project entitlements to PAP should be the duty of the DCs office and LWB.

Organization and Staffing

The services are expected to be provided over a 12 months period by a team comprising one team leader, 5 RLIA staff and documentation and reporting staff. The details of proposed professionals and their required input are shown below.
The organization must have experience of working as RLIA for implementing Resettlement Action Plan (RAP) for minimum 5 years in infrastructure development projects. The RLIA must have a local presence. The team must communicate in local language / dialect. The RLIA must have experience in monitoring physical and financial targets of program implementation.

Details of Proposed RLIA

Skills & Personnel	Nos.	Estimated Man-months
Valuation Expert (1)	*1*	6
Civil Engineer (1) with knowledge of construction	*1*	6
Community Development Expert – 2	*2*	9
Social economic Expert (livelihood Specialist)	*1*	6
Data manager /project monitoring expert	*1*	9
Resettlement Expert	*1*	9
Team Leader	*1*	9
Support Personnel (Valuation, Sensitization) – 2	*2*	6
Logistics officer /Accountant	*1*	9

Details on Staff Qualifications

RLIA Team Leader

The TL must have qualification at Master's Degree level with experience of working as NGO staff for more than 10 years. He must have working experience of implementing resettlement programmes in infrastructure development projects in the country at least for 5 years as the team leader. He should be conversant with monitoring of financial and physical progress of project implementation.

Project Implementation Staff
Each of the staff must be a graduate with 5 years of working experience as team members of RLIA in implementing resettlement programmes in infrastructure development projects. They must have knowledge of regional social, cultural and economic characteristics. The staff must have proven capacity to mobilize people for developmental activities. The staff should have experience in creating awareness among local communities on issue-based developmental activities.

Documentation and Reporting Staff

The reporting staff must be a graduate. He/she should have experience of documentation of project implementation progress and also for keeping day-to-day accountabilities.

Supervision
The team will work in association with the PO, reporting to the project manager of the PO on a day-to-day basis. Overall supervision will be done by the ESHSU.

Outputs
The team's outputs will include: (i) an inception report after one week of mobilization, (iii) monthly progress report stating monitoring figures of all physical and financial progress done during the preceding month. (iii) a draft final report at the end of 11th month, containing a description of achievements, awareness created among PAP, taken part in resolving issues through GRC, an assessment of their effectiveness in meeting objectives, and (iv) a final report at the end of assignment. All reports will be submitted both in English and Chichewa

1. TERMS OF REFERENCES FOR MONITORING AND EVALUATION CONSULTANT

A. Background

The implementation of all environmental and social activities (in regards to environmental quality, biodiversity, resettlement, livelihoods restoration and compensation implementation) needs to be monitored and evaluated by an independent third party monitoring agency called monitoring and evaluation consultant (MEC) to assess the process of implementation of programs recommended in the ESMP. Their main objectives will be to monitor on a quarterly basis the physical and progress of the project implementation. The MEC will also evaluate all inclusive target achievements and performance (against the indicators listed in the monitoring plan) during three years of operational stage.

The MEC will be engaged over the three years of project implementation and three years of operation stages. Thus, the MEC will be engaged for a sum total of six years for carrying out monitoring and evaluation activities. However, the period of engagement is not envisaged as continuous, instead it will be intermittent over 12 months.

B. Objectives of the Services

The objectives of the MEC have been envisaged as follows:

To monitor the environmental quality, biodiversity, plantation and community forest development, afforestation, and soil erosion and silt contents in Shire River.

h. To monitor all project activities regarding resettlement and rehabilitation, livelihoods restoration, disbursement of all entitlements to PAP, implementation of HIV/AIDS protection and control programs and any other unforeseen issues concerning adverse social impacts of the project.

To carry out monitoring and evaluation activities on a pre-planned framework for the whole period of project implementation and operational stages, i.e., over 6 years.

Carry out regular quarterly monitoring of physical and financial targets of program implementation.

Carry out evaluation of achievements at the end of each year of implementation of the project and prepare annual reports including suggestions of modifications of the process of implementation to retract targets in case these are not achieved following the proposed implementation program.

To ensure evaluating the GRM process in place to register and resolve cases of objections of acquisition of affected properties, cases of dissatisfaction on compensation amounts and payment disbursements.

To assess the performance of the ESHSU in implementing ESMP during project implementation and operation stages.

Suggest measures of rectification of procedures in meeting up objectives of the implementation of RLRCAP.

C. Scope of Work

1. The MEC's primary task is to perform the activities of monitoring and evaluation of implementation of proposed ESMP, RLRCAP.

2. Carry out situational analyses for monitoring, evaluating and suggesting modifications in the process if required to meet necessary targets scheduled over defined time scale.

3. The MEC should produce quarterly progress reports (QPR) on monitoring physical, biological, and financial targets and achievements of ESMP implementation.

4. After completion of each year of program implementation, the MEC will prepare annual monitoring and evaluation reports (AM&ER) to assess the achievements of the ESMP implementation, highlight failures of the ESMP against the target, and suggest modification of the monitoring indicator and process in order to bring the implementation on track, if it would deviate from originally proposed program.

D. Organization and Staffing

The services of the MEC are expected to be provided for 30 months over 72 months, during the period of project implementation and operation stages. The team will comprise of one Senior Monitoring and Evaluation Specialist / Team Leader, one Social Development Specialist (including HIV/AIDS), one Environmental Specialist (including biodiversity), and one Documentation and Reporting Staff. Details of the proposed professionals and their required input are:

Details of Proposed Consultants

Items	No	Input (Man Months)
A. Key Professional Staff		
1. Senior Monitoring and Evaluation Specialist / Team Leader	1	12
2. Social Development Specialist (including HIV/AIDS)	1	12
3. Environmental Specialist (including biodiversity)	1	12
4. Documentation and Reporting Staff	1	12

E. Details on Staff Qualifications

Senior Monitoring and Evaluation Specialist / Team Leader

The TL must have qualification at Master's Degree level with experience of working as MEC for more than 10 years. He must have working experience of carrying out M&E activities of implementing resettlement programmes in infrastructure development projects in the country at least for 5 years as the team leader. He should be conversant with monitoring of financial and physical progress of project implementation.

Social Development Specialist (including HIV/AIDS) The social development specialist must be a graduate with 5 years of working experience M&E projects. Experience of program implementation of resettlement plans, livelihoods restoration, HIV/AIDS, etc. will be a necessary.

Environmental Specialist

The environmental specialist must be a graduate with 5 years of working experience in M&E projects. Experience of program implementation in environmental management plans, including biodiversity management will be a necessary.

Documentation and Reporting Staff

The reporting staff must be a graduate. He/she should have experience of documentation of project implementation progress and also for keeping day-to-day accountabilities.

F. Supervision

The team will work in association with the PO, reporting to the project manager of the PO on a day-to-day basis. Overall supervision will be done by the ESHSU.

G. Outputs

- An Inception Report at the end of 4 weeks of project mobilization stating the work program and any deviation from the original plan.
- Quarterly monitoring and evaluation report.
- Annual monitoring and evaluation report

Annex 5: Minutes and List of Participants for Stakeholder Meetings/Workshops

Small group discussions checklist

Project: Diamphwe Multipurpose Dam ESIA & RAP Consultancy - Social Aspects

Date:

2. Village(s) Name:
   _____
3. Facilitator Name:
   _____
4. Note Taker Name:
   _____
5. Interest group name
   _____

SOCIAL AND RESOURCE MAPPING:

Introduce Social and Resource Mapping Objectives:

- To learn about the social structures in the village and the differences among the households by ethnicity, religion and wealth.
- To learn about who is living where.
- To learn about the social institutions and the different views local people might have regarding those institutions.
- To learn the villagers' perception of what natural resources are found in the community and how they are used.

Social Mapping Key Questions:

- What are the approximate boundaries of the village with regard to social interaction and social services?
- What are the social structures and institutions found in the village? (e.g. church, stores, mills, school, health centers, roads, water pumps, irrigation, recreation facilities, meeting places)?
- What religious groups are found in the village?
- What ethnic groups are found in the village?
- How many households are found in the village and where are they located? Is the number of households growing or shrinking?

Resource Mapping Key Questions:

- What resources are abundant? Or scarce? Which resource do you have the most problem with?
- Does everyone have equal access to land? Do women have access to land? Do the poor have access to land? Who makes decisions on land allocation?
- Where do people go to collect water? Who collects water?

- Where do people go to collect firewood? Who collects firewood?
- Where do people graze livestock?
- What kind of development activities do you carry out as a whole community? Where?

Social Mapping - How to facilitate:

- Ask the participants to draw a map of the village, showing all households.
- Discuss whether the total number of households has increased or shrunk during recent years. If there were any changes ask why the number has changed and whether this has caused any problem for certain families or for the community at large.
- Ask the group to show institutions, buildings and places that offer some kind of social service or which are popular spots to meet and discuss. Example: schools, churches, health services, traditional healers, community administration, community leaders, local shops, kindergartens, places where people frequently meet, water points etc.)
- Encourage the group to discuss and show on the map which different ethnic groups are living in their village. Using a common symbol, mark those households in which any minority ethnic groups live.
- Encourage the group to discuss and show on the map which different religious groups are living in their village. Using a common symbol, mark those households in which any minority religious groups live.
- Ask the group to indicate with a symbol on the map all households that are female headed.

Resource Mapping - How to facilitate:

To do this map with separate groups of men and women in the village. This is because women and men may use different resources. The women will map the resources they think are important (like water sources, firewood sources, etc.). The men will map the resources they think are important (like grazing land, infrastructure, etc.). Maps may include: infrastructure (roads, houses, buildings, bridges, etc.); water sites and sources; agricultural lands (crop varieties and locations); soils, elevations; forest lands; grazing areas; shops, markets; health clinics, schools, churches; special places (sacred sites, cemeteries, bus stops, shrines, etc.).

TIMELINE (HISTORICAL MAPPING)

Objective: To learn the major past events that occurred in the community, how it affected them, and how they successfully solved the problems/challenges.

Discuss with the villagers the most important events in the community's past and, with this information, prepare an historical timeline which serves as the base for further work.

The timeline with basic events can be used for focused discussions on problems, social and technological innovations or on communities' history of cooperations and activities which helped them to solve past problems successfully.

TIME CHART OR SEASONAL CALENDAR

Objective: To learn about changes in livelihoods over the year and to show the seasonality of agricultural and nonagricultural workload, food availability, human diseases, gender-specific income and expenditure, water, forage, credit and holidays.

Key Questions:

- What are the busiest months of the year?
- At what time of the year is food scarce?
- How does income/expenditure vary over the year for men and women?
- How does rainfall vary over the year?
- How does water availability for human consumption vary over the year?
- How does livestock forage availability vary over the year?
- How does credit availability vary over the year?
- When are holidays, and how many days in which month?
- When is most agricultural work carried out by women? And by men?
- When is most non-agricultural work carried out by women? And by men?

Seasonal Calender - How to facilitate:

- Find a large open space for the group. The calendar can be drawn on the ground or on very big sheets of paper.
- Ask the participants to draw a matrix, indicating each month along one axis by a symbol.
- It usually easiest to start the calendar by asking about rainfall patterns. Choose a symbol for rain, and draw it next to the column participants will now use to illustrate the rainfall. Ask the group to put stones under each month of the calendar to represent relative amounts of rainfall (more stones meaning more rainfall).
- Move to the next topic and ask people during which month the food is usually scare. Discuss the reasons why it is scarce and make sure that the different kind of food donations that people receive are discussed and that this information is shown on the map.
- After the calendar is finished, ask the group which linkages they see among the different topics of the calendar. Encourage the group to discuss what they see on the calendar.

DIAMPHWE DAM PROJECT

Project Positive Impacts:

- Briefly explain to the participants about the Dam Project and the nature of the Dam, including the Dam location. Show them the maps and compare/relate them with/to the resource and social maps.
- Ask the participants what positive impacts they are anticipating from the Dam Project. To rank the positive impacts in order of priority; facilitator to write the impacts on paper and let the participants vote on each impact.
- Which group(s) will benefit what and how, and rank which group(s) are to benefit most?

- How will the community enhance the positive impacts as a result of the Project?

Project Negative Impacts:

- Overlay the Dam Project map with the social and resource maps, and ask the participants to isolate social services structures as well as resources potentially affected by the Project.
- Ask the participants to share the potential negative impacts of the Project.
- Which group(s) will be negatively affected, why, and rank which group(s) will be affected the most.
- Will vulnerable groups be affected negatively by the Project; who and how?
- What are possible mitigation measures for the anticipated negative impacts, including roles and responsibilities of stakeholders?
- Possible places for resettlement if some affected people need to be moved and get resettled? Indicate on the map.
- To rank the negative impacts in order of significance - Facilitator to write the impacts on paper and let the participants vote on each impact.

END: THANK THE PARTICIPANTS FOR THEIR TIME

Project: Diamphwe Multipurpose Dam ESIA & RAP Consultancy -Social Aspects

Small Group Discussion 1 Report

28 September 2015

1. Village Names:
   - Mtenthamawa,
   - Msonga
   - Mtsilizika
   - Kumkama
   - Kalumbi
   - Chimbowa
   - Msodoka
   - Kamakhala
2. Facilitator: John Mwalwanda
3. Notetaker: Connex Makuya
4. Interest group: Leaders

Social Mapping

The Small Group Discussion (SGD) took place at Group Village Headman Chinzili of Mazengera T.A. in Lilongwe District. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households per village (increasing):

Village name	Number of households
Mtenthamawa	52
Msonga	46
Mtsilizika	98
Kumkama	48
Kalumbi	25
Msodoka	75
Chimbowa	30
Kamakhala	45

It was indicated that the area is inhabited by the Chewas.

There are a number of religious groups, including: Church of Central African Presbyterian (CCAP), African Isaac, African Abraham and Baptist Church.

In the area, communities use water from one shallow well and two boreholes. The shallow well serves Mtsilizika and Kalumbi villages. Both boreholes serve the villages of Msonga, Kamakhala, Chimbowa, Mtenthamawa, Msodoka and Kumkama. There is water all year round at these water sources.

The community has one under-five clinic at Mwango, and several traditional herbalists.

The community has a primary school at Mwango. They use the school ground for meetings, football and netball. Swimming, fishing and laundry are done at and on the Diamphwe River.

There is a court at each village head headquarters. Courts are heard based on the level of crime. There are three levels: Village head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big dance (gulewamkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos and on agricultural land during the dry season. The livestock is fed along the Diamphwe River and around Maye Hill. The feed is usually abundant during the rainy season, from November to March, although this is the time that livestock are tethered to protect them from eating crops, and are therefore usually lean, unlike from March to October when they are plump.

Resource Mapping

The following natural resources were reported to be found in abundance: water and rocks, in that order of ranking.

The community indicated that everyone has equal access to land, and that includes women, whether married or not, and the poor. In the past, the chiefs allocated land to families in the area. The head of the family is now allocating this land - to family members.

Usually women collect water from a shallow well and the two boreholes in the area, and the Diamphwe River.

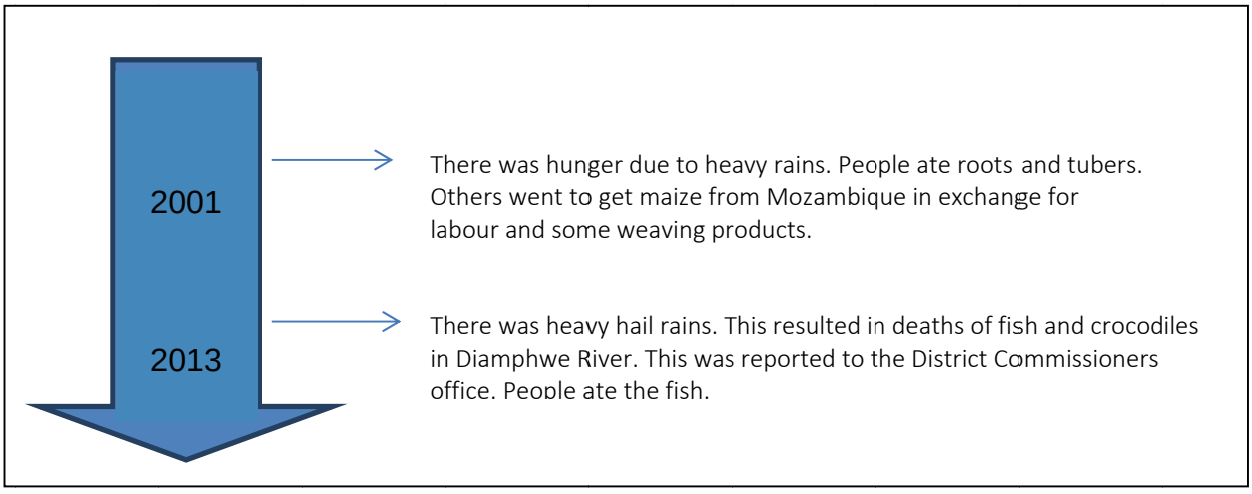
Trees were reported as a scarce resource therefore firewood is too. Most firewood is collected by women, from Mwangu, Maye and Kaphwiti hills.

Livestock is taken to the hills, and along the dambos close to the Diamphwe River.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. The community has been involved in tree nurseries and tree planting. They also have been involved in road construction and maintenance.

Historical Mapping Timeline

The group came up with events that have happened in the community and its part of their history in the area. This is depicted in the time line below.



Seasonal calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■								■	■	
Food lean period	■	■											
Income earning period					■	■	■	■	■	■			
Expenditure					■	■	■	■	■	■			
Rainfall season	■	■	■	■								■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	The boreholes and Diamphwe River have water all year. Shallow wells dry up in dry season.
Livestock Forage availability	■	■	■									■	Livestock have more forage in rainy season though not accessible due to tethering.
Credit availability					■	■							
Non-Agricultural activities						■	■	■	■				
Season for additional activities					■	■	■	■	■	■			

Generally the participants linked the activities on the calendar, for instance food availability and rainfall, livestock forage to health status of the goats, income and expenditure to the rainy season.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in order of importance: irrigation farming, source of drinking water, fishing, employment at project site and access to electricity.

Economically active individuals will benefit from the development as they can engage in these activities and access electricity into their houses.

Project Negative Impact and Mitigation Measures

The participants ranked the negative impacts in order of significance as follows:

- Loss of land for farming and housing; must be compensated and resettled close to current area. Should be enough land to continue economic activity as before resettlement. Resettled land should be identified through consultation with community and a general consensus should be reached and agreed upon.
- Floods into graveyards; chief must be compensated; government should exhume remains (content) and rebury at new resettlement land. Chewas require funding for the cultural value they have on guluwamkulu

- Loss of dambo land for grazing livestock; compensation
- Increased amount of crocodiles in Diamphwe River; a fence should be erected to protect community.

The group emphasised that they would like to get resettled near the project area. This will help them access all the perceived benefits as a result of the construction of the dam.

The group identified the aged, female-headed households and orphans as vulnerable groups. The aged do not have the energy to actively participate in agricultural activities, which is the source of livelihood. The female-headed households and orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Social Mapping

The SGD took place at Group Village Headman **Chinzili** of Mazengera TA in Lilongwe District. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households per village (indicated as increasing):

Village name	Number of households
Mtenthamawa	52
Msonga	46
Mtsilizika	98
Kumkama	48
Kalumbi	25
Msodoka	75
Chimbowa	30
Kamakhala	45

It was indicated that the area is inhabited by the Chewas.

There are a number of religious groups, including: Church of Central African Presbyterian (CCAP), African Isaac, African Abraham and Baptist Church.

In the area communities use water from one shallow well and two boreholes. The shallow well serves Mtsilizika and Kalumbi villages. Both boreholes serve the villages of Msonga, Kamakhala, Chimbowa, Mtenthamawa, Msodoka and Kumkama. There is water all year round at these water sources.

The community has one Under-Five clinic at Mwango, and several traditional herbalists.

The community has a primary school at Mwango. They use the school ground for meetings, football and netball. Swimming, fishing and laundry are done at and on the Diamphwe River.

There is a court at each village head headquarters. Courts are heard based on the level of crime. There are three levels: Village head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big dance (gulewamkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos and on agricultural land during the dry season. The livestock is fed along the Diamphwe River and around Maye Hill. The feed is usually abundant during the rainy season, from November to March, although this is the time that livestock are tethered to protect them from eating crops, and are thus usually lean, unlike from March to October when they are plump.

Resource Mapping

The following natural resources were reported to be found in abundance: land for farming, water and fish, in that order of ranking.

The community indicated that everyone has equal access to land, and that includes women, whether married or not, and the poor. In the past, land allocation was done by the chiefs to families in the area. This land is now being allocated by the head of the family to family members.

Usually women collect water from a shallow well and the two boreholes in the area.

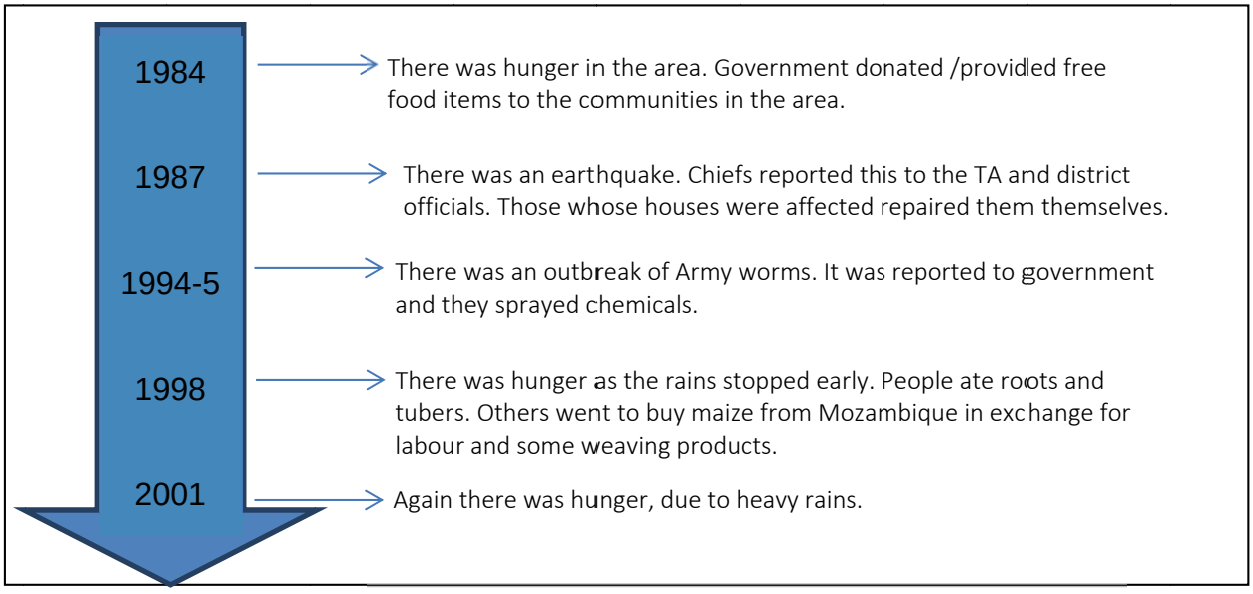
Firewood was reported to be a very scarce resource. Most is collected, by women, from Mwangu, Maye and Kaphwiti hills.

Livestock is taken to the hills, and along the dambos close to the Diamphwe River.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. The community has been involved in tree nurseries and tree planting. They also have been involved in road construction and maintenance.

Historical Mapping Timeline

The group came up with events that have happened in the community and its part of their history in the area. This is depicted in the time line below.



Seasonal calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month													
Food lean period													Look for piece work (ganyu)
Income earning period													
Expenditure													
Rainfall season													
Water availability for the year													
Livestock Forage availability													
Credit availability													Realise proceeds from agricultural produce
Non-Agricultural activities													
Season for additional activities													
Holidays													No holidays. Take Sunday as a holiday

Generally the participants linked the activities on the calendar, for instance food availability and rainfall, livestock forage to health status of the goats, income and expenditure to the rainy season.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in order of importance: irrigation farming, fishing and an opportunity for small scale business development.

Economically active individuals will benefit from the development as they can engage in these activities.

Project Negative Impact and Mitigation Measures

The participants ranked the negative impacts in order of significance as follows:

- Loss of land for farming and housing/residence, and grazing; they have to be compensated, and be resettled close to their current area – where the land is enough to carry on their economic activities as they are doing now, prior to the resettlement.
- Loss of a graveyard; their chief has to be compensated, and government will decide on what to do.
- Cost of shifting and resettlement; since they are Chewas, there will be a need to help them fund the cultural value they have on Gulewamkulu before resettlement.
- Acceptance in the resettled area; as a community, if they move to some place there is concern that they will face resistance at the new site; they would like to resettled in one area.

The group would like to get resettled near the project area. This will help them access all the perceived benefits as a result of the construction of the dam.

The group identified the aged and orphans as vulnerable groups. The aged do not have the energy to actively participate in agricultural activities, which is the source of livelihood. The orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Small Group Discussion 3 Report

Date: 29th September, 2015

1. Village(s) Name:
   - Chayimedi
   - Potolani
   - Kuntamba
   - Sitalichi

2. Facilitator Name: John Mwalwanda

3. Note Taker Name: Connex Makuya

4. Interest group name: Farmers, fishermen

Social Mapping:

The SGD took place at **Kuntamba** Village Head. The members present drew a map on flipchart paper on which their villages were located, and their proximity to social structures and institutions.

The estimated number of households has been increasing.

It was indicated that the area is inhabited by the Chewas.

There are a number of religious groups, including: Church of Central African Presbyterian (CCAP), African Isaac and Roman Catholic.

In the area, all four villages use water from a borehole at Chayimedi Village. The borehole, along with Diamphwe River, provides water all year round.

They use grounds located on dambo land at Chayimedi and Kuntamba villages for meetings, football and netball. Swimming, fishing and laundry are done at and on the Diamphwe River.

There is a court at each village head headquarters. Courts are heard based on the level of crime. There are three level; those at Village head, Group Village Head and those that are referred to the national judicial system through the police.

It is at these local judicial courts where Big dance (gulewamkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos and along the Diamphwe River during rainy season, and on agricultural land during the dry season. The feed is usually abundant during the rainy season, from November to March, although this is the time that livestock are tethered to protect them from eating crops, and are thus usually lean, unlike from March to October when they are plump.

Resource Mapping

The following natural resources were reported to be found in abundance: bananas, guavas, paw-paws, in that order of ranking.

Scarce resources include: land, livestock, mangoes and oranges.

The community indicated that everyone has equal access to land, and that includes women (both married and unmarried) and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from Diamphwe River and the borehole in the area.

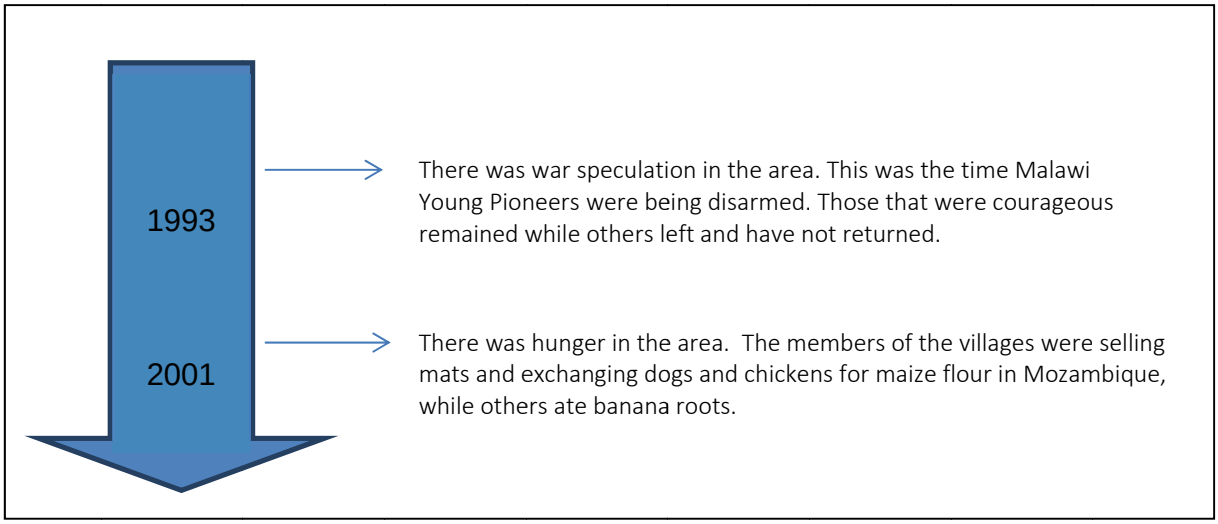
The women also collect firewood along the Diamphwe river and community woodlots.

Livestock graze on dambos along the Diamphwe River during the rainy season, and on agricultural land during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility.

Historical Mapping

The group came up with events that have happened in the community and it is part of their history in the area. This is depicted in the time line below.



Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■										■	
Food lean period	■	■	■									■	
Income earning period				■	■	■	■	■					
Expenditure					■	■	■	■					
Rainfall season	■	■	■									■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	The boreholes and Diamphwe River have water all year. Shallow wells dry up in dry season.
Livestock Forage availability			■	■	■	■	■						Livestock have more forage in rainy season though not accessible due to tethering.
Credit availability				■	■	■	■	■					
Non-Agricultural activities					■	■	■	■					
Season for additional activities					■	■	■	■	■	■			

Generally the participants linked the activities on the calendar, for instance food availability and rainfall, cultural activities to income generation (Gulewamkulu active during financial prosperity), livestock forage to health status of the goats.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in order of importance: employment, irrigation farming, increased food security and fishing opportunities.

The group identified that active individuals benefit from the development as they can be engaged in the activities (such as: irrigation and working at the project site).

Project Negative Impact and Mitigation Measures

The participants ranked the negative impacts in order of significance as follows:

- Loss of land for farming, housing and grazing; they have to be compensated, and be resettled. The land has to be enough for housing and agricultural activities.
- Loss of a graveyard; their chief has to be compensated, and government will decide what to do.
- The community felt that there would be an infringement on their human rights; as a result, the community should be resettled on government-owned land where there are no chiefs. Government should be involved in public sensitisation in the new area.
- There is fear of flooding as a result of the dam; it was indicated that there should be relief items and donations.
- There is fear of community dispersion (members of the community will be scattered); as a result there should be enough land for every member in the community to resettle.
- Firewood scarcity (as a result of the removal of trees); it is indicated that there should be programs to promote tree planting for the community.
- Lack of cleaning water; which should be mitigated through provision of boreholes.
- No fishing; which should continue if regulated by government.

The group emphasised that they would like to get resettled near their current settlement. This will help them to access all the perceived benefits as a result of the construction of the dam.

The group identified the aged and female-headed families as vulnerable groups, in order. The aged do not have the energy to actively participate in agricultural activities, which is the source of livelihood. The female-headed households require assistance from relatives and/or the community, which many not have the resources to provide for them.

Project: Diamphwe Multipurpose Dam ESIA & RAP Consultancy -Social Aspects

Small Group Discussion Report

Date: 29 September, 2015

1. Village(s) Name:
    - Chayimedi
    - Potolani
    - Kuntamba
    - Sitalichi
2. Facilitator Name: John Mwalwanda
3. Note Taker Name: Connex Makuya
4. Interest group name: Youth

Social Mapping

The Focus Group Discussion (FGD) took place at Kuntamba Village Head. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing, and more increase is expected as the group members have indicated that they intend to get married and have children.

It is indicated that the area is inhabited by the Chewas; there are also traces of Yao.

There are a number of religious groups, including: Church of Central African Presbyterian (CCAP), African Isaac, Islam, Baptist Church and Roman Catholic.

In the area, all four villages use water from a borehole at Chayimedi village. There is water all year round at the borehole and from the Diamphwe River.

The community uses grounds located on dambo land at Chayimedi and Kuntamba villages for meetings, football and netball. Swimming, fishing and laundry are done at the Diamphwe River.

There is a court at each village head headquarters. Courts are heard based on the level of crime. There are three levels: Village head, Group Village Head and those that are referred to the national judicial system through the police.

It is at these local judicial courts where Big dance (gule wa nkulu) takes place.

The community use the land, not only to cultivate the land for crop production, but also to collect firewood and to graze livestock on village dambos along the Diamphwe River during rainy season and on agricultural land during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: land, trees, bananas, paw-paws.

Wild game was reported to be a scare resource.

The community indicated that everyone has equal access to land, which includes women (both married and unmarried) and the poor. The chiefs allocate Land to the families in the area.

Usually women collect water from Diamphwe River and the borehole in the area.

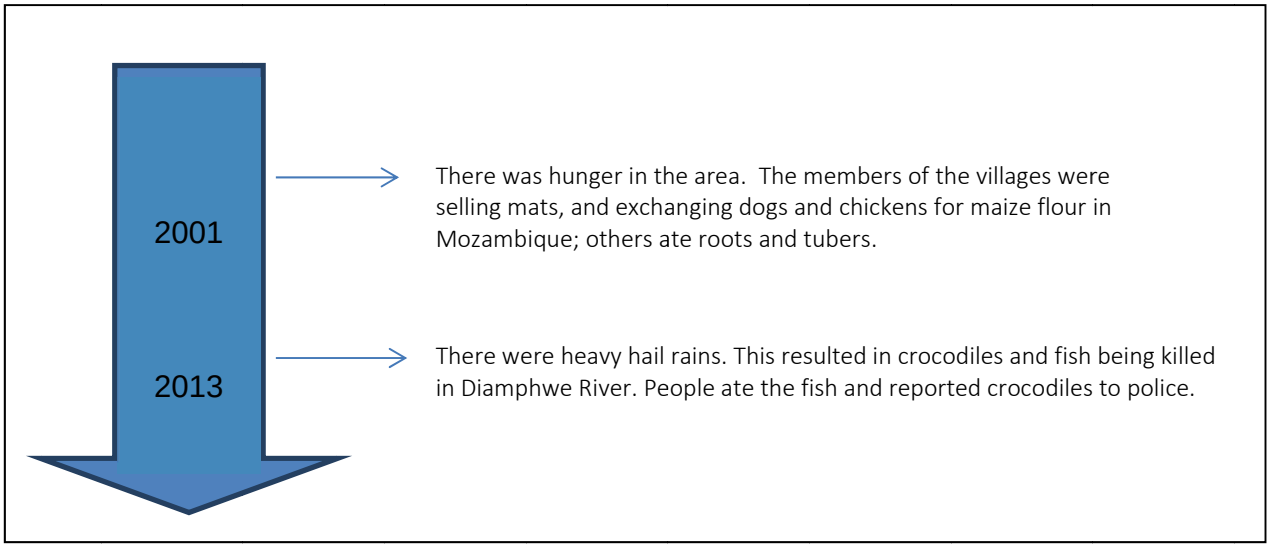
The women also collect firewood along the Diamphwe River and community woodlots.

Livestock graze on dambos along the Diamphwe River during the rainy season, and on agricultural land during the dry season.

The community has been involved in community development projects through which they mould bricks used for school blocks, teachers' houses and a health facility.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.



Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■	■	■	■	■			■	■	■	Busy time includes school days and farming activities. August and September are school holiday months.
Food lean period	■	■	■									■	
Income earning period				■	■	■	■						
Expenditure				■	■	■	■	■					
Rainfall season	■	■	■								■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	The boreholes and Diamphwe River have water all year.
Livestock Forage availability	■	■	■	■								■	
Credit availability							■	■					
Non-Agricultural activities						■	■	■	■	■			
Season for additional activities								■	■				

Generally the participants linked the activities on the calendar, for instance food availability and rainfall, education and cultural activities to income generation and amount of farm produce.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in order of importance: food secure area, irrigation farming, employment, fishing opportunities and increased social economic status.

Active individuals benefit from the development as they can be engaged in the agricultural-based activities (such as: irrigation and employment opportunities).

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing and farming; the participants indicated that there will have to be compensation.
- No portable water
- Loss of a graveyard; their chief has to be compensated, and government will decide what to do.
- There is fear of flooding as a result of the dam; it was indicated that there should be relief items and donation to the affected people.
- Loss of land for grazing livestock and community dispersion (members of the community will be scattered); there should be enough land for every member of the community to resettle with enough land for all of the livestock.
- Loss of source of firewood; it was suggested that those affected receive compensation.
- Loss of entertainment grounds;
- No fishing; it was suggested that fishing be regulated and laws should be enforced so that fish are available all the time.
- Lack of cleaning water; to be mitigated through the provision of boreholes.

The participants would like to be resettled to land close to their current settlement, preferring land along the M1 road as it has opportunity for business ventures. They requested that their new settlement should have entertainment ground facilities (provided by efforts from the government).

The group identified the aged and orphans as vulnerable groups, in that order. The aged do not have energy to actively participate in agricultural activities, which is the source of livelihood. The orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

    - and Mphaleidyani

2. Facilitator Name: John Mwawanda

3. Note Taker and Reporter Name: Connex Makuya

4. Interest group name: Farmers

Social Mapping

The Focus Group Discussion (FGD) took place at Group Village Headman Malenya. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: Baptist Church, Assemblies of God, African Isaac and African Abraham.

In the area, communities use water from shallow wells and boreholes. The boreholes are at Mnobwa and Mzingwa villages. Chankhalala River passes through Mnombwa and Phaleidyani villages. These water sources provide water all year round.

The community has a nursery school at Malenya village, which has a community ground on the same property. They use these premises for meetings, netball and football. It is also used for court, along with courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos, agricultural land and around the hills during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: land for farming, trees, fish, livestock, hills, rivers and crocodiles.

Wild game was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

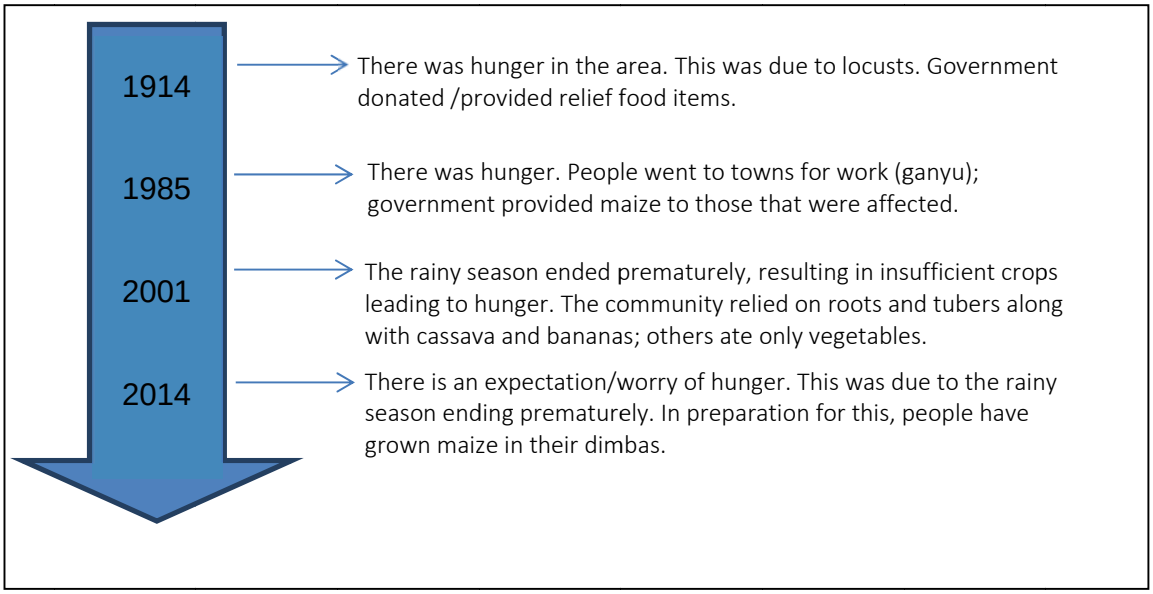
Usually women collect water from the shallow wells and boreholes in the area. The women also collect firewood around the villages from trees planted by the community.

Livestock graze on village dambos along Diamhpwe River, agricultural land and around the hills during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and health facility. They also indicated that they have been involved in road construction and maintenance.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.



Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec

Livestock Forage availability			■	■	■	■	■	■	■				
Credit availability				■									
Non-Agricultural activities							■	■					
Season for additional activities							■	■					
Holidays							■	■					

Generally the participants linked the activities on the calendar, for instance food availability and money was linked to rainfall. They indicated that the amount of produce harvested would determine how much food and money would be available to that particular household, as well as the larger community.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, employment, fishing and portable piped water. The active individuals will benefit from the development as they can get engaged in the activities to generate money.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; they have to be compensated. In addition to this, there is a request to be resettled within the same catchment area.
- Loss of water sources
- Loss of fruit trees; there should be compensation.
- Fear of hunger for the members of the affected villages
- Loss of the graveyard; compensation and the government should decide what to do.
- Generation of school fees for the children

The participants emphasised that they would like to be resettled near the project area. If this is not possible, there is preference to be resettled at Dzalanyama in Lilongwe or Kasungu District.

The group identified the aged and orphans as vulnerable groups, in that order. The aged do not have energy to actively participate in agricultural activities, which is the source of livelihood. The orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■								■	■	These are farming months which coincide with the rainy season
Food lean period	■	■											
Income earning period				■	■	■	■	■	■				
Expenditure				■	■	■	■	■	■				
Rainfall season	■	■	■								■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	
Livestock Forage availability					■	■	■	■	■	■			
Credit availability				■	■	■							
Non-Agricultural activities							■	■	■	■			
Season for additional activities					■	■	■	■	■	■			
Holidays					■	■	■	■	■	■			

Generally the participants linked the activities on the calendar, for instance food availability and rainfall. They also identified a link between income and expenditure as a result of the rainy season.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: portable piped water, employment, irrigation farming and fishing.

The active individuals will benefit from the development as they can get engaged in the activities to generate money.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; they have to be compensated. In addition to this, there is a request to be resettled within the same catchment area.
- Loss of graveyard; compensation and the government should decide what to do.
- Loss of grazing land
- Community dispersion (members of the community will be scattered); they indicated that all the affected members have to resettle on the same piece of land so that they still leave as a community and continue with their cultural values and beliefs.
- Difficulty accessing water, schools and health facilities; if these become inaccessible, the government should provide these facilities in an accessible position.
- People will not be fishing; as it is a means of livelihood, people should be given access to fish.

There are specific interest groups that will be affected by the project:

The herbalist discussed these negative impacts, in order:

- Loss of trees (plant parts for medicinal use)
- Clients may not have access to their service when resettled

The gule wa mkulu elders discussed these negative impacts, in order:

- Graveyard resettlement will disrupt their base.

The participants emphasized that they would like to be resettled in the catchment area and close to the project area to access perceived benefits from the dam construction.

In addition to this, the group identified the orphans, the poorest, and the disabled as vulnerable groups, in that order. The orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Social Mapping

The Focus Group Discussion (FGD) took place at Village Headman Chinthankhwa. The members present were drawn from different development agents, church leaders and members of the local development committee. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: Catholic, African Isaac and Baptist Church.

In the area, communities use water from shallow wells and boreholes. These water sources provide water all year round, however the shallow wells sometimes dry up.

There is a community ground that is used for meetings, netball and football.

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos and agricultural land during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: land for farming, trees, and dimba land.

Tamed livestock (such as cattle) was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

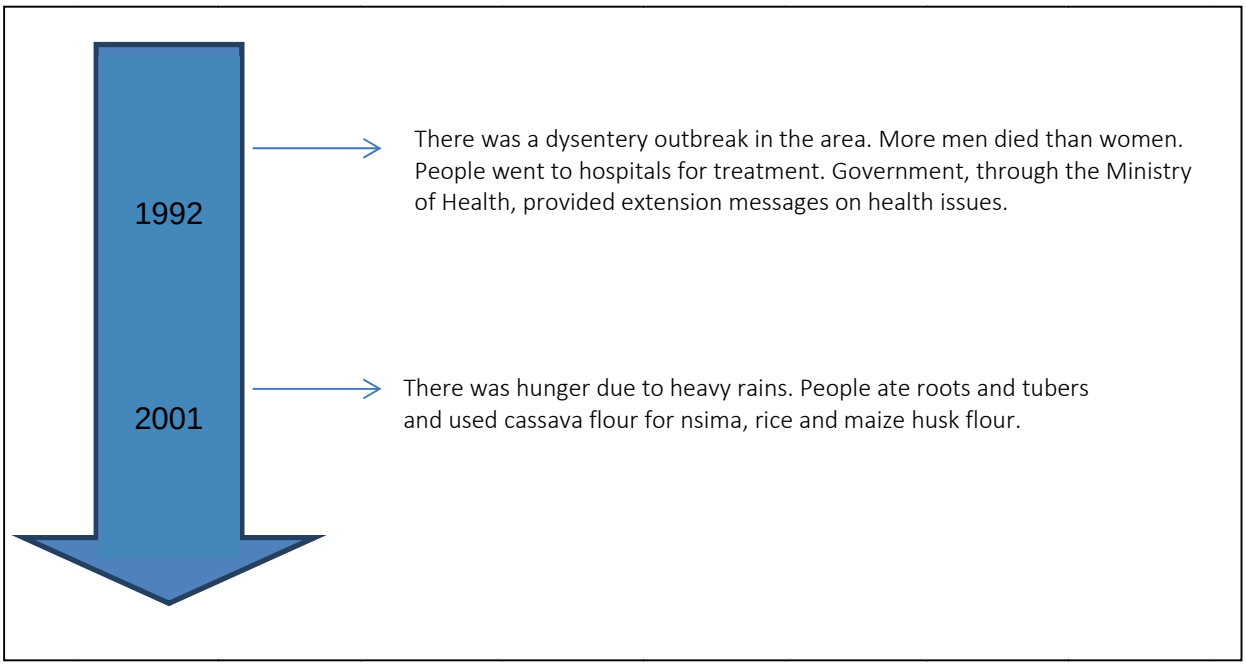
Usually women collect water from the shallow wells and boreholes in the area. The women also collect firewood from dambo fields and around the hills.

Livestock graze on village dambos and in the hills.

The community has been involved in a community development project through which they provide sand and stones, mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in road construction and maintenance. In addition to this, they have also planted trees as a community.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.



Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■								■	■	■	
Food lean period	■	■	■										
Income earning period				■	■	■							
Expenditure				■	■	■							
Rainfall season	■	■	■	■							■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	
Livestock Forage availability	■	■	■	■	■	■							
Credit availability				■	■	■	■	■					
Non-Agricultural activities					■	■	■	■	■				
Season for additional activities								■	■	■			
Holidays													They indicated there are no holidays. They take Sundays to be their holidays

Generally the participants linked the activities on the calendar, for instance between income and hard work on agricultural fields during the rainy season. Both agricultural and non-agricultural work was reported to be done by both men and women, and primarily women do most of the household activities.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, piped water for drinking, fishing and business opportunities. The economically active individuals will benefit from the development as they can get engaged in the activities to generate money.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; members indicated that they will have to be compensated and resettled close to current area. The land where they will be resettled should be enough to continue economic activities as before resettlement.
- Loss of land for grazing livestock; the chief will have to be compensated for dambo land lost, and the government should provide land for grazing livestock.
- Loss of graveyard; the group indicated that there will have to be compensation. The remains (contents of the graveyard) will have to be exhumed and buried in the resettled area.
- Loss of trees and fruit trees; the group indicated that there should be compensation.
- Communication will be cut between the communities in Dedza and Lilongwe; government should provide reliable bridges where people currently cross Diamphwe River.
- Services from schools, hospitals and churches more difficult to access.

The participants emphasized that they would like to be resettled close to the project area as to access perceived benefits as a result of the construction of the dam.

In addition to this, the group identified the aged living with orphans, and female headed households as vulnerable groups, in that order. The aged living with orphans do not have energy to actively participate in agricultural activities (source of livelihood) and the orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Small Group Discussion Report

Date: 1st October, 2015

1. Village(s) Name:
   - Veremu
   - Chinthankhwa,
   - Jamu
   - Khomani
   - Kamsampha
   - Pemba

2. Facilitator Name: John Mwalwanda

3. Note Taker Name:Connex Makuya

4. Interest group name: Religious, development agents and local area development committee members

Social Mapping

The Focus Group Discussion (FGD) took place at Village Headman Chinthankhwa. The members present were drawn from different development agents, church leaders and members of the local development committee. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: Catholic, African Isaac and Baptist Church.

In the area, communities use water from shallow wells and boreholes. These water sources provide water all year round, however the shallow wells sometimes dry up.

There is a community ground that is used for meetings, football and netball.

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos and agricultural land during the dry season. The feed is usually abundant from January to September.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: land for farming, trees, and dimba land.

Tamed livestock (such as cattle) was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

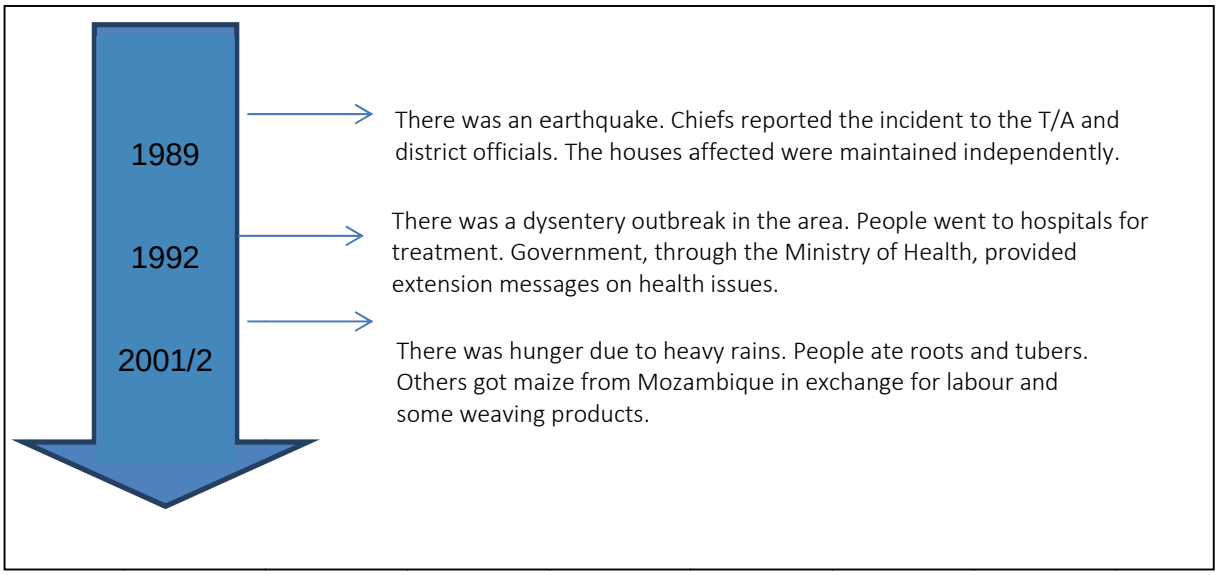
Usually women collect water from the shallow wells and boreholes in the area. The women also collect firewood from dambo fields and around the hills.

Livestock graze on village dambos and in the hills.

The community has been involved in a community development project through which they provide sand and stones, mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in road construction and maintenance. In addition to this, they have also planted trees as a community.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.



Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■								■	■	
Food lean period		■	■										
Income earning period					■	■	■						
Expenditure					■	■	■						
Rainfall season	■	■	■								■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	This depends on the depth of the water source. Shallow well dry up while boreholes do not
Livestock Forage availability	■	■	■	■	■	■	■	■	■				
Credit availability				■	■	■	■	■					
Non-Agricultural activities								■	■				
Season for additional activities								■	■	■			
Holidays													They indicated there are no holidays. They take Sundays to be their holidays

Generally the participants linked the activities on the calendar, for instance between income and expenditure as a result of the rain season experienced. When there are good rains the yields are higher and the farmers earn more money, which is disposable. The more income earned the more will be spent.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: piped water for drinking, irrigation farming and fishing. The economically active individuals will benefit from the development as they can get engaged in the activities to generate money.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; members indicated that they will have to be compensated and resettled close to current area. The land where they will be resettled should be enough to continue economic activities as before resettlement.
- Services from schools, hospitals and churches more difficult to access; government should provide these in the new area.
- Loss of land for grazing livestock; the chief will have to be compensated for dambo land lost.
- Loss of trees and fruit trees; the group indicated that there should be compensation.
- Cost of construction of dwelling houses; must be compensation to help funding for construction of new dwelling houses for the affected community members.
- Communication will be cut between the communities in Dedza and Lilongwe; government should provide reliable bridges where people currently cross Diamphwe River.

The participants emphasized that they would like to be resettled close to the project area as to access perceived benefits as a result of the construction of the dam.

In addition to this, the group identified the aged living with orphans, and female headed households as vulnerable groups, in that order. The aged living with orphans do not have energy to actively participate in agricultural activities (source of livelihood) and the orphans and female headed-households require assistance from relatives and/or the community, which may not have the resources to provide for them.

Small Group Discussion Report

Date: 2nd October, 2015

1. Village(s) Name:
    - Kamwana
    - Chimtenga
    - Chimangiro
    - Kangulu
    - Kathumba
    - M'maso

2. Facilitator Name: John Mwalwanda

3. Note Taker Name: Connex Makuya

4. Interest group name: Chiefs and elders

Social Mapping

The Focus Group Discussion (FGD) took place at Kamwana Village. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: Seventh Day Adventist (SDA), African Abraham, New Apostolic Church and Baptist Church.

In the area, communities use water a boreholes and the Diamphwe River. These water sources provide water all year round.

The community has primary schools at Luwani, Njuchi, Kanyezi and Bua. These school grounds are used for meetings, netball and football. Swimming, fishing and laundry are done at the Diamphwe River.

They access health services from Kanyezi (Katchale) Health Centre.

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos and agricultural land during the dry season. The feed is usually abundant in the rainy season (November to July).

Resource Mapping

The following natural resources were reported to be found in abundance, in order: land for farming, trees, livestock, water, bamboo, crocodiles and fruit.

Fish and wild game were reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

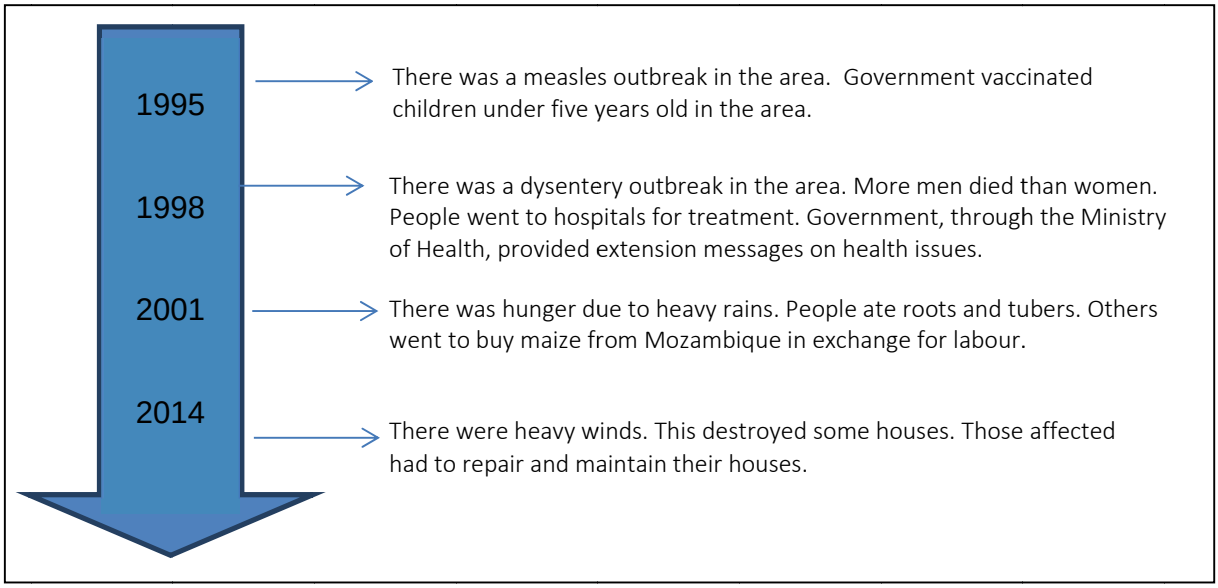
Usually women collect water from a borehole in the area and the Diamphwe River. The women also collect firewood from their own fields and from homestead wood plots.

Livestock graze on village dambos.

The community has been involved in a community development project through which they collect sand and stones, mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in tree nurseries and tree planting. In addition, they also fund raise through ganyu to carry out repairs and maintenance of boreholes.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.



Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■	■	■	■			■	■	■	■	
Food lean period	■	■	■									■	
Income earning period				■	■	■	■						
Expenditure				■	■	■	■						
Rainfall season	■	■	■	■							■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	
Livestock Forage availability	■	■	■	■	■	■	■				■	■	
Credit availability					■								
Non-Agricultural activities							■	■	■				
Season for additional activities							■	■	■	■			
Holidays													Sundays are assumed to be holidays.

Generally the participants linked the activities on the calendar, for instance food availability in relation to amount of rainfall. They also indicated the link between credit availability and income generated.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, employment opportunities, positive change in social economic status, tapped water for home use, access to electricity due to the project, and fishing opportunities. The youth will benefit more (in areas such as employment) during construction of the dam project.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; members indicated that they will have to be compensated and resettled close to current area.
- Loss of land for grazing livestock; must be compensated.
- Lack of portable water for home use; boreholes in the resettled area should be sunk so that they can be accessed for portable home use.
- Loss of bamboo, trees and fruit trees; the group indicated that there should be compensation.
- Fear of community dispersion; it was indicated that the chief should have a leading role in the identification and choosing of land, which will assist in accounting for cultural beliefs and values.
- Loss of graveyard; the group indicated that there will have to be compensation. The remains (content of the graveyard) will have to be exhumed and buried in the resettled area. Graveyards are a base for gule wa mkulu, and as a result the government should fund a proper ceremony.

The participants emphasized that they would like to be resettled close to the project area. If there is no available land close to the project site, Dzalanyama in Lilongwe would be the most preferable resettlement location. Other accepted locations would include: Kasungu and Mchinji in Lilongwe. The land should be enough to continue their economic activities.

In addition to this, the group identified the aged and orphans as vulnerable groups, in that order. The aged do not have energy to actively participate in agricultural activities (source of livelihood) and the orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Social Mapping

The FGD took place at Chinthankhwa Village. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: Seventh Day Adventist (SDA), Church of Central African Presbyterian (CCAP), African Abraham, Zion, Rainbow Covenant, New Apostolic Church and Baptist Church.

In the area, communities use water a borehole and the Diamphwe River. These water sources provide water all year round.

The community has primary schools as Luwani, Njuchi, Kanyezi and Bua. These school grounds are used for meetings, netball and football. Swimming, fishing and laundry are done at and on the Diamphwe River.

They access health services from Kanyezi (Katchale) Health Centre.

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos along the Diamphwe River and agricultural land during the dry season. The feed is abundant during the rainy season (January to February).

Resource Mapping

Trees are a natural resource reported to be found in abundance.

Wild game was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

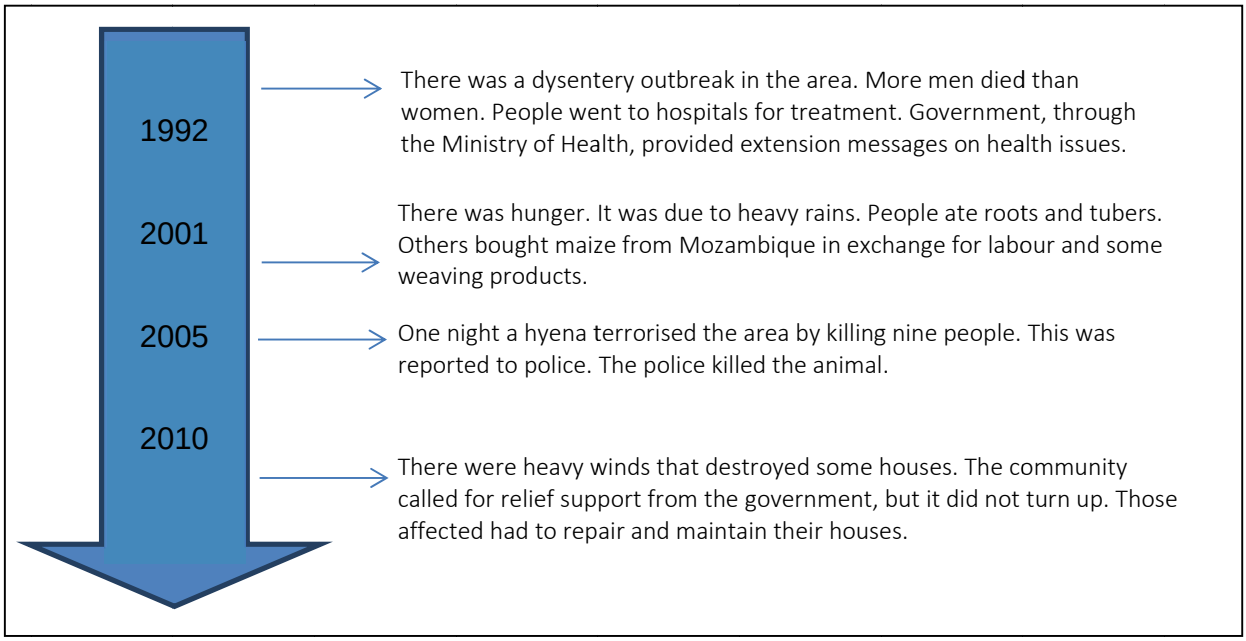
Usually women collect water from the boreholes in the area and the Diamphwe RIver. The women also collect firewood from their own fields and from homestead wood plots.

Livestock graze on village dambos along the Diamphwe River, and around the hills.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in tree nurseries and tree planting.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.



Seasonal Calendar

Holidays													Sundays are assumed to be holidays.

Generally the participants linked the activities on the calendar, for instance food availability in relation to amount of rainfall. They also indicated the link between income and expenditure (more income leads to increased spending).

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, safe piped water to the communities, fishing and employment. The youth will benefit more (in areas such as employment) during construction of the dam project.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; members indicated that they will have to be compensated and resettled close to their current area.
- Loss of trees and fruit trees; must be compensated.
- Loss of land for grazing livestock; must be compensated and resettled close to their current area.
- Loss of graveyard; the group indicated that there will have to be compensation. The remains (content of the graveyard) will have to be exhumed and buried in the resettled area.
- Loss of communication between people in Dedza and Lilongwe sides of the river.
- Fear of crocodiles when the water level rises due to the construction of the dam; a fence should be erected around the body of water.

The participants emphasized that they would like to be resettled close to the project area. The land should be enough to continue their economic activities.

In addition to this, the group identified female-headed households, the aged and orphans as vulnerable groups, in that order. Female-headed households will be affected as they rely on other community members. The aged do not have energy to actively participate in agricultural activities (source of livelihood) and the orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Small Group Discussion Report

Date: 6th October, 2015

1. Village(s) Name:
    - Kaluchi
    - Savala
    - Maloko,
    - Chingwenje
    - Chimbano
    - Maliyoti
    - Chiononga
    - Chinkhuti
2. Facilitator Name: John Mwalwanda
3. Note Taker Name: Connex Makuya
4. Interest group name: Youth

Social Mapping

The focus Group Discussion (FGD) took place at Chingwenje Village Head. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing. The group members indicated that this will increase further as they intend to get married and have children.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: Province Industrial Mission (PIM) and Church of Central African Presbyterian (CCAP)

In the area, communities use water from three boreholes located at Kaluchi, Chingwenje and Moloko villages; and the Diamphwe River. These water sources provide water all year round. Dimbas are along the Diamphwe River where irrigation farming is practiced. There are woodlots located at Chiononga, Savala and Kaluchi villages.

The community utilises ground located at PIM premises (close to the nursery school) for meetings, football and netball. Swimming, fishing and laundry are done at and on the Diamphwe River. Adult literacy classes, night secondary school and under-five clinics are held at the nursery school.

There are income-generating projects funded by an Italian woman named Maria. These projects included layers, broilers, a piggery and a maize mill

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos along the Diamphwe River during the rainy season and agricultural land during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: land, bamboo, trees and sisal.

Wild game was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from the boreholes in the area and the Diamphwe RIver. The women also collect firewood along the Diamphwe River and from community and family woodlots.

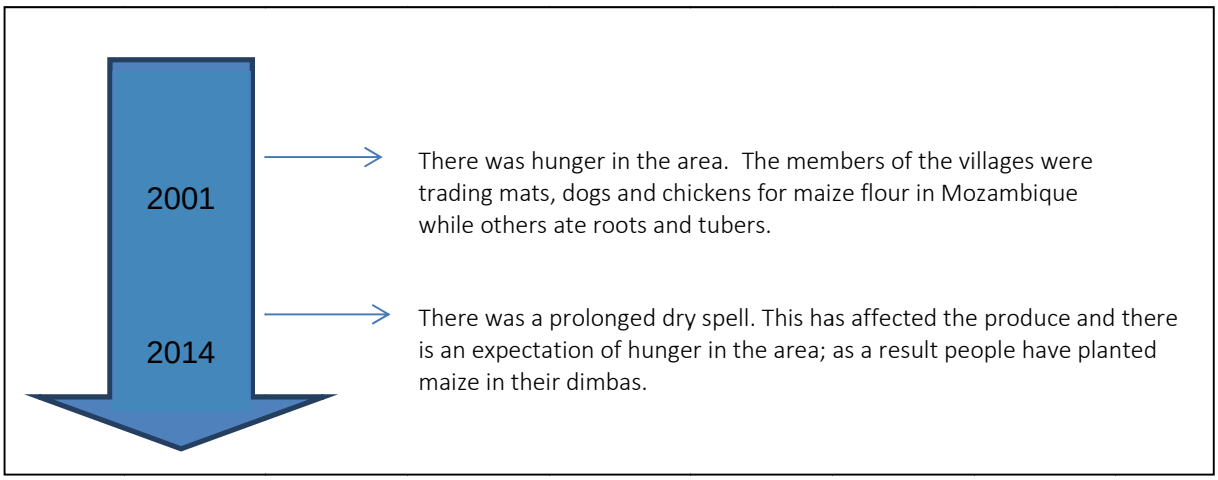
Livestock graze on village dambos along the Diamphwe River during the rainy season and on agricultural land during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in forestation projects resulting in family and community woodlots.

It was also indicated that crocodiles in the area had killed people, and were a concern for the community.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below



Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■							■	■	■	
Food lean period	■	■											
Income earning period				■	■	■	■	■					
Expenditure				■	■	■	■	■

Non-Agricultural activities				■	■	■	■	■					
Season for additional activities								■	■				
Holidays	■			■				■	■			■	

Generally the participants linked the activities in the area with reference to the calendar activities, for instance weddings take place when people have money from produce proceeds.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: piped water source for community, irrigation farming, fishing, employment and business opportunities.

The group identified that active individuals, like themselves (youth), will benefit more from the development because they are able to engage in agricultural based activities, such as irrigation and employment opportunities.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing and farming; members indicated that they will have to be compensated, and feel that the youth should identify suitable land to resettle with sufficient land for farming, housing and grazing and is ideal to start businesses. This should be close to their current settlement.
- No portable water
- Loss of trees (community and family woodlots affected)
- Changes in coping strategies; the need for seed funds to assist with dimba activities in new or other businesses if their crops fail.
- Settlement dispersion (scattered) and the impact on relationships; given enough land for the whole community to resettle.
- Loss of grazing livestock
- Nursery school will be affected
- Loss of graveyard

The participants emphasized that they would like to be resettled close to the project area. The land should be enough to continue their economic activities.

In addition to this, the group identified the aged, orphans and female-headed households as vulnerable groups, in that order. The aged are unable to work. Orphans may have financial difficulty. Female-headed households require assistance from relatives and/or the community, which may not have the resources to provide for them.

Generally the participants linked the activities in the area with reference to the calendar activities, for instance good rains results in more produce which leads to more income, ultimately leading to more dances.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, piped water source for the community, fishing and employment.

The group identified that economically active individuals will benefit more from the development because they are able to engage in agricultural-based activities, such as irrigation and employment opportunities.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing and farming; members indicated that they will have to be compensated. They would like to resettle close to the project site.
- Loss of the graveyard; the chief must be compensated, and also identify a new graveyard. The community should receive funds to have a ceremony for the remains.
- There will be no portable water; the government should provide water to the community.
- The community fears the new environment when resettled
- Loss of natural resources (trees, grazing land)
- Settlement dispersion (scattered) which will impact on relationships; the land for resettling should be enough for the whole community.

The participants emphasised that they would like to be resettled close to the project area.

In addition to this, the group identified the aged, orphans and female-headed households as vulnerable groups, in that order. The aged are unable to work. Orphans and female-headed households require assistance from relatives and/or the community, which may not have the resources to provide for them.

Small Group Discussion 13 Report

07 October 2015

1. Village Names:
    - Mtontho
    - Malika
    - Kambwata
    - Chidothi
    - Njiwa
    - Mbwadzulu
    - Chipanangwe
    - Njiwayoyera
    - Kaziputa
    - Kasauka
    - Sunga
2. Facilitator: John Mwalwanda
3. Notetaker: Connex Makuya
4. Interest Group: Women

Social Mapping

The SGD took place at Mtontho Group Village Head.

The members present drew a map on flipchart paper on which their villages were located.

The area is inhabited by Chewas.

There are a number of religious groups, including: African Isaac and Jehovah's Witness.

In the area, communities use water from shallow wells and boreholes. These water sources provide water all year round. Dambos are along Kasisiti and the Diamphwe River where irrigation farming is practiced. There are woodlots located at Njiwa, Sunga and Mtontho villages.

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wamkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos along the Diamphwe River during the rainy season and agricultural land during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: trees and livestock.

Land was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

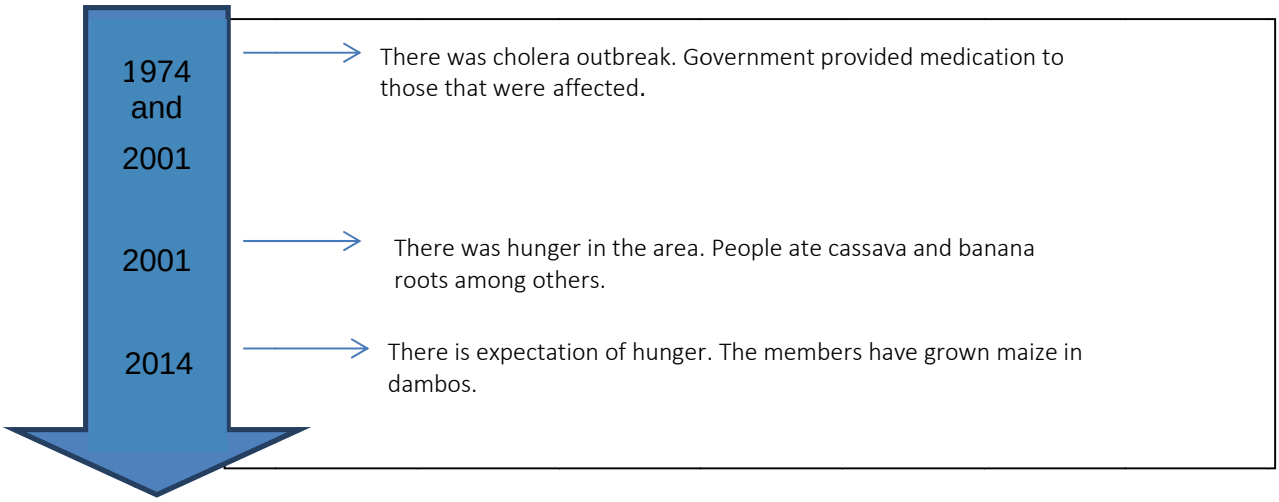
Usually women collect water from the shallow wells, boreholes in the area and the Diamphwe RIver. The women also collect firewood along the Diamphwe River and from community and family woodlots.

Livestock graze along the Kasisiti and Diamphwe Rivers during the rainy season and on agricultural land during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in forestation projects resulting in family and community woodlots.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.



Seasonal Calendar

Activity	Month											
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec
Busiest month												
Food lean period												
Income earning period												
Expenditure												
Rainfall season												
Water availability for the year												
Livestock Forage availability												
Credit												

availability												
Non-Agricultural activities												
Season for additional activities												

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: safe piped water, irrigation farming, business opportunity, employment and fishing.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing and farming; must be compensated. They would like to resettle close to the project site.
- Loss of graveyard; must be compensated, government should decide what to do.
- Loss of livestock grazing area; must be compensated.
- Loss of trees; must be compensated.

The participants indicated that there is not a preference for the placement of resettlement, as there will be financial compensation.

In addition to this, the group identified the aged and orphans as vulnerable groups, in that order. Both groups are unable to work and require assistance from relatives and/or the community, which may not have the resources to provide for them.

2. Facilitator Name: John Mwalwanda

3. Note Taker Name: Connex Makuya

4. Interest group name: Leaders and Elders

Social Mapping

The Focus Group Discussion (FGD) took place at Mtontho Group Village Head. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: African Isaac and Jehovah's Witness.

In the area, communities use water from shallow wells and boreholes. These water sources provide water all year round. Dimbas are along Kasisiti and the Diamphwe River where irrigation farming is practiced. There are woodlots located at Njiwa, Sunga and Mtontho villages.

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos along the Diamphwe River during the rainy season and agricultural land during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: trees and livestock.

Land was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

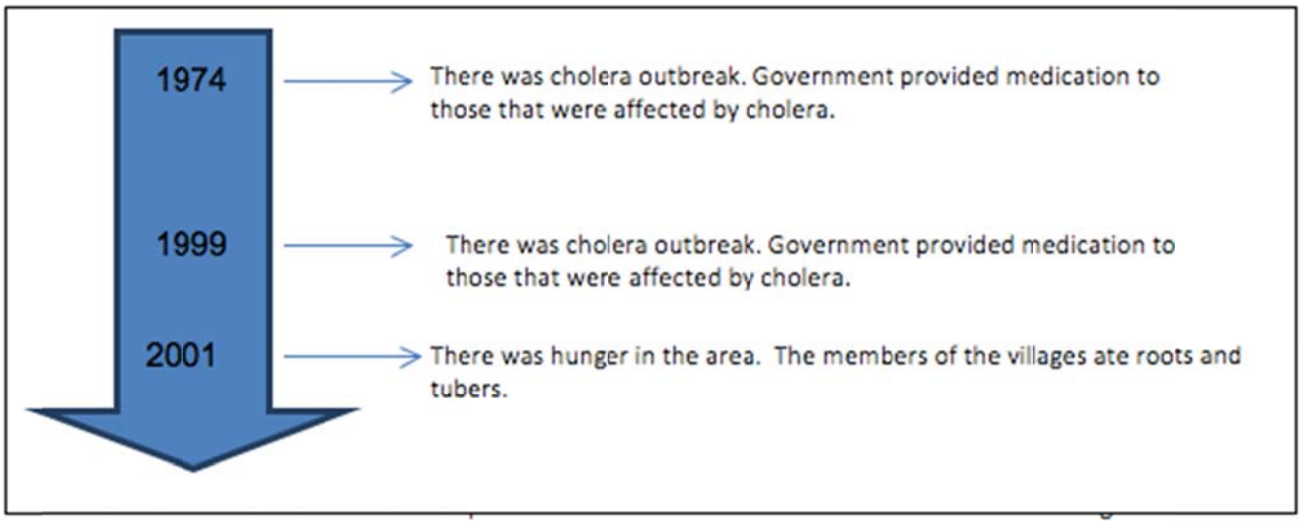
Usually women collect water from the shallow wells, boreholes in the area and the Diamphwe RIver. The women also collect firewood along the Diamphwe River and from community and family woodlots.

Livestock graze along the Kasisiti and Diamphwe Rivers during the rainy season and on agricultural land during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in forestation projects resulting in family and community woodlots.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.



Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■						■	■	■	■	
Food lean period	■	■	■									■	
Income earning period				■	■	■	■	■					
Expenditure				■	■	■	■	■					
Rainfall season	■	■	■								■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	
Livestock Forage availability	■	■	■	■								■	
Credit availability				■	■	■	■	■					These are months when it is very easy to get a loan. There are Village savings and loans (VSL) which run for the whole year.
Non-Agricultural activities				■	■	■	■	■					
Season for additional activities							■	■					
Holidays													Sundays are holidays.

Generally the participants linked the activities in the area with reference to the calendar activities, for instance good rains results in more income from produce, which can be used to purchase rice and fund entertainment.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, piped water source for the community, fishing, employment and tourism.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing and farming; must be compensated. They would like to resettle close to project site.
- Dispersion of settlement (scattering)
- Loss of graveyard; chief must be compensated and should identify a new graveyard in the resettled area. The community should receive funds to have a ceremony for the remains. Government will decide on what to do.
- Expectation that Katawa River will flood when dam is full; there will be a need for relief items to affected people.
- Loss of livestock grazing area; compensation.
- Loss of trees; must be compensation.
- Low school attendance

The participants indicated that the preference for resettlement would be in the Dedza district in close proximity to the dam catchment area.

In addition to this, the group identified the aged and female-headed households as vulnerable groups, in that order. The aged are unable to work and both the groups require assistance from relatives and/or the community, which may not have the resources to provide for them.

Small Group Discussion 15 Report

08 October 2015

1. Village Names:
    - Kawelama
    - Chinkhalamba
    - Psyata
    - M'machimadza
2. Facilitator: John Mwalwanda
3. Notetaker: Connex Makuya
4. Interest group: Women

Social Mapping

The Focus Group Discussion (FGD) took place at Kawelama Village Head.

The members present drew a map on flipchart paper on which their villages were located.

It was indicated that that the area is inhabited by Chewas.

African Abraham is the only identified religious group in the area.

In the area, communities use water from shallow wells, boreholes and the Diamphwe River. These water sources provide water all year round. Dambos are along the Diamphwe River where irrigation farming is practiced.

The community utilises a ground at Chinkhalamba for meetings, football and netball. The community access milling services at Kabwazi trading centre. The area also has a community – based childcare (CBCC).

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wamkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos along the Diamphwe River during the rainy season and agricultural land during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: trees and livestock. Land was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from the shallow wells, boreholes and the Diamphwe RIver. The women also collect firewood from the fields, usually mango trees and community woodlots.

Livestock graze along the Diamphwe River during the rainy season and on agricultural land during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in maintenance of roads and community fund raising activities.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.

Small Group Discussion Report

Date: 08th October, 2015

1. Village(s) Name:
   - Kawelama
2. Facilitator Name: John Mwalwanda
3. Note Taker Name: John Mwalwanda
4. Reporter : Connex Makuya
5. Interest group name: Chiefs and Elders

Social Mapping

The Focus Group Discussion (FGD) took place at Kawelama Village Head. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: Church of Central African Presbyterian (CCAP), African Abraham, Catholic and New Jerusalem.

The area has a community-based childcare (CBCC) and night classes for secondary school students. There is gule wa mkulu for entertainment.

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on during the dry season, and the village dambos along the Diamphwe River. The feed is usually abundant during the rainy season (November to July).

Resource Mapping

Water was reported to be the most abundant natural resource.

Wild game was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from a borehole and the Diamphwe River. The women also collect firewood from their own field and community (homestead) woodlots.

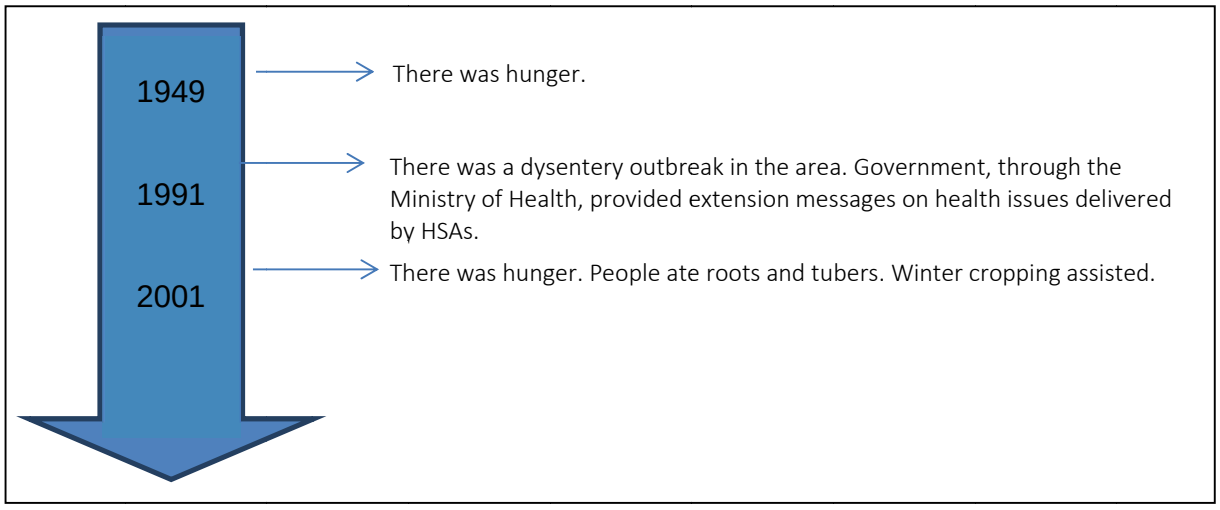
Livestock graze along the Diamphwe River.

The community has been involved in a community development project through which they collect sand and stones, mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in tree nurseries and tree planting, road repair and maintenance and group farming (clubs).

It was also indicated that crocodiles in the area had killed people, and were a concern for the community.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.



Seasonal Calendar

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, drinking water, fishing and tourism.

The group identified that the youth will benefit more from the development from employment at the dam site during construction.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; must be compensated. They would like to resettle close to the project site, with sufficient land to continue economic activities as before.
- Lack of portable water for home use; boreholes must be sunk in order to access portable water.

- Loss of grazing land; must be compensation.
- Loss of graveyards; must be compensation. The remains (content of the graveyard) will have to be exhumed and buried in the resettled area.
- Loss of bamboo, trees and fruit trees; must be compensated.
- Affect gule wa mkulu grounds
- Fear of not being allowed to fish; must be compensated.
- Roads and bridges will be affected; government should construct new infrastructure.

The participants emphasized that they would like to be resettled close to the project area.

In addition to this, the group identified the aged, orphans and female-headed households as vulnerable groups, in that order.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: potable water, and irrigation farming and fishing - that will spur business and job opportunities - during and after the dam construction.

The group identified that economically active individuals (both men and women) will benefit from the development because they are able to engage in agricultural-based activities, such as irrigation farming and fishing. The youth will also benefit from job opportunities. Overall they anticipate that everyone will benefit equally from access to portable water.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing and farming
- Loss of trees
- Affected electricity poles
- Affected roads

The group was not willing to share possible mitigation measures, as they need to discuss first amongst themselves and provide feedback at a later time.

The group also was not ready to share a location for resettlement.

In addition to this, the group identified the aged as being a vulnerable group, specifically in terms of loss of land and housing. The aged are unable to work and are not economically active.

Small Group Discussion 18 Report

Date: 8 October, 2015

1. Village Names:
    - Mthiko
    - Nasoni
    - Kanthukena
    - Mphete
    - Mzinga

2. Facilitator: John Mwalwanda

3. Notetaker: Connex Makuya

4. Interest group: Youth Pipeline

Social Mapping

The SGD took place at Mthiko Village Head.

The members present drew a map on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

The area is inhabited by Chewas.

There are a number of religious groups, including: African Isaac and Roman Catholic.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: trees, livestock, bananas, elephant grass and bamboo.

Wild game was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from shallow wells and boreholes.

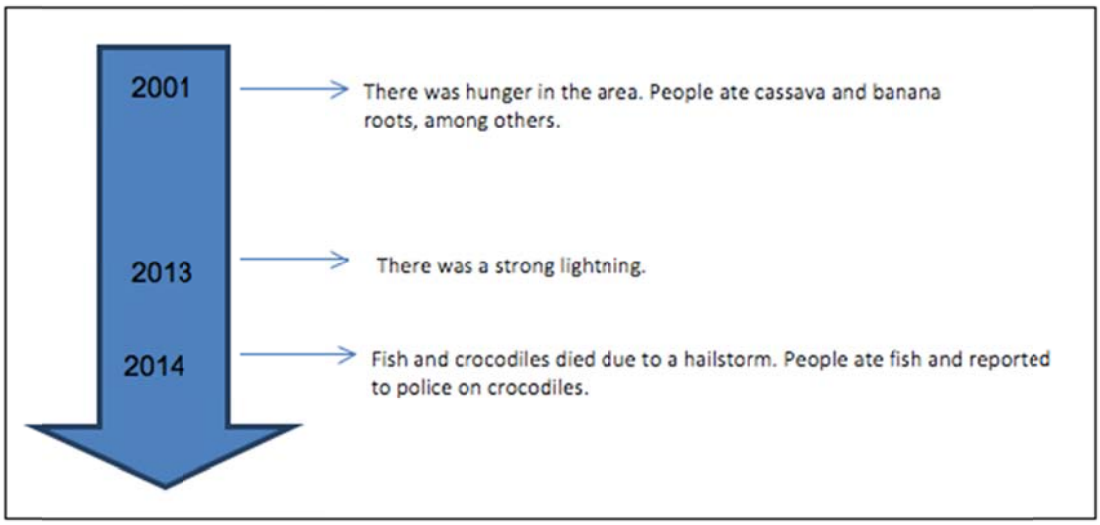
The women collect firewood from the fields and Batha mountain.

Livestock graze along the M1 road, Batha Mountain and the Diamphwe River during the rainy season and on agricultural land during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. They also have been involved in maintenance of roads and community fund raising activities.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below



Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■	■	■	■	■			■	■	■	Doing agriculture /farming work
Food lean period		■											
Income earning period				■	■	■	■	■					
Expenditure				■	■	■	■	■

Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	
Livestock Forage availability	■	■	■	■								■	Livestock are not allowed to graze freely to avoid destroying other peoples' crops; they are let loose during dry season and winter
Credit availability					■	■	■						

Non-Agricultural activities												
Season for additional activities												They have less farming activities

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: employment, irrigation farming, fishing, electricity opportunity, knowledge sharing and tourism.

The group identified that youth will benefit more from the development due to the time frame of the project.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing, farming and grazing – there will be quarry site; must be compensation as quarry activities will disrupt farming activities.
- Fear of flooding; dam should have provision for controlling floods
- Population increase in area due to affected people moving upstream; people should be sold land.
- HIV/AIDS due to workers at dam site; more sensitisation in the communities about HIV/AIDS and should be a behavioural change.
- Loss of graveyard
- Loss of natural resources

In addition to this, the group identified the aged as being a vulnerable group.

Small Group Discussion 19 Report

Date: 9 October, 2015

1. Village: Chemboga
2. Facilitator: John Mwalwanda
3. Notetaker: Connex Makuya
4. Interest group: Villagers at tank site

Social Mapping

The SGD took place at **Chemboga** village head.

The people belong to the Chewa ethinic tribe.

A number of religious denominations include: Seventh Day Adventist (SDA), CCAP, African Abraham, New Apostolic, Chisomo, Rainbow Convenant and Zion.

The village has a borehole where women fetch water; some fetch water from the Diamphwe River.

The court issues are handled based on the country court system, from Group Village Head to Group Village Head, Traditional Authorities, and then the police.

Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■								■	■	Agricultural or farming activities
Food lean period	■	■	■										
Income earning period				■	■	■							Income is earned from crop sales after harvesting in April
Expenditure				■	■	■							
Rainfall season	■	■	■	■							■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	

Livestock Forage availability	■	■	■								■	■	The livestock are tethered during these months to avoid eating other people's crops
Credit availability				■	■	■							
Non-Agricultural activities								■	■	■	■	■	
Season for additional activities							■	■					

Participants were able to connect activities within the calendar; for example, more income is realised from crop sales when there is reliable and adequate rainfall.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts of the dam project, in the order of importance: safe piped water, irrigation farming, employment, fish supply from the dam, and electricity.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; must be compensated.
- Loss of trees at tank site and along pipeline to tank; must be compensated.
- Loss of graveyard; must be compensated.

The participants emphasised that those that will be affected should relocate within village.

Social Mapping

The SGD took place at **Mkanda** Village Head.

Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■	■	■						■	■	Agricultural /farming activities
Food lean period	■	■	■										
Income earning period				■	■	■	■	■					
Expenditure				■	■	■	■	■					
Rainfall season	■	■	■	■								■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	

Livestock Forage availability	■	■	■	■							■	■	Livestock feeds along the M1 road.
Credit availability				■	■	■	■	■					
Non-Agricultural activities								■	■	■			
Season for additional activities							■	■					

Generally the participants linked the activities in the area to the calendar activities; for instance, good rains result in more produce, which leads to more income, ultimately leading to more cultural activities.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: Irrigation, safe drinking water, fishing and finally employment.

All groups will benefit from the development, but the youth will benefit more as they are economically active, and are always in search of job opportunities.

The group considered female-headed households, the aged and orphans to be affected more than other groups of the community.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Affect housing when laying pipes
- Fear of leaking pipes, which may impact houses, fences and trees
- Must be compensated for trees.

In terms of mitigation, the group indicated that there are existing laws that should be followed by the government for structures (houses, fences) that fall within the road reserve boundary.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: safe piped water to the community, irrigation farming to those that are close to the Dam and fish supply for food.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance especially for those that are close to the road, as follows:

- Loss of land for housing and farming; must be compensation
- Loss of trees along pipeline; must be given seedlings to plant and compensation as well
- Affect electricity poles; move the electricity poles to a different place
- Loss of soil and creation of pits on the land; refill the pits

The participants emphasised that they would like to be resettled within the village.

Small Group Discussion 1 Report

28 September 2015

1. Village Names:
   - Mtenthamawa,
   - Msonga
   - Mtsilizika
   - Kumkama
   - Kalumbi
   - Chimbowa
   - Msodoka
   - Kamakhala
2. Facilitator: John Mwalwanda
3. Notetaker: Connex Makuya
4. Interest group: Leaders

Social Mapping

The Small Group Discussion (SGD) took place at Group Village Headman Chinzili of Mazengera T.A. in Lilongwe District. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households per village (increasing):

Village name	Number of households
Mtenthamawa	52
Msonga	46
Mtsilizika	98
Kumkama	48
Kalumbi	25
Msodoka	75
Chimbowa	30
Kamakhala	45

It was indicated that the area is inhabited by the Chewas.

There are a number of religious groups, including: Church of Central African Presbyterian (CCAP), African Isaac, African Abraham and Baptist Church.

In the area, communities use water from one shallow well and two boreholes. The shallow well serves Mtsilizika and Kalumbi villages. Both boreholes serve the villages of Msonga, Kamakhala, Chimbowa, Mtenthamawa, Msodoka and Kumkama. There is water all year round at these water sources.

The community has one under-five clinic at Mwango, and several traditional herbalists.

The community has a primary school at Mwango. They use the school ground for meetings, football and netball. Swimming, fishing and laundry are done at and on the Diamphwe River.

There is a court at each village head headquarters. Courts are heard based on the level of crime. There are three levels: Village head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big dance (gulewamkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos and on agricultural land during the dry season. The livestock is fed along the Diamphwe River and around Maye Hill. The feed is usually abundant during the rainy season, from November to March, although this is the time that livestock are tethered to protect them from eating crops, and are therefore usually lean, unlike from March to October when they are plump.

Resource Mapping

The following natural resources were reported to be found in abundance: water and rocks, in that order of ranking.

The community indicated that everyone has equal access to land, and that includes women, whether married or not, and the poor. In the past, the chiefs allocated land to families in the area. The head of the family is now allocating this land - to family members.

Usually women collect water from a shallow well and the two boreholes in the area, and the Diamphwe River.

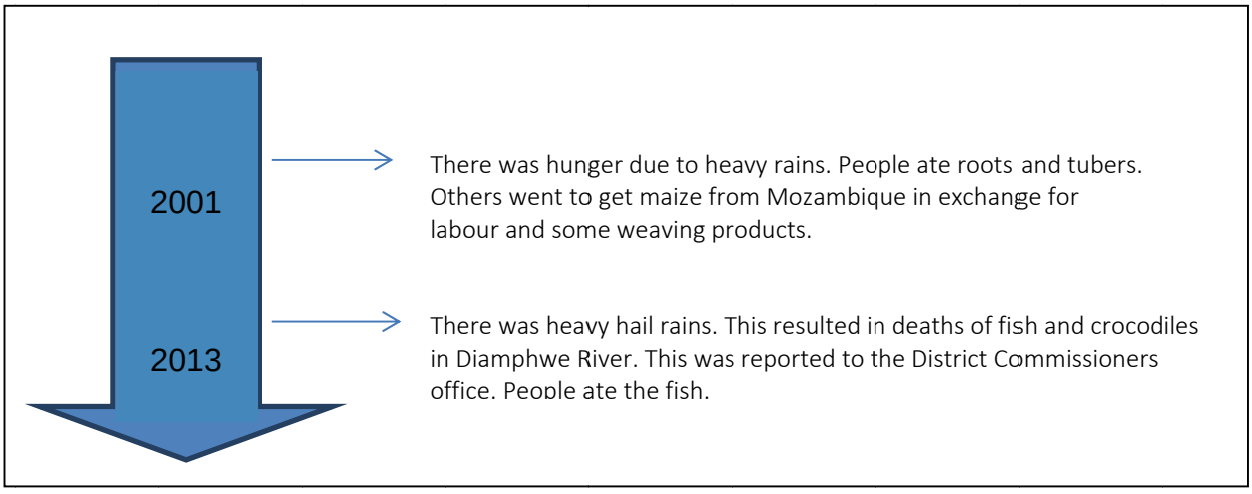
Trees were reported as a scarce resource therefore firewood is too. Most firewood is collected by women, from Mwangu, Maye and Kaphwiti hills.

Livestock is taken to the hills, and along the dambos close to the Diamphwe River.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. The community has been involved in tree nurseries and tree planting. They also have been involved in road construction and maintenance.

Historical Mapping Timeline

The group came up with events that have happened in the community and its part of their history in the area. This is depicted in the time line below.



Seasonal calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■								■	■	
Food lean period	■	■											
Income earning period					■	■	■	■	■	■			
Expenditure					■	■	■	■	■	■			
Rainfall season	■	■	■	■								■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	The boreholes and Diamphwe River have water all year. Shallow wells dry up in dry season.
Livestock Forage availability	■	■	■									■	Livestock have more forage in rainy season though not accessible due to tethering.
Credit availability					■	■							
Non-Agricultural activities						■	■	■	■				
Season for additional activities					■	■	■	■	■	■			

Generally the participants linked the activities on the calendar, for instance food availability and rainfall, livestock forage to health status of the goats, income and expenditure to the rainy season.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in order of importance: irrigation farming, source of drinking water, fishing, employment at project site and access to electricity.

Economically active individuals will benefit from the development as they can engage in these activities and access electricity into their houses.

Project Negative Impact and Mitigation Measures

The participants ranked the negative impacts in order of significance as follows:

- Loss of land for farming and housing; must be compensated and resettled close to current area. Should be enough land to continue economic activity as before resettlement. Resettled land should be identified through consultation with community and a general consensus should be reached and agreed upon.
- Floods into graveyards; chief must be compensated; government should exhume remains (content) and rebury at new resettlement land. Chewas require funding for the cultural value they have on guluwamkulu

- Loss of dambo land for grazing livestock; compensation
- Increased amount of crocodiles in Diamphwe River; a fence should be erected to protect community.

The group emphasised that they would like to get resettled near the project area. This will help them access all the perceived benefits as a result of the construction of the dam.

The group identified the aged, female-headed households and orphans as vulnerable groups. The aged do not have the energy to actively participate in agricultural activities, which is the source of livelihood. The female-headed households and orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Small Group Discussion 2 Report

28 September 2015

1. Village Names:
   - Mtenthamawa,
   - Msonga
   - Mtsilizika
   - Kumkama
   - Kalumbi
   - Chimbowa
   - Msodoka
   - Kamakhala
2. Facilitator: John Mwalwanda
3. Note taker: Connex Makuya
4. Interest group: Women

Social Mapping

The SGD took place at Group Village Headman **Chinzili** of Mazengera TA in Lilongwe District. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households per village (indicated as increasing):

Village name	Number of households
Mtenthamawa	52
Msonga	46
Mtsilizika	98
Kumkama	48
Kalumbi	25
Msodoka	75
Chimbowa	30
Kamakhala	45

It was indicated that the area is inhabited by the Chewas.

There are a number of religious groups, including: Church of Central African Presbyterian (CCAP), African Isaac, African Abraham and Baptist Church.

In the area communities use water from one shallow well and two boreholes. The shallow well serves Mtsilizika and Kalumbi villages. Both boreholes serve the villages of Msonga, Kamakhala, Chimbowa, Mtenthamawa, Msodoka and Kumkama. There is water all year round at these water sources.

The community has one Under-Five clinic at Mwango, and several traditional herbalists.

The community has a primary school at Mwango. They use the school ground for meetings, football and netball. Swimming, fishing and laundry are done at and on the Diamphwe River.

There is a court at each village head headquarters. Courts are heard based on the level of crime. There are three levels: Village head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big dance (gulewamkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos and on agricultural land during the dry season. The livestock is fed along the Diamphwe River and around Maye Hill. The feed is usually abundant during the rainy season, from November to March, although this is the time that livestock are tethered to protect them from eating crops, and are thus usually lean, unlike from March to October when they are plump.

Resource Mapping

The following natural resources were reported to be found in abundance: land for farming, water and fish, in that order of ranking.

The community indicated that everyone has equal access to land, and that includes women, whether married or not, and the poor. In the past, land allocation was done by the chiefs to families in the area. This land is now being allocated by the head of the family to family members.

Usually women collect water from a shallow well and the two boreholes in the area.

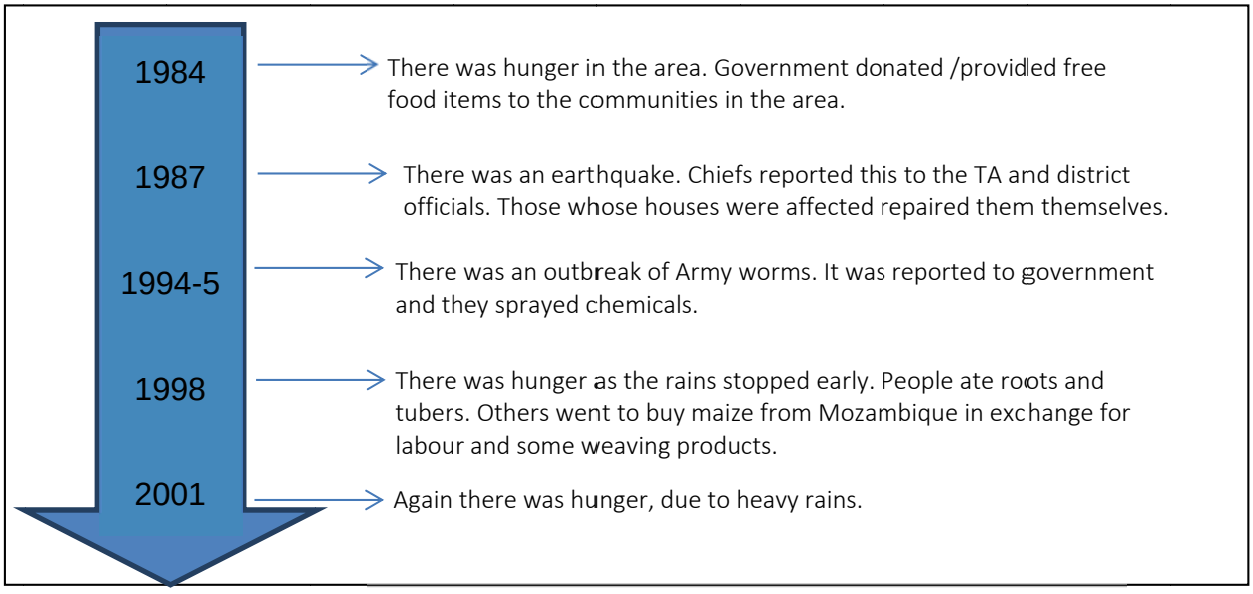
Firewood was reported to be a very scarce resource. Most is collected, by women, from Mwangu, Maye and Kaphwiti hills.

Livestock is taken to the hills, and along the dambos close to the Diamphwe River.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. The community has been involved in tree nurseries and tree planting. They also have been involved in road construction and maintenance.

Historical Mapping Timeline

The group came up with events that have happened in the community and its part of their history in the area. This is depicted in the time line below.



Seasonal calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month													
Food lean period													Look for piece work (ganyu)
Income earning period													
Expenditure													
Rainfall season													
Water availability for the year													
Livestock Forage availability													
Credit availability													Realise proceeds from agricultural produce
Non-Agricultural activities													
Season for additional activities													
Holidays													No holidays. Take Sunday as a holiday

Generally the participants linked the activities on the calendar, for instance food availability and rainfall, livestock forage to health status of the goats, income and expenditure to the rainy season.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in order of importance: irrigation farming, fishing and an opportunity for small scale business development.

Economically active individuals will benefit from the development as they can engage in these activities.

Project Negative Impact and Mitigation Measures

The participants ranked the negative impacts in order of significance as follows:

- Loss of land for farming and housing/residence, and grazing; they have to be compensated, and be resettled close to their current area – where the land is enough to carry on their economic activities as they are doing now, prior to the resettlement.
- Loss of a graveyard; their chief has to be compensated, and government will decide on what to do.
- Cost of shifting and resettlement; since they are Chewas, there will be a need to help them fund the cultural value they have on Gulewamkulu before resettlement.
- Acceptance in the resettled area; as a community, if they move to some place there is concern that they will face resistance at the new site; they would like to resettled in one area.

The group would like to get resettled near the project area. This will help them access all the perceived benefits as a result of the construction of the dam.

The group identified the aged and orphans as vulnerable groups. The aged do not have the energy to actively participate in agricultural activities, which is the source of livelihood. The orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Small Group Discussion 3 Report

Date: 29th September, 2015

1. Village(s) Name:
   - Chayimedi
   - Potolani
   - Kuntamba
   - Sitalichi

2. Facilitator Name: John Mwalwanda

3. Note Taker Name: Connex Makuya

4. Interest group name: Farmers, fishermen

Social Mapping:

The SGD took place at **Kuntamba** Village Head. The members present drew a map on flipchart paper on which their villages were located, and their proximity to social structures and institutions.

The estimated number of households has been increasing.

It was indicated that the area is inhabited by the Chewas.

There are a number of religious groups, including: Church of Central African Presbyterian (CCAP), African Isaac and Roman Catholic.

In the area, all four villages use water from a borehole at Chayimedi Village. The borehole, along with Diamphwe River, provides water all year round.

They use grounds located on dambo land at Chayimedi and Kuntamba villages for meetings, football and netball. Swimming, fishing and laundry are done at and on the Diamphwe River.

There is a court at each village head headquarters. Courts are heard based on the level of crime. There are three level; those at Village head, Group Village Head and those that are referred to the national judicial system through the police.

It is at these local judicial courts where Big dance (gulewamkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos and along the Diamphwe River during rainy season, and on agricultural land during the dry season. The feed is usually abundant during the rainy season, from November to March, although this is the time that livestock are tethered to protect them from eating crops, and are thus usually lean, unlike from March to October when they are plump.

Resource Mapping

The following natural resources were reported to be found in abundance: bananas, guavas, paw-paws, in that order of ranking.

Scarce resources include: land, livestock, mangoes and oranges.

The community indicated that everyone has equal access to land, and that includes women (both married and unmarried) and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from Diamphwe River and the borehole in the area.

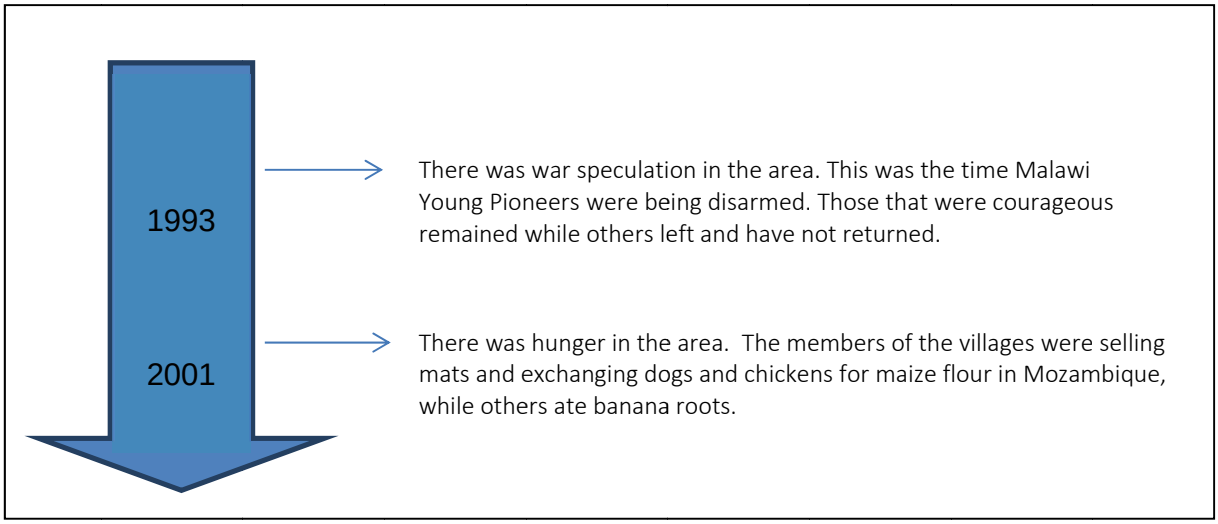
The women also collect firewood along the Diamphwe river and community woodlots.

Livestock graze on dambos along the Diamphwe River during the rainy season, and on agricultural land during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility.

Historical Mapping

The group came up with events that have happened in the community and it is part of their history in the area. This is depicted in the time line below.



Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■										■	
Food lean period	■	■	■									■	
Income earning period				■	■	■	■	■					
Expenditure					■	■	■	■					
Rainfall season	■	■	■									■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	The boreholes and Diamphwe River have water all year. Shallow wells dry up in dry season.
Livestock Forage availability			■	■	■	■	■						Livestock have more forage in rainy season though not accessible due to tethering.
Credit availability				■	■	■	■	■					
Non-Agricultural activities					■	■	■	■					
Season for additional activities					■	■	■	■	■	■			

Generally the participants linked the activities on the calendar, for instance food availability and rainfall, cultural activities to income generation (Gulewamkulu active during financial prosperity), livestock forage to health status of the goats.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in order of importance: employment, irrigation farming, increased food security and fishing opportunities.

The group identified that active individuals benefit from the development as they can be engaged in the activities (such as: irrigation and working at the project site).

Project Negative Impact and Mitigation Measures

The participants ranked the negative impacts in order of significance as follows:

- Loss of land for farming, housing and grazing; they have to be compensated, and be resettled. The land has to be enough for housing and agricultural activities.
- Loss of a graveyard; their chief has to be compensated, and government will decide what to do.
- The community felt that there would be an infringement on their human rights; as a result, the community should be resettled on government-owned land where there are no chiefs. Government should be involved in public sensitisation in the new area.
- There is fear of flooding as a result of the dam; it was indicated that there should be relief items and donations.
- There is fear of community dispersion (members of the community will be scattered); as a result there should be enough land for every member in the community to resettle.
- Firewood scarcity (as a result of the removal of trees); it is indicated that there should be programs to promote tree planting for the community.
- Lack of cleaning water; which should be mitigated through provision of boreholes.
- No fishing; which should continue if regulated by government.

The group emphasised that they would like to get resettled near their current settlement. This will help them to access all the perceived benefits as a result of the construction of the dam.

The group identified the aged and female-headed families as vulnerable groups, in order. The aged do not have the energy to actively participate in agricultural activities, which is the source of livelihood. The female-headed households require assistance from relatives and/or the community, which many not have the resources to provide for them.

Project: Diamphwe Multipurpose Dam ESIA & RAP Consultancy -Social Aspects

Small Group Discussion Report

Date: 29 September, 2015

1. Village(s) Name:
    - Chayimedi
    - Potolani
    - Kuntamba
    - Sitalichi
2. Facilitator Name: John Mwalwanda
3. Note Taker Name: Connex Makuya
4. Interest group name: Youth

Social Mapping

The Focus Group Discussion (FGD) took place at Kuntamba Village Head. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing, and more increase is expected as the group members have indicated that they intend to get married and have children.

It is indicated that the area is inhabited by the Chewas; there are also traces of Yao.

There are a number of religious groups, including: Church of Central African Presbyterian (CCAP), African Isaac, Islam, Baptist Church and Roman Catholic.

In the area, all four villages use water from a borehole at Chayimedi village. There is water all year round at the borehole and from the Diamphwe River.

The community uses grounds located on dambo land at Chayimedi and Kuntamba villages for meetings, football and netball. Swimming, fishing and laundry are done at the Diamphwe River.

There is a court at each village head headquarters. Courts are heard based on the level of crime. There are three levels: Village head, Group Village Head and those that are referred to the national judicial system through the police.

It is at these local judicial courts where Big dance (gule wa nkulu) takes place.

The community use the land, not only to cultivate the land for crop production, but also to collect firewood and to graze livestock on village dambos along the Diamphwe River during rainy season and on agricultural land during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: land, trees, bananas, paw-paws.

Wild game was reported to be a scare resource.

The community indicated that everyone has equal access to land, which includes women (both married and unmarried) and the poor. The chiefs allocate Land to the families in the area.

Usually women collect water from Diamphwe River and the borehole in the area.

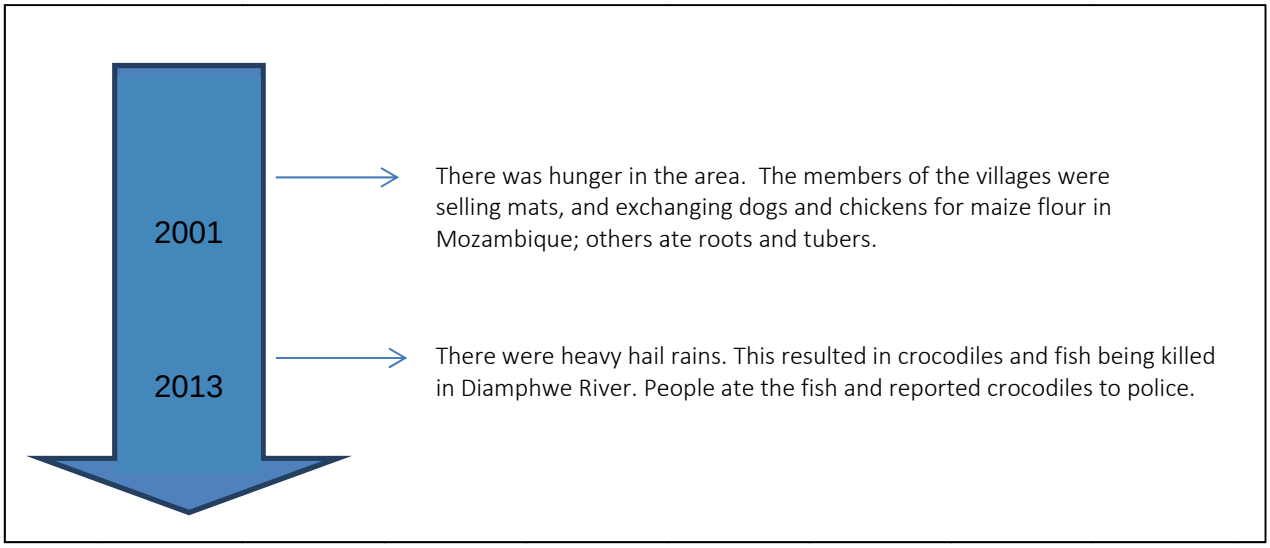
The women also collect firewood along the Diamphwe River and community woodlots.

Livestock graze on dambos along the Diamphwe River during the rainy season, and on agricultural land during the dry season.

The community has been involved in community development projects through which they mould bricks used for school blocks, teachers' houses and a health facility.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.



Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■	■	■	■	■			■	■	■	Busy time includes school days and farming activities. August and September are school holiday months.
Food lean period	■	■	■									■	
Income earning period				■	■	■	■						
Expenditure				■	■	■	■	■					
Rainfall season	■	■	■								■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	The boreholes and Diamphwe River have water all year.
Livestock Forage availability	■	■	■	■								■	
Credit availability							■	■					
Non-Agricultural activities						■	■	■	■	■			
Season for additional activities								■	■				

Generally the participants linked the activities on the calendar, for instance food availability and rainfall, education and cultural activities to income generation and amount of farm produce.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in order of importance: food secure area, irrigation farming, employment, fishing opportunities and increased social economic status.

Active individuals benefit from the development as they can be engaged in the agricultural-based activities (such as: irrigation and employment opportunities).

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing and farming; the participants indicated that there will have to be compensation.
- No portable water
- Loss of a graveyard; their chief has to be compensated, and government will decide what to do.
- There is fear of flooding as a result of the dam; it was indicated that there should be relief items and donation to the affected people.
- Loss of land for grazing livestock and community dispersion (members of the community will be scattered); there should be enough land for every member of the community to resettle with enough land for all of the livestock.
- Loss of source of firewood; it was suggested that those affected receive compensation.
- Loss of entertainment grounds;
- No fishing; it was suggested that fishing be regulated and laws should be enforced so that fish are available all the time.
- Lack of cleaning water; to be mitigated through the provision of boreholes.

The participants would like to be resettled to land close to their current settlement, preferring land along the M1 road as it has opportunity for business ventures. They requested that their new settlement should have entertainment ground facilities (provided by efforts from the government).

The group identified the aged and orphans as vulnerable groups, in that order. The aged do not have energy to actively participate in agricultural activities, which is the source of livelihood. The orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

The community has a nursery school at Malenya village, which has a community ground on the same property. They use these premises for meetings, netball and football. It is also used for court, along with courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos, agricultural land and around the hills during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: land for farming, trees, fish, livestock, hills, rivers and crocodiles.

Wild game was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

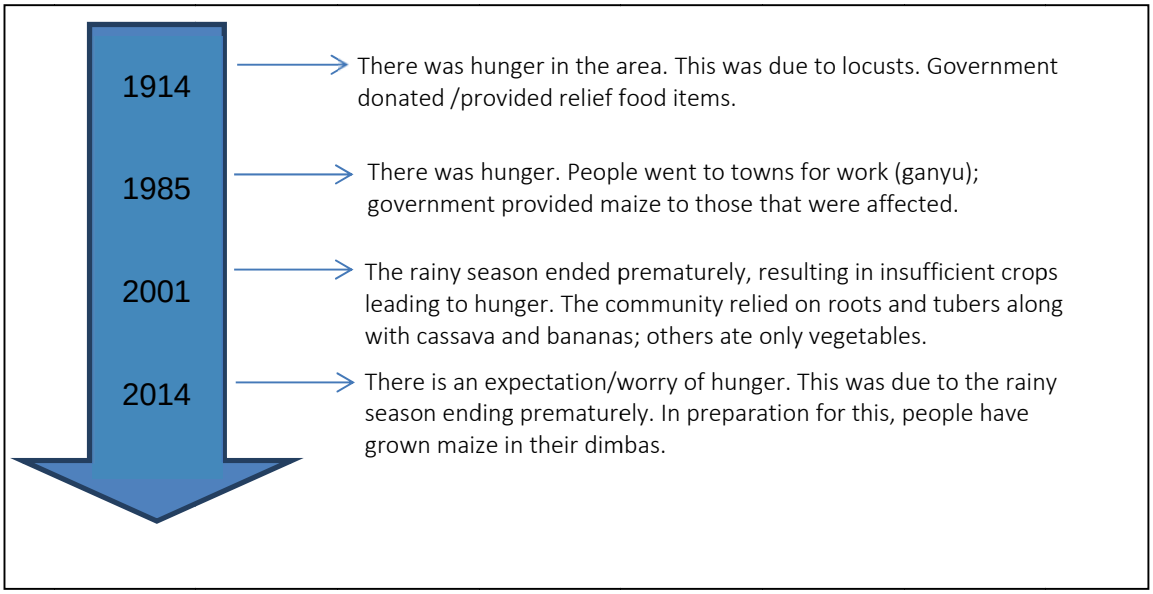
Usually women collect water from the shallow wells and boreholes in the area. The women also collect firewood around the villages from trees planted by the community.

Livestock graze on village dambos along Diamhpwe River, agricultural land and around the hills during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and health facility. They also indicated that they have been involved in road construction and maintenance.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.



Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■	■	■			■	■	■	■	■	
Food lean period	■	■									■	■	
Income earning period				■	■								
Expenditure					■	■							
Rainfall season	■	■	■								■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	
Livestock Forage availability			■	■	■	■	■	■	■				
Credit availability				■									
Non-Agricultural activities							■	■					
Season for additional activities							■	■					
Holidays							■	■					

Generally the participants linked the activities on the calendar, for instance food availability and money was linked to rainfall. They indicated that the amount of produce harvested would determine how much food and money would be available to that particular household, as well as the larger community.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, employment, fishing and portable piped water. The active individuals will benefit from the development as they can get engaged in the activities to generate money.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; they have to be compensated. In addition to this, there is a request to be resettled within the same catchment area.
- Loss of water sources
- Loss of fruit trees; there should be compensation.
- Fear of hunger for the members of the affected villages
- Loss of the graveyard; compensation and the government should decide what to do.
- Generation of school fees for the children

The participants emphasised that they would like to be resettled near the project area. If this is not possible, there is preference to be resettled at Dzalanyama in Lilongwe or Kasungu District.

The group identified the aged and orphans as vulnerable groups, in that order. The aged do not have energy to actively participate in agricultural activities, which is the source of livelihood. The orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Credit availability				■	■	■							
Non-Agricultural activities							■	■	■	■			
Season for additional activities					■	■	■	■	■	■			
Holidays					■	■	■	■	■	■			

Generally the participants linked the activities on the calendar, for instance food availability and rainfall. They also identified a link between income and expenditure as a result of the rainy season.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: portable piped water, employment, irrigation farming and fishing.

The active individuals will benefit from the development as they can get engaged in the activities to generate money.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; they have to be compensated. In addition to this, there is a request to be resettled within the same catchment area.
- Loss of graveyard; compensation and the government should decide what to do.
- Loss of grazing land
- Community dispersion (members of the community will be scattered); they indicated that all the affected members have to resettle on the same piece of land so that they still leave as a community and continue with their cultural values and beliefs.
- Difficulty accessing water, schools and health facilities; if these become inaccessible, the government should provide these facilities in an accessible position.
- People will not be fishing; as it is a means of livelihood, people should be given access to fish.

There are specific interest groups that will be affected by the project:

The herbalist discussed these negative impacts, in order:

- Loss of trees (plant parts for medicinal use)
- Clients may not have access to their service when resettled

The gule wa mkulu elders discussed these negative impacts, in order:

- Graveyard resettlement will disrupt their base.

The participants emphasized that they would like to be resettled in the catchment area and close to the project area to access perceived benefits from the dam construction.

In addition to this, the group identified the orphans, the poorest, and the disabled as vulnerable groups, in that order. The orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Social Mapping

The Focus Group Discussion (FGD) took place at Village Headman Chinthankhwa. The members present were drawn from different development agents, church leaders and members of the local development committee. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: Catholic, African Isaac and Baptist Church.

In the area, communities use water from shallow wells and boreholes. These water sources provide water all year round, however the shallow wells sometimes dry up.

There is a community ground that is used for meetings, netball and football.

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos and agricultural land during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: land for farming, trees, and dimba land.

Tamed livestock (such as cattle) was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from the shallow wells and boreholes in the area. The women also collect firewood from dambo fields and around the hills.

Livestock graze on village dambos and in the hills.

The community has been involved in a community development project through which they provide sand and stones, mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in road construction and maintenance. In addition to this, they have also planted trees as a community.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.

Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■								■	■	■	
Food lean period	■	■	■										
Income earning period				■	■	■							
Expenditure				■	■	■							
Rainfall season	■	■	■	■							■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	
Livestock Forage availability	■	■	■	■	■	■							
Credit availability				■	■	■	■	■					
Non-Agricultural activities					■	■	■	■	■				
Season for additional activities								■	■	■			
Holidays													They indicated there are no holidays. They take Sundays to be their holidays

Generally the participants linked the activities on the calendar, for instance between income and hard work on agricultural fields during the rainy season. Both agricultural and non-agricultural work was reported to be done by both men and women, and primarily women do most of the household activities.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, piped water for drinking, fishing and business opportunities. The economically active individuals will benefit from the development as they can get engaged in the activities to generate money.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; members indicated that they will have to be compensated and resettled close to current area. The land where they will be resettled should be enough to continue economic activities as before resettlement.
- Loss of land for grazing livestock; the chief will have to be compensated for dambo land lost, and the government should provide land for grazing livestock.
- Loss of graveyard; the group indicated that there will have to be compensation. The remains (contents of the graveyard) will have to be exhumed and buried in the resettled area.
- Loss of trees and fruit trees; the group indicated that there should be compensation.
- Communication will be cut between the communities in Dedza and Lilongwe; government should provide reliable bridges where people currently cross Diamphwe River.
- Services from schools, hospitals and churches more difficult to access.

The participants emphasized that they would like to be resettled close to the project area as to access perceived benefits as a result of the construction of the dam.

In addition to this, the group identified the aged living with orphans, and female headed households as vulnerable groups, in that order. The aged living with orphans do not have energy to actively participate in agricultural activities (source of livelihood) and the orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Busiest month	■	■	■								■	■	
Food lean period		■	■										
Income earning period					■	■	■						
Expenditure					■	■	■						
Rainfall season	■	■	■								■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	This depends on the depth of the water source. Shallow well dry up while boreholes do not
Livestock Forage availability	■	■	■	■	■	■	■	■	■				
Credit availability				■	■	■	■	■					
Non-Agricultural activities								■	■				
Season for additional activities								■	■	■			
Holidays													They indicated there are no holidays. They take Sundays to be their holidays

Generally the participants linked the activities on the calendar, for instance between income and expenditure as a result of the rain season experienced. When there are good rains the yields are higher and the farmers earn more money, which is disposable. The more income earned the more will be spent.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: piped water for drinking, irrigation farming and fishing. The economically active individuals will benefit from the development as they can get engaged in the activities to generate money.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; members indicated that they will have to be compensated and resettled close to current area. The land where they will be resettled should be enough to continue economic activities as before resettlement.
- Services from schools, hospitals and churches more difficult to access; government should provide these in the new area.
- Loss of land for grazing livestock; the chief will have to be compensated for dambo land lost.
- Loss of trees and fruit trees; the group indicated that there should be compensation.
- Cost of construction of dwelling houses; must be compensation to help funding for construction of new dwelling houses for the affected community members.
- Communication will be cut between the communities in Dedza and Lilongwe; government should provide reliable bridges where people currently cross Diamphwe River.

The participants emphasized that they would like to be resettled close to the project area as to access perceived benefits as a result of the construction of the dam.

In addition to this, the group identified the aged living with orphans, and female headed households as vulnerable groups, in that order. The aged living with orphans do not have energy to actively participate in agricultural activities (source of livelihood) and the orphans and female headed-households require assistance from relatives and/or the community, which may not have the resources to provide for them.

Small Group Discussion Report

Date: 2nd October, 2015

1. Village(s) Name:
    - Kamwana
    - Chimtenga
    - Chimangiro
    - Kangulu
    - Kathumba
    - M'maso

2. Facilitator Name: John Mwalwanda

3. Note Taker Name: Connex Makuya

4. Interest group name: Chiefs and elders

Social Mapping

The Focus Group Discussion (FGD) took place at Kamwana Village. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: Seventh Day Adventist (SDA), African Abraham, New Apostolic Church and Baptist Church.

In the area, communities use water a boreholes and the Diamphwe River. These water sources provide water all year round.

The community has primary schools at Luwani, Njuchi, Kanyezi and Bua. These school grounds are used for meetings, netball and football. Swimming, fishing and laundry are done at the Diamphwe River.

They access health services from Kanyezi (Katchale) Health Centre.

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos and agricultural land during the dry season. The feed is usually abundant in the rainy season (November to July).

Resource Mapping

The following natural resources were reported to be found in abundance, in order: land for farming, trees, livestock, water, bamboo, crocodiles and fruit.

Fish and wild game were reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from a borehole in the area and the Diamphwe River. The women also collect firewood from their own fields and from homestead wood plots.

Livestock graze on village dambos.

The community has been involved in a community development project through which they collect sand and stones, mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in tree nurseries and tree planting. In addition, they also fund raise through ganyu to carry out repairs and maintenance of boreholes.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.

Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■	■	■	■			■	■	■	■	
Food lean period	■	■	■									■	
Income earning period				■	■	■	■						
Expenditure				■	■	■	■						
Rainfall season	■	■	■	■							■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	
Livestock Forage availability	■	■	■	■	■	■	■				■	■	
Credit availability					■								
Non-Agricultural activities							■	■	■				
Season for additional activities							■	■	■	■			
Holidays													Sundays are assumed to be holidays.

Generally the participants linked the activities on the calendar, for instance food availability in relation to amount of rainfall. They also indicated the link between credit availability and income generated.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, employment opportunities, positive change in social economic status, tapped water for home use, access to electricity due to the project, and fishing opportunities. The youth will benefit more (in areas such as employment) during construction of the dam project.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; members indicated that they will have to be compensated and resettled close to current area.
- Loss of land for grazing livestock; must be compensated.
- Lack of portable water for home use; boreholes in the resettled area should be sunk so that they can be accessed for portable home use.
- Loss of bamboo, trees and fruit trees; the group indicated that there should be compensation.
- Fear of community dispersion; it was indicated that the chief should have a leading role in the identification and choosing of land, which will assist in accounting for cultural beliefs and values.
- Loss of graveyard; the group indicated that there will have to be compensation. The remains (content of the graveyard) will have to be exhumed and buried in the resettled area. Graveyards are a base for gule wa mkulu, and as a result the government should fund a proper ceremony.

The participants emphasized that they would like to be resettled close to the project area. If there is no available land close to the project site, Dzalanyama in Lilongwe would be the most preferable resettlement location. Other accepted locations would include: Kasungu and Mchinji in Lilongwe. The land should be enough to continue their economic activities.

In addition to this, the group identified the aged and orphans as vulnerable groups, in that order. The aged do not have energy to actively participate in agricultural activities (source of livelihood) and the orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Small Group Discussion Report

Date: 2nd October, 2015

1. Village(s) Name:
   - Katande
   - Gidion
   - Robert
   - Bonga
   - Dazi
   - Chinthankhwa
   - Chika

2. Facilitator Name: John Mwawanda

3. Note Taker Name: Connex Makuya

4. Interest group name: Elders, Chiefs, Development Agents and Farmers

Social Mapping

The FGD took place at Chinthankhwa Village. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: Seventh Day Adventist (SDA), Church of Central African Presbyterian (CCAP), African Abraham, Zion, Rainbow Covenant, New Apostolic Church and Baptist Church.

In the area, communities use water a borehole and the Diamphwe River. These water sources provide water all year round.

The community has primary schools as Luwani, Njuchi, Kanyezi and Bua. These school grounds are used for meetings, netball and football. Swimming, fishing and laundry are done at and on the Diamphwe River.

They access health services from Kanyezi (Katchale) Health Centre.

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos along the Diamphwe River and agricultural land during the dry season. The feed is abundant during the rainy season (January to February).

Resource Mapping

Trees are a natural resource reported to be found in abundance.

Wild game was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from the boreholes in the area and the Diamphwe RIver. The women also collect firewood from their own fields and from homestead wood plots.

Livestock graze on village dambos along the Diamphwe River, and around the hills.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in tree nurseries and tree planting.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.

Seasonal Calendar

Livestock Forage availability	■	■										■	
Credit availability					■	■	■						
Non-Agricultural activities								■	■	■	■		
Season for additional activities					■	■	■	■	■	■			
Holidays													Sundays are assumed to be holidays.

Generally the participants linked the activities on the calendar, for instance food availability in relation to amount of rainfall. They also indicated the link between income and expenditure (more income leads to increased spending).

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, safe piped water to the communities, fishing and employment. The youth will benefit more (in areas such as employment) during construction of the dam project.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; members indicated that they will have to be compensated and resettled close to their current area.
- Loss of trees and fruit trees; must be compensated.
- Loss of land for grazing livestock; must be compensated and resettled close to their current area.
- Loss of graveyard; the group indicated that there will have to be compensation. The remains (content of the graveyard) will have to be exhumed and buried in the resettled area.
- Loss of communication between people in Dedza and Lilongwe sides of the river.
- Fear of crocodiles when the water level rises due to the construction of the dam; a fence should be erected around the body of water.

The participants emphasized that they would like to be resettled close to the project area. The land should be enough to continue their economic activities.

In addition to this, the group identified female-headed households, the aged and orphans as vulnerable groups, in that order. Female-headed households will be affected as they rely on other community members. The aged do not have energy to actively participate in agricultural activities (source of livelihood) and the orphans require assistance from relatives and/or the community, which may not have the resources to provide for them.

Small Group Discussion Report

Date: 6th October, 2015

1. Village(s) Name:
    - Kaluchi
    - Savala
    - Maloko,
    - Chingwenje
    - Chimbano
    - Maliyoti
    - Chiononga
    - Chinkhuti
2. Facilitator Name: John Mwalwanda
3. Note Taker Name: Connex Makuya
4. Interest group name: Youth

Social Mapping

The focus Group Discussion (FGD) took place at Chingwenje Village Head. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing. The group members indicated that this will increase further as they intend to get married and have children.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: Province Industrial Mission (PIM) and Church of Central African Presbyterian (CCAP)

In the area, communities use water from three boreholes located at Kaluchi, Chingwenje and Moloko villages; and the Diamphwe River. These water sources provide water all year round. Dimbas are along the Diamphwe River where irrigation farming is practiced. There are woodlots located at Chiononga, Savala and Kaluchi villages.

The community utilises ground located at PIM premises (close to the nursery school) for meetings, football and netball. Swimming, fishing and laundry are done at and on the Diamphwe River. Adult literacy classes, night secondary school and under-five clinics are held at the nursery school.

There are income-generating projects funded by an Italian woman named Maria. These projects included layers, broilers, a piggery and a maize mill

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos along the Diamphwe River during the rainy season and agricultural land during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: land, bamboo, trees and sisal.

Wild game was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from the boreholes in the area and the Diamphwe RIver. The women also collect firewood along the Diamphwe River and from community and family woodlots.

Livestock graze on village dambos along the Diamphwe River during the rainy season and on agricultural land during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in forestation projects resulting in family and community woodlots.

It was also indicated that crocodiles in the area had killed people, and were a concern for the community.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below

Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec

Season for additional activities								■	■				
Holidays	■			■				■	■			■	

Generally the participants linked the activities in the area with reference to the calendar activities, for instance weddings take place when people have money from produce proceeds.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: piped water source for community, irrigation farming, fishing, employment and business opportunities.

The group identified that active individuals, like themselves (youth), will benefit more from the development because they are able to engage in agricultural based activities, such as irrigation and employment opportunities.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing and farming; members indicated that they will have to be compensated, and feel that the youth should identify suitable land to resettle with sufficient land for farming, housing and grazing and is ideal to start businesses. This should be close to their current settlement.
- No portable water
- Loss of trees (community and family woodlots affected)
- Changes in coping strategies; the need for seed funds to assist with dimba activities in new or other businesses if their crops fail.
- Settlement dispersion (scattered) and the impact on relationships; given enough land for the whole community to resettle.
- Loss of grazing livestock
- Nursery school will be affected
- Loss of graveyard

The participants emphasized that they would like to be resettled close to the project area. The land should be enough to continue their economic activities.

In addition to this, the group identified the aged, orphans and female-headed households as vulnerable groups, in that order. The aged are unable to work. Orphans may have financial difficulty. Female-headed households require assistance from relatives and/or the community, which may not have the resources to provide for them.

Holidays													Sundays are holidays.

Generally the participants linked the activities in the area with reference to the calendar activities, for instance good rains results in more produce which leads to more income, ultimately leading to more dances.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, piped water source for the community, fishing and employment.

The group identified that economically active individuals will benefit more from the development because they are able to engage in agricultural-based activities, such as irrigation and employment opportunities.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing and farming; members indicated that they will have to be compensated. They would like to resettle close to the project site.
- Loss of the graveyard; the chief must be compensated, and also identify a new graveyard. The community should receive funds to have a ceremony for the remains.
- There will be no portable water; the government should provide water to the community.
- The community fears the new environment when resettled
- Loss of natural resources (trees, grazing land)
- Settlement dispersion (scattered) which will impact on relationships; the land for resettling should be enough for the whole community.

The participants emphasised that they would like to be resettled close to the project area.

In addition to this, the group identified the aged, orphans and female-headed households as vulnerable groups, in that order. The aged are unable to work. Orphans and female-headed households require assistance from relatives and/or the community, which may not have the resources to provide for them.

2. Facilitator: John Mwalwanda
3. Notetaker: Connex Makuya
4. Interest Group: Women

Social Mapping

The SGD took place at Mtontho Group Village Head.

The members present drew a map on flipchart paper on which their villages were located.

The area is inhabited by Chewas.

There are a number of religious groups, including: African Isaac and Jehovah's Witness.

In the area, communities use water from shallow wells and boreholes. These water sources provide water all year round. Dambos are along Kasisiti and the Diamphwe River where irrigation farming is practiced. There are woodlots located at Njiwa, Sunga and Mtontho villages.

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wamkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos along the Diamphwe River during the rainy season and agricultural land during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: trees and livestock.

Land was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from the shallow wells, boreholes in the area and the Diamphwe RIver. The women also collect firewood along the Diamphwe River and from community and family woodlots.

Livestock graze along the Kasisiti and Diamphwe Rivers during the rainy season and on agricultural land during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in forestation projects resulting in family and community woodlots.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: safe piped water, irrigation farming, business opportunity, employment and fishing.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing and farming; must be compensated. They would like to resettle close to the project site.
- Loss of graveyard; must be compensated, government should decide what to do.
- Loss of livestock grazing area; must be compensated.
- Loss of trees; must be compensated.

The participants indicated that there is not a preference for the placement of resettlement, as there will be financial compensation.

In addition to this, the group identified the aged and orphans as vulnerable groups, in that order. Both groups are unable to work and require assistance from relatives and/or the community, which may not have the resources to provide for them.

Small Group Discussion Report

Date: 7th October, 2015

1. Village(s) Name:
   - Mtontho
   - Malika
   - Kambwata
   - Chidothi
   - Njiwa
   - Mbwadzulu
   - Chipanangwe
   - Njiwayoyera
   - Kaziputa
   - Kasauka
   - Sunga

2. Facilitator Name: John Mwalwanda

3. Note Taker Name: Connex Makuya

4. Interest group name: Leaders and Elders

Social Mapping

The Focus Group Discussion (FGD) took place at Mtontho Group Village Head. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: African Isaac and Jehovah's Witness.

In the area, communities use water from shallow wells and boreholes. These water sources provide water all year round. Dimbas are along Kasisiti and the Diamphwe River where irrigation farming is practiced. There are woodlots located at Njiwa, Sunga and Mtontho villages.

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos along the Diamphwe River during the rainy season and agricultural land during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: trees and livestock.

Land was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from the shallow wells, boreholes in the area and the Diamphwe RIver. The women also collect firewood along the Diamphwe River and from community and family woodlots.

Livestock graze along the Kasisiti and Diamphwe Rivers during the rainy season and on agricultural land during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in forestation projects resulting in family and community woodlots.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.

Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■						■	■	■	■	
Food lean period	■	■	■									■	
Income earning period				■	■	■	■	■					
Expenditure				■	■	■	■	■					
Rainfall season	■	■	■								■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	
Livestock Forage availability	■	■	■	■								■	
Credit availability				■	■	■	■	■					These are months when it is very easy to get a loan. There are Village savings and loans (VSL) which run for the whole year.
Non-Agricultural activities				■	■	■	■	■					
Season for additional activities							■	■					
Holidays													Sundays are holidays.

Generally the participants linked the activities in the area with reference to the calendar activities, for instance good rains results in more income from produce, which can be used to purchase rice and fund entertainment.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, piped water source for the community, fishing, employment and tourism.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing and farming; must be compensated. They would like to resettle close to project site.
- Dispersion of settlement (scattering)
- Loss of graveyard; chief must be compensated and should identify a new graveyard in the resettled area. The community should receive funds to have a ceremony for the remains. Government will decide on what to do.
- Expectation that Katawa River will flood when dam is full; there will be a need for relief items to affected people.
- Loss of livestock grazing area; compensation.
- Loss of trees; must be compensation.
- Low school attendance

The participants indicated that the preference for resettlement would be in the Dedza district in close proximity to the dam catchment area.

In addition to this, the group identified the aged and female-headed households as vulnerable groups, in that order. The aged are unable to work and both the groups require assistance from relatives and/or the community, which may not have the resources to provide for them.

Small Group Discussion 15 Report

08 October 2015

1. Village Names:
    - Kawelama
    - Chinkhalamba
    - Psyata
    - M'machimadza
2. Facilitator: John Mwalwanda
3. Notetaker: Connex Makuya
4. Interest group: Women

Social Mapping

The Focus Group Discussion (FGD) took place at Kawelama Village Head.

The members present drew a map on flipchart paper on which their villages were located.

It was indicated that that the area is inhabited by Chewas.

African Abraham is the only identified religious group in the area.

In the area, communities use water from shallow wells, boreholes and the Diamphwe River. These water sources provide water all year round. Dambos are along the Diamphwe River where irrigation farming is practiced.

The community utilises a ground at Chinkhalamba for meetings, football and netball. The community access milling services at Kabwazi trading centre. The area also has a community – based childcare (CBCC).

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wamkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on village dambos along the Diamphwe River during the rainy season and agricultural land during the dry season.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: trees and livestock. Land was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from the shallow wells, boreholes and the Diamphwe RIver. The women also collect firewood from the fields, usually mango trees and community woodlots.

Livestock graze along the Diamphwe River during the rainy season and on agricultural land during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in maintenance of roads and community fund raising activities.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, fishing and employment.

The group identified that economically active individuals will benefit more from the development because they are able to engage in agricultural-based activities, such as irrigation and employment opportunities.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; members indicated that they will have to be compensated. They would like to resettle close to the project site and to their current settlement.
- Loss of the graveyard; the chief must be compensated, and also identify a new graveyard. The community should receive funds to have a ceremony for the remains.
- No potable water; the government should provide water to the community.
- Loss of trees and fruit

In addition to this, the group identified the aged, orphans and female-headed households as vulnerable groups, in that order. The aged are unable to work. Orphans and female-headed households require assistance from relatives and/or the community, which may not have the resources to provide for them.

5. Interest group name: Chiefs and Elders

Social Mapping

The Focus Group Discussion (FGD) took place at Kawelama Village Head. The members present drew a map on flipchart paper on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

It was indicated that that the area is inhabited by Chewas.

There are a number of religious groups, including: Church of Central African Presbyterian (CCAP), African Abraham, Catholic and New Jerusalem.

The area has a community-based childcare (CBCC) and night classes for secondary school students. There is gule wa mkulu for entertainment.

There are courts at each village headquarters. Courts are heard based on the level of crime. There are three levels: Village Head, Group Village Head, and those that are referred to the national judicial system through the police.

It is at these local judicial courts where the Big Dance (gule wa nkulu) takes place.

The community uses the land, not only to cultivate for crop production, but also to collect firewood, and to graze livestock on during the dry season, and the village dambos along the Diamphwe River. The feed is usually abundant during the rainy season (November to July).

Resource Mapping

Water was reported to be the most abundant natural resource.

Wild game was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from a borehole and the Diamphwe River. The women also collect firewood from their own field and community (homestead) woodlots.

Livestock graze along the Diamphwe River.

The community has been involved in a community development project through which they collect sand and stones, mould bricks used for school blocks, teachers' houses and a health facility. They also indicated that they have been involved in tree nurseries and tree planting, road repair and maintenance and group farming (clubs).

It was also indicated that crocodiles in the area had killed people, and were a concern for the community.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below.

Seasonal Calendar

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: irrigation farming, drinking water, fishing and tourism.

The group identified that the youth will benefit more from the development from employment at the dam site during construction.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; must be compensated. They would like to resettle close to the project site, with sufficient land to continue economic activities as before.
- Lack of portable water for home use; boreholes must be sunk in order to access portable water.

- Loss of grazing land; must be compensation.
- Loss of graveyards; must be compensation. The remains (content of the graveyard) will have to be exhumed and buried in the resettled area.
- Loss of bamboo, trees and fruit trees; must be compensated.
- Affect gule wa mkulu grounds
- Fear of not being allowed to fish; must be compensated.
- Roads and bridges will be affected; government should construct new infrastructure.

The participants emphasized that they would like to be resettled close to the project area.

In addition to this, the group identified the aged, orphans and female-headed households as vulnerable groups, in that order.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: potable water, and irrigation farming and fishing - that will spur business and job opportunities - during and after the dam construction.

The group identified that economically active individuals (both men and women) will benefit from the development because they are able to engage in agricultural-based activities, such as irrigation farming and fishing. The youth will also benefit from job opportunities. Overall they anticipate that everyone will benefit equally from access to portable water.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing and farming
- Loss of trees
- Affected electricity poles
- Affected roads

The group was not willing to share possible mitigation measures, as they need to discuss first amongst themselves and provide feedback at a later time.

The group also was not ready to share a location for resettlement.

In addition to this, the group identified the aged as being a vulnerable group, specifically in terms of loss of land and housing. The aged are unable to work and are not economically active.

Social Mapping

The SGD took place at Mthiko Village Head.

The members present drew a map on which their villages were located. Villages were drawn in relation to social structures and institutions in the area.

The estimated number of households has been increasing.

The area is inhabited by Chewas.

There are a number of religious groups, including: African Isaac and Roman Catholic.

Resource Mapping

The following natural resources were reported to be found in abundance, in order: trees, livestock, bananas, elephant grass and bamboo.

Wild game was reported to be a scarce resource.

The community indicated that everyone has equal access to land, and that includes women and the poor. The chiefs allocate land to the families in the area.

Usually women collect water from shallow wells and boreholes.

The women collect firewood from the fields and Batha mountain.

Livestock graze along the M1 road, Batha Mountain and the Diamphwe River during the rainy season and on agricultural land during the dry season.

The community has been involved in a community development project through which they mould bricks used for school blocks, teachers' houses and a health facility. They also have been involved in maintenance of roads and community fund raising activities.

Historical Mapping

The group came up with events that have happened to the community and it is part of their history in the area. This is depicted in the time line below

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: employment, irrigation farming, fishing, electricity opportunity, knowledge sharing and tourism.

The group identified that youth will benefit more from the development due to the time frame of the project.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for housing, farming and grazing – there will be quarry site; must be compensation as quarry activities will disrupt farming activities.
- Fear of flooding; dam should have provision for controlling floods
- Population increase in area due to affected people moving upstream; people should be sold land.
- HIV/AIDS due to workers at dam site; more sensitisation in the communities about HIV/AIDS and should be a behavioural change.
- Loss of graveyard
- Loss of natural resources

In addition to this, the group identified the aged as being a vulnerable group.

Small Group Discussion 19 Report

Date: 9 October, 2015

1. Village: Chemboga
2. Facilitator: John Mwalwanda
3. Notetaker: Connex Makuya
4. Interest group: Villagers at tank site

Social Mapping

The SGD took place at **Chemboga** village head.

The people belong to the Chewa ethinic tribe.

A number of religious denominations include: Seventh Day Adventist (SDA), CCAP, African Abraham, New Apostolic, Chisomo, Rainbow Convenant and Zion.

The village has a borehole where women fetch water; some fetch water from the Diamphwe River.

The court issues are handled based on the country court system, from Group Village Head to Group Village Head, Traditional Authorities, and then the police.

Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■								■	■	Agricultural or farming activities
Food lean period	■	■	■										
Income earning period				■	■	■							Income is earned from crop sales after harvesting in April
Expenditure				■	■	■							
Rainfall season	■	■	■	■							■	■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	

Livestock Forage availability	■	■	■								■	■	The livestock are tethered during these months to avoid eating other people's crops
Credit availability				■	■	■							
Non-Agricultural activities								■	■	■	■	■	
Season for additional activities							■	■					

Participants were able to connect activities within the calendar; for example, more income is realised from crop sales when there is reliable and adequate rainfall.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts of the dam project, in the order of importance: safe piped water, irrigation farming, employment, fish supply from the dam, and electricity.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Loss of land for farming and housing; must be compensated.
- Loss of trees at tank site and along pipeline to tank; must be compensated.
- Loss of graveyard; must be compensated.

The participants emphasised that those that will be affected should relocate within village.

Social Mapping

The SGD took place at **Mkanda** Village Head.

Seasonal Calendar

Activity	Month												Comments
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	
Busiest month	■	■	■	■	■						■	■	Agricultural /farming activities
Food lean period	■	■	■										
Income earning period				■	■	■	■	■					
Expenditure				■	■	■	■	■					
Rainfall season	■	■	■	■								■	
Water availability for the year	■	■	■	■	■	■	■	■	■	■	■	■	

Livestock Forage availability	■	■	■	■							■	■	Livestock feeds along the M1 road.
Credit availability				■	■	■	■	■					
Non-Agricultural activities								■	■	■			
Season for additional activities							■	■					

Generally the participants linked the activities in the area to the calendar activities; for instance, good rains result in more produce, which leads to more income, ultimately leading to more cultural activities.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: Irrigation, safe drinking water, fishing and finally employment.

All groups will benefit from the development, but the youth will benefit more as they are economically active, and are always in search of job opportunities.

The group considered female-headed households, the aged and orphans to be affected more than other groups of the community.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance, as follows:

- Affect housing when laying pipes
- Fear of leaking pipes, which may impact houses, fences and trees
- Must be compensated for trees.

In terms of mitigation, the group indicated that there are existing laws that should be followed by the government for structures (houses, fences) that fall within the road reserve boundary.

Project Positive Impact and Enhancement

The community indicated the following as positive impacts, in the order of importance: safe piped water to the community, irrigation farming to those that are close to the Dam and fish supply for food.

Project Negative Impact and Mitigation Measures

The community ranked the negative impacts in order of significance especially for those that are close to the road, as follows:

- Loss of land for housing and farming; must be compensation
- Loss of trees along pipeline; must be given seedlings to plant and compensation as well
- Affect electricity poles; move the electricity poles to a different place
- Loss of soil and creation of pits on the land; refill the pits

The participants emphasised that they would like to be resettled within the village.

Consultation Outcomes

Date	Place	Discussion	Issues	Participants
August				
21	LWB Office	SMEC team members met with members of the LWB and a representative of the NWDP.	Introductions were made and the Client provided background and documentation relating to the project. Arrangements were made for an informal visit to the Dam site on the same day.	SMEC: P Geerdts (Sociologist), C Mhango (Ecologist) and C Ghosh (GIS Expert) LWB: S Maliano, C Kachingwe NWDP: P Kutengule
	Project site	SMEC team members informally visited the Project site and Kuntamba village in Dedza District.	Initial discussions about Project and location of the dam wall was shown by GVH Makoko and villagers.	SMEC: P Geerdts, C Mhango, C Ghosh
28	Forestry Headquarters Office, City Centre, Liliongwe	Information on forest reserves in study area; studies, documentation, activities by Forestry Department in Project area	Department of Forestry is working in Dzalanyama Forest Reserve through a project financed by JICA. They have data; it is in electronic form and kept under the authority of Mr Onaka who is Adviser to Forest Conservation (he went on leave that day and will be coming back after a month). Referred to the District Forestry Officer for Lilongwe.	SMEC: C Mhango Department of Forestry: Alinafe Kaudzu, Assistant Officer to JICA (Tel: 0999 754920 / 0884 062701)
	Lilongwe District Forestry Office, Amina House, Lilongwe	Information on forest reserves and activities by District Forestry Office, in Project impact area, the wider catchment area,	Collected documents - Lilongwe Socio-Economic report (old and latest draft), Lilongwe District State of Environment Report electronic copy, and Dzalanyama Forest reserve document in soft copy; indicated that there may be village forest areas on customary land in the Project impact areas.	SMEC: C Mhango, P Geerdts Department of Fisheries: Jipate Munyenyembe, Lilongwe District Forestry Officer (DFO)

Date	Place	Discussion	Issues	Participants
		and Lilongwe District .		(Tel: 0999 792427)
	Fisheries Department Headquarters, Capital Hill, Lilongwe	Information on fisheries resources in Project (Diamphwe and Linthipe Rivers);	Department of Fisheries has not carried out any recent studies in Diamphwe; no data specific to Diamphwe; Diamphwe mostly has subsistence fisheries. Damming might have positive impact on fisheries resources. On negative impacts, concern would be maintaining environmental flows for Linthipe which flows to Lake Malawi. The endangered fish Mpasa is migratory and Linthipe is one of the major rivers that fish uses. Need to maintain flows during the dry season. and check how far it migrates and possible if any impacts.	SMEC: C Mhango Department of Fisheries: Mr Orton Kachinjika, Assistant Director of Fisheries
September				
04	LWB Office	Introductory meeting with SMEC Team Leader	Introduction of Team Leader, confirmation of programme and staffing; outstanding documentation and information; arrangement of site access and meeting.	SMEC, LWB
08	Makoka Village	A more formal site visit coincided with SMEC representatives attending a meeting with 55 villagers and members of the Lilongwe and Dedza Dam Project Committees (DPCs) at Makoka Village, together with representatives of the LWB, the NWDP, and the MoAIWD. Walked to dam site and surrounds	The meeting was chaired by a Community Development Officer (representing the Ministry of Gender) of Lilongwe DC. Introductions were made and a synopsis of anticipated Project activities was given by the LWB, the NWDP and SMEC; after which villagers were provided the opportunity to raise any issues or concerns. Some issues raised included: - Government commitment and timing of the Project - How compensation is to be calculated and government commitment to pay compensation - Where PAP would be located - Management of potentially affected graveyards - Previous consultants (WAPCOS) promised a community workshop to discuss how environmental and social studies would be undertaken - Use of local people to assist with site surveys During this meeting the following was agreed on: - SMEC would meet with leadership of the TAs potentially affected to inform them of SMEC's proposed work plan prior to starting fieldwork in their areas. - The following District meetings were agreed: 16/9/2015: Kaphuka TA, Dedza District 18 /9/2015: Chilikumwendo TA, Dedza District 20/9/2015: Mazingela TA, Lilongwe District	SMEC: L Palfreeman, P Geerdts, C Mhango, C Ghosh, J Mwalwanda and S Ulaya LWB: C Kachingwe NWDP: P Kutengule MoAIWD DPC and community members

Date	Place	Discussion	Issues	Participants
			22/9/2015: Kalumbu TA, Lilongwe District 24/9/2015: Chadza TA, Lilongwe District - LWB would a organise a workshop with the Lilongwe and Dedza DPCs on 14 September 2015 in fulfilment of a commitment promised by WAPCOS), for the Committees to obtain more detailed information on the Project.	
14	Local Church Hall	Community workshop with DPC members and local leaders as an orientation to the Project - social and environmental aspects.	LWB gave an overview of the Project, followed by a presentation of the composition of the SMEC teams, and work planned for the social aspects (by P Geerdts and J Mwalwanda) and the environmental aspects (by C Mhango). The Asset Surveyor, Patrick Mbundungu, was introduced to those present.	SMEC: P Geerdts, C Mhango, J Mwalwanda, P Mbundungu LWB: C Kachingwe DPCs: 27 members (5 women and 22 men), representing different villages from Lilongwe and Dedza Districts Dedza DC: two Community Development Assistants (CDAs) of the Gender Office
16	Kaphuka TA residence	Introducing SMEC Teams and asking permission to work in the area.	SMEC teams were given permission to work in the area.	SMEC: J Mwalwanda, P Mbundungu DPC members: Golden Chimzimu, Uladi Paulo, Kaphuka TA
	Chilikumwendo TA residence	Introducing SMEC Teams and asking permission to work in the area.	SMEC teams were given permission to work in the area.	SMEC: J Mwalwanda, P Mbundungu DPC member: Elisy, Chilikumwendo TA
18	Kalumbu TA residence	Introducing SMEC Teams and asking permission to work in the area.	SMEC teams were given permission to work in the area.	SMEC: J Mwalwanda, P Mbundungu DPC member: Davite Tsirizani, Kalumbu TA
16-22	Villages in Kaphuka,	Ground-truthing exercise for villages,	Shared the aim of the study to respective village heads; collected GPS coordinates for villages in the study area, and for social structures e.g. graveyards, schools, markets.	SMEC: J Mwalwanda, P

Date	Place	Discussion	Issues	Participants
	Chilikumwendo, Chadza, Kalumbu and Mazengera TAs	social structures along Diamphwe River and within demarcated proposed Project study area.	Collected Village Development Comittee (VDC) Development Plans. Recorded names of villages, and obtained estimates the number of households per village where available.	Mbundungu DPC members and Chiefs
18	Kaphuka TA Court, Linthipe, Dedza; Mazengera TA Headquarters, Lilongwe; Chilikumwendo TA Headquarters, Dedza	Informed TAs about the commencement of ecological and socio-economic studies; discussed possibility of some graveyards being inundated, asked TAs to consult with VHs on mitigation, compensation measures; notified them about an archaeologist and cultural expert coming to carry out studies; consulted on possibility of carrying out vegetation and animal surveys in graveyards	On issue of access to graveyards, TA Kaphuka indicated that he welcomed the Project together with a majority of people in his area; he mentioned that the issue of graveyards is not new - it has been discussed before since some graveyards are located very close to the river bank; he has to consult his VHs since graveyards are very important culturally due to the Gule Wamkulu cult; women are not allowed access to the graveyards unless they have been initiated; need to ensure that when gaining access it is through VHs so that cultural procedures are followed; he has to consult affected VHs on the inundation of the graveyards, and concerned families will make final decision. TA Mazengera indicated that the issue was not new; she will consult with her GVHs that are affected and will get back to SMEC. TA Chilikumwendo said that their culture is Ngoni thus they do not have Gule Wamkulu; chiefs should be consulted and notified in advance as it is not culturally right for people to gain access to graveyards without seeking consent from chiefs.	SMEC: C Mhango, C Mpanga LLWB: C Kachingwe TAs: Kaphuka, Mazengera, Chilikumwendo
21	Lithipe Extension Planning Area (EPA)	Collected village household numbers in Kaphuka TA under Lithipe EPA	Collected the number of villages in Kaphuka TA, under Lithipe EPA.	SMEC: J Mwalwanda, P Mbundungu Acting Agricultural Extension Development Co-ordinator (AEDC),

Date	Place	Discussion	Issues	Participants
				Lucy Mwalughali Chiefs
21	LWB Office	Progress meeting with LWB	WAPCOS: limited survey information/data, no information on pipeline. - SMEC commenced geo-referencing surveys and programme for site surveys; enumerator training on Oct 12 - Cut-Off date to be managed by LWB - Overall Compensation budget estimates to be +/- 30%; no PAP sign-off - SMEC to consult with Chiefs before going into field; to use local villagers with survey teams - LWB suggest using Department of Antiquities for cultural/ graveyard survey - Other issues: need construction schedule, cannot survey during wet/ breeding season, need re-do all surveys, no 'float' in ESIA schedule if things are delayed.	SMEC: L Palfreeman, Wongani Chisala, C Mhango LWB: Sinosi Maliano
28	Msodoka Village, GVH Chinzili, Mazengera TA	2 Small Group Discussions (SGDs) - Groups 1 & 2	Collection of views from villagers on the proposed Project; social and resource mapping; potential positive and negative impacts and mitigation; potential places to relocate where applicable.	SMEC: John Mwalwanda, Connex Makuya Villagers: Women group; VHs and elderly group
29	Kuntamba Village, Makoko GVH, Kaphuka TA	2 Small Group Discussions (SGDs) - Groups 3 & 4	Collection of views from villagers on the proposed Project; social and resource mapping; potential positive and negative impacts and mitigation; potential places to relocate where applicable.	SMEC: John Mwalwanda, Connex Makuya Villagers: Farmers, fishermen group; youth group
30	Malenya Village, GVH Malenya, Kalumbu TA	2 Small Group Discussions (SGDs) - Groups 5 & 6	Collection of views from villagers on the proposed Project; social and resource mapping; potential positive and negative impacts and mitigation; potential places to relocate where applicable.	SMEC: John Mwalwanda, Connex Makuya Villagers: Farmers group; VHs, traditional healers, gule wankule dancers group
October				
01	Chinthakhwa Village,	2 Small Group Discussions (SGDs) -	Collection of views from villagers on the proposed Project; social and resource mapping; potential positive and negative impacts and mitigation; potential places to relocate where	SMEC: John Mwalwanda, Connex

Date	Place	Discussion	Issues	Participants
	GVH Chinthakhwa, Chadza TA	Groups 7 & 8	applicable.	Makuya Villagers: Religious group; VHs, elders, farmers, development agents, ADC members group
02	Kamwala Village, GVH Mbalira, Kaphuka TA	1 Small Group Discussion (SGD) - Group 9	Collection of views from villagers on the proposed Project; social and resource mapping; potential positive and negative impacts and mitigation; potential places to relocate where applicable.	SMEC: John Mwalwanda, Connex Makuya Villagers: VHs, elders group
	Chinthakhwa Village, TA Chilikumwendo	1 Small Group Discussion (SGD) - Group 10	Collection of views from villagers on the proposed Project; social and resource mapping; potential positive and negative impacts and mitigation; potential places to relocate where applicable.	SMEC: John Mwalwanda, Connex Makuya Villagers:Elders, farmers group
06	Chingwenje Village, GVH Chingwenje, Kalumbu TA	2 Small Group Discussions (SGDs) - Group 11 & 12	Collection of views from villagers on the proposed Project; social and resource mapping; potential positive and negative impacts and mitigation; potential places to relocate where applicable.	SMEC: John Mwalwanda, Connex Makuya Villagers: Youth group; elders, farmers group
	LWB office	Meeting to follow up LWB's review of SMEC's Review report (submitted 28/9/2015) and to discuss a number of other issues	SMEC highlighted issues on information requirements, and need to confirm length of raw water pipeline to be included in ESIA.	SMEC, LWB
07	Ntotho Village, GVH Ntotho, Kaphuka TA	2 Small Group Discussions (SGDs) - Group 13 & 14	Collection of views from villagers on the proposed Project; social and resource mapping; potential positive and negative impacts and mitigation; potential places to relocate where applicable.	SMEC: J Mwalwanda, C Makuya Villagers: Women group; leaders, elders group
08	Kawelama	2 Small Group	Collection of views from villagers on the proposed Project; social and resource mapping;	SMEC: J Mwalwanda, C

Date	Place	Discussion	Issues	Participants
	Village, GVH Kawelama, Kaphuka TA	Discussions (SGDs) - Group 15 & 16	potential positive and negative impacts and mitigation; potential places to relocate where applicable.	Makuya Villagers: Women group; chiefs elders, farmers group
	Kathukena Village, GVH Kathukena, Mazengera TA	2 Small Group Discussions (SGDs) - Group 17 & 18	Collection of views from villagers on the proposed Project; social and resource mapping; potential positive and negative impacts and mitigation; potential places to relocate where applicable.	SMEC: J Mwalwanda, C Makuya Villagers: Farmers group; youth group
09	Mkanda Village, GVH Mkanda, Mazengera TA	1 Small Group Discussion (SGD) - Group 19	Collection of views from villagers on the proposed Project; social and resource mapping; potential positive and negative impacts and mitigation; potential places to relocate where applicable.	SMEC: J Mwalwanda, C Makuya Villagers: Men, women farmers group
	Chemboga Village, GVH Chemboga, Mazengera TA	1 Small Group Discussion (SGD) - Group 20	Collection of views from villagers on the proposed Project; social and resource mapping; potential positive and negative impacts and mitigation; potential places to relocate where applicable.	SMEC: J Mwalwanda, C Makuya Villagers: Men, women farmers group
10	Chaponda Village,TA Mazengera	2 Small Group Discussions (SGDs) - Group 21 & 22	Collection of views from villagers on the proposed Project; social and resource mapping; potential positive and negative impacts and mitigation; potential places to relocate where applicable.	SMEC: J Mwalwanda, C Makuya Villagers: Men, women farmers group; youth group
13	LWB Office	SMEC Presentation to LWB, World Bank (WB) and International Finance Corporation (IFC)	SMEC presentation of key issues and Project risks. WB/IFC issues: graveyards, downstream water use, biodiversity, PAP.	SMEC, WB, IFC, LWB
14	Capital Hotel	SMEC Presentation to LWB, World Bank and IFC	SMEC presentation of key issues and project risks: - SMEC highlighted Project risks and initial survey findings. Noted that WAPCOS ESIA had significant gaps and PAP probably much larger - WB/IFC interested in maintaing Program schedule and delivery of ESIA/RAP by mid	SMEC, WB, IFC, LWB

Date	Place	Discussion	Issues	Participants
			December - SMEC confirmed was possible subject to Project risks.	
20	NWDP Office	Workshop on environmental and social issues and key Project risks	Focus on key issues. Confirmation that pipeline study stops at Bunda Turnoff.	SMEC, WB, LWB, NWDP
23	SMEC Office	Survey findings and consultation with villagers	Department of Antiquities (DoA) summarised survey findings, importance of graveyards as monuments and graves must be exhumed and relocated. DoA to meet with SMEC, WB and Client to discuss status of study and future work.	SMEC: L Palfreeman, W Chisala DoA: Chrissy Chiumia, Oris Malijani, Topeka Zakeyo
26	World Bank Office	Cultural survey and graveyard issues	Discussed cultural survey findings, graveyard issues and how to address in ESIA, ESMP and RAP.	SMEC, WB, DoA, LWB, NWDP
November				
02	WaterAid	Meeting to discuss Project and identify any issues important to WaterAid	WaterAid's main focus is to facilitate water supply to low income households. - Currently looking at Peri-Urban communities in Lilongwe - Very interested in Diamphwe Project and fully support initiatives to develop new water sources - Major issue is catchment management and maintaining water quality. In particular forest destruction due to charcoal production is of major concern. Mentioned catchment problems associated with Kamuzu Dam. Water Act includes catchment management requirements.	SMEC: L Palfreeman WaterAid: Mercy Masoo (tel. 0888 614650; Website www.wateraid.org.uk)
03	Dedza	LWB arranged meeting with Community representatives, MoAIWD, NWDP, and SMEC	- SMEC presented status of Census survey - General discussions regarding Cut-Off date and consultations with TAs - Strong support for the proposed Dam Project.	SMEC: L Palfreeman, P Geerdts MoAIWD, Water Resources NWDP LWB District Commissioners (DCs), TAs
	Dedza	Meeting SMEC, LWB and NWDP	- SMEC: highlighted major Program risk associated with large numbers of PAP being identified. Estimate 5000 or more PAP. Noted that total of 9 enumerators and 2 surveyors	SMEC: L Palfreeman, P Geerdts NWDP

Date	Place	Discussion	Issues	Participants
			- LWB noted that Water Resources is undertaking catchment management studies (Arecon). Will arrange visit to Kamuzu Dam - LWB will arrange meeting with TA and DoA re graveyards.	LWB
04	Dam site	Health Specialist introduced to Lilongwe and Dedza DPCs by SMEC (J Mwalwanda)	Informal meeting with members of the DPCs to plan community consultation. The Dam site was visited to have an understanding of the Project.	SMEC: J Mwalwanda, Gloria Kunyenga (Health Specialist) DPCs: Lilongwe, Mackenzie Chilembwe and Tsilizani David; Dedza, Uladi Paulo
	Mdeza Health Centre	Health facility servicing the communities in the proposed Project area	Discussed with the medical person in charge about current health issues. Some anticipted challenges include: increased cases of malaria, bilharzia and diarrhoea due to stagnant water around dam site, malnutrition due to farming land shortages, respiratory diseases due to dust in the construction phase, STDs and HIV due to workers on the site. The Centre has only 12 staff members and thus a heavy workload; also shortage of drugs. Maternity cases are referred to Chitowe Health Centre. Would like Project to support Centre with better services, increase number of staff.	SMEC: G Kunyenga Mdeza Health Centre: Samuel Ridi, Medical Assistant
04	Concern Universal, Dedza office	NGO implementing projects in the proposed Project site	Studies are underway for the organisation to introduce a one-year project in the area that will focus on enhancing good governance, growth and accounatbility, health, food security and nutrition. The Project shall have no serious impact on the organisation's interventions; rather, it will provide additional benefits to communities through access to health services, in that it will have to consider additional services to address Project impacts. It is expected that the Project will take corporate social responsible role e.g. provision of new clinics, water points, development of trading centre for social activities.	SMEC: G Kunyenga Concern Universal Dedza office: Gift Munthali, Health Manager (Tel: 0997579173)
	District Environmental Health Office (EHO), Dedza	Responsibility for provision of health services in the District; perception of the Project; positive and negative impacts	Proposed Project will have many benefits as well as challenges to health/ wellbeing of the people around the Dam and relocated PAP. Need to consider proximity of the people to health services, provision of psycho-social support to affected households, sensitisation on disease prevention, accident prevention measures, water reusage in the city.	SMEC: G Kunyenga Dedza District Health Office: Mrs Elizabeth Chingayipe, Chief Preventive Health Officer (Tel: 0888364552 / 0994208130)
	Dedza District	Perception of the Project; positive and	Welcome the development, but DC is to be informed each step of the way about Project activities. Issues: timing of land acquisition, to coincide with harvesting; after land has been	SMEC: P Geerdts DC: Mr Gwedemula,

Date	Place	Discussion	Issues	Participants
	Council (DC) Administration Office	negative impacts; mitigation measures	acquired, people to be advised how best to utilise/invest compensation payments e.g. savings scheme.	Director of Administrator (DOA) (tel: 0888 869494)
	Dedza DC, Gender, Child & Community Development Office	Perception of the Project; positive and negative impacts; any mitigation measures; potential involvement of the Office	Project is national, to benefit the nation rather than individuals, and out of the control of the District. Outlined improvements anticipated: electricity to neighbouring villages; road infrastructure; agricultural investment through irrigation projects; fish ponds as income-generating activity, and improved nutrition; employment/job opportunities; forestry development. Negative: governance issues, with some people losing positions; resettlement imacting on nutrition. Outlined Dept projects that could assist e.g. Food Utilisation and Dietry Diversification; Community Saving and Investment Promotion, and encouragement in income-generation activities; gender-based violence awareness training; literacy classes.	SMEC: P Geerdts DC: Maria Goma, District Community Development Officer (DCDO) (tel. 0881 151662)
04	Office for Kasusu Community Based Orphan Care Organisation (KACO), Dedza	Activities of the NGO; potential role in the Project	Target vulnerable groups i.e. women widows, orphan children, the elderly, people with disabilities; provide educationa/bursary support to orphans, and economic empowerment to parents/guardians; enhancement of early childhood development through supporting community-based child care; community population education programme; hygiene and sanitation; food security. Work with other NGOs (eg Concern Universal) and DC departments. Part of District NGO network.	SMEC: P Geerdts KACO: Rev Gladstone Kachale (Tel: 0999 213 255)
	Dedza DC, Social Welfare Office	Activities of the Department; potential involvement in the Project	Work of the Dept targets juvenile offenders, street children, orphans, children with AIDS, people with disabilities, and commercial sex workers. Also promotes girl-child education. Work with NGOs and the DC (e.g. CD and Youth Offices). Need to start sensitising communities on the implications of the dam project, particularly around HIV/AIDS, and the potential for commercial sex work.	SMEC: P Geerdts DC: Mphatso Chisepa, Social Welfare Assistant (tel. 0881 7250820) and Selima Kasamaleni, Child Protection Worker (Tel: 0999 095042)
05	Chinkhuti Village, Lilongwe DC	Health issues facing communities; perception of the Project; positive and negative impacts;	Community feels Project is good for the Government, not for them as their source of livelihood will be destroyed. The Government should consider provision of food, social amenities like clinics and schools, compensation packages, and enough land, to those families that will be relocated. Anticipate water shortage problems and inadequate land for farming, and thus increased malnutrition for relocated families. Project will improve	SMEC: G Kunyenga Community of Chinkhuti village (10 women, 22 men: one was a DPC member

Date	Place	Discussion	Issues	Participants
		mitigation measures	health services in community and better access to safe drinking water.	who organised the meeting)
	Kumkama Village, Lilongwe DC	Health issues facing communities; perception of the Project; positive and negative impacts; mitigation measures	Community feels the benefits of the Project include health services, employment opportunities, fishing and irrigation. They feel Project may bring problems of malnutrition due to inadequate farm land, psychological problems of being relocated, health challenges for most vulnerable groups like widows and child-headed families. However, the community is ready to relocate but the Government needs to give them enough information about this arrangement. As it is now, the information is not clear of what is expected of them as far as their health concerns are concerned.	SMEC: G Kunyenga Community of Kumkama village (7 women, 9 men; 2 DPC members)
05	World Vission (WV) Office, Dedza	Activities of the NGO; potential role in the Project	WV currently does not work in the Project area as they only work in one TA per DC; however, they can be approached to assist with service provision, and sign an agreement to undertake work. Current projects: water supply; health/M-Nech (Newborn and Child Health Care); education; food security; sponsorship. Work in partnership with the DC in the provision of services. However, encouragement of savings groups is different from the DC in that all the money is shared amongst members; for the COMSIP (Community Savings Investment Programme) of the CD Dept a certain % goes to develop the area through public works.	SMEC: P Geerdts World Vision: Prisca Gauti, Development Facilitator, Health (Email: priscagauti@yahoo.com); Joseph Chelewani, Development Facilitator, Food Security (Tel: 0 888 694689)
	Dedza DC, Water Development Office	Perception of the Project; positive and negative impacts; mitigation measures; potential involvement of the Dept	Involved in rural water supply, in the provision of boreholes and shallow wells, and pumps. Mobilise communities to take ownership of the faciilty, training Water Point/Borehole committees to manage, maintain it themselves. Recommend that communities affected by the dam project benefit from the water, preferably through a piped water system, with tanks, water treatment works,distribution pipeline, taps provided by the government (through a mini Water Board); managed by a local committee, who would set up a fee system per household for water provision. The supply of replacement boreholes would be second choice. Ensure communities have proper training to manage whatever water system is set up. Recommends that all activities undertaken by consultants be with involvement of DEOs. No map of water provision in area.	SMEC: P Geerdts DC: Charles Yatiwa, District Water Officer (DWO) (Tel: 0999 265 680)
	Office of the Catholic Development	Activities of the NGO; potential role in the Project	Relief and development arm of the Catholic Church; this office is involved with the Dedza Church district, which has the Diamphwe river as its boundary. Thematic areas: agriculture + food security, water + sanitation, environmental rehabilitation, income-generating activities + economic empowerment, health, education, human rights. Also provide	SMEC: P Geerdts CADECOM; Patrick Namakhoma (Tel: 0122 3453; 0995 899411)

Date	Place	Discussion	Issues	Participants
	Commission in Malawi (CADECOM), Dedza		disaster relief e.g. in times of drought, floods. Work with other NGOs to co-ordinate activities, and with government offices. National office in Lilongwe, but work independently.	
05	Dedza DC, Animal Health and Livestock Development Office	Perception of the Project; positive and negative impacts; any mitigation measures; potential involvement of the Office	Offer vetinary sevices in district Extension Planning Areas (EPAs); the EPA serving Dedza District near the dam is Inthipe. Involved in: animal health, disease control; improved pasture establishment; animal feed and soil conservation; public health relating to animal food. Collaborate with DC sections, and with NGOs - although NGOs in the area come and go! Could assist with improvement of alternative pasture land, especially for the many dairy farmers in the area,.	SMEC: P Geerdts DC: Arnold Nthala, District Animal Health and Livestock Development Officer (DAHLDO) (Tel: 0 999 171281); Moses Katseka, Assistant Vetinary Officer (AVO) (Tel: 0999 256 221)
	Office of the Rights Advice Centre (RAC), Dedza	Activities of the NGO; potential role in the Project	Offer paralegel service, but no service of private lawyers; can refer to Legal Aid in Lilongwe, but few lawyers available. Concerned with human rights issues, informing communities about new legislation, and awareness campaigns e.g. around human trafficking. For the project could offer mediation around disputes in compensation, advise the client to seek legal advice, or go to other government institutions to obtain support (e.g. the Office of the Ombudsman in Lilongwe).	SMEC: P Geerdts RAC: Stanley Gome, Finance and Administration Officer (Tel: 0888 991444); James Njala, Paralegal
	Office of the Centre for Children Aid, Dedza	Activities of the NGO; potential role in the Project	Focus on youth, only in Dedza District. Youth empowerment in rural areas, working through youth clubs, CBOs, schools - through established structures to avoid duplication. Train in life skills, human rights, gender issues, HIV/AIDS, early pregnancy. Part of District Education Network and District CSO Network. Has little funding, few resources. Would be available to undertake a suitable project, if required, with planned ToR and budget.	SMEC: P Geerdts Centre for Children Aid: Heston Nalikole, Executive Director (Tel: 0888 995660)
06	Dedza District Council (DC) Office	Perception of the Project; positive and negative impacts; any mitigation measures; potential involvement of the Office	Explained composition and ToR of DESC and how it relates to DEC; comprises Officers of various Offices; can invite specific NGOs that are implementing projects with environmental aspects. Only one EDO in Dedza District, responsible for: co-ordinating all environmental activities at district level; involved in the screening process of projects; supervise/ monitor environmental micro projects; implement ESMPs of LDF (Local Development Fund) projects; do environmental inspections of projects etc. If project needs a full EIA, it is referred to the national Environmental Affairs Dept; if full EIA is not required, ESMP is applied at District level. Already involved in Project, in choice of site, accompanying environmental team on site (WAPCOS?); falling under the District Planning	SMEC: P Geerdts DC: Bruno Kamanga, Environmental District Officer (EDO), Secretariat for DESC, acting Monitoring and Evaluation Officer (Tel: 0999 656728)

Date	Place	Discussion	Issues	Participants
			Office (DPO) he is involved in all planning activities. When ESIA Report is finalised he will monitor whether EMPs are being adhered to during implementation.	
06	Dedza DC Office	Perception of the Project; positive and negative impacts; any mitigation measures; potential involvement of the Office	The Dam is 'multipurpose', including irrigation, supplying water through gravity-fed system of canals) to 1000 ha - 500 ha in Dedza and 500 ha in Lilongwe. All people losing agricultural land upstream of the dam to be reallocated land as part of the irrigation scheme; all to have the option of benefitting. Communities have agreed on this all with WAPCOS, and are expecting it. Recommend growing rice, beans, tomatoes, green maize as cash crops. Water distribution to be managed by Water User Associations, after provision of training. DC Office can supervise layout, construction etc of canals, and provide technical know-how/advice on cash crop production. Currently farmers are using small hand/petrol pumps, and treddle pumps; no large irrigation scheme in the area; usage is seasonal.	SMEC: P Geerdts DC: Gift Moloko, District Irrigation Officer (DIO) (Tel: 0999 717675; 0888 063420)
	Dedza DC Fisheries Office	Perception of the Project; positive and negative impacts; any mitigation measures; potential involvement of the Office	1 DFO and 3 technicians (not based in Dedza). Co-ordinate all fisheries activities in the district. Work with fish farmers; some in Kaphuka TA who use fish ponds in the dhambos. High demand for fish from locals, so no need to look for markets in the towns elsewhere. Provide inputs to encourage fish ponds (e.g. wheelbarrows, shovels, pipes, outlets to construct the ponds), but no fingerlings. The Office can advise on placement of sites, on construction of ponds, how tostock with fish and farm etc., but have limited resources (transport) to monitor progress. Recommend fish farming for the project as it is a good business, using the dam and fish ponds. Farmers to form groups, working in co-operatives. With all interventionsfor the dam project need an overall/umbrella committee, with a subcommittee for fisheries.	SMEC: P Geerdts DC: Ida Kandiuze, District Fisheries Officer (DFO) (Tel: 0888 388601)
09	Chitowo Health Centre	Health issues facing communities; perception of the Project; positive and negative impacts; any mitigation measures	There is no medical assistant at the clinic making it difficult for people to access all important services, and too great a workload for staff. Project will bring electricity to the facility as they face problems without it. Relocation of families may result in overpopulation as not all will leave but rather intergrate into the nearest communities, resulting in communicable disease transmission and pressure on health services. The Government to consider extension of Chitowo Health Centre, and more HSAs to be deployed for health promotion in communities.	SMEC: G Kunyenga, N Lufesi (Assistant Health Specialist) Chitowo Health Centre: Felix Sandikonda, Nurse in charge/Midwife Technician
	Diamphwe Health Centre	Health issues facing communities; perception of the Project; positive and negative impacts; any mitigation	Facility faces medical supply problems as it caters for people from Dedza and Lilongwe, being located inbetween. Issues: low literacy level for most women, who thus do not practice family planning; high population puts pressure on limited resources at the facility; the Project will contribute to poor hygiene and sanitation problems due to limited land to construct latrines; malnutrition will increase due to land shortages for cultivation; promiscuity will increase leading to unwanted pregnancies and disease transmission such	SMEC: G Kunyenga, N Lufesi Diamphwe Health Centre: Henry Kuzemba, Medical Assistant; Samuel

Date	Place	Discussion	Issues	Participants
		measures	as HIV; early marriages due to high illiteracy levels. The Government should consider expanding the Health Centre and improve in provision of supplies and outreach services etc.	Kapangani, Assistant EHO; Enos Sinoya, Laston Owen, Max Chaduka, HSAs (Tel: 0999 235002) (HSA = Health Surveillance Assistant in the Ministry of Health responsible for community surveillance and Health promotion activities)
10	Chidothi/Njiwa Villages	Health issues facing communities; perception of the Project; positive and negative impacts; mitigation measures	Communities feel there are positive and negative impacts of Project on health issues: there will be an improvement of livelihoods as selling of their farm products will not be a problem, providing money to feed families, leading to improved health; employment opportunities; improved income is equal to improved health. However, rellocation may bring water, food and land shortages, and poor hygiene and sanitation/health. Isolation of ancestors will bring psychological torture. There will be marriage brerakups and hence HIV transmission. Government should consider providing enough land for graveyard, farming and other social amenities.	SMEC: G Kunyenga, N Lufesi Chidothi and Njiwa villages; community members (12 men, 10 women of the 2 villages)
10	Kangong'o Village	Health issues facing communities; perception of the Project; positive and negative impacts; mitigation measures	Community is currently facing drug shortages in hospitals; Project will ensure avaialbility of drugs. To improve health they depend on selling farm products; Project will help in market demand from construction workers, to earn a living and live a better life health-wise. There is no bridge to access services at Kamphata Health Centre, especially needed for pregnant women; Project will provide a bridge on Diapmhwe River. Each household has a pit latrine - no open defeacation is practiced. Community expects to be relocated to a place where they can maintain this practice. Integration problems, either at relocated area or in same community, will bring insecurity problems, disease, accidents and possibly robbery.	SMEC: G Kunyenga, N Lufesi Kangong'o village; community members (12 men, 4 women)
11	Kamuzu Dams 1 and 2	Review catchment management measures, including social dimension	- Rehabilitation and 15 meter buffer area. Noted well established and successful tree planting within the 15 BZ - Onsite nursery supplying seedlings for dam areas as well as to the surrounding communities - Catchment management committee set up to manage catchment issues. Some funding to implement catchment projects	SMEC: P Geerdts, L Palfreeman, C Mpanga LWB: C Kachingwe

Date	Place	Discussion	Issues	Participants
			- LWB hire local army personnel to patrol the catchment to prevent illegal tree clearing - LWB to provide Sedimentation Report - LWB Water Resources Contact for catchment management: Peter Kadewere, Principal Hydrologist in MoAIWD (Tel. 0888 893847).	
	Kamphata Health Centre	Health issues facing communities; perception of the project; positive and negative impacts; any mitigation measures	Health Centre serves majority of PAP. Currently facing: infrastructure problems; services are increasing at the facility, but inadequate rooms - Project might consider extra provision; shortage of staff, considering the workload; most outreach services do not take place due to lack of transport; drug shortage is also a problem. More accidents and injuries will occur during Dam construction; early pregnancies, marriages plus disease transmission. Governement should consider supporting Health Centres to carry out their work and provide necessary services to the community.	SMEC: G Kunyenga, N Lufesi Kamphata Health centre: Daniel Mtenje, Nurse/Midwife Technician
12	National Smallholder Farmers Association of Malawi (NASFAM), Nathenje	Health issues facing communities; perception of the project; positive and negative impacts; any mitigation measures	NASFAM serves communities in the Dam area, in Lilongwe and Dedza, by promoting rural livelihoods. Services offered are extension activities, gender action learning, and promoting farming as a business. Currently promote crop production in the rainy season. With the Dam construction farmers will be displaced and have small plots to grow crops. Less food will worsen the situation of malnutrition. If integrated with irrigation farming the Dam will promote growing crops all year round, which will promote crop rotation and include vegetables such as tomatoes. NASFAM will promote crops by finding markets (targeting bigger shops in town). Drowning from swimming is a danger as it will take some time to learn how to use the water. Government should integrate climate change issues and prevention of water pollution. Employ locals for Dam construction so they benefit economically and health will improve.	SMEC: N Lufesi NASFAM: Elijah Longwe, Centre Manager (0999 119628)
	Kasina Health Centre	Health issues facing communities; perception of the Project; positive and negative impacts; any mitigation measures	Health Centre has a community development arm to help deal with child/adult malnutrition. Facility has organised different groups e.g. for women, men, chiefs (men/women separately), youth. Mixed opinions on what the Dam will bring. Some think it will provide an opportunity to sell land to displaced communities, as income for families; can grow vegetables/maize and catch fish to boost family nutrition - as they have been trained to do. For those on the lower side of the Dam, overflowing can put people at risk of diarrhoea and other waterborne diseases. Mixture of different cultures can lead to prolification of different social diseases e.g. STIs, HIV, bilharzia.	SMEC: N Lufesi Kasina Health Centre: Sister Stella Ovuntamba - Team leader, Community Programmes (Tel: 0994 654381); Boniface Chawala, Extension Worker; 20 women village leaders that gather at Health Centre to discuss nutrition

Date	Place	Discussion	Issues	Participants
				project activities in their areas
			Heath Centre aims to increase agriculture productivity and appropriate use of maize, soya beans, chickens and other small livestock. Facility has developed training for transformation in order to combat children/adult malnutrition. People around the Dam will get clean water if this has beeen considered, improving sanitation, hygiene. Since the area is close to the main road it has potential to turn into a small town and promote different businesses e.g. restaurants, rest houses; however, this can contribute to diseases (spread of food-borne diseases, STIs). People relocated may expereince problems e.g. weather change, difficulty in construction of houses, starting new fields (elderly, children, widows). Security will be a problem as chiefs lose power. Government should ensure that human dignity is restored to PAP by ensuring that people are relocated in places with similar weather, culture. Water should first be provided to local communities, and then to LIlongwe city.	SMEC: N Lufesi Kasina Health Centre: Sister Stella Ovuntamba, Team Leader, Community Programmes (Tel 0994 654381); Boniface Chawala, Extension Worker
13	Makoko village	Health issues facing communities; perception of the Project; positive and negative impacts; mitigation measures	Health benefits of the Dam will include employment, which will help families have food, fishing for protein, good water, electricity. Despite the benefits, most disease will increase e.g. malaria, schistosomiasis, HIV/AIDS and STIs. If relocated people choose to stay on, and with influx of others, sanitation will become a problem since there are few toilets in the community. Condern for drowning in the dam, especially children.	SMEC: N Lufesi Dedza DPC (8 members): Uladi Paulo (vice secretary (Tel. 0994 811643) Group Mbwadzuwa; Raphael Foloko; Samson Fanizo; Rodrick Jeremiah; GVH Makoko; GVH Chaponda
	Lilongwe DPC	Health issues facing communities; perception of the project; positive and negative impacts; any mitigation measures	Project will bring: clean water closer to communities, fishing, employment; will stop need for women to walk long distances for water. Diarrhoe will decrease as people stop drinking water from wells/river. May have population increase if unmarried women/teenagers are promiscuous with people constructing the Dam. Those close to the Dam, increased episodes of malaria as water may become breeding place for mosquitoes. At time of dam construction sanitation will be compromised as people move into area seeking employment; families will be disturbed if women indulge in sexual relationships with those from other areas, leading to transmissition of STIs, HIV/AIDS, and congestions at health centres, which currently do not have enough health workers, drugs and space. Water	SMEC: N Lufesi DPC Lilongwe (8 members): Mackenzie Chilembwe (Chair) (Tel: 0999 434373); VH Felemu (Vice Chair); Tsilizani Daniel (Secretary); Bester Lundu (Treasurer); Eric

Date	Place	Discussion	Issues	Participants
			pollution and toxicity may result if catchment areas are not well controlled. Government to include programmes to improve water quality, and consider relocating people in areas with similar weather patterns.	Timothy; Robert Victor; Nsonga Laimu; Chikondano Jaziyele
13	Lilongwe DC District Environmental Health Office (DEHO)	Health issues facing communities; perception of the Project; positive and negative impacts; mitigation measures	Dam will bring reliable water source for people in the area; food security will improve through irrigation farming, reducing diseases (e.g. diarrhoea), malnutrition. Fish will provide source of protein. Possible increase in malaria, schistosomiasis, accident related diseases, HIV and STI transmission, teenage pregnancies. People relocated may face challenges with weather, malnutriton if relocated to unfertile soils. Women, children, elderly may have problems with construction of houses, starting new farms. Health centres already experience challenges e.g. drug shortages, inadequate human resources. Government to consider involving DHO in planning process of Dam; District to design programmes to help in dealing with increased number of diseases; also ensure that water is used by communities to avoid sabotage (through cutting pipes - citing example of Mpira Dam in Ntcheu where the town was without water for several days). DoH and Water should check water quality regularly; sensitise community on water use and possible risks of the Dam. Government to consider upgrading one health centre in the area, especially Diamphwe, and equip it with enough staff, medicines, an ambulance, and an emergency room.	SMEC: N Lufesi Lilongwe District DEHO: Paul Chunga, District EHO (Tel: 0999 793186); Grenville Kachisi, Assistant District EHO (Tel: 0888 790709)
	Lilongwe DC Planning and Development Office (PDO)	Perception of Project; positive, negative impacts; mitigation measures; potential involvement	Aware of the Project; concerned that people losing the land will not benefit from irrigation, fishing and social services; should be enouraged to buy land in areas where they can take advantage of Project benefits, use the water. Provided names and contacts of District Officers.	SMEC: P Geerdts DC: Peter Jimusole, Director of Planning and Development (DPD) (Tel: 0888 641596)
	Lilongwe DC Community Development (CD) Office	Perception of the project; positive and negative impacts; mitigation measures; potential involvement of the Office	Sending a team out to monitor SMEC's survey activities in the field. CD Assistants (CDAs), as the frontline staff, have asked what they can do for the Project. Involvement: capacity building programmes; community entry; mobilise communities to understand Project activities (change mindset to 'ownership'); Economic Activities Programmed, encouraging savings with compensation payments; adult literacy; sensitise around gender issues, to increase participation of women in decision-making processes.	SMEC: P Geerdts DC: Annie Kamwendo, District Community Development Officer (DCDO) (Tel: 0888 350197)
17	Mapiri Lodge, Dedza	Activities of NGO; potential role in the Project	Church and Society is part of CCAP (Church of Central Africa Presbyterian), with Head Office in Nkhoma.They are downstream of the Project area, using water from the Linthipe River, so concerned about less available water. Diamphwe water should be pumped to	SMEC: P Geerdts Church and Society: Simon Mvula, CCAP

Date	Place	Discussion	Issues	Participants
			Dedza town as Dedza has water problems, mainly created by increasing deforestation. Operate in Project area, with relief and development services: relief during natural disaster, devastation; development through digging shallow wells, constructing houses for the needy, assisting in establishing and supporting schools,etc. People from the Project area use CCAPs Nkhoma hospital. Nkhoma University offers courses in education, nursing, theology.	Church elder (Tel: 0999 281997 / 0888 523603)
	Mapiri Lodge, Dedza	Meeting with Civil Society Organisations (CSOs) to update them on Project developments/status, and sensitise them on graveyards and other physical cultural resources	Process of preserving physical and cultural resources affected by the Project, as part of the Projects ESIA. Presentations on: situation analysis (LWB); overview of the Project (Water Resources Department); environmental/social status (SMEC); survey findings of the physical cultural resources (DoA); roles, expectations of CSOs (Lilongwe District Commissioner). CSOs responded: implementers to take into consideration governance issues; legal framework is required to back up the investment; request a visit to Project area; CSOs will sensitise communities around Project; have the capacity to monitor and evaluate; to be included in all consultation meetings around graves. Agreed to consider exhuming graves; Chiefs to consult with communities, and look at sites for graveyards;	SMEC: L Palfreeman, P Geerdts, W Chisala MoAIWD: P Kaluwa (Deputy Director, Water Resources); J Kumwenda (Deputy Director, Water Supply Services) NWDP: Z Kasomekera (Programme Manager, LWP); P Kutengule (Environmental Social Safeguards Specialist) LWB: C Kachingwe (Water Quality Manager) DoA: A Topella (Archaeologist), O Molajani (Geoarchaeologist) DCs: C Makanga (Lilongwe DC), J Kanyangalazi (Dedza DC) CSOs: CCJP, CCAP, NICE, WRE, PRO LWB
18	Panjira Lodge,	DoA presentation on findings around	Graveyards are key assets identified in the area, used for two reasons: Dambwe and Burial places. Discussion on way forward around graveyards. Agreement as to how to proceed:	SMEC: J Mwalwanda DoA

Date	Place	Discussion	Issues	Participants
	Dedza	cultural heritage, and particularly graveyards; legal process around interment of graves	Chiefs to go back to respective communities to discuss options, and meet again to continue planning way forward based on their particular villages.	MoAIWD: Director Water Resources NWDP: Programme Manager, PMU LWB: Safeguards Officer Lilongwe, Dedza DC: DCs, Councillors, CSOs, MPs, Chiefs, reporters
19	Dedza DC Agriculture Office	Perception of the Project; positive and negative impacts; any mitigation measures; potential involvement of the Office	Agriculture: Involvement in Project has been through facilitating meetings with local leaders (TA) and DOs to datee.g. in Salima (2013); positive results after mobilising communities, who had fears about the project. As part of the Department: Land Resources Conservation Office can take soil samples, but analysis at national (not District) level, and LRCO officer can be involved in conservation measures required to prevent siltation of the dam; Irrigation Officer to advise on irrigation system; Extension and Crop Officers to advise on crops to grow, and agricultural methods. Provide value of crops/trees through national office. Land: Office will assist in resolving issues over land, and reallocation of land with all stakeholders; can work with valuation under the Department of Valuation. Housing: involved in waste management infrastructure and house design (building regulations). Waste infrastructure cannot be less than 50m away from the water source. Encourage compensation that covers building houses of higher quality than what exists.	SMEC: P Geerdts DC: Owen Kumwenda, District Agriculture Development Officer (DADO) (Tel:0999 409606); Moffat Nkhoma, District Land Officer (DLO) (Tel: 0999 472383); Chrispin B Naphiyo, District Housing Officer (DHO) (Tel: 0999 474651 / 0888 770338)
	Dedza Catholic Commission for Justice and Peace (CCJP) office	Activities of the NGO; potential role in the project	As social advocacy arm of the Catholic Church, JP is involved in thematice areas of: Human Rights, Good Governance, Rule of Law, Gender; HIV/AIDS, Climate Change and voter educaiton. Work with chiefs, VDCs, ADCs, opinion leaders. Have volunteers at community level; given basic training in human rights, and as paralegals. CCJP can give communities info about the Project, working with other CSOs e.g.use the medium of posters, leaflets, open day, their community radio. As Chair of Dedza CSO Network Committee, outlined the structure, and it's objectives.	SMEC: P Geerdts CCJP: Lawrence Puliti, CCJP Co-ordinator (Tel: 0999 206909)
19	Dedza National Initiative for Civic Educaiton	Activities of the NGO; potential role in the project	NICE covers whole district, with involvement in good governance, human rights, capacity building in leadership skills (e.g. on roles, responsibilities of GVHs and VHs, writing of district and village level Development Plans). For Project, volunteers at community level can sensitise PAP, communities and their leadership around their contribution to the Project. Head office is in Lilongwe: contact is Christopher Naphiyo (RCEO) (Tel. 0999917294	SMEC: P Geerdts NICE: Jean Bulirani, Assistant District Civic Education Officer (ADCEO) (Tel. +265 992

Date	Place	Discussion	Issues	Participants
	(NICE) office		/ 0888349396).	884426)
23	LWB Water Quality and Environmental Management Division office	Project institutional base	Institutional make-up, and roles and responsibilities of LWB in relation to MoAIWD and NWDP as relating to the Project. Capacity within LWB for environmental/social activities; catchment management, with an example of involvement in Kamuze Dams I and II; grievance mechanism.	SMEC: P Geerdts LWB: C Kachingwe, Safeguards Officer (Tel: 0888 364967)
	District Forestry Office (DFO), Lilongwe	Information on Village Forest Areas (VFAs); capacity of DFO Lilongwe in implementation of the ESMP; data; contacts of Forestry Staff in Project area; NGOs working in forestry in the area	Received electronic copy of VFAs in Lilongwe District and Project Impact Area. Forestry works with the following NGOs: World Vision (regeneration of Chilenje Hill); NASFAM, Inter Aid, Plan Malawi in reafforestation programmes; field staff working with LWB in rehabilitation of Kamuzu Dam BZ. On measures to mitigate impacts on vegetation and endangered species, there are currently plans to restock Dzalanyama with wildlife in collaboration with Department of National Parks and Wildlife (DNPW).	SMEC: C Mhango Department of Forestry: Mr Jipate Munyenyembe, DFO, Lilongwe (Tel: 0999792427)
	Department of National Parks and Wildlife (DNPW) Headquarters, Lilongwe	Information on wildlife known to exist in Project area and Dzalanyama Forest; documentation, including studies on crocodiles in Diamphwe River; impacts and proposed mitigation	Received electronic copy of report on animals that currently exist in the Project Impact Area; large mammals that may exist in the area, including types of otters; no known studies on crocodiles in Diamphwe and no crocodile hunting licences issued for Diamphwe; no reports on crocodile attacks or deaths to DNPW; for crocodiles there will be a habitat created, so positive impact; some wildlife seeking refugee in graveyards may lose habitats.	SMEC: C Mhango DNPW: Mr Manda, Deputy Director, Research and Development; Mr Mgoola, Assistant Director Research and Development, Lilongwe (Tel: 0888353993 / 0993189350)
27	NWDP Office	Project institutional base	Status of the Project; structure, roles and responsibilities of NWDP, in relation to the MoAIWD and the LWB; capacity within the LWDP to fulfil required/recommended functions e.g. grievance redress, GIS. On land for resettlement, NWDP/LWB to organise a meeting with DCs and TAs around land availability and potential relocation sites; views of	SMEC: P Geerdts NWDP: Prisca Kutengule, Environmental Social

Date	Place	Discussion	Issues	Participants
			PAP to be taken into consideration on where they would like to resettle.	Safeguards/Community Development Specialist (Tel: 0999 225472)
December				
02	Panjira Lodge, Dedza	Chiefs presented feedback after consultation with their respective subjects on the potential transfer of affected graveyards, and cultural procedures on how to tranfer such graveyards	NWDP Environmental and Social Safeguards Specialist made presentation on World Bank OP 4.11: Physical Cultural Resources, and reiterated requirement for Physical Cultural Resources Management Plan (to be done by DoA). DoA made presentation on findings. Chiefs from across the Project potentially affected areas reported that people have accepted that graves to be affected can be exhumed/reburied as long as culturally accepted procedures are followed. Chiefs will help in identifying required alternative burial sites for exhumed remains; to be agreed with affected villagers and PAP. Need for sensitisation of relevant stakeholders e.g. CSOs, MPs, Councillors (DCs to identify).	SMEC: J Mwalwanda MoAIWD: Director Water Resources NWDP: Programme Manager, PMU; P Kutengule, Safeguards Specialist LWB: C Kachingwe, Safeguards Officer DoA: Director Lilongwe, Dedza DC: District Commissioners, Councillors, CSOs, MPs, Chiefs, reporters
21 Oct 2015 - 20 Jan 2016	Resevoir area	Census, socio-economic and asset surveys - DPC members and chiefs of villages where surveys have been undertaken	Administered 4,388 census surveys and 473 socio-economic surveys, and 45,169 asset surveys for Diamphwe Reservoir.	SMEC: J Mwalwanda, 2 surveyors, 9 Enumerators Chiefs, DPC members PAP

LIVELIHOOD RESTORATION CONSULTATION SCHEDULE						
Month	**Date**	**Place**	**Discussion/Issues**	**Issues & challenges**	**Recommendations**	**Participants**
2016						
Feb	**9**	Chinzili,Bisayi,Mkute and Ulongwe	Verification and data collection exercise on relocation ,mode of compensation and understanding some challenges with respect to social services	Names of sixty-nine (69) PAPs were missing in the consolidated PAPs list.	There is need to ensure that all PAPs are correctly captured in the consolidated list	Lilongwe district Council Representatives and PAPs
Feb	**10**	Bisayi Trading Center		Some PAPs (8) indicated that they were registered but their photos for IDs had not been taken yet.	The remaining assessment work on some of the PAPs should be finalised. Referenc is made to the cases of PAPs' photographs not taken for identification	
				Some PAPs are not yet sure of where they will relocate. They are either still looking for alternative land or are waiting to get their compensation first to start searching for alternative land for cultivation. Nevertheless, they intend to acquire land within the neighbouring villages	The PAPs need to be well sensitised and guided on how to use the compensation money.	
				There are some PAPs who intend to relocate to areas outside Lilongwe district	The PAPs should be provided with technical assistance when identifying alternative land to acquire to ensure that they are not taken advantage of. For instance a thorough assessment of the land to which PAPs will be relocated will need to be done to determine its adequacy and suitability for agricultural production.	
				Some PAPs will relocate to areas outside their TAs but within Lilongwe	An assessment of availability of social amenities and services in the areas where the PAPs will be relocating to as a group should be done to ensure that they do not end up worse off with regard to access to social amenities. This would also assist in determining the need for appropriate support in terms of amenities (where necessary).	
Feb	**11**	GVH Chinzili		As of now PAPs do not have knowledge of availability of social services and amenities in the areas where they w be relocating to. For those who will be relocating within their current villages or nearby villages they will be using the already existing facilities. Nevertheless, there was an indication that safe water sources are not guaranteed in some villages. As such, there is need for further work to thoroughly assess the social amenities requirements in the areas of relocation once they have been confirmed.	There should be a discussion involving all concerned stakeholders regarding how the relocation of public facilities e.g. Bisayi Trading Centre would best be handled to avoid future misunderstandings.	
Feb	**12**	GVH Mkute		Bisayi Trading Centre in TA Kalumbu has been affected in the sense that the major of shop owners will be relocating. The centre has a postal agency and borehole which were serving the community. The local traditional leadership is identifying alternative land upland within Bisayi village where the trading centre is expected to be relocated.	PAPs verified ,data collected on mode of compensation and identified the need for further assessment on social services	
				Tsirizika and Ntenthamawa boreholes will be required	Need to provide boreholes	
Feb	**13**	Ulongwe		There are 13 cases where either a whole village or most village members will be relocating. In 4 of the cases alternative land has been identified in another nearby village but in 9 of the cases alternative land has been identified within the PAPs' current villages and therefore relocation will take place within the villages.	PAPs verified ,data collected on mode of compensation and identified the need for further assessment on social services	
				Loss of business structures and Relocation of affected business structures	Each affected business should be given money for the affected assets (considering the inflation aspect as the kwacha does fluctuate overtime)	
				Had close customers and moving will affect their daily income generation as customers will take time to know where they are to relocate	Disturbance and shifting allowances should also be given as there will be need to transfer goods to the new relocation areas	

Feb	**11**	Bisayi Trading Center	Focus group discussion with Project Affected Business People on the impact of the project, possible livelihood restoration activities ,mode of compensation and an understanding of the nature of the businesses affetced	For some businesses not affected but close are very few and they consider themselves as being part of the big trading centre and feel they will not make money if left alone while the others move to a new area hence requested to be part of the relocated structures	In consultation and collaboration with the traditional leaders the chairman and business committee for Bisayi trading centre will identify new relocation area for the trading centre (businesses) and this relocation area will be sourced from other community members and they will also be given compensation for the land they have given to the trading centre.	SMEC; John & Enumerators, PAPs (70 men and 35 women)
					All remaining few non-affected businesses should be considered on board as PAPs as they were following the trading centre the key structure for the survival of their respective businesses	
					Training in business planning and management will be needed	
					The identified place for relocation should be well established first before the old affected existing structures are relocated and time should be considered so that the business should temporarily stop within a very short period without losing much income.	
					The new relocation area should have good access roads as business are more involved in transporting goods and also require such good roads for provision of services	
Feb	**15**	GVH Mwachilolo	Focus Group Discussions with Host PAPs on relocation, socioal services challenges , and possible livelihhood restoration activities	The boreholes they relied upon have been affected for all the villages and upland the alternative boreholes is very far from the new relocation sites	Project should provide boreholes	SMEC: John & Enumerators, Dam Project Committee Rep, Host PAPs (14 men, 5 women)
				The hosting communities offered their own crop fields and hence reducing the land for crop production	compensation for their affected land should be enough for them to buy land for cultivation	
					Compensation given for their respective land loss should be reasonable to be able to buy new farming land and be able to sustain and or maintain their livelihoods	
					Since many people do not know how to save and manage finances there is need to sensitize and encourage people to save and use the compensation money they will receive to get resettled buy cultivable land and sustain their livelihoods	
					The community also expressed an interest to raise tree seedlings which could be so to the project to be planted along the reservoir	
					The community further anticipate that controlled fishing will also form the basis for th sustenance of their livelihood as some already are fishermen	
Feb	**15**	GVH Chinzili	Focus Group Discussions with Host PAPs on relocation, socioal services challenges , and possible livelihhood restoration activities	The boreholes they relied upon have been affected for all the villages and upland the alternative boreholes is very far from the new relocation sites	Most of the villages moves within their own village just upland where other have offered their own crop fields. For the schools and health facilities the participants indicated there will be no changes as they all already access the same schools and health facilities which were not affected.The project shoul provide boreholes	SMEC: John & Enumerators, Dam Project Committee Rep, Host PAPs (16men ,4 women)
				The hosting communities offered their own crop fields and hence reducing the land for crop production	As regards to compensation the participants considers themselves being project affected persons and will need to be compensated for the loss of their respective farming land for them to further secure new farming land	
					The communities should be given a chance to do small scale irrigation along the reservoir using treadle pumps and watering canes	
					Since many people do not know how to save and manage finances there is need to sensitize and encourage people to save and use the compensation money they will receive to get resettled buy cultivable land and sustain their livelihoods	
					Training in agro-based business planning and management will be needed	

					The community also expressed an interest to raise tree seedlings which could be sold to the project to be planted along the reservoir	
					The community further anticipate that controlled fishing will also form the basis for the sustenance of their livelihood as some already are fishermen	
Feb	**16**	Salima Ndinda GVH Chingwenje	Focus Group Discussions with Host PAPs on relocation, socioal services challenges , and possible livelihhood restoration activities	The boreholes they relied upon have been affected for all the villages and upland the alternative boreholes is very far from the new relocation sites	The project should provide boreholes	SMEC: John & Enumerators, Dam Project Committee Rep, Host PAPs (28men , 25 women)
				The hosting communities offered their own crop fields and hence reducing the land for crop production	Compensation given for their respective land loss should be reasonable to be able to buy new farming land and be able to sustain and or maintain their livelihoods	
				Chiononga the village was affected and not their graveyard and the relocation to the new site results into long distance to the graveyard	Most of the villages moves within their own village just upland where other have offered their own crop fields. For the schools and health facilities the participants indicated there will be no changes as they all already access the same schools and health facilities which were not affected.	
					Ulongwe primary school and Ulongwe Community Day Secondary School are the schools where children does their education. All do access Chitowo and Kaphata health centres and Ulongwe and Chingwenje under-five clinics	
					The participants shared that they will need to be given money for the farmland they have offered to those who are to relocate.	
					The communities need to be sensitised on proper usage of money so that they are able to positively utilise the compensation money for their relocation and also sustenance of their respective livelihoods.	
					The communities should be given a chance to do small scale irrigation along the reservoir using treadle pumps and watering canes	
					Training in agro-based business planning and management will be needed	
					The community also expressed an interest to raise tree seedlings which could be sold to the project to be planted along the reservoir	
					The community further anticipate that controlled fishing will also form the basis for the sustenance of their livelihood as some already are fishermen	
				Farmland will be inadequate	compensation for their affected land should be enough for them to buy land for cultivation	
				inadequate Water	The project should provide boreholes	
					Most of the villages moves within their own village just upland where other have offered their own crop fields. For the schools and health facilities the participants indicated there will be no changes as they all already access the same schools and health facilities which were not affected. Chitowo CDSS,Kananma CDSS and primary school and where children does their education. All do access Chitowo health centre,Diapmhwe health Center, Kasina Health Center	

Feb	**18**	GVH Chiothera, GVH Kwendekeza, & GVH Makoko	Focus Group Discussions with Host PAPs on relocation, socioal services challenges , and possible livelihhood restoration activities		The participants preferred to be given money for their farm land they offered for relocation so that they can buy new land for farming.	SMEC: John & Enumerators, Dam Project Committee Rep, Host PAPs (65 men and 29 women)
					The community recognised the need to be sensitised on money use as many fear that they have never handled a lot of money and many can end up unnecessarily spending the money overlooking the need to sustain their respective livelihoods.	
					The community also expressed an interest to raise tree seedlings which could be sold to the project to be planted along the reservoir	
					The community further anticipate that fishing will be allowed so that they will continue accessing fish protein and also income	
					The communities expressed also interest in Nature based enterprises like bee keeping along the reservoir as an income generating activity	
Feb	**8 to 14**	GVH Chimamba,GVH Kawelama, GVH Chisela, GVH Kangulu, GVH Chiothera, GVH Kwendekeza,GVH Makoko	Verification and data collection exercise on relocation ,mode of compensation and understanding how PAPS will use the compensation they will get and how many PAPs will need the assistance of the Chiefs on alternative land .This also included addressing remaining issues of graveyards relocation		The team strongly recommends that the PAPs and all the people in GVH Chimamba must be provided with bridges on either side so that the people continue accessing the services they used to enjoy before the project came into their area.	Dedza district Council Representatives and PAPs
					Consultation meeting with PAPs in GVHs and most PAPs indicated will use their compensation to start a business or construct a modern house to improve their livelihood; and others indicated that they have already identified an alternative site to buy all they are waiting for is the compensation while some has indicated that they would need the assistance of the chiefs as custodian of customary land to identify alternative land which they will buy using proceeds from the compensation.	
					Project management should facilitate a follow up meeting for the District Team to validate the names of the missing PAP:	
					The project should strive to adhere to the wishes of the people on compensation as any deviation/departure from the same may have serious implications on the smooth implementation of the project	
					Chiefs as custodians of customary land are strongly requested to assist PAPs who have indicated that they would need the assistance of the chiefs to identify alternative land which they would buy for their resettlement. Leaving this issue to the PAPs only may derail project implementatio	

MEETING WITH BUSINESS PEOPLE AT BISAYI TRADING CENTER

MEETING WITH BUSINESS PEOPLE AT BISAYI

DATE: 11 FEBRUARY 2016

MEMBERS PRESENT: All business people affected and non-affected

LIST OF PARTICIPANTS

ISSUES ARISING DURING THE MEETING

TYPES OF BUSINESS AFFECTED

- Tea room –sell tea
- Grocery –sell assorted groceries
- Clothe selling
- Bar
- Hardware –sell construction materials
- Maize mill –providing milling service
- Selling cooking oil
- Agro-produce business-buying and selling agricultural related products
- Butchery
- Phone charging
- Barbershop
- Tailoring
- Restaurant
- Selling vegetable

PROJECT IMPACT

Business people recognised the following negative impacts by the project:

- Relocation of affected business structures
- Had close customers and moving will affect their daily income generation as customers will take time to know where they are to relocate
- For some businesses not affected but close are very few and they consider themselves as being part of the big trading centre and feel they will not make money if left alone while the others move to a new area hence requested to be part of the relocated structures

Business people recognised the following as being positive aspect of the project:

- They are anticipating that the project will bring in tourist to their area hence businesses will be making money
- They also anticipate that they will have access to clean and safe drinking water which will add value their respective businesses
- Electricity is also another benefit they anticipating will come as a result of the project

COMPENSATION

As regards to compensation and choosing where to relate the business community shared the following:

- Each affected business should be given money for the affected assets (considering the inflation aspect as the kwacha does fluctuate overtime)
- Disturbance and shifting allowances should also be given as there will be need to transfer goods to the new relocation areas
- In consultation and collaboration with the traditional leaders the chairman and business committee for Bisayi trading centre will identify new relocation area for the trading centre (businesses) and this relocation area will be sourced from other community members and they will also be given compensation for the land they have given to the trading centre.
- All remaining few non-affected businesses should be considered on board as PAPs as they were following the trading centre the key structure for the survival of their respective businesses

LIVELIHOOD RESTORATION AND SUSTAINABILITY

As regards to the initiatives needed to ensure sustainability of their respective businesses the participants shared the following:

- Training in business planning and management will be needed
- The identified place for relocation should be well established first before the old affected existing structures are relocated and time should be considered so that the business should temporarily stop within a very short period without losing much income.
- The new relocation area should have good access roads as business are more involved in transporting goods and also require such good roads for provision of services

FOCUS GROUP DISCUSSION WITH COMMUNITIES ON RELOCATION

GVH MWACHILOLO TA KALUMBU

Participants - GVH Mwachilolo TA Kalumbu

ISSUES ARISING DURING THE MEETING

VILLAGES TO RELOCATE

Village affected	relocates to	Comments
Mpasu I	Mpasu I upland	Those who offered their land for relocating these villages offered their farming land
Mbonongo	Mpasu I & Kumfera	
Kamphwereza	Mwachilolo	

ACCEPTANCE

- The participants have warmly welcomed the affected families to settle with them.

ANTICIPATED CHALLENGES AS A RESULT OF HOSTING RELOCATED FAMILIES

Village affected	relocates to	Challenges	Proposed solution	Comments
Mpasu I	Mpasu I upland	Water and farming land will be a challenge. The boreholes they relied upon have been affected for all the villages and upland the alternative boreholes is very far from the new relocation sites. The hosting communities offered their own crop fields and hence reducing the land for crop production	The project should provide boreholes and also the compensation for their affected land should be enough for them to buy land for cultivation	For the schools and health facilities the participants indicated there will be no changes as they all already access the same schools and health facilities which were not affected
Mbonongo	Mpasu I & Kumfera			
Kamphwereza	Mwachilolo			

COMPENSATION

As regards to compensation the participants expressed the need to be given money for the land they have offered to those relocating to use and procure new farming land.

LIVELIHOOD RESTORATION AND SUSTAINABILITY

As regards to the initiatives needed to ensure sustainability of their respective livelihoods the participants shared the following:

- Compensation given for their respective land loss should be reasonable to be able to buy new farming land and be able to sustain and or maintain their livelihoods
- Since many people do not know how to save and manage finances there is need to sensitize and encourage people to save and use the compensation money they will receive to get resettled buy cultivable land and sustain their livelihoods
- The community also expressed an interest to raise tree seedlings which could be sold to the project to be planted along the reservoir
- The community further anticipate that controlled fishing will also form the basis for the sustenance of their livelihood as some already are fishermen

VILLAGES TO RELOCATE

Village affected	**relocates to**	**Comments**
Chinganji	Chinganji upland	Most of the villages moves within their own village just upland where other have offered their own crop fields.
Chimbano	Chimbano upland	
Chingwenje	Chingwenje upland	
Moloko	Moloko upland	
Salima Ndinda	To identify and buy new land once compensation is paid	
Malioti	Malioti upland	
Savala	Savala upland	
Chilunje	To identify and buy new land once compensation is paid	
Chiononga	Chiononga upland	
Chikhuti	Chikhuti upland	

ACCEPTANCE

- The participants indicated that they have wholeheartedly accepted the families who are relocating.

ANTICIPATED CHALLENGES AS A RESULT OF HOSTING RELOCATED FAMILIES

Village affected	relocates to	Challenges	Proposed solution	Comments
Chinganji	Chinganji upland	Most of the villages have lost their boreholes (affected) and where they are relocating there are no boreholes hence water challenge. The relocating families have only been given land which was used as farmland for the homesteads hence no farming land for them as well as reduced farmland for the host families. Chiononga the village was affected and not their graveyard and the relocation to the new site results into long distance to the graveyard	The project should provide boreholes and also the compensation for their affected land should be enough for them to buy land for cultivation.	Most of the villages moves within their own village just upland where other have offered their own crop fields. For the schools and health facilities the participants indicated there will be no changes as they all already access the same schools and health facilities which were not affected.Ulongwe primary school and Ulongwe Community Day Secondary School are the schools where children does their education. All do access Chitowo and Kaphata health centres and Ulongwe and Chingwenje under-five clinics
Chimbano	Chimbano upland			
Chingwenje	Chingwenje upland			
Moloko	Moloko upland			
Salima Ndinda	To identify and buy new land once compensation is paid			
Malioti	Malioti upland			
Savala	Savala upland			
Chilunje	To identify and buy new land once compensation is paid			
Chiononga	Chiononga upland			
Chikhuti	Chikhuti upland			

COMPENSATION

The participants shared that they will need to be given money for the farmland they have offered to those who are to relocate.

LIVELIHOOD RESTORATION AND SUSTAINABILITY

As regards to the initiatives needed to ensure sustainability of their respective livelihoods the participants shared the following:

- The communities need to be sensitised on proper usage of money so that they are able to positively utilise the compensation money for their relocation and also sustenance of their respective livelihoods.
- The communities should be given a chance to do small scale irrigation along the reservoir using treadle pumps and watering canes
- Training in agro-based business planning and management will be needed
- The community also expressed an interest to raise tree seedlings which could be sold to the project to be planted along the reservoir

- The community further anticipate that controlled fishing will also form the basis for the sustenance of their livelihood as some already are fishermen

COMPENSATION

As regards to compensation the participants considers themselves being project affected persons and will need to be compensated for the loss of their respective farming land for them to further secure new farming land.

LIVELIHOOD RESTORATION AND SUSTAINABILITY

As regards to the initiatives needed to ensure sustainability of their respective livelihoods the participants shared the following:

- The communities should be given a chance to do small scale irrigation along the reservoir using treadle pumps and watering canes
- Since many people do not know how to save and manage finances there is need to sensitize and encourage people to save and use the compensation money they will receive to get resettled buy cultivable land and sustain their livelihoods
- Training in agro-based business planning and management will be needed
- The community also expressed an interest to raise tree seedlings which could be sold to the project to be planted along the reservoir
- The community further anticipate that controlled fishing will also form the basis for the sustenance of their livelihood as some already are fishermen

LIVELIHOOD RESTORATION CONSULTATION SCHEDULE						
Month	**Date**	**Place**	**Discussion/Issues**	**Issues & challenges**	**Recommendations**	**Participants**
2016						
Feb	**9**	Chinzili,Bisayi,Mkute and Ulongwe	Verification and data collection exercise on relocation ,mode of compensation and understanding some challenges with respect to social services	Names of sixty-nine (69) PAPs were missing in the consolidated PAPs list.	There is need to ensure that all PAPs are correctly captured in the consolidated list	Lilongwe district Council Representatives and PAPs
Feb	**10**	Bisayi Trading Center		Some PAPs (8) indicated that they were registered but their photos for IDs had not been taken yet.	The remaining assessment work on some of the PAPs should be finalised. Referenc is made to the cases of PAPs' photographs not taken for identification	
				Some PAPs are not yet sure of where they will relocate. They are either still looking for alternative land or are waiting to get their compensation first to start searching for alternative land for cultivation. Nevertheless, they intend to acquire land within the neighbouring villages	The PAPs need to be well sensitised and guided on how to use the compensation money.	
				There are some PAPs who intend to relocate to areas outside Lilongwe district	The PAPs should be provided with technical assistance when identifying alternative land to acquire to ensure that they are not taken advantage of. For instance a thorough assessment of the land to which PAPs will be relocated will need to be done to determine its adequacy and suitability for agricultural production.	
				Some PAPs will relocate to areas outside their TAs but within Lilongwe	An assessment of availability of social amenities and services in the areas where the PAPs will be relocating to as a group should be done to ensure that they do not end up worse off with regard to access to social amenities. This would also assist in determining the need for appropriate support in terms of amenities (where necessary).	
Feb	**11**	GVH Chinzili		As of now PAPs do not have knowledge of availability of social services and amenities in the areas where they w be relocating to. For those who will be relocating within their current villages or nearby villages they will be using the already existing facilities. Nevertheless, there was an indication that safe water sources are not guaranteed in some villages. As such, there is need for further work to thoroughly assess the social amenities requirements in the areas of relocation once they have been confirmed.	There should be a discussion involving all concerned stakeholders regarding how the relocation of public facilities e.g. Bisayi Trading Centre would best be handled to avoid future misunderstandings.	
Feb	**12**	GVH Mkute		Bisayi Trading Centre in TA Kalumbu has been affected in the sense that the major of shop owners will be relocating. The centre has a postal agency and borehole which were serving the community. The local traditional leadership is identifying alternative land upland within Bisayi village where the trading centre is expected to be relocated.	PAPs verified ,data collected on mode of compensation and identified the need for further assessment on social services	
				Tsirizika and Ntenthamawa boreholes will be required	Need to provide boreholes	
Feb	**13**	Ulongwe		There are 13 cases where either a whole village or most village members will be relocating. In 4 of the cases alternative land has been identified in another nearby village but in 9 of the cases alternative land has been identified within the PAPs' current villages and therefore relocation will take place within the villages.	PAPs verified ,data collected on mode of compensation and identified the need for further assessment on social services	
				Loss of business structures and Relocation of affected business structures	Each affected business should be given money for the affected assets (considering the inflation aspect as the kwacha does fluctuate overtime)	
				Had close customers and moving will affect their daily income generation as customers will take time to know where they are to relocate	Disturbance and shifting allowances should also be given as there will be need to transfer goods to the new relocation areas	

Feb	**11**	Bisayi Trading Center	Focus group discussion with Project Affected Business People on the impact of the project, possible livelihood restoration activities ,mode of compensation and an understanding of the nature of the businesses affetced	For some businesses not affected but close are very few and they consider themselves as being part of the big trading centre and feel they will not make money if left alone while the others move to a new area hence requested to be part of the relocated structures	In consultation and collaboration with the traditional leaders the chairman and business committee for Bisayi trading centre will identify new relocation area for the trading centre (businesses) and this relocation area will be sourced from other community members and they will also be given compensation for the land they have given to the trading centre.	SMEC; John & Enumerators, PAPs (70 men and 35 women)
					All remaining few non-affected businesses should be considered on board as PAPs as they were following the trading centre the key structure for the survival of their respective businesses	
					Training in business planning and management will be needed	
					The identified place for relocation should be well established first before the old affected existing structures are relocated and time should be considered so that the business should temporarily stop within a very short period without losing much income.	
					The new relocation area should have good access roads as business are more involved in transporting goods and also require such good roads for provision of services	
Feb	**15**	GVH Mwachilolo	Focus Group Discussions with Host PAPs on relocation, socioal services challenges , and possible livelihhood restoration activities	The boreholes they relied upon have been affected for all the villages and upland the alternative boreholes is very far from the new relocation sites	Project should provide boreholes	SMEC: John & Enumerators, Dam Project Committee Rep, Host PAPs (14 men, 5 women)
				The hosting communities offered their own crop fields and hence reducing the land for crop production	compensation for their affected land should be enough for them to buy land for cultivation	
					Compensation given for their respective land loss should be reasonable to be able to buy new farming land and be able to sustain and or maintain their livelihoods	
					Since many people do not know how to save and manage finances there is need to sensitize and encourage people to save and use the compensation money they will receive to get resettled buy cultivable land and sustain their livelihoods	
					The community also expressed an interest to raise tree seedlings which could be so to the project to be planted along the reservoir	
					The community further anticipate that controlled fishing will also form the basis for th sustenance of their livelihood as some already are fishermen	
Feb	**15**	GVH Chinzili	Focus Group Discussions with Host PAPs on relocation, socioal services challenges , and possible livelihhood restoration activities	The boreholes they relied upon have been affected for all the villages and upland the alternative boreholes is very far from the new relocation sites	Most of the villages moves within their own village just upland where other have offered their own crop fields. For the schools and health facilities the participants indicated there will be no changes as they all already access the same schools and health facilities which were not affected.The project shoul provide boreholes	SMEC: John & Enumerators, Dam Project Committee Rep, Host PAPs (16men ,4 women)
				The hosting communities offered their own crop fields and hence reducing the land for crop production	As regards to compensation the participants considers themselves being project affected persons and will need to be compensated for the loss of their respective farming land for them to further secure new farming land	
					The communities should be given a chance to do small scale irrigation along the reservoir using treadle pumps and watering canes	
					Since many people do not know how to save and manage finances there is need to sensitize and encourage people to save and use the compensation money they will receive to get resettled buy cultivable land and sustain their livelihoods	
					Training in agro-based business planning and management will be needed	

					The community also expressed an interest to raise tree seedlings which could be sold to the project to be planted along the reservoir	
					The community further anticipate that controlled fishing will also form the basis for the sustenance of their livelihood as some already are fishermen	
Feb	**16**	Salima Ndinda GVH Chingwenje	Focus Group Discussions with Host PAPs on relocation, socioal services challenges , and possible livelihhood restoration activities	The boreholes they relied upon have been affected for all the villages and upland the alternative boreholes is very far from the new relocation sites	The project should provide boreholes	SMEC: John & Enumerators, Dam Project Committee Rep, Host PAPs (28men , 25 women)
				The hosting communities offered their own crop fields and hence reducing the land for crop production	Compensation given for their respective land loss should be reasonable to be able to buy new farming land and be able to sustain and or maintain their livelihoods	
				Chiononga the village was affected and not their graveyard and the relocation to the new site results into long distance to the graveyard	Most of the villages moves within their own village just upland where other have offered their own crop fields. For the schools and health facilities the participants indicated there will be no changes as they all already access the same schools and health facilities which were not affected.	
					Ulongwe primary school and Ulongwe Community Day Secondary School are the schools where children does their education. All do access Chitowo and Kaphata health centres and Ulongwe and Chingwenje under-five clinics	
					The participants shared that they will need to be given money for the farmland they have offered to those who are to relocate.	
					The communities need to be sensitised on proper usage of money so that they are able to positively utilise the compensation money for their relocation and also sustenance of their respective livelihoods.	
					The communities should be given a chance to do small scale irrigation along the reservoir using treadle pumps and watering canes	
					Training in agro-based business planning and management will be needed	
					The community also expressed an interest to raise tree seedlings which could be sold to the project to be planted along the reservoir	
					The community further anticipate that controlled fishing will also form the basis for the sustenance of their livelihood as some already are fishermen	
				Farmland will be inadequate	compensation for their affected land should be enough for them to buy land for cultivation	
				inadequate Water	The project should provide boreholes	
					Most of the villages moves within their own village just upland where other have offered their own crop fields. For the schools and health facilities the participants indicated there will be no changes as they all already access the same schools and health facilities which were not affected. Chitowo CDSS,Kananma CDSS and primary school and where children does their education. All do access Chitowo health centre,Diapmhwe health Center, Kasina Health Center	

Feb	**18**	GVH Chiothera, GVH Kwendekeza, & GVH Makoko	Focus Group Discussions with Host PAPs on relocation, socioal services challenges , and possible livelihhood restoration activities		The participants preferred to be given money for their farm land they offered for relocation so that they can buy new land for farming.	SMEC: John & Enumerators, Dam Project Committee Rep, Host PAPs (65 men and 29 women)
					The community recognised the need to be sensitised on money use as many fear that they have never handled a lot of money and many can end up unnecessarily spending the money overlooking the need to sustain their respective livelihoods.	
					The community also expressed an interest to raise tree seedlings which could be sold to the project to be planted along the reservoir	
					The community further anticipate that fishing will be allowed so that they will continue accessing fish protein and also income	
					The communities expressed also interest in Nature based enterprises like bee keeping along the reservoir as an income generating activity	
Feb	**8 to 14**	GVH Chimamba,GVH Kawelama, GVH Chisela, GVH Kangulu, GVH Chiothera, GVH Kwendekeza,GVH Makoko	Verification and data collection exercise on relocation ,mode of compensation and understanding how PAPS will use the compensation they will get and how many PAPs will need the assistance of the Chiefs on alternative land .This also included addressing remaining issues of graveyards relocation		The team strongly recommends that the PAPs and all the people in GVH Chimamba must be provided with bridges on either side so that the people continue accessing the services they used to enjoy before the project came into their area.	Dedza district Council Representatives and PAPs
					Consultation meeting with PAPs in GVHs and most PAPs indicated will use their compensation to start a business or construct a modern house to improve their livelihood; and others indicated that they have already identified an alternative site to buy all they are waiting for is the compensation while some has indicated that they would need the assistance of the chiefs as custodian of customary land to identify alternative land which they will buy using proceeds from the compensation.	
					Project management should facilitate a follow up meeting for the District Team to validate the names of the missing PAP:	
					The project should strive to adhere to the wishes of the people on compensation as any deviation/departure from the same may have serious implications on the smooth implementation of the project	
					Chiefs as custodians of customary land are strongly requested to assist PAPs who have indicated that they would need the assistance of the chiefs to identify alternative land which they would buy for their resettlement. Leaving this issue to the PAPs only may derail project implementatio

ISSUES ARISING DURING THE MEETING

TYPES OF BUSINESS AFFECTED

- Tea room –sell tea
- Grocery –sell assorted groceries
- Clothe selling
- Bar
- Hardware –sell construction materials
- Maize mill –providing milling service
- Selling cooking oil
- Agro-produce business-buying and selling agricultural related products
- Butchery
- Phone charging
- Barbershop
- Tailoring
- Restaurant
- Selling vegetable

PROJECT IMPACT

Business people recognised the following negative impacts by the project:

- Relocation of affected business structures
- Had close customers and moving will affect their daily income generation as customers will take time to know where they are to relocate
- For some businesses not affected but close are very few and they consider themselves as being part of the big trading centre and feel they will not make money if left alone while the others move to a new area hence requested to be part of the relocated structures

Business people recognised the following as being positive aspect of the project:

- They are anticipating that the project will bring in tourist to their area hence businesses will be making money
- They also anticipate that they will have access to clean and safe drinking water which will add value their respective businesses
- Electricity is also another benefit they anticipating will come as a result of the project

COMPENSATION

As regards to compensation and choosing where to relate the business community shared the following:

- Each affected business should be given money for the affected assets (considering the inflation aspect as the kwacha does fluctuate overtime)
- Disturbance and shifting allowances should also be given as there will be need to transfer goods to the new relocation areas
- In consultation and collaboration with the traditional leaders the chairman and business committee for Bisayi trading centre will identify new relocation area for the trading centre (businesses) and this relocation area will be sourced from other community members and they will also be given compensation for the land they have given to the trading centre.
- All remaining few non-affected businesses should be considered on board as PAPs as they were following the trading centre the key structure for the survival of their respective businesses

LIVELIHOOD RESTORATION AND SUSTAINABILITY

As regards to the initiatives needed to ensure sustainability of their respective businesses the participants shared the following:

- Training in business planning and management will be needed
- The identified place for relocation should be well established first before the old affected existing structures are relocated and time should be considered so that the business should temporarily stop within a very short period without losing much income.
- The new relocation area should have good access roads as business are more involved in transporting goods and also require such good roads for provision of services

FOCUS GROUP DISCUSSION WITH COMMUNITIES ON RELOCATION

GVH MWACHILOLO TA KALUMBU

Participants - GVH Mwachilolo TA Kalumbu

DATE: 15 FEBRUARY 2016

MEMBERS PRESENT:

ISSUES ARISING DURING THE MEETING

VILLAGES TO RELOCATE

Village affected	relocates to	Comments
Mpasu I	Mpasu I upland	Those who offered their land for relocating these villages offered their farming land
Mbonongo	Mpasu I & Kumfera	
Kamphwereza	Mwachilolo	

ACCEPTANCE

- The participants have warmly welcomed the affected families to settle with them.

ANTICIPATED CHALLENGES AS A RESULT OF HOSTING RELOCATED FAMILIES

Village affected	relocates to	Challenges	Proposed solution	Comments
Mpasu I	Mpasu I upland	Water and farming land will be a challenge. The boreholes they relied upon have been affected for all the villages and upland the alternative boreholes is very far from the new relocation sites. The hosting communities offered their own crop fields and hence reducing the land for crop production	The project should provide boreholes and also the compensation for their affected land should be enough for them to buy land for cultivation	For the schools and health facilities the participants indicated there will be no changes as they all already access the same schools and health facilities which were not affected
Mbonongo	Mpasu I & Kumfera			
Kamphwereza	Mwachilolo			

COMPENSATION

As regards to compensation the participants expressed the need to be given money for the land they have offered to those relocating to use and procure new farming land.

LIVELIHOOD RESTORATION AND SUSTAINABILITY

As regards to the initiatives needed to ensure sustainability of their respective livelihoods the participants shared the following:

- Compensation given for their respective land loss should be reasonable to be able to buy new farming land and be able to sustain and or maintain their livelihoods
- Since many people do not know how to save and manage finances there is need to sensitize and encourage people to save and use the compensation money they will receive to get resettled buy cultivable land and sustain their livelihoods
- The community also expressed an interest to raise tree seedlings which could be sold to the project to be planted along the reservoir
- The community further anticipate that controlled fishing will also form the basis for the sustenance of their livelihood as some already are fishermen

ISSUES ARISING DURING THE MEETING

VILLAGES TO RELOCATE

Village affected	**relocates to**	**Comments**
Chinganji	Chinganji upland	Most of the villages moves within their own village just upland where other have offered their own crop fields.
Chimbano	Chimbano upland	
Chingwenje	Chingwenje upland	
Moloko	Moloko upland	
Salima Ndinda	To identify and buy new land once compensation is paid	
Malioti	Malioti upland	
Savala	Savala upland	
Chilunje	To identify and buy new land once compensation is paid	
Chiononga	Chiononga upland	
Chikhuti	Chikhuti upland	

ACCEPTANCE

- The participants indicated that they have wholeheartedly accepted the families who are relocating.

ANTICIPATED CHALLENGES AS A RESULT OF HOSTING RELOCATED FAMILIES

Village affected	relocates to	Challenges	Proposed solution	Comments
Chinganji	Chinganji upland	Most of the villages have lost their boreholes (affected) and where they are relocating there are no boreholes hence water challenge. The relocating families have only been given land which was used as farmland for the homesteads hence no farming land for them as well as reduced farmland for the host families. Chiononga the village was affected and not their graveyard and the relocation to the new site results into long distance to the graveyard	The project should provide boreholes and also the compensation for their affected land should be enough for them to buy land for cultivation.	Most of the villages moves within their own village just upland where other have offered their own crop fields. For the schools and health facilities the participants indicated there will be no changes as they all already access the same schools and health facilities which were not affected.Ulongwe primary school and Ulongwe Community Day Secondary School are the schools where children does their education. All do access Chitowo and Kaphata health centres and Ulongwe and Chingwenje under-five clinics
Chimbano	Chimbano upland			
Chingwenje	Chingwenje upland			
Moloko	Moloko upland			
Salima Ndinda	To identify and buy new land once compensation is paid			
Malioti	Malioti upland			
Savala	Savala upland			
Chilunje	To identify and buy new land once compensation is paid			
Chiononga	Chiononga upland			
Chikhuti	Chikhuti upland			

COMPENSATION

The participants shared that they will need to be given money for the farmland they have offered to those who are to relocate.

LIVELIHOOD RESTORATION AND SUSTAINABILITY

As regards to the initiatives needed to ensure sustainability of their respective livelihoods the participants shared the following:

- The communities need to be sensitised on proper usage of money so that they are able to positively utilise the compensation money for their relocation and also sustenance of their respective livelihoods.
- The communities should be given a chance to do small scale irrigation along the reservoir using treadle pumps and watering canes
- Training in agro-based business planning and management will be needed
- The community also expressed an interest to raise tree seedlings which could be sold to the project to be planted along the reservoir

- The community further anticipate that controlled fishing will also form the basis for the sustenance of their livelihood as some already are fishermen

ANTICIPATED CHALLENGES AS A RESULT OF HOSTING RELOCATED FAMILIES

Village affected	relocates to	Challenges	Proposed solution	Comments
Mtenthamawa	Mtenthamawa upland	Water and farming land will be a challenge. The boreholes they relied upon have been affected and where they are relocating upland there are no boreholes. The hosting communities offered their own crop fields and hence reducing the land for crop production	The project should provide boreholes and also the compensation for their affected land should be enough for them to buy land for cultivation	Most of the villages moves within their own village just upland where other have offered their own crop fields. For the schools and health facilities the participants indicated there will be no changes as they all already access the same schools and health facilities which were not affected
Kumkama	Kumkama upland			
Kamakhala	Kumkama upland			
Chimbowa	Chimbowa upland			
Msonga	Thebulo & Mkaika			
Mtsirizika	Mtsirizika upland			
Kalumbi	Kalumbi upland			
Msodoka	Kumkama upland			

COMPENSATION

As regards to compensation the participants considers themselves being project affected persons and will need to be compensated for the loss of their respective farming land for them to further secure new farming land.

LIVELIHOOD RESTORATION AND SUSTAINABILITY

As regards to the initiatives needed to ensure sustainability of their respective livelihoods the participants shared the following:

- The communities should be given a chance to do small scale irrigation along the reservoir using treadle pumps and watering canes
- Since many people do not know how to save and manage finances there is need to sensitize and encourage people to save and use the compensation money they will receive to get resettled buy cultivable land and sustain their livelihoods
- Training in agro-based business planning and management will be needed
- The community also expressed an interest to raise tree seedlings which could be sold to the project to be planted along the reservoir
- The community further anticipate that controlled fishing will also form the basis for the sustenance of their livelihood as some already are fishermen

DEDZA DISTRICT COUNCIL

REPORT ON CONSULTATION MEETINGS WITH PROJECT AFFECTED PERSONS (PAPs) ON RELOCATION

Prepared By: Dedza District Team

16th February 2016

REPORT ON THE CONSULTATION MEETINGS WITH PROJECT AFFECTED PERSONS ON THE DIAMPHWI MULTIPURPOSE DAM

1.0 INTRODUCTION

It is the wish of the Malawi Government, project and donors of any project that Project Affected Persons (PAPs) are not made poorer or destitute after a project, but rather that their livelihoods should improve for the better.

It is against this background that the District Team with financial support from the project organized consultation meetings with all PAPs in the presence of their chiefs in order to hear from them how they intend to use proceeds from their compensation so that they live improved livelihoods. The meetings were also used as forums to verify whether all the PAPs have their names registered to avoid misunderstandings during payment of compensation due to missing names.

2.0 OBJECTIVES

The objectives of the consultation meetings were twofold:-

i. To consult the Project Affected Persons (PAPs) on relocation
ii. To conclude outstanding issues on the relocation of graveyards

3.0 CONSULTATION MEETINGS WITH PAPs ON RELOCATION

Expected responses from the consultation meetings were that:-

- PAPs will use proceeds from the compensation to start a business or build a modern house.
- PAPs will use proceeds from compensation to pay for land which they have already identified to replace the land lost to the project.
- PAPs will use the proceeds from compensation to buy land to replace the one lost to the project, but will need assistance of the chiefs since on their own have failed to identify land.

Finally, the exercise would determine how many PAPs would require the assistance of chiefs to identify alternative land. The information would then lay bare the task ahead of the chiefs in ensuring that their people are properly resettled.

The following gives a brief of the proceedings:-

i. Planning Meeting with Group Village Headmen from TA Kaphuka

The team conducted a planning meeting with all Group Village Headmen (GVHs) and Dam Committee from the project affected areas of TA Kaphuka. The meeting targeted both recognized and unrecognized GVHs as it was noted from past experience that using only recognized GVHs resulted in some messages not reaching the unrecognized GVHs who were living directly with the PAPs due to chieftaincy wrangles. The team also learnt from past exercise that leaving the dissemination of messages to the TA alone had some challenges as certain PAPs were not reached with the messages resulting in the postponement of meetings or delayed meetings.

The purpose of the meeting was threefold:-

a) To brief the GVHs and Dam Committee the aim of the meetings being planned for and get their views on how best the meetings should be handled in order to achieve the objective which was to get PAPs views on the three options;
b) To remind the GVHs on their feedback regarding issues on relocation of graveyards that were still outstanding in certain areas;
c) To develop a program of the meetings in (a) that is convenient to both parties – the team and the GVHs so that nobody is left behind.

The team pleaded with the GVHs to ensure that all PAPs are present during the meetings as the team would want to hear from them directly on the three options. The list of the GVHs present in the meeting is annexed 4. The outcome of the meeting was a program annexed 5. Below are pictorial views depicting the meeting which was held at Chitowo Community Day Secondary School.

ii. Consultation Meeting with PAPs in GVHs Chimamba and Mothera

The consultation meeting with PAPs in GVH Chimamba and GVH Mothera was conducted at Chimamba Junior Primary School. Present were both the GVHs, their Village Headmen and the PAPs from the two GVHs. Almost 95% of the PAPs had their names validated and their views known on the 3 options. 20% of the PAPs indicated that they intend to use their compensation to start a business or construct a modern house to improve their livelihood; 55% indicated that they have already identified an alternative site to buy land, all they are waiting for is the compensation while 25% has indicated that they would need the assistance of the chiefs as custodian of customary land to identify alternative land which they will buy using proceeds from the compensation. Their views are shown in Appendix 1. The PAPs whose names were not appearing on the list had their names recorded in order to crosscheck with SMEC (Refer Appendix 2). A follow up meeting to provide feedback on the missing names was arranged to combine with consultation meeting with PAPs in GVH Kangulu. The figures below show pictorial views of the meeting. Appendix 3 gives the names of chiefs present by GVH while the figure below depicts PAPs who attended the meeting.

The team was privileged to have been visited by Mrs Kutengule and Mr Kachingwe who came to monitor how the exercise was going on, appreciate the challenges on the ground and provide guidance/direction on the challenges being faced. The team greatly appreciates their visit as it assisted in clarifying some issues emanating from the misunderstandings that arose due to the missing of some names of the PAPs.

One contentious issue that needs quick resolution is that GVH Chimamba will be surrounded by the Dam turning the whole GVH into an island cutting it away from the social services from either side of Lilongwe and Dedza.

Recommendation: - The team strongly recommends that the PAPs and all the people in GVH Chimamba must be provided with bridges on either side so that the people continue accessing the services they used to enjoy before the project came into their area. Provision of an engine boat begets the question on: - *who shall be responsible for diesel and its maintenance?* This according to the team is not sustainable.

Consultation meeting with PAPs from GVHs Chimamba and Mothera

Mrs Kutengule explaining on the missing names of PAPs in GVH Chimamba

iii. Visit to Old Graveyards and Alternative Sites for Graveyards at GVH Ntathira

Immediately after the meeting in GVH Chimamba and Mothera, the team accompanied by GVH Ntanthira and his Village Headmen visited the old graveyard to be relocated and the alternative site for new graveyards to get pictures and coordinates of the sites. This was an outstanding issue during the previous consultation meetings on graveyards. The figures below show pictorial views of the old site and the alternative site.

iv. Consultation Meeting with PAPs from GVH Chiothera

Consultation meeting with PAPs in GVHs Chiothera, was conducted at GVH Chiothera ground in the morning on Thursday. The meeting went on very well as most names were validated except for 37 PAPs whose names were not in the register. These names were recorded for verification with SMEC (Refer Appendix 2) 30% of the PAPs indicated that they intend to use their compensation to start a business or construct a modern house to improve their livelihood; 50% indicated that they have already identified an alternative site to buy all they are waiting for is the compensation while 20% has indicated that they would need the assistance of the chiefs as custodian of customary land to identify alternative land which they will buy using proceeds from the compensation. The views of the PAPs on the 3 options are recorded on Appendix 1. The figure below depicts pictorial view of the meeting. Appendix 3 gives the names of chiefs present by GVH.

Consultation meeting with PAPs from GVH Chiothera

PAPs whose names were not in the register in GVH Chiothera

v. Consultation Meeting with PAPs from GVHs Makoko and Mbwandira

This meeting which combined GVHs Makoko and Mbwandira was held at GVH Makoko in the afternoon in the same Thursday. The meeting went on very well as most names were validated except for 93 PAPs whose names were not in the register (Refer Appendix 2). These names were recorded for verification with SMEC and they were also advised to come to Chaponda, venue for the next meeting as the team had a strong belief that these names might have appeared on GVH Chaponda register. 10% of the PAPs indicated that they intend to use their compensation to start a business or construct a modern house to improve their livelihood; 25% indicated that they have already identified an alternative site to buy all they are waiting for is the compensation while 65% has indicated that they would need the assistance of the chiefs as custodian of customary land to identify alternative land which they will buy using proceeds from the compensation. The views of the PAPs on the 3 options are recorded on Appendix 1. It was however noted with dismay that most villages that need to be relocated had not yet identified alternative sites for resettlement at the time of the meeting. Chief among these villages are Mbalametchemba, Zitalichi and Mkanda. The Village Headmen of these villages were strongly advised to identify alternative sites as a matter of urgency including land for graveyards and report to the team within two weeks. Only Kuntamba and Chaimedi Villages had identified alternative sites within GVH Makoko at the time of the meeting. The figures below depict pictorial

views of the meeting. Appendix 3 gives the names of chiefs present by GVH while the figure below depicts pictorial views of the PAPs present.

Consultation meeting with PAPs from GVH Makoko and Mbwandira

vi. Consultation Meeting with PAPs from GVH Kwendekeza

The meeting was held at the headquarters of GVH Kwendekeza and was attended by PAPs and other members. Almost 98% of the PAPs had their names validated and their views known on the 3 options. 35 % of the PAPs indicated that they intend to use their compensation to start a business or construct a modern house to improve their livelihood; 50% indicated that they have already identified an alternative site to buy land, all they are waiting for is the compensation while 15% has indicated that they would need the assistance of the chiefs as custodian of customary land to identify alternative land which they will buy using proceeds from the compensation. Their views are shown in Appendix 1. The PAPs whose names were not appearing on the list had their names recorded in order to crosscheck with SMEC (Refer Appendix 2). A follow up meeting to provide feedback on the missing names will be arranged once all the necessary logistics with project managers are in place. The team was also informed that VHs Galanga, Ndingo, Mkhaladzulu and Khumbiza which according to the project design and impact have to be resettled, had already identified new sites for their resettlement. These new sites were toured by the team where proper coordinates were recorded. Figure 1 shows the exact location of the new sites while the figures

below show pictorial views of the meeting. Appendix 3 gives the names of chiefs present by GVH while the figure below depicts pictorial views of the PAPs present.

Recommendation: The project management should facilitate another follow up meeting for the District Team to verify the missing names and get their views on the 3 options.

Consultation meeting with PAPs from GVH Kwendekeza in TA Kaphuka

vii. Consultation Meeting with PAPs from GVH Chisela

The meeting was held on the grounds of GVH Chisela and attended by PAPs, GVH Chisela, VHs as per Appendix 3. Over 99% of the PAPs had their names validated and their views known on the 3 options. 40% of the PAPs indicated that they intend to use their compensation to start a business or construct a modern house to improve their livelihood; 35% indicated that they have already identified an alternative site to buy land, all they are waiting for is the compensation while 25% has indicated that they would need the assistance of the chiefs as custodian of customary land to identify alternative land which they will buy using proceeds from the compensation. Their views are shown in Appendix 1. The PAPs whose names were not appearing on the list had their names recorded in order to crosscheck with SMEC as per Appendix 2. A follow up meeting to provide feedback on the missing names will have to be arranged once all the necessary logistics with project managers are in place.

One of the PAPs, Mr Celystino Chikololere reported that he has consulted his family relations on their resettlement and agreed that they will resettle at GVH Dzandi. He further reported that the family graveyard will also be relocated to where they will resettle. The figure below depicts a pictorial view of PAPs present.

It was also revealed that Mr Chichitike Chimalizeni's land which is within the project area was not recorded. This was corroborated by the PAPs neighbouring his land. It was also learnt that PAP Liginesi Safileni, though she was registered, her picture was not taken as she was at Maternity Waiting Shelter awaiting delivery during the time pictures were being taken.

Recommendations

- Project management should facilitate a follow up meeting for the District Team to validate the names of the missing PAPs, get their views on the 3 options but also visit the new site for family graveyard for Mr Celystino Chikololere.
- SMEC should organize another meeting in GVH Chisela to sort out the issues of Mr. Chichitike Chimalizeni and Ms Ligineti Safileni.

Consultation meeting with PAPs from GVH Chisela – TA Kaphuka

viii. Consultation Meeting with PAPs from GVHs Kangulu and Mbalira

This meeting which combined GVHs Kangulu and Mbalira was held at GVH Kangulu. The meeting went on very well as most names were verified save for 2 PAPs whose names were not in the register (Refer Appendix 2). These names were recorded for verification with SMEC. 25% of the PAPs indicated that they intend to use their compensation to start a business or construct a modern house to improve their livelihood; 60% indicated that they have already identified an alternative site to buy all they are waiting for is the compensation while 15% has indicated that they would need the assistance of the chiefs as custodian of customary land to identify alternative land which they will buy using proceeds from the compensation. The views of the PAPs on the 3 options are recorded on Appendix 1.

The meeting was also attended by PAPs from GVHs Chimamba and Mothera whose names missed during a similar meeting at GVH Chimamba. Most of the missing names were verified save for 9 names (Refer Appendix 2) which still missed in the updated register which SMEC had sent to the district through Mrs Kutengule. These names will have to be verified before compensation. Names of all chiefs who attended the meeting are annexed as Appendix 3 while the figure below depicts pictorial views of the PAPs present.

Consultation Meeting with PAPs from GVHs Kangulu and Mbalira

ix. Consultation Meeting with PAPs from GVH Chaponda

This meeting was held at GVH Chaponda. The meeting went on very well as almost all names were verified save for Angelina Bikiele whose name was not in the register (Refer Appendix 2). The names were recorded for verification with SMEC. 15% of the PAPs indicated that they intend to use their compensation to start a business or construct a modern house to improve their livelihood; 40% indicated that they have already identified an alternative site to buy all they are waiting for is the compensation while 55% has indicated that they would need the assistance of the chiefs as custodian of customary land to identify alternative land which they will buy using proceeds from the compensation. The views of the PAPs on the 3 options are recorded on Appendix 1.

The meeting was also attended by PAPs from GVHs Manondo, Chiothera and Chisela whose names missed during a similar meeting. Most of the missing names were verified save for 4 (Refer Appendix 2) which still missed in the updated register which SMEC had sent to the district through Mrs Kutengule. The names will have to be verified before compensation.

During the meeting VHs Kambwata, Malika, Njati, Bikinosi and Fred reported that they have finally identified alternative sites where their villages will be resettled. The new sites are GVH Chaponda for Njati, Bikinosi and Fred Villages whereas Kambwata, and Malika will resettle at Mtontho Village.
Names of all chiefs who attended the meeting are annexed as Appendix 3 while the figure below depicts pictorial views of the PAPs present.

Recommendation: - The new resettlements sites for Kambwata, Malika, Njati, Bikinosi and Malika Villages need to be inspected, assessed and valued accordingly.

Consultation meeting with PAPs from GVH Chaponda

x. Consultation Meeting with PAPs from GVHs Dulampingo & Kuthambala

This meeting was held at VH Khomani Ground in GVH Kuthambala. The meeting went on very well as almost all names were verified except for 7 PAPs whose names were not in the register (Refer Appendix 2). The names were recorded for verification with SMEC. 20% of the PAPs indicated that they intend to use their compensation to start a business or construct a modern house to improve their livelihood; 60% indicated that they have already identified an alternative site to buy all they are waiting for is the compensation while 20% has indicated that they would need the assistance of the chiefs as custodian of customary land to identify alternative land which they will buy using proceeds from the compensation. The views of the PAPs on the 3 options are recorded on Appendix 1. Names of all chiefs who attended the meeting are annexed as Appendix 3 while the figure below depicts pictorial views of the PAPs present.

Consultation meeting with PAPs from GVH Dulampingo & Kuthambala in TA Chilikumwendo

xi. Consultation Meeting with PAPs from GVH Chilikumwendo

This meeting was held at GVH Chilikumwendo Headquarters. The meeting went on very well as almost all names were verified except 6 PAPs whose names were not in the register (Refer Appendix 2). The names were recorded for verification with SMEC. 35% of the PAPs indicated that they intend to use their compensation to start a business or construct a modern house to improve their livelihood; 55% indicated that they have already identified an alternative site to buy all they are waiting for is the compensation while 10% has indicated that they would need the assistance of the chiefs as custodian of customary land to identify alternative land which they will buy using proceeds from the compensation. The views of the PAPs on the 3 options are recorded on Appendix 1. Names of all chiefs who attended the meeting are annexed as Appendix 3 while the figure below depicts pictorial views of the PAPs present.

Consultation meeting with PAPs from GVH Chilikumwendo

4.0 GENERAL RECOMMENDATIONS

The team recommends the following:-

a. All key stakeholders/players involved in the Diamphwe Multipurpose Dam should share data/information that is well cleaned and analyzed so that the District Team does not waste time to clean or analyze the data. This will speed up implementation.

b. Any changes or modifications on the design and implementation of the project should be communicated to the GVHs, VHs and PAPs through the District Team or Dam Committees to avoid giving conflicting messages.

c. The project should strive to adhere to the wishes of the people on compensation as any deviation/departure from the same may have serious implications on the smooth implementation of the project.

d. Chiefs as custodians of customary land are strongly requested to assist PAPs who have indicated that they would need the assistance of the chiefs to identify alternative land which they would buy for their resettlement. Leaving this issue to the PAPs only may derail project implementation.

e. The project should support the District Team with logistics to go back to the GVHs and VHs which still have outstanding issues on identification of alternative sites for resettlement such as GVH Makoko, Kwendekeza etc verification of missing PAPs and getting their views on the 3 options.

5.0 CONCLUSION

The exercise was worthy undertaking as it has helped to avert what would have brought tension during payment of compensation, for it has resolved/clarified some thorny issues which if remain unresolved would have negatively affected project implementation.

REPORT FOR VERIFICATION AND DATA COLLECTION EXERCISE FOR DIAMPHWE DAM PROJECT AFFECTED PERSONS IN LILONGWE DISTRICT

INTRODUCTION

A verification and data collection exercise was conducted by the Lilongwe district task force from 8th to 13th February, 2016. The team travelled to designated centres within the areas of traditional authorities Mazengera, Chadza and Kalumbu where team members interfaced with individual PAPs to verify and collect some information from them (Refer to Annex 1).

Specifically, the following was considered:

- Whether the PAPs names were appearing in the consolidated list of PAPs
- Prefered mode of compensation: cash or house construction where PAP will be relocating
- Prospects of finding alternative land for farming and relocation. PAPs were also asked to indicate where they will be relocating (for those whose houses have been affected and will be relocating)
- Whether there are any concerns in terms of availability of social services and amenities (schools, health facilities, protected portable water source, roads) in the areas where the PAPs will be relocating
- Existence of any unique or interesting stories and cases; for example a whole village relocating

SUMMARY OF MAJOR FINDINGS

Following the consultations with the project affected persons a number of major findings and issues came out as outlined below:

- Names of sixty-nine (69) PAPs were missing in the consolidated PAPs list. See Annex 2
- Some PAPs (8) indicated that they were registered but their photos for IDs had not been taken yet. Refer to Annex 3
- Some PAPs are not yet sure of where they will relocate. They are either still looking for alternative land or are waiting to get their compensation first to start searching for alternative land for cultivation. Nevertheless, they intend to acquire land within the neighbouring villages
- There are some PAPs who intend to relocate to areas outside Lilongwe district
- Some PAPs will relocate to areas outside their TAs but within Lilongwe
- As of now PAPs do not have knowledge of availability of social services and amenities in the areas where they will be relocating to. For those who will be relocating within their current villages or nearby villages they will be using the already existing facilities. Nevertheless, there was an indication that safe water sources are not guaranteed in some villages. As such, there is need for further work

to thoroughly assess the social amenities requirements in the areas of relocation once they have been confirmed.

- Bisayi Trading Centre in TA Kalumbu has been affected in the sense that the major of shop owners will be relocating. The centre has a postal agency and borehole which were serving the community. The local traditional leadership is identifying alternative land upland within Bisayi village where the trading centre is expected to be relocated.

- All PAPs relocating indicated that they should get cash compensation. The only exception is where a communal facility such as a church building has been affected.

- There is land available, being offered for sale within the PAPs current villages and nearby villages which the PAPs who will be relocating can acquire once they get their cash compensations. However, there will be need for the land to be thoroughly assessed in terms of its quantity (adequacy) and suitability for agricultural production. The PAPs will need sensitisation and technical support in that regard.

- There are 13 cases where either a whole village or most village members will be relocating. In 4 of the cases alternative land has been identified in another nearby village but in 9 of the cases alternative land has been identified within the PAPs' current villages and therefore relocation will take place within the villages. The table below presents the details:

No.	TA	GVH	Current Village	Relocation Village	Status of Amenities	Recommendation
1	Kalumbu	Mwachilolo	Kaphwereza	Mwachilolo	Borehole available	Need for thorough assessment of the land and amenities
2	Kalumbu	Mwachilolo	Mbonongo	Chaluma	-	Need for thorough assessment on the land and amenities
3	Kalumbu	Chingwenje	Salimandinda	Salimandinda	-	Need for thorough assessment of the land and amenities
4	Kalumbu	Chingwenje	Chinkhuti	Kuntuwa	-	Need for thorough assessment of the land and amenities
5	Kalumbu	Bisayi	Bisayi Trading Centre	Bisayi	-	Need to determine what to do regarding the public facilities at the trading centre when relocation happens
6	Mazengera	Chinzili	Mtsirizika	Mtsirizika	-	Need for thorough assessment of the land and amenities
7	Mazengera	Chinzili	Kalumbi	Kalumbi	-	Need for thorough assessment of the land and amenities
8	Mazengera	Chinzili	Kumkama	Kumkama	-	Need for thorough

						assessment of the land and amenities
9	Mazengera	Chinzili	Chimbowa	Chimbowa	-	Need for thorough assessment of the land and amenities
10	Mazengera	Chinzili	Kamakhala	Kamakhala	-	Need for thorough assessment of the land and amenities
11	Mazengera	Chinzili	Nsodooka	Mtsirizika	Borehole will be required	Need for thorough assessment of the land and amenities
12	Mazengera	Chinzili	Mtenthamawa	Mtenthamawa	Borehole will be required	Need for thorough assessment of the land and amenities
13	Mazengera	Chinzili	Msonga	Kumkaika	-	Need for thorough assessment of the land and amenities

RECOMMENDATIONS

The following recommendations are made based on the findings of the exercise:

(a) There is need to ensure that all PAPs are correctly captured in the consolidated list

(b) The remaining assessment work on some of the PAPs should be finalised. Reference is made to the cases of PAPs' photographs not taken for identification

(c) The PAPs need to be well sensitised and guided on how to use the compensation money.

(d) The PAPs should be provided with technical assistance when identifying alternative land to acquire to ensure that they are not taken advantage of. For instance a thorough assessment of the land to which PAPs will be relocated will need to be done to determine its adequacy and suitability for agricultural production.

(e) An assessment of availability of social amenities and services in the areas where the PAPs will be relocating to as a group should be done to ensure that they do not end up worse off with regard to access to social amenities. This would also assist in determining the need for appropriate support in terms of amenities (where necessary).

(f) There should be a discussion involving all concerned stakeholders regarding how the relocation of public facilities e.g. Bisayi Trading Centre would best be handled to avoid future misunderstandings.

(g) A review meeting involving Ministry of Water Development, the district task forces, the consultants (SMEC) and Lilongwe Water Board should be held to share progress, information, the findings and determine a shared way forward on the PAPs assessment exercise. This would help in having a shared understanding of what is happening to ensure that the PAPs are not told varied information from various stakeholders in the process.

Annex 1: Programme for Verification and Data Collection

DAY & DATE	ACTIVITY	VENUE
1. Monday, 8th February, 2016	Task Force preparatory meeting	D. C. Chamber
2. Tuesday, 9th February, 2016	Sensitisation/mobilisation meetings with traditional leaders and committee members	• Chinziri • Bisayi • Mkute • Ulongwe

CONSULTATION MEETINGS ON THE PROPOSED DAM SITE FOR LILONGWE WATER SUPPLY PROJECT

BACKGROUND

The Ministry of Water Development and Irrigation hired Sogreah to conduct preliminary designs for the proposed dam at Diamphwi 2011. Sogreah sub hired a local consultant to undertake the environmental and social assessment of the site. This local consultant hired research assistants that started conducting the assessment. In the process, the research assistants started to conduct the assessment without consulting the local leaders. In addition to that, they misinformed the communities on the issues of resettlement that they would be thrown out of their villages when the dam is constructed. The consultant proceeded to mark the assets that would be affected without proper explanation on what would actually happen in the event that some houses and assets are impacted.

This angered the villagers and they chased the consultant and was told not to visit the site again. The irate villagers also chased the World Bank Mission with phanga knives when they visited the site and no one was allowed to visit the site there after. This development prompted the Ministry to engage the traditional authorities and MPs of the area to find a solution to the problem. A task force comprising of the MOWDI, NWDP and LWB was instituted to come up with a list of stakeholders who would be invited to a round table discussion.

CONSULTATION WORKSHOPS ON DIAMPHWI

PARTICIPANTS

A stakeholder consultation workshop was conducted in August 2013. The objective of the workshop was to map a way forward to address the resistance by community members of the project in the area. The target participants to the workshop were Traditional Authorities (TAs) and Members of Parliament (MPs) from the area, Officials from the Ministries of Water Development and Irrigation, Finance, Local Government, Lands, Environmental Affairs, Office of the President and Cabinet, Lilongwe and Dedza District Councils and officials from Lilongwe Water Board. The Meeting was chaired by the Minister of Water Development and Irrigation.

The TAs were targeted because they are the traditional leaders who are the custodians of culture and people at local level. They are also custodians of customary land and therefore, any project that goes in the community has to go through them to assist in the mobilization of the people to accept the project. As political leaders, the MP have a very big influence on their constituents to accept or reject the projects depending on how they view the it. AS such, they needed to have enough and proper information of the project for them to assist in the sensitization of the communities . The officials from the lines Ministries and District councils were also crucial to be part of the meeting as they play various roles in the planning and implementation of the project.

THE DISCUSSIONS

The discussions started with the background to the proposed project , the preparatory studies that have been conducted so far and why the studies discontinued. A brief presentation on the World Bank Safeguards Policies was made to assure the participants on the Bank's commitment in ensuring that diverse negative impacts are avoided and reduced where the Bank is funding the project.

It was discovered through the discussions that the violent reaction from the community members towards the project was triggered by the way the consultant that was engaged to conduct an environmental and social assessment presented the project to the community. The approach taken by the consultant lacked proper consultations with community leaders. There was also a mis-presentation of facts on the project that instilled fear among the communities that they were going to lose all their livelihoods and would be thrown out of their villages to places where they were going starve for the rest of their lives. It was therefore agreed that the community consultation meetings should start all over again to present the project as it is and the impact on the communities and the mitigation measures that have been proposed. A plan of action on how these would be conducted was prepared as annexed

MEETINGS WITH OPINION LEADERS

Opinion leaders were identified by the Traditional Authorities and MPs from the concerned areas. The leaders together with their Chiefs were taken on education visits to Bwanje Irrigation Scheme and to Kamuzu Dams 1 and 2. The aim of the visits was to show the leaders some of the benefits that other communities are enjoying from similar projects. The other objective for the visit was for the leaders to learn from these communities how the negative impacts were mitigated so that they make informed decisions on the proposed project.

After the visits, a concluding meeting was conducted and the leaders appreciated the project and were motivated to sensitise the others on the benefits of the project to them and the need to allow the studies to continue. The opinion conducted several community meetings after the visits

COMMUNITY MEETINGS

Four community meetings were conducted from 20th to 22nd November 2013 in the concerned villages of TAs Kaphuka, Chilikumwendo, Kalumbu and Chadza. Each meeting was attended by the responsible Traditional Authority, concerned Group Village Heads, Village Heads, Opinion leaders and the potential impacted persons. The meetings were conducted by officials from the Ministry, PMU, Lilongwe Water Board, Dedza and Lilongwe District Councils. For the participants to the meetings, see annex 2 and the attached pictures as most community members refused to have their names written and that was respected.

The meetings were organised to dialogue with the communities to allow the studies to start again. The facilitators outlined the problems that Lilongwe city is currently facing and the need to have a new water source. They also presented the benefits that the communities along the Diamphwi river will get if the project is accepted to proceed. The facilitation team also highlighted how the dam will be designed

and the possible impacts on some fields and assets. The team also pointed out that the actual impact can only be identified if a thorough study is undertaken and therefore requested the communities to allow the detailed design and ESIA consultants to commence the work. In addition to that, the facilitators also talked on the World Bank Safeguards Policies and Practices in such projects.

The communities were given time to raise their questions and concerns .The following concerns and questions raised by various people.

TA CHILIKUMWENDO MEETING

Mr. Ziwoya Veriati

Where are we going be resettled if we lose our houses? We do not want to be resettled outside our area

Where are going to find land for cultivation

What will be the benefits for the people of Diamphwi from the Dam

Mr. Gracious Mwita

If resettled will the host community accept us? Are they not going to be hostile to us. If a village is moved is it going to be called the same name where they will move to. Is the chief going to maintain the chieftaincy?

Mr. Manjalera

What will be the size of the Dam, in terms of length , width and depth?

Villge Headman Moffat

What are the benefits for the concerned villages?

Ms Mpeketula

What will I get for my trees that are along the river?

Ms Stella Matiyasi

What is the size of the Dam

What will happen if one loses land

Ms Maurine Libson

Do we have the freedom to refuse to move out of the area?

Godfrey Nowa

Which land are we going to do irrigation if the present land we are cultivating will be in water?

Micheal Dalion

Where are we going to get alternative land for farming since land is already finished up land

TA KAPHUKA MEETING

Fillimon Lambart

Where are we going to get land for farming

M.Gonbwa

Are we going to get compensation for the impacted farmland and houses

What will happen to graveyards if impacted, where are we going to burry the dead?

What will happen to the schools, clinics and churches that will be affected

How are going to ensure that there is no corruption on compensation

Sosten Chapaza

Can you explain the size of the dam again?

Can we get the real information on relocation sites as we hear that we will be moved to Salima, Nkhotakota, Mchinji

Amatenda Mothela

Where are we going to get alternative land

Enifa

We cry for land for cultivation

Harrison Chimutu

We have friends and relatives on the other side of the river and we cross easily when it is dry, what will happen when the dam is constructed as the river will be flooded?

Falieyi

How will the children access schools

Aliyana cheni

Where are we going to get land

Ganizani Wilson

How will compensation be done

TA MAZENGERA MEETING

Simbiketi William

What is the actual size of the dam as we were told at first by the consultant that it will be 80 metres wide, then 180 metres, again 700mitres now you are telling us 600 metres

Nepiyala Eliot

Where are we going to get land for farming as land is scarce

Lackson Makioni

What will be the size of the dam

N. Chapota

We have been getting different information on the size of the dam

Where will the land for the proposed irrigation activities come from as all our land will be in water

We are afraid of going to hot districts like Salima. We feel our lives will be in danger as we are used to cool weather. Our old people will die in that weather

K. Saka

There is limited land in the area to move too

Is the government open to take proposals from the people on the dam. Can the government accept to reduce the size of the dam if it is proved that it will have diverse impact on us?

Victor Mlenga

What will happen if one loses a house

Village Headman Ntenthamau

The government should seriously look at the land issue so that people should have land to cultivate and that they are not moved to other districts.

TA KALUMBU MEETING

Zelita Jentala

Where are we going to move to

Siteliano

What will start first, the dam construction or the assessments

Ms Mkuluwinda

What will happen to graveyards

Village Headman Kantema

What will happen if the whole village is impacted? where will this village move too? I am afraid because my village is in the riverbank.

How many dams are you going to construct. We hear there are going to be three dams, one for water supply, the other one for irrigation and the last one for fish farming

Andrew Sitima

Where will we get land for our livelihood

Group Village Mwachilolo

We hear that there will be a forest, is it going to be within the 600 meters buffer or it will require additional land?

Sadrick Fositala

If the people are moved far from the dam, will they get the benefits for losing their land?

Elias Chisenga

Are we going to have any say on the compensation amounts?

TA CHADZA MEETING

Andrea Kalonga

What will happen to the graveyards

Friday Nasoni

Are we going to pay any fees for the irrigation project

Kadyombwe

Where will the deepest point be

Alick Josam

Where will the dam end

Charles Nyondo- Field assistant

Diamphwi river is infested with crocodiles and there have been cases of people being killed by crocodiles, with the construction of the dam their population will increase, what are the proposed mechanisms to protect the people from being attached

Juma

Are we going to be compensation for the trees and gardens

Steve Kalambalala

There are bridges along the river, are you going to construct other ones when the dam is constructed?

Mr. Laison

Will there be any benefits from the dam for those who will not be directly affected

Syden Ndiwo

Will there be employment opportunities

CONCLUDING REMARKS

The facilitation team tried to respond to the concerns and questions raised. However, they emphasized that unless the study is conducted the actual size of the dam cannot be determined and the actual number of people affected cannot be known. In all the meetings the District commissioner, assured the community members that a step by step process will be followed and that they will be part of the whole process. On their part, the Traditional Authorities requested the people to allow the studies to proceed and advised them not to be violent again.

WAY FORWARD

It was agreed that any community entry, should be done through traditional leaders to avoid violent reaction from the communities. No person should go into the graveyards without village chiefs. Generally the communities agreed that the consultants should proceed with the studies and should work together with the opinion leaders who are known as dam committee members. However, these consultants should be introduced in the initial meeting so that the people know them. There should be community meetings to update the communities on what is happening

WAYFORWARD FOR THE STAKEHOLDERS MEETING ON

DIAMPHWE ISSUES

WORKSHOP AGREEMENTS

1. As an implementing entity we all erred and it led to the rejection of the project by the beneficiaries ie communities.
2. There is a general consensus that all members agree that there is need for a new water sources in Lilongwe before the situation gets worse, so the project should really take off.
3. It has been agreed that consultations should start again involving all key stakeholders.
4. There is need to look at technical options on the project to ensure that only a small number of people is resettled.
5. Social Responsibility to be taken seriously, all benefits of the project to be clearly articulated to the project affected persons (PAPs)
6. Need to document and circulate all agreements for all the meetings on the project.

Annex 6: Cultural Heritage Report from Department of Antiquities

A CULTURAL HERITAGE IMPACT ASSESSMENT REPORT

for

LOWER DIAMPHWE MULTIPURPOSE DAM PROJECT

Prepared by:

Malawi Department of Antiquities,
P.O. Box 264,
Lilongwe
Malawi.

February 2016

EXECUTIVE SUMMARY

This report summarizes the findings of the Cultural Heritage Impact Assessment (CHIA) which was conducted in the Lower Diamphwe area by the Malawi Department of Antiquities. This area is has been earmarked for the construction of a multipurpose dam which will supply water to Lilongwe City and surrounding areas and support large scale agricultural developments such as irrigation farming, fish farming and livestock production.

The Malawi Department of Antiquities was sub-contracted by SMEC International Ltd to conduct this cultural heritage impact assessment and propose mitigation measures as part of the component of the Environmental and Social Impact Assessment (ESIA).

To successfully assess the impact of the project on cultural heritage resources in the proposed project area, a number of methods were used and these included literature review, field site survey and interviews with local residents. A combination of systematic spaced transacts of 15-20m apart and intensive inspection of sample quadrants was also used. The identified sites were recorded with a GPS, digital camera and the details of the finds recorded in the survey forms.

The CHIA revealed the presence of 30 archaeological sites, 1 Rock Shelter, 1 *Bwalo* (cultural meeting place), 2 Historical Traditional Water Wells, 1 ancient Kraal for cattle and 15 graveyards / cemeteries and associated 9 sites of intangible cultural heritage. These intangible cultural heritages are mainly *Dambwes* (forest patches) - meeting places of the *Nyau* secret societies which are recognized under the 2003 UNESCO Convention of the Intangible Cultural Heritage. Given the methodological constraints and high disturbance rate by agricultural cultivation, the area may hold more cultural heritage sites than the ones contained in this report. Although none of these heritage sites would prevent the continuation of the project, some mitigation measures are required to avoid destruction of sites that are threatened by the project. This report will therefore, recommend mitigation measures that need to be applied before the commencement of the dam project.

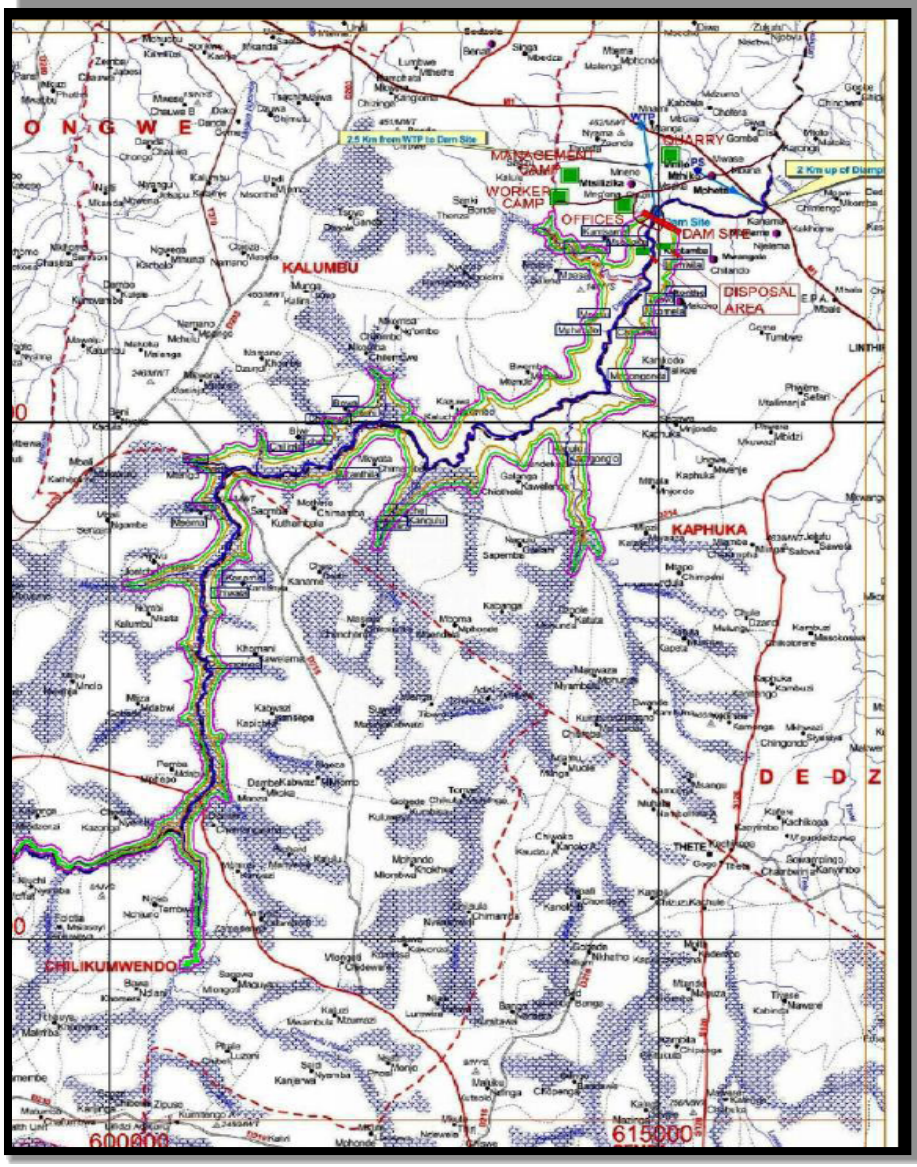
1. INTRODUCTION

SMEC International Ltd was contracted by Lilongwe Water Board to conduct the Environmental and Social Impact Assessment (ESIA) for a planned development of a multipurpose dam in Lower Diamphwe River, a project to be financed by World Bank. The Malawi Department of Antiquities was sub-contracted by SMEC International Ltd to conduct the cultural heritage impact assessment and propose mitigation measures as part of the component of the ESIA.

The multi-purpose dam will supply water to Lilongwe City and the surrounding areas, and support large scale agricultural developments including irrigation farming, fish farming and livestock production. The project components will comprise the dam and associated infrastructure, raw water transmission pipeline, water treatment plant, balancing tank, and pipeline from Mbuna to Bunda Turnoff. The dam wall will be located approximately 2 kms upstream from the Lilongwe M1 Road and will inundate approximately 30 kms of the Diamphwe River. This dam site lies in between Dedza and Lilongwe districts covering Traditional Authorities (TAs) Mazengera, Kaluma and Chadza on the Lilongwe west side; and TA Kaphuka on the Dedza east side.

Linthipe –Chongoni in central Malawi is one of the regions that have yielded rare and important pre-historic, historic and cultural heritage resources. Previous archaeological research in this area has documented sites from Middle and Later Stone (MSA and LSA) to Early, Middle, and Later Iron Age. Some of these sites have been excavated and results of the findings have been published. Pottery typologies that have been discovered include *Nkope, Kapeni, Maudzu* and *Nkhudz*i.



Map showing the project area

The purposes of the assessment were:

a. To identify and evaluate the cultural heritage within the project areas.
b. Identify and evaluate impacts on cultural heritage resources that might come as a result of the project, and
c. Recommend mitigation measures for managing unavoidable adverse.

This report therefore, presents the results of the cultural heritage impact assessment and recommends mitigation measures.

2. SCOPE OF WORK AND PURPOSE OF THE PROJECT

The following scope of work was agreed upon between the main contractor and the sub-contractor:

a. Collate, review and document baseline cultural heritage information relating to the study area. This to include identification of potential sites of cultural significance using satellite imagery and site verification.
b. Consult with the local community and relevant government agencies with regard to cultural sites and their management, in particular with the management of affected graveyard sites.
c. Consult and meet with the LWB, MoAIWD and other representatives as required.
d. Liaise with other members of the SMEC study team, as required. In particular communicate with the Social survey group with regard to community consultation and questionnaire surveys.
e. Where significant project impacts on critical cultural heritage are unavoidable, then to assist MoAIWD to obtain the Free, Prior and Informed Consent (FPIC) of the Affected Communities.
f. Prepare a Cultural report that includes:
    i. Baseline cultural conditions within the study area.
    ii. Project impact assessment on cultural sites. This should document the extent of any direct or indirect impacts associated with proceeding with the Project.
    iii. Identify suitable mitigation and management strategies. This should include management strategies for graveyard sites and any other significant cultural sites that will be directly impacted by the project footprint or construction activities.

3. DEFINITION OF CULTURAL HERITAGE RESOURCES

Cultural heritage is well understood in the context of its uniqueness and values. Consistent with national and international heritage laws, it is the mandate of Malawi through the Department of Antiquities to protect its irreplaceable cultural heritage and guide the developer to avoid or mitigate adverse impacts on cultural heritage in the course of their development activities. The heritage impact assessment is required in respect of the laws of Malawi as provided for in the Monuments and Relics Act of 1990. This Act and the Antiquities policy define cultural heritage

in its tangible and intangible forms. The tangible cultural heritage comprises thephysical cultural heritage resources both movable and immovable including the following:-

- places, buildings, structures of cultural significance;
- places to which oral traditions are attached or which are associated with living heritage;
- historical settlements and townscapes;
- landscapes and natural features of cultural significance;
- geological sites of scientific or cultural importance;
- archaeological and palaeontological sites;
- graves and burial grounds, including ancestral graves, royal graves and graves of traditional leaders, graves of individuals designated by the Minister by notice in the Gazette, historical graves and cemeteries; and other human remains
- sites of significance relating to the history of slavery;
- movable objects such as archaeological and palaeontological objects and material, meteorites and rare geological specimens;
- objects to which oral traditions are attached or which are associated with living heritage such as ethnographic art and objects;
- iron smelting sites;
- objects of decorative or fine art;
- Ethnographic art and objects.

Intangible cultural heritage is the type of heritage that is manifested in the following:

- Oral traditions and expressions, including language as a vehicle of the intangible cultural heritage;
- Performing arts;
- Social practices, rituals and festive events;
- Knowledge and practices concerning nature and the universe;
- Traditional craftsmanship and skills transmitted from generation to generation.

4. LEGAL AND POLICY FRAMEWORK

Before any land altering development activity is undertaken, Cultural Heritage Impact Assessment is required by the laws of Malawi. The Monument and Relics Act of 1990 provides statutory protection against the threat of development on declared monuments, historical buildings and archaeological, paleontological, geological, anthropological, ethnological, and other heritage sites to enable their preservation for posterity and socio economic development.

Section 29 of the Monuments & Relics Act of 1990 (Cap. 29:01 Laws of Malawi) reads:

> (1) *A person in charge of any survey, excavation, exploration, construction or new development shall, at the earliest stages of planning for such activities, give notice to the Minister to enable, where necessary, rescue archaeology to be carried out (…)*
>
> (2) (…) *the cost of such work shall … be borne by the person in charge of any survey, excavation, exploration, construction or other development*.

The Malawi Cultural Policy (2014) and the Antiquities Policy (2012) also provides statutory and legal mandate of ensuring that Cultural Heritage Impact Assessment is conducted before embarking on large scale land altering development projects.

Besides these national legal and policy requirements, project donors have their own safeguarding policies to adhere to. For instance, this World Bank funded multipurpose dam project have to go by their safeguarding operational policy 4.11 on physical cultural resources and operational policy 4.10 on indigenous people. The latter is particularly relevant with regard to intangible cultural heritage such as shrines, *Dambwes* and other spiritual places.

The European Union has acknowledged the value of archaeology and the critical role of the archaeologist in development projects in its Malta Convention (1992) which followed the ICOMOS charter on Archaeological Heritage Management (1990).

Malawi is further signatory to the 1972 UNESCO World Heritage Convention concerning the Protection of the World Cultural and Natural Heritage and the 2003 UNESCO Convention on

Safeguarding of the Intangible Cultural Heritage. Malawi thus has an international obligation to preserve its heritage.

5. METHODOLOGY

5.1. Literature Review

For the initial identification of archaeological sites, the research team firstly consulted the Antiquities National Site Register and some published works. The literature review started with the examination of documentary records comprising reports, articles, maps, photos, national inventory of archaeological, historical and cultural sites.

5.2. Field Survey

Thereafter, a field site survey was carried out which consisted of a transect walk of 6 experienced archaeological surveyors and 3 local community members spaced between 10-15m apart. The survey intended to cover the project affected area and the buffer zone of 250m on each side. The survey involved systematic screening of the surface area, natural gullies cut by rivers and rivulets, eroded pedestrian pathways, cultivated fields, bare premises around the peoples' homes and the road edges. In all these areas, lots of cultural artifacts such as pottery and iron slugs were observed and samples were collected for analysis at the Nguludi Slave House National Laboratory and selected few finds were photographed in the field. The locations of the identified sites were recorded with a Garmin Etrex 20 GPS and the attributes of the finds were recorded in standard survey forms. Digital camera was also used to take pictures of sites and finds

The baseline survey area was however limited to the area around the dam reservoir, an area that will be directly inundated by the dam. Particular attention was also extended to a 250m wide area around the dam perimeter that is included as part of the ESIA study area. The survey also focused on the area along the main pipeline alignment. This area includes a 15m wide area along a pipeline alignment, which extends approximately 30kms to Lilongwe from Diamphwe to Bunda turnoff.

However, the efficacy was hampered at times by poor visibility as a result of dense vegetation covering the gardens and over farming cultivations. Given time constraints, no subsurface testing was done at this stage. Some effort was however taken to randomly inspect exposed sections such as erosion gullies and excavated areas. The phase I of the field survey was conducted from 13th to 19thOctober, 2015 and phase II of the field survey was conducted from 2nd to 22nd November 2015.

Figure 1: Archaeological surveyors conducting the field site survey

Figure 2: Archaeological surveyors recording the identified archaeological sites

5.3. Public Consultation

Public consultations took many methods and tools appropriate to the respondents to source their views. Among the people consulted were the traditional leaders, *gule wa mkulu* elders, land owners and some other people who were randomly selected. The community consultations

mainly focused on determining the significance that they attach to the cultural heritage sites in the proposed project area and also identification of burials and the deceased on the graveyards.

Figure 3: Survey team with local communities holding consultation meetings

6. RESULTS

A total of 35 heritage sites were identified during the field surveys. These include 30 archaeological sites of variable ages. The presence of archaeological sites in the area is not surprising as river banks have always been the preferred place of settlement given the need for drinking water. Moreover, rivers would provide a source of food, way of transport and line of defense. Given poor ground visibility at times and inaccessibility of certain sections, some sites are likely to have remained undiscovered. Moreover, no subsurface testing was done at this baseline stage. More sites may thus lie below the 30 cm plough zone and remain unexposed.

6.1. Along the Inundation Zone

Along the inundation zone, the CHIA revealed the presence of 16 archaeological sites, 1 rock shelter, 1 *Bwalo* (cultural meeting place), 2 historical traditional water wells, 1 ancient kraal for cattle and 13 graveyards / cemeteries and associated 9 sites of intangible cultural heritage called *Dambwes* (forest patches). Below is the summary of the cultural heritage sites recorded along the inundation zone:

Table 1: Location of identified heritage sites and their significance

Site Number	Location UTM 36L	Description	Significance
DW-DZ01	0614509 E 8436190 S	Decorated pottery in the maize fields on the lower bank of the Diamphwe River over a distance of more than 100m. Pottery densities are generally low (<5 /m2) with some concentration areas. The pottery is with few exceptions undecorated and highly fragmented as a result of cultivation. The exceptions include some curved molded ribs and some incised fragments.	**High.** This is possible late 19th century to early 20th century extensive settlement site.
DW-DZ02	0614428 E 8436062 S	Historic traditional water well located approximately 200m east of Diamphwe River. The outer lining of the well is made of stones and it still used up today.	High. Important source of drinking water since historic times
DW-DZ03	0614409 E 8435964 S	A traditional ancient Krall for cows, made of an outline of stones piled up one after another in a circular form. It is located approximately 250m east of the Diamphwe River	High. No longer used by the local communities, but it has commemorative and symbolic value to the locals as a monument of local importance to the communities.
DW-DZ04	0614365 E 8435919 S	A scatter of decorated and undecorated pottery on a small hill-top. Also presence of beads. Samples collected to be further analyzed.	High. An interface of iron age settlements and the historic settlements.
DW-DZ05	0614476 E 8435929 S	Clusters of embedded potsherds along a walkway, (>10/m^2). Some decorated and	High. Possible late 19th to early 20th century

		with rims. Samples collected for further analysis.	settlement.
DW-DZ06	0614496 E 8435952 S	An Iron Age Site in a maize field was detected with clusters of decorated and undecorated pottery, (>5/m^2). Samples collected for further analysis.	High. Possible late 19th to early 20th century settlement.
DW-DZ07	0614358 E 8434770 S	An exposure of lithics and cluster of decorated and undecorated pottery site, located in an undisturbed extensive area of approximately 50m x 50m. Samples collected for further analysis.	High. Possible late 19th to early 20th century settlement
DW-DZ08	0613098 E 8432329 S	Traditional water well located along a foot-path.	High. Important source of drinking water since historic times
DW-DZ09	0612592 E 8427502 S	An Iron Age Site in a maize field was detected with clusters of decorated and undecorated pottery, (>5/m^2). Samples collected for further analysis.	High. Possible late 19th to early 20th century settlement
DW-DZ10	0602181 E 8421544 S	An Iron age Site located in a maize field with clusters of decorated and undecorated pottery and daga, >10/m^2.	High. Historic settlement.
DW-DZ11	0602105 E 8423942 S	An Iron Age Site located in intact ground with possible Maudzu potsherds embedded on the ground. Presence of metals (iron) fragments. Situated in 50m x 50m area, about 200m east of Diamphwe River	High. Possible late 19th to early 20th century settlement
DWDZ12	0602461 E 8420073 S	An Iron age Site located in a maize field with clusters of decorated and undecorated pottery and daga, >10/m^2, of total area approx. 50mx50m.	High. Historic settlement.

DW-LL13	0614147 E 8436363 S	A rock-shelter, possible settlement of the Akafula, no traces of rock paintings, scatters of potsherds and glass.	High. Possible late 19th to early 20th century settlement
DW-LL14	0614117 E 8435419 S	A historic and Iron age Site located in a maize field with clusters of decorated and undecorated pottery with intact rims, >10/m^2, of total area approx. 20mx20m. Samples collected for further analysis	High. Possible late 19th to early 20th century settlement
DW-LL15	0614464 E 8436271 S	A historic site located in a maize field with scatters of decorated and undecorated pottery and daga, >15/m^2, of total area approx. 30mx30m.	High. Possible late 19th to early 20th century settlement
DW-LL16	0614067 E 8436320 S	An Iron age Site located in a maize field with clusters of thick decorated and undecorated pottery mostly eroded, >10/m^2, of total area approx. 50mx50m. A few potsherds with comb dragging, incisions and comb stamping.	High. Possible late 19th to early 20th century settlement
DW-LL17	0610708 E 8431631 S	*Bwalo*- a sacred meeting place for 8 chieftaincy's within the 3 Traditional Authorities and GuleWaMkulu performing arena.	High. Historic and socio-cultural.
DW-LL18	0602174 E 8420560 S	A historic and Iron age Site located in Nyamazani village, in a maize field with clusters of decorated and undecorated pottery and pieces of reed impressed dagga, >5/m^2, of total area approx. 50mx50m. Samples collected for further analysis and site interpretations.	High. Possible late 19th to early 20th century settlement
DW-LL19	0601903 E	An Iron Age Site with high	High. Possible late 19th

	8423267 S	concentration of pottery in a disturbed maize field, (>20/m^2), in an area of approx.. 50m x 50m. Samples collected for further analysis	to early 20th century settlement
DW-LL20	0602057 E 8423358 S	Scatters of embedded potsherds on an undisturbed landscape, (>10/m^2) in Chimkuteni Village. Some decorated and other undecorated with rims intact. Samples collected for further analysis.	High. Possible late 19th to early 20th century settlement
DW-LL21	0607807 E 8430211 S	An Iron age Site located in an undisturbed landscape surrounded by maize fields, with clusters of potsherds, approx..>10/m^2, in total area approx. 30mx30m. Samples collected for further analysis.	High. Possible late 19th to early 20th century settlement

6.2. Along the Construction Area and Pipeline

This section summarizes the results of the phase II of the Cultural Heritage Impact Assessment (CHIA) which was carried out in an area where a proposed dam wall and other ancillary structures will be located and also along the proposed pipeline alignment. The construction area will have ancillary structures such as access roads, construction camps, office, pump station, raw water pipeline, Water Treatment Plant (WTP) and balance tank. Also to be included in this zone is an area within a four kilometer area radius of the dam wall, which may be affected by construction and operational activities such as laydown areas and material stockpiles.

The assessment was also conducted along the main pipeline alignment. This area includes a 15 meter wide area along the pipeline alignment, which extends approximately 30 kilometers to Lilongwe from the WTP in Chibwata area to the Bunda turn-off. The alignment is within the road easement.

This phase II field survey revealed the presence of 14 archaeological sites and 3 graveyards. All the three graveyards have *Dambwes*- meeting places of the *Nyau* society which is recognized under the UNESCO convention of the Intangible Cultural Heritage.

6.2.1. Archaeological Findings along the Pipeline and construction zone

a) DW-LL22 – Mtsirizika Archaeological Site

UTM Coordinate: 36L 0614401 E, 8436631 N
Elevation: 1165 m a.s.l.
Area: Mtsirizika
District: Lilongwe

An Iron Age site covering some 20 square meters in a maize garden. The cultural artifacts recorded include potsherds and dagga. Decorated pottery with rims was observed on the upper bank of the Diamphwe River over a distance of more than 100m. Pottery densities are generally low (<10 /m2). The pottery is highly fragmented as a result of cultivation. This is a possible late 19th century to early 20th century settlement. This site was recommended for further sub-surface investigations.

Figure 1: An Iron age Site located in a maize field with clusters of thick decorated and undecorated pottery mostly eroded

b) DW-LL23 – Mtsirizika Archaeological Site

UTM Coordinate: 36L 0614238 E, 8436358 N

Elevation: 1170 m a.s.l.

Area: Mtsirizika

District: Lilongwe

An Iron Age Site located approximately 45 cm north –east side from the rock shelter where the dam wall will be constricted. Scatters of embedded potsherds along a pathway , (>10/m^2). Some decorated and other undecorated with rims intact. Samples collected for further analysis.

Figure 2: Iron Age Site embedded in solid ground

c) DW-LL24 – Mtsirizika Archaeological Site

UTM Coordinate: 36L 0614580 E, 8436890 N

Elevation: 1158 m a.s.l.

Area: Mtsirizika

District: Lilongwe

An Iron Age Site located in a disturbed agricultural farming land with clusters of potsherds, approximately (>10/m^2) in total area approximately. 5mx5m. Samples collected for further analysis.

Figure 3: Scatters of decorated and undecorated pottery

d) DW-LL25 – Mbalame Archaeological Site

UTM Coordinate: 36L 0615041 E, 8436897 N

Elevation: 1157 m a.s.l.

Area: Mbalame

District: Lilongwe

An Iron Age Site located in a highly disturbed maize field with clusters of thick decorated and undecorated pottery mostly eroded, >10/m^2, of total area approximately 10mx10m. A few potsherds with comb dragging, incisions and comb stamping around the rims was observed.

Figure 4: Embedded potsherds

e) DW-LL26 – Nilo Archaeological Site

UTM Coordinate: 36L 0615993 E, 8436752 N

Elevation: 1164 m a.s.l.

Area: Nilo

District: Lilongwe

An Iron Age Site covering some 10 x 10 square meters in a maize garden. Decorated and undecorated pottery with rims was recorded. Dagga was also observed at this archaeological site. Pottery densities are generally low (<10 /m2). Samples collected for further analysis. This site was recommended for further sub-surface investigations.

Figure 5: decorated potsherds embedded on the intact ground

f) DW-LL27 – Chisindo Archaeological Site

UTM Coordinate: 36L 0617270 E, 8437062 N

Elevation: 1151 m a.s.l.

Area: Chisindo

District: Lilongwe

An Iron Age Site with high concentration of pottery in a disturbed maize field (>20/m^2) in an area of approximately 50m x 50m. Samples collected for further analysis.

Figure 6: clusters of pottery in and dagga

g) DW-LL28 – Zamkondo Archaeological Site

UTM Coordinate: 36L 0616053 E, 8438104 N

Elevation: 1197 m a.s.l.

Area: Zamkondo

District: Lilongwe

A historic and Iron age Site located in a maize field with clusters of decorated and undecorated pottery with intact rims, >10/m^2, of total area approx. 20mx20m. Samples collected for further analysis

Figure 7: clusters of decorated and undecorated pottery with intact rims

h) DW-LL29 – Nthiko Archaeological Site

UTM Coordinate: 36L 0615865 E, 8439047 N

Elevation: 1195 m a.s.l.

Area: Nthiko

District: Lilongwe

An Iron Age Site covering some 15 x 15m^2 in a maize cultivation land. Some decorated and undecorated pottery with rims was recorded at the site with pottery densities of approximately (<10 /m2). Pottery samples were collected for further analysis. This site was recommended for further sub-surface investigations.

Figure 8: undecorated pottery with rims was recorded at the site

i) DW-LL30 – Mbuna Archaeological Site

UTM Coordinate: 36L 061629 E, 8439047 N

Elevation: 1231 m a.s.l.

Area: Mbuna

District: Lilongwe

An Iron Age site covering some 10 x 10 square meters located approximately 2 meters from the Mbuna graveyard. Scatters of decorated and undecorated pottery was recorded at the site, with pottery densities of <10 /m^2. Dagga was also observed at this archaeological site. Pottery Samples collected for further analysis. This site was recommended for further sub-surface investigations.

Figure 9: Potsherd embedded on the ground

j) DW-LL31 – Chikapula Archaeological Site

UTM Coordinate: 36L 0612135 E, 8439683 N

Elevation: 1222 m a.s.l.

Area: Chikapula

District: Lilongwe

An Iron Age site covering some 20 x 20m^2 situated about 5 meters along the M1 road, along a pipeline. The site is highly disturbed by farming cultivations. Decorated and undecorated pottery with rims was recorded at the site, with pottery densities of approximately <5 /m^2. Some pottery samples were collected for further analysis.

Figure 10: Decorated pottery with rim recorded at the site.

k) DW-LL32 – Kamphata Archaeological Site

UTM Coordinate: 36L 0607277 E, 8440238 N

Elevation: 1238 m a.s.l.

Area: Kamphata

District: Lilongwe

An Iron Age site situated along a proposed pipeline approximately 5 metres north of Kamphata grave yard. The site covers an area of about 10 x 10 meters in a disturbed maize garden. A number of decorated and undecorated pottery was recorded at this site. Pottery densities are generally <10 /m2. Pottery samples were collected for further analysis.

Figure 11: decorated and undecorated pottery was recorded at the site along M1 road.

l) DW-LL33 – Kuleza Archaeological Site

UTM Coordinate: 36L 0606616 E, 8440771 N

Elevation: 1205 m a.s.l.

Area: Kuleza

District: Lilongwe

An Iron Age site located along M1 road approximately 5 m from the road, with clusters of thick decorated and undecorated pottery mostly weathered, >10/m^2, of total area approximately 50mx50m. A few potsherds with comb dragging, incisions and comb stamping. Pottery samples were collected for further analysis.

Figure 12: clusters of thick decorated and undecorated pottery

m) DW-LL34 – Nsonkhwo Archaeological Site

UTM Coordinate: 36L 0602740 E, 84426885 N

Elevation: 1172 m a.s.l.

Area: Nsonkhwo

District: Lilongwe

An Iron Age site situated 5 m from M1 road covering some 10 x 10 square meters in a maize garden. Decorated and undecorated pottery and dagga was recorded at this site with

pottery densities of <10 /m2. Pottery samples were collected for further analysis. This site was recommended for further sub-surface investigations.

Figure 13: Decorated and undecorated pottery and dagga in a proposed pipeline alignment

n) DW-LL35 – Chagogo Archaeological Site

UTM Coordinate: 36L 0589821 E, 8443986 N

Elevation: 1085 m a.s.l.

Area: Chagogo

District: Lilongwe

An Iron Age site located about 4 m along M1 road covering some 15 x 15 square meters situated in a proposed pipeline. Decorated and undecorated pottery with rims was recorded at this site with pottery densities of <10 /m2. Pottery samples were collected for further analysis. This site was recommended for further sub-surface investigations.

Figure 14: Decorated and undecorated pottery with rims was recorded at this site

o) Nathenje Monumental Arch Bridge

A monumental arch bridge across the Nathenje river at Dzuka. The bridge was constructed by the Missionaries of Africa, in the 1920s for them to ease transport problems. In general the bridge is in dire need of restoration. The first arch on the east bank has largely collapsed. Only a two brick-wide outer wall is still standing there which pedestrians still use to pass over. The bridge is not directly within the alignment as it stands about 3m from the road reserve boundary. However, it will be affected by construction activities such as vibration.

Figure 15: Monumental arch bridge across the Nathenje River

Figure 7: Forest patches as graves and *Dambwes*

7. ASSESSMENT AND EVALUATION OF IMPACTS OF PROJECT AND MITIGATION MEASURES

A. IMPACT ON CULTURAL HERITAGE SITES

Dam development will obviously have destructive effects on the cultural heritage sites identified within the project area. The severity of the impact depends on the size and nature of the site. Without full understanding of these aspects, any impact assessment remains tentative. As no subsurface testing was conducted at this stage of the assessment of the project at hand, the impacts indicated in Table 2 below are preliminary.

Table 3: Impact on the identified heritage sites

Site No	Nature of Impact	Severity of the Impact
DW-D01	Completely to be inundated in dam water. Direct loss of archaeological sites due to permanent submerging of the site in the course of flooding.	Moderate to severe
DW-D02	Completely to be submerged in dam water	Severe
DW-D03	Completely to be destroyed by the dam	Severe
DW-D04	Completely to be inundated in dam water. Direct loss of archaeological sites due to permanent submerging of the site in the course of flooding.	Severe
DW-D05	To be inundated in dam water. Direct loss of archaeological sites due to permanent submerging of the site in the course of flooding.	Very severe
DW-D06	Potential inundation in dam water. Direct loss of archaeological sites due to permanent submerging of the site in the course of flooding.	Moderate to severe
DW –07	Potential inundation in dam water. Direct loss of archaeological sites due to permanent submerging of the site in the course of flooding.	Moderate to severe
DW– 08	Completely to be submerged in dam water	Severe

DW-LL32	Completely to be inundated in dam water. Direct loss of archaeological sites due to permanent submerging of the site in the course of flooding.	Very severe
DW-LL33	To be inundated in dam water. Direct loss of archaeological sites due to permanent submerging of the site in the course of flooding.	Moderate to severe
DW-LL34	Completely to be destroyed in dam construction. Direct loss of archaeological deposits due to sediments being removed from archaeological areas.	Moderate to severe
DW-LL35	Permanent change of cultural landscape around the heritage sites that indirectly reduces the associated cultural landscape value.	Severe
Nathenje Monumental Arch Bridge	Visual impact during the construction phase.	Moderate to severe

None of these heritage sites would prevent the continuation of the project, but some mitigation measures are required. All the 38 archaeological sites and 13 graveyards would be destroyed by the planned dam developments. At least 10 of these are of high significance and would definitely require rescue archaeology.

7. GRAVES / CEMETARIES WITHIN THE PROJECT AREA

Graves are regarded as protected monuments under the laws of Malawi as provided for in the Monuments and Relics Act of 1990. Part 1 section 2(c) of the Act, defines "Monument" as

> *'…any grave, tumulus, cairn, place of interment, pit, dwelling, trench, excavation, working, rock, rock-shelter, madden, mound, cave, grotto, rock sculpture, rock painting and wall painting'.*

The CHIA has discovered that the dam construction may lead to the destruction of 13 graves/cemeteries which are lying within the project area. The affected graveyards include 7 in Lilongwe side and 8 in Dedza side. In Lilongwe side, it include: Kumkama graveyard, Kaphwereza graveyard, Mbonongo graveyard, Salimandinda graveyard, Mpasu underage graveyard, Mpasu Leprosy graveyard and Mkute Leprosy graveyard. In Dedza side, it include: Ndingo graveyard, Kanguri mkhonde graveyard, Kawerenga I, II and III graveyard and Bengo isolated graveyard with one tombstone and one unmarked grave. All these graveyards / cemeteries will be inundated by the dam water. A table below highlights the number of villages that use these affected graveyards:

Table 4: Showing number of villages that use these affected graveyards

A. Lilongwe Side

	Name of Graveyard	Villages that use this graveyard
1.	Name: Kumkama graveyard GVH : Chinzili TA :Mazengera	1. Kumkama 2. Msodoka 3. Chibowa 4. Kamakhala 5. Msonga 6. Mtenthamawa
2.	Name: Kaphwereza graveyard GVH : Mwachilolo TA :Mazengera	1. Kaphwereza
3.	Name: Mbonongo graveyard GVH : Mwachilolo TA :Mazengera	a. Mbonongo
4.	Name: Salimandinda graveyard GVH : Chingwenje TA :Kalumbu	1. Chilundwe 2. Ankhwazomba 3. Salimandinda 4. Lukiyo

2.	Name: Kapedzera graveyard GVH : Kapedzera TA : Mazengera	1. Kapedzera 2. Chithenga 3. Mbendera 4. Chitelera 5. Akimud 6. Chikazingwa 7. Sadzi 1 and II 8. Josephy 9. Manda 10. Benard 11. Msandukira 12. Kajime 13. Yesaya
3.	Name: Kamphata graveyard GVH : Kamphata TA : Mazengera	- Kamphata

7.1. DOCUMENTATION OF GRAVES WITHIN THE PROJECT AREA

The Department of Antiquities in liaison with the local communities conducted a grave recording survey in all the identified affected graveyards within the project area. The team of archaeological surveyors recorded a total number of 995 graves in all the 13 affected graveyards. A standardized survey recording form (see attachment 2) was used to do the recording and the head-counting of the deceased.

The graveyard recording focused on the following aspects: General Information of the graveyard - (name, district, Traditional Authority, Village, Group village headman, Area and assigning of unique identification numbers for each grave). Details of the graveyard - Type of memorial, the material the memorial is made from, the shape of the top of the memorial, Measurement of the memorial in terms of its height, width, thickness and length; number of components that make up the memorial, the availability of the inscriptions, their style, symbols present on the memorial, orientation of the graves; Details of the deceased in terms of name, gender, address, occupation, birth, death, cause of death and age at death. Also recorded were the conditions of the inscriptions and the memorials. Photographs were taken for each memorial and the photo numbers were also recorded on the survey forms. Below is the total number of graves counted:

Table 5: Total number of graves in each cemetery in Dedza side

Lilongwe Side

	Name of Graveyard	**Villages that use this graveyard**	**Total number of graves**
1.	Name: Kumkama graveyard GVH : Chinzili TA :Mazengera	7. Kumkama (96 graves) 8. Msodoka (72 graves) 9. Chibowa (28 graves) 10. Kamakhala (56) 11. Msonga (52 graves) 12. Mtenthamawa (34 graves)	338
2.	Name: Kaphwereza graveyard GVH : Mwachilolo TA :Mazengera	2. Kaphwereza	17
3.	Name: Mbonongo graveyard GVH : Mwachilolo TA :Mazengera	1. Mbonongo	15
4.	Name: Salimandinda graveyard GVH : Chingwenje TA :Kalumbu	6. Chilundwe (17 graveyards) 7. Ankhwazomba (9 graveyards) 8. Salimandinda (40 graveyards) 9. Lukiyo (23 graveyards) 10. Mwambo (35 graveyards)	124
5.	Name: Mpasu graveyard (for still born babies) GVH : Mwachilolo	4. Mpasu 5. Mlombwa 6. Mphaleyidyani	Unknown still-born babies

	TA :Mazengera		
6.	Name: Mpasu Leprosy graveyard *(Manda aanthu akhate)* GVH : Chingwenje TA :Mazengera	- All people from Mwachilolo villages	2
7	Name: Mkute Leprosy graveyard *(Manda aanthu akhate)* GVH : Mkute TA :Mazengera	7. Kalumbi 8. Nankhombo 9. Mbalame 10. Gwengwe 11. Ndakuyanja 12. Chatupa	15
Total number of graves in Lilongwe side			**511**

Dedza Side

	Name of Graveyard	**Villages that use this graveyard**	
1.	Name: Ndingo graveyard GVH : Chinzili TA : Kaphuka	3. Ndingo	84
2.	Name: Kanguru-mkhonde graveyard GVH : Mbalila TA :Kaphuka	ii. Kanguru-mkhonde	31
3.	Name: Bonya graveyard GVH : Chiwothera TA : Kaphuka	- Old closed graveyard (no longer used)	38
4.	Name: Kawerenga graveyard GVH : Chiwothera TA : Kaphuka	8. Kawerenga (69 graves) 9. Kubwaila (35 graves) 10. Mthawanji (36 graves) 11. Mzelera (50 graves) 12. Nyalubwe (8 graves) 13. Zingalume (25 graves) 14. Chigwira (6 graves)	229
5.	Name: Tsalakunja graveyard GVH : Chiwothera TA : Kaphuka	2. Tsalakunja	38
6.	Name: Mkhaladzulu graveyard GVH : Kwendekeza TA : Kaphuka	3. Khumbiza (14 graves) 4. Mkhaladzulu (45 graves)	59
7.	Name: Bengo Isolated graveyard (1 tombstone)	2. Mjondo village	2

	and one unmarked grave GVH : Chisela TA :Mazengera		
8	Name: Mtanthila 1 graveyard GVH : Chimamba TA : Kaphuka	2. Mtanthila	3
Total number of graves in Dedza side			**484**

Total number of graves to be exhumed and relocated	**995**

For more details of individual bodies buried in these graves, refer to appendix IV attached.

7.2. PROCEDURES AND PROCESSES FOR GRAVE RELOCATION

There are specific government laws that regulate the exhumation and relocation of graves. These include Public Health Act and Monuments and Relics Act. Exhumation and relocation of graves is done by the Department of Antiquities. The Antiquities policy provides guidelines and procedures that need to be followed when relocating graves.

8. RECOMMENDATIONS AND MITIGATION MEASURES

A. ARCHAEOLOGICAL SITES

ii. 10 archaeological sites require subsurface probing (test pitting) to adequately assess their significance and integrity

iii. Rescue archaeology need to be carried out on at least eight archaeological sites reported above (DW-D11, DW-L14, DW-L16, DW-L18, DW-L19, DW-L19, DW-L20 and DW-L21) and possibly on additional sites as more information becomes available during actual dam construction work. This work needs to be

conducted before dam development work starts. It would require test pitting of approximately 5mx5m unit.

B. CEMETARIES / GRAVEYARDs

i. Need to find an alternative grave site for each village affected by the project
ii. All the affected graveyards need to be exhumed and relocated to where the villages will be resettled.
iii. Re-routing the pipeline to avoid disturbance of the graveyards along the pipeline alignment.
iv. Alternatively, exhume the remains on the affected part and reburial them in unaffected part.
v. As proposed exhumation and relocation of graves will probably take some time there is need for proper planning.
vi. Need for constant monitoring during the dam construction phases by qualified cultural heritage specialists to record the archaeological objects recovered as chance finds.

9. SUMMARY AND CONCLUSIONS

The proposed dam development works may lead to destruction of the identified archaeological and cultural heritage sites and some graves. These, however, do not have economic value at the moment but only cultural and scientific values. It would thus be appropriate to allow for archaeological excavations prior to the dam construction to allow for the development project to go ahead without loss of cultural and scientific information. As the significance of some archaeological sites could not be determined yet, there will be need for sub surface screening to assess the nature and extent of these sites. Depending on the outcome, more extensive excavations may be required. For some

sites the significance is evident, and therefore, rescue archaeology is highly recommended.

The 10 graveyards and D*ambwes* will be inundated. These graves definitely need to be relocated to where the villages will be resettled. This is in line with the Monuments and Relics Act of 1990 which calls for the protection and preservation of graves. Also, culturally graves are highly valued places which need to be accorded utmost respect. Necessary relocation procedures and processes need to be followed in consultation with all relevant stakeholders.

As stated above none of the identified cultural heritage sites and the affected graves will stop the implementation of this dam project, as long as appropriate mitigation measures have been taken.

APPENDIX

A PHYSICAL CULTURAL HERITAGE RESOURCES MANAGEMENT PLAN

1. Introduction

The Malawi Department of Antiquities was requested by SMEC International Ltd, an environmental and social consultant and National Water Development Programme to conduct a Cultural Heritage Impact Assessment (CHIA) and propose mitigation measures for a planned development of a multipurpose dam in Lower Diamphwe River. The multi-purpose dam will supply water to Lilongwe City and the surrounding areas, and support large scale agricultural developments including irrigation farming, fish farming and livestock production.

The CHIA which the department conducted revealed the presence of a total of 17 archaeological sites along the inundation zone that will be affected by the dam construction works.

Also total of 5 cultural and historic sites will also be negatively impacted by the dam construction works. These include:

1 x Rock Shelter,
1 x *Bwalo* (cultural meeting place),
2 x Historical Traditional Water Wells,
1 x Ancient Kraal for cattle.

Further, a total of 15 graveyards / cemeteries will be affected by the dam construction works.

As part of the scope of work assigned by the Department of Antiquities, it was requested to develop a physical cultural heritage resources management plan. This document therefore, presents a management plan for both the affected physical cultural heritage resources and the graveyards to be inundated by the proposed dam.

2. MANAGEMENT MEASURES

2.1.Management Measures of the Archaeological Sites

2.1.1. Planned Activities

i. Test-pitting

- Nine (9) of the identified archaeological sites need further sub-surface detailed research in terms of test-pitting in order to clearly understand their context and site values. Depending on the findings of the test-pitting studies, there may be need for rescue archaeology to obtain representative samples.

ii. Rescue Archaeology

- Eight (8) of the identified archaeological sites need to be rescued in order to have a representation of archaeological samples for further detailed analysis. These include: DW-D11, DW-L14, DW-L16, DW-L18, DW-L19, DW-L19, DW-L20 and DW-L21 and possibly additional sites as more information becomes available during actual dam construction work. This work needs to be conducted before dam construction works start. The number of sites that needs rescue archaeology may change depending on the results of test-pitting.

iii. Analysis and Curation of the recovered Archaeological Materials

- A number of archaeological materials will be recovered during the rescue archaeology operations, test-pitting and also during the construction works. All the recovered archaeological objects need to be properly analyzed and processed by qualified archaeologists at the National Archaeological laboratory in Nguludi.
- After all the analysis and processing of the archaeological materials are done, the artifacts need to be properly curated at Nguludi National repository for future use.

iv. Monitoring during the Dam Construction Works

- Need for constant monitoring during the dam construction phases by qualified cultural heritage specialists to record the archaeological objects recovered as chance finds.

2.2. Management Measures of the Cultural and Historical Sites

2.2.1. Planned Activities

i. Detailed study of the cultural and historic sites

- There is need to conduct more historic studies about the identified rock shelter; *Bwalo* - cultural meeting place, traditional water wells and an ancient kraal for cattle. This is very important in order to determine the significance and values attached to these sites before they are destroyed completely by the dam construction works. For example, rock shelters were potential settlements for the Stone Age hunter gatherers and also potential meeting places of traditional and modern religious groupings. *Bwalos* have some cultural, social and spiritual values because they are places where lot cultural and social activities take place. The traditional water wells have some medicinal, social and spiritual values. Traditional kraals have some unique architectural and commemorative values. These values and significances need be properly documented so that they are well understood in consultation with the local custodians before they are completely destroyed.

ii. Public awareness on the identified cultural heritage resources of the area

- There is need to conduct 4 awareness-raising meetings in four villages to inform the local communities that these heritage resources will be damaged by the dam development works but

proper records of the sites and the fabric will be documented and preserved.

2.3. Management Measures of the Graveyards / Cemeteries

2.3.1. Planned Activities

i. Community Sensitization on the relocation of the graveyards / cemeteries and Recruitment of Grave Diggers.

- There is need to carry out further 15 community sensitization meetings (representing 15 graveyards / cemeteries), before embarking on the exhumation and relocation of the graves. These meetings will aim at informing the local communities on how the reburial process will be conducted. This is important because the communities need to be prepared psychologically as this is a very sensitive issue which may open up old wounds.

- These meetings will also be used to select and recruit young and energetic men who will later be trained on how to exhume and rebury human remains. About 60 local youth need to be recruited.

ii. Procurement of Coffins

- New coffins need to be procured for each and every deceased person. Tentatively, 1001 graves have been recorded in all the affected graveyards / cemeteries. In order to be cost effective there is need to identify one supplier to supply all the coffins.

iii. Exhumation of the Graves

- A minimum of six graves will be exhumed and reburied per day. Three in Dedza side and three in Lilongwe side. These will be done concurrently. The exhumation will be done by the professional and technical team from the Department of Antiquities with assistance from the recruited Grave-Diggers from the surrounding local communities. The trained local communities' Grave-Diggers will

remove the top layer of the grave soils up to the level where the remains are laid to rest. Thereafter, the technical staff from the department of antiquities supervised by department archaeologists will remove the human remains using archaeological methods and place them in new coffins.

iv. Reburial of Graves

- An alternative new graveyard site has to be already identified and mapped. Digging of new graves should be done concurrently with the exhumation processes. In this case, six graves will be dug per day to correspond with the number of graves to be exhumed in a day. Grave-Diggers recruited from the local communities will be responsible for the digging of new graves to bury the exhumed human remains. Ensure that all necessary digging and funeral materials are available during the reburial processes. These have been listed on page 21. All bodies exhumed **must be** reburied the same day

v. Construction of new tombstones

- New tombstones will have to be constructed on all graves which initially had tombstones. The symbols of the new tombstones should be in conformity with the original damaged tombstones. Skilled local labors and bricklayers from the local communities should be identified and recruited to construct these tombstones. The new tombstones should be replicas of the old ones.

v. Conduct Funeral Ceremonies

- There may be need to conduct some funeral ceremonies before or after the exhumation and reburial depending on the customs, beliefs and traditions of the communities.
- Communities need to be encouraged to o plant fast-growing *Nkhadze* wild plants surrounding the new graveyard sites.

3. STAKEHOLDERS

3.1. Identification of Stakeholders for Grave relocation

There are a number of stakeholders with an interest in graveyard relocation. These groups of people have been consulted during the preparation of this action plan, and will continue to be consulted during the actual implementation of the project. These groups of stakeholders are identified below:

Table 1: Stakeholders working directly with the affected physical cultural heritage resources

	Stakeholders	Area of Interest
Government: Stakeholders working directly with the project	1. Department of Antiquities	Responsible for coordinating all the grave relocation processes and conducting rescue archaeology, study, conservation and management of all historical and cultural heritage sites.
	2. Dedza and Lilongwe district Assembly	Responsible for mobilization of and consultation with local community leaders. Facilitate the identification of potential land for relocation.
	3. Ministry of Lands	Responsible for surveying, zoning and valuation of land.
	4. District Health Office	Provision of healthy and sanitary services during the exhumation and reburial of graves.
	5. District Police Services	Provision of security during the exhumation and reburial of graves.
	6. Judiciary	Interpreting the relevant legislations
Local	7. Community Leaders (VH,	Custodians and managers of graveyards and other cultural heritage resources.

Communities	GVHs and TAs)	
	8. Next of kin of the deceased	Responsible for provision details of the deceased decision-making on their behalf.
	9. Lilongwe and Dedza Dam Community Committees	Responsible for community advocacy and local support on the proposed graveyard relocation activities.
Civil Society groups / Faith groups	10. Civil Society organizations	Responsible for raising awareness on the development projects of the area and their impact on graveyards and other heritage resources.
	11. Religious groups (Churches)	Responsible for advocacy and moral support to the local communities during the relocation of graveyards.
	12. Gulewamkulu secret society	Responsible for moral support and performance of traditional rituals during grave relocation.
	13. Media	Responsible for general information dissemination during the relocation of graveyards.

3.2. Stakeholder Views and Expectations

The consultative stakeholder meetings conducted raised the following key issues as regards to relocation of graves: Emphasis on the need to conduct funeral ceremonies and involvement of community members. In some cases, next-of-kins and family members requested not to be actively involved during the exhumation and reburial; and need for next-of-kins and family members to be assisted with some form of compesation for each grave to be exhumed.

4. IMPLEMENTATION PLAN

Most of the mitigation measures recommended in this report will be implemented by the Department of Antiquities in collaboration with other identified stakeholders.

4.1. Action Plan: Management Measures of the Archaeological Sites

4.1.1. Test-Pitting

Ten (10) of the identified archaeological sites need to be further probed by conducting test-pitting. This was one of the recommendations in the CHIA report. This activity will be implemented for a minimum period of 10 days.

4.1.2. Rescue Archaeology

The identified 8 or more archaeological sites will need to be mapped in detail and then rescue archaeology conducted. This operation will require a minimum period of 1 month (30 days).

4.2.3. Analyze and curate the recovered archaeological materials

After the archaeological materials have been rescued, a bulk of the archaeological artifacts needs to be transported to Nguludi Slave House National Laboratory where processing, analysis and curation of all archaeological materials are carried out. This work will take a minimum period of 3 weeks (21 days).

4.2.4. Monitor the Dam Construction Works

Monitoring of the dam by qualified heritage experts will depend on the duration of the project.

4.2. Action Plan : Management Measures of the Cultural and Historical Sites

4.2.1. Study in detail the cultural and historic sites

The detailed study of the identified Rock Shelter; *Bwalo* - cultural meeting place, Historical Traditional Water Wells and an Ancient Kraal for cattle will need a minimum of 1 week, (7 days).

4.2.2. Raise public awareness on the identified cultural heritage resources of the area

The awareness-raising meetings in four villages will be done concurrently with other activities.

Table 2: below describes the implementation schedule, responsibilities and resources needed to successfully carry out this activity

A. Management Measures of the Archaeological Sites

Expected Outcomes	Activity Description	Timeframe (Weeks)								Resources	Responsibilities
		1	2	3	4	5	6	7	8		
Site archaeological context and integrity well understood through test-pitting of the sites.	**1. Test-pitting**										
	- Map in detail 10 archaeological sites recommended for test-pitting.	x								Funds, Personnel, equipment / tools	Department of Antiquities
	- Excavate about 5 -10, 1 x 1m test-pits at each archaeological sites.	x	x							Funds, Personnel, equipment / tools	Department of Antiquities
	Produce test-pitting technical report.		x							Professional staff	Department of Antiquities
A representative of archaeological artifacts rescued	**2. Rescue Archaeology**										
	- Map in detail 8 archaeological sites recommended for rescue archaeology.		x							Funds, Personnel, equipment / tools	Department of Antiquities
	- Carry out rescue archaeology operations in all recommended archaeological sites.		x	x	x	x				Funds, Personnel, equipment / tools	Department of Antiquities
	- Produce rescue archaeology technical report						x			Professional staff	Department of Antiquities
Cultural landscape well interpreted and reconstructed	**3. Analysis and curation of recovered archaeological materials**										
	-Transfer all the recovered archaeological materials to Nguludi Archaeological Laboratory.						x			Funds, Personnel, equipment / tools	Department of Antiquities
	-Prepare and analyse the recovered archaeological materials						x	x	x	Funds, Personnel, equipment / tools	Department of Antiquities
	-Produce artefact analysis technical report								x	Professional staff	Department of Antiquities
A representative of	**4. Monitoring during dam Construction**										

archaeological artifacts salvaged	**Works**[1]										
	- Deploy qualified heritage experts to do the monitoring									Funds, Personnel, equipment, stationery	Department of Antiquities
	- Salvage the archaeological objects during the dam construction works.									Funds, Personnel, equipment / tools	Department of Antiquities
	- Produce reports of the monitoring activities									Professional staff	Department of Antiquities
B. Management Measures of the Cultural and Historical Sites											
Site context and integrity well understood through the detailed studies.	**Detailed study of the cultural and historic sites**										
	Conduct detailed historic and ethno-archaeological research		x							Funds, Personnel	Department of Antiquities
	Produce a technical report		x							Funds, Personnel	Department of Antiquities
	Conduct awareness on the identified cultural heritage resources of the area		x							Funds, Personnel	Department of Antiquities

[1] This activity will be done throughout the project implementation phases when earth removing work is being carried

4.3. Action Plan : Management Measures of the Graveyards / Cemeteries

4.3.1. Plan and sensitize the locals on the relocation of the graveyards and Recruitment of Grave-Diggers.

Planning and preparatory community sensitization meetings before starting the grave exhumation and relocation processes will need a minimum of 10 days. This will include 5 days of community meetings and 5 days of capacity building of Grave-Diggers. 60 Grave Diggers need to be recruited, 30 in Lilongwe side and 30 in Dedza side; and a group of 30 will be split further, 10 digging new graves and 20 helping in exhumations.

4.3.2. Procure Coffins

To identify a supplier to supply coffins of different sizes depending on the ages of the deceased, it will need a minimum of 1 month.

4.3.3. Exhume the Graves

A minimum of 6 graves will be exhumed and reburied per day. To exhume 1001 graves on daily basis, it will take a minimum of 6 – 7 months.

4.3.4. Rebury the Human Remains

Similarly, a minimum of 6 human remains will be reburied per day. To rebury 1001 human remains on daily basis, it will take a minimum of 6 – 7 months.

4.3.5. Construct new Tombstones

The construction of the new tombstones will correspond with the relocation of the grave yards. Soon after the relocation is over in one graveyard, the tombstone construction should also start. A minimum of 10 tombstones will be constructed per day. A minimum of 8 skilled brick layers will need to be recruited to assist in construction of the tombstones

4.3.6. Conduct Funeral Ceremonies

The preparations and facilitation of funeral ceremonies needs a minimum period of 45 days, 15 days planning and preparations and 30 days of actual events.

Table 3: below describes the implementation plan to successfully carry out this activity:

Management Measures of the Graveyards / Cemeteries

Expected Outcomes	Activity Description	Timeframe (Months)							Resources	Responsibilities
		1	2	3	4	5	6	7		
Local communities well prepared for grave relocation processes. Grave-Diggers recruited and trained	**1. Plan and sensitize the locals on the relocation of the graveyards / cemeteries and Recruitment of Grave Diggers[2]**									
	- Conduct 15 community inception meetings	x							Funds, Personnel	Department of Antiquities
	- Select and recruit Grave-Diggers.	x							Funds, Personnel	Department of Antiquities
	- Train Grave-Diggers	x							Funds, Personnel	Department of Antiquities
Availability of enough and different sizes of coffins	**2. Procure Coffins**									
	Identify and procure the Carpentry and Joinery services	x							Funds, Personnel	Department of Antiquities
	Provide the Coffins	x	x						Funds, Personnel	Department of Antiquities
Graves exhumed	**3. Exhume the Graves**									
	- Document the graves	x							Funds, Personnel, equipment, stationery	Department of Antiquities
	- Clear the Graveyards and Exhume the burials	x	x	x	x	x	x	x	Funds, Personnel, equipment, stationery	All stakeholders
Human remains reburied	**4. Rebury the Human Remains**									

[2] This process will need a minimum period of 10 days

	- Dig new graves	x							Funds, Personnel, equipment, stationery	All stakeholders
	- Rebury the human remains	x	x	x	x	x	x	x	Funds, Personnel, equipment, stationery	All stakeholders
	- Produce a grave relocation report							x		
New graves well presented	**5. Construct new Tombstones**									
	Identify and recruit skilled brick layers	x							Funds, Personnel, equipment, stationery	All stakeholders
	Construct the tombstones		x	x	x	x	x	x	Funds, Personnel, equipment, stationery	All stakeholders
Communities united and spirits pacified	**6. Conduct Funeral Ceremonies**									
	Mobilize the resources for the funeral ceremony	x	x						Funds, Personnel, equipment, stationery	All stakeholders
	Facilitate the funeral ceremonies		x	x	x	x	x	x	Funds, Personnel, equipment, stationery	All stakeholders

5. ASSUMPTIONS AND RISKS

The following are the **assumptions and expectations** in the implementation of this action plan:

- Department of Antiquities to take full responsibility in the implementation of all the outlined activities proposed in this management plan
- Willingness from funding partners to provide financial and technical resources
- Willingness and support from stakeholders to participate in all levels of the implementation of the planned activities
- Availability of Malawi Government technical and professional staff to execute the work
- Political will.

The following are the **risks** threatening the implementation of the action plan:

- Stakeholders' participation not assured
- No guarantee that there will be funding from donor partners
- External and internal conflicts.

6. PROJECT PROFILES AND BUDGET MANAGEMENT

To successfully implement all the activities outlined in this action plan, there is need for funds amounting to a minimum sum of MK183, 715,000. To mitigate the negatives effects on the archaeological and other cultural heritage resources, the required budget is MK23, 080, 000. See table 4 below for breakdown according to the proposed tasks. To successfully relocate the affected graveyards, the estimated total budget is Mk160, 635,000. See table 5 below for the breakdown of the proposed tasks. The detailed budget has been provided in Appendix I of this report.

Table 4: Management Measures of the Archaeological Sites and other cultural heritage resources

Tasks	Project Profiles	Total Budget (MK)
Task 1	Test-pitting	**2,950,000**
Task 2	Rescue Archaeology	**7,050,000**
Task 3	Analyze and curate the recovered archaeological materials	**4,735,000**
Task 4	Monitor the Dam Construction Works	**6,700,000**
Task 6	Study in detail the cultural and historic sites	**1,645,000**
	Sub- Total Budget	**Mk 23,080,000**

Table 5: Budget for Management Measures of Graveyards / Cemeteries

Tasks	Project Profiles	Total Budget (MK)
Task 1	Sensitize the local communities on the exhumation and reburial processes and recruitment of Grave-Diggers	**2,000,000**
Task 2	Procure Coffins	**42,345,000**
Task 3&4	Exhume and rebury the human remains	**90,200,000**
Task 5	Construct New Tombstones	**14,640,000**
Task 6	Conduct Funeral Ceremonies	**11,450,000**
	Sub- Total Budget	**MK160,635,000**
TOTAL PROGRAMME BUDGET		**MK183,715,000**

APPENDIX I: Detailed budget for the Management of the Physical Cultural Resources of the Diamphwe Dam Project Area

A. Budget for Management Measures of the Archaeological Sites and other Cultural Heritage Resources

Item	Quantity	Total Cost (MK
Task 1: Test-pitting		
A. Personnel		
Professional staff	3	650,000
Technical staff	4	500,000
Support staff	2	200,000
Sub-total		**1,350,000**
B. Supplies /Materials		
Excavation equipment		300,000
Supplies for Artefacts		200,000
Stationery		200,000
Sub-total		**700,000**
C. Transportation		
Fuel and Lubricants		400,000
Other Costs		
Honoraria for Chiefs		250,000
Allowance for Local assistance	10	150,000
Communication costs		100,000
Sub-total		**500,000**
Total		**2,950,000**
Task 2: Rescue Archaeology		
A. Personnel		
Professional staff	3	1,950,000
Technical staff	4	1,500,000
Support staff	2	600,000
Sub-total		**4,000,000**
B. Supplies /Materials		
Excavation equipment		200,000
Supplies for Artefacts		150,000
Stationery		100,000
Sub-total		**450,000**
C. Transportation		
Fuel and Lubricants		800,000
Vehicle maintenance		700,000
Sub-total		**1,500,000**
Other Costs		

Honoraria for Chiefs		250,000
Allowance for Local assistance		600,000
Communication costs		250,000
Sub-total		**1,100,000**
Total		**7,050,000**
Task 3: Analyze and curate the recovered archaeological materials		
A. Personnel		
Professional staff		1,365,000
Technical staff		1,050,000
Support staff		420,000
Sub-total		**4,835,000**
B. Supplies /Materials		
Supplies for Artefacts		150,000
Stationery		100,000
Sub-total		**250,000**
C. Transportation		
Fuel and Lubricants		800,000
Vehicle maintenance		700,000
Sub-total		**1,500,000**
Other Costs		
Communication costs		150,000
Total		**4,735,000**
Task 4: Monitor the Dam Construction Works		
A. Personnel		
Professional staff	2	3,600,000
Support staff	2	1,800,000
Sub-total		**5,400,000**
B. Transportation		
Fuel and Lubricants		1,000,000
D. Other Costs		
Communication costs		300,000
Sub-total		
Total		**6,700,000**
Task 5: Study in detail the cultural and historic sites		
A. Personnel		
Professional staff	3	455,000
Technical staff	4	350,000
Support staff	2	140,000
Sub-total		**945,000**
B. Supplies /Materials		

Stationery		100,000
C. Transportation		
Fuel and Lubricants		400,000
Other Costs		
Honoraria for Chiefs		100,000
Allowance for Local assistance		100,000
Communication costs		100,000
Sub-total		**300,000**
Total		**1,645,000**
Total Budget for Management Measures of the Archaeological and Cultural Heritage resources		**Mk 23,080,000**

B. Budget for Management Measures of Graveyards / Cemeteries

Item	Quantity	Total Cost (MK
Task 1: Plan and sensitize the local on the relocation of graveyards and recruitment of Grave-Diggers		
A. Personnel		
Professional staff	3	650,000
Technical staff	4	500,000
Support staff	2	200,000

Fuel and Lubricants		400,000
D. Other Costs		
Communication costs		100,000
Total		**2,000,000**
Task 2: Procure Coffins		
A. Supplies /Materials		
Coffins for 1-6 years old	200	6,000,000
Coffins for 7-12 years old	300	13,000,000
Coffins for 13- 100+ years old	501	22,545,000
Sub-total		**41,545,000**
B**. Transportation**		
Fuel and Lubricants		500,000
Vehicle hiring		300,000

Sub-total		**800,000**
Total		**42,345,000**
Task 3 and 4: Exhume and Rebury the human remains		
A. Personnel		
Professional staff	3	11,700,000
Technical staff	6	13,500,000
Support staff	2	3,200,000
Grave-Diggers	60	32,400,000
Police Security Officers	2	3,600,000
Healthy Officer	1	3,600,000
District Official	1	2,700,000
Sub-total		**71,100,000**
B. Supplies /Materials		
Mouth Masks		500,000
Gloves		400,000
Chlorine		800,000
Shovels and Hoes		600,000
Plastic Sheets		250,000
Mats		350,000
Overalls		550,000
White Cloth		800,000
Gumboots		650,000
Ropes		200,000
Scissors		100,000
Protective eye glasses		150,000
Wood cutting machines		800,000
Coffin Carriers / Stretchers		2,500,000
Food & Consumables for grave-diggers		5,500,000
Sub-total		**14,150,000**
C. Transportation		
Fuel and Lubricants		2,000,000
Vehicle maintenance		2,500,000
Sub-total		**4,500,000**
D. Other Costs		
Communication costs		450,000
Sub-total		
Total		**90,200,000**
Task 5: Construct New Tombstones		
A. Personnel		
Technical staff	2	600,000
Support staff	2	600,000
Brick layers	8	1,440,000

Sub-total		**2,640,000**
B. Supplies /Materials		
Construction materials (Bricks, Sand, Cement, Paint etc)		10,500,000

LILONGWE DISTRICT COUNCIL

REPORT FOR THE COMMUNITY CONSULTATION MEETINGS ON GRAVEYARD RELOCATION FOR DIAMPHWE DAM PROJECT

INTRODUCTION

The Task Force members conducted the consultative meetings with concerned traditional leaders and community members from TAs Kalumbu, Mazengera and Chadza from 11th to 18th January, 2016. The meetings were aimed at discussing with the community based stakeholders on the possibility of identifying new land where the graveyards to be affected would be relocated.

This report presents a synoptic account of the findings from the respective graveyard sites.

VERIFICATION OF GRAVEYARDS

Before undertaking the consultations the task force met to validate the locations of the various graveyards in terms of group village heads, village heads and traditional authorities.

The findings were as tabulated below:

No.	Name of Graveyard	Group village head	Village	Traditional Authority
1	Salimandinda	Chigwenje	Chilunje Nkhozomba Salimandinda Lukiyo Mwambo	Kalumbu
2	Kaphwereza	Mwachilolo	Kaphwereza	Kalumbu
3	Mbonongo	Mwachilolo	Mbonongo	Kalumbu
4	Mpasu Under-age	Mwachilolo	Mpasu Mlombwa Mphaleyidyani	Kalumbu

5	Mpasu Leprosy	Mwachilolo	Mwachilolo	Kalumbu
6	Kumkama	Chinzili	Kumkama Msodoka Chibowa Kamakhala Mtenthamawa	Mazengera
7	Mkute Leprosy	Kalumbi	Kalumbi Nankhombo	Kalumbu/Chadza

ACTIVITY PROGRAMM

The activities undertaken during the exercise were scheduled as outlined in the table below:

Day	Date	Graveyard/Activity
1	11th January, 2016	Verification of graveyards
2	12th January, 2016	Salimandinda Kaphwereza
3	13th January, 2016	Mbonongo Mpasu Under-age
4	14th January, 2016	Mpasu Leprosy Kumkama
5	15th January, 2016	Mkute Leprosy
6	18th January, 2016	Report Writing

PARTICIPANTS DURING THE CONSULTATIVE MEETINGS

A range of community stakeholders participated in the meetings. These included: group village heads, village heads, ward councilors, members of dam committees, *adzukulu, anamkungwis, akunjira*, project affected persons and interested community members.

The traditional authorities led the discussions in all the meetings. The rest of the task force members supported the discussions by responded to questions that were raised by the audience and providing clarifications where necessary.

Picture 1

Picture 2

Picture 3

Picture 4

Picture 1: Senior chief Kalumbu facilitating the community discussions for Mkute graveyard relocation at GVH Kalumbi headquarters

Pictures 2 and 3: Community leaders attending the meeting

Picture 4: Project affected person asking a question during the meeting

FINDINGS AND RESOLUTIONS BY SITE

Following the consultations made by the task force members with the traditional leaders and the concerned community members in the respective graveyard sites the findings and resolutions were as summarized in the table below:

No.	Name of Graveyard	Findings and Resolutions
1	Salimandinda	➢ The community was aware of the need for relocating the graveyard and accepted to relocate ➢ A new site was identified for relocating the graveyard on condition that all cultural procedures and norms should be followed in the process ➢ The land belongs to Tatiweji Kalilombe of Nkhozomba Village and Bryson Mthamanga of Mwambo Village. ➢ The land owners are expecting compensation
2	Kaphwereza	➢ The community was already aware of their relocation together with the graveyard site as the whole village is affected ➢ The whole village will relocate to their original village which is between Kapotu and Nyengere Village which is 1 km to the west of the current location. This is where they currently farm. Land for relocating the graveyard has been identified there ➢ The land owners are Mr Khungwa of Mwachilolo Village; Mr Mabwani, Mr Mphundi,, Mr Nelo and Mr Nankasa of Salimamakoza Village ➢ These land owners will need to be compensated
3	Mbonongo	➢ The community was aware of the relocation ➢ A new graveyard site has been identified ➢ The land belongs to Mr Abele Tamoni of Kumfera Village, Mrs Manganaye Zilaka of Mpasu I Village ➢ Compensation for these land owners is required
4	Mpasu Under-Age	➢ The community was already aware that the

		graveyard will be relocated ➢ New graveyard site was identified ➢ The owner of the land is Mr Madziada Kaluza of Mpasu II Village ➢ Compensation for the land owner will be
5	Mpasu Leprosy	➢ The community is aware and accepted the relocation of the graveyard ➢ Identification of a new site is yet to be done because it involves all the villages within Mwachilolo GVH ➢ Compensation will be required when the land is identified
6	Kumkama	➢ The community was already aware that the graveyard would be relocated ➢ New land to become the new graveyard site was identified ➢ The land belongs to Neckson Lameki of Kumkama Village, Chimaimba Sikoti and Noel Kubwalo of Msodoka Village ➢ The land owners will need to be compensated
7	Mkute Leprosy	➢ The traditional leaders and all community members were already aware that the graveyard would be relocated ➢ A piece of land (about one acre) was identified to be used as a new graveyard site ➢ It belongs to Mr Jossam Kachala of Mkute Village

CONCLUSION

In conclusion it should be mentioned that the exercise was a success as the task force managed to conduct discussions in all the graveyard sites. Commitment to securing new land for the relocation of the graveyards was secured. The cordial relationship and cooperation from all the stakeholders involved was commendable.

MINUTES FOR DIAMPHWE MULTIPURPOSE DAM PROJECT – FEED BACK MEETINGS ON RELOCATION OF GRAVEYARDS AND SOME VILLAGES IN DEDZA DISTRICT HELD FROM 11TH TO 14TH JANUARY, 2016

AGENDA	SUMMARY OF THE PRESENTATION	PLENARY/DISCUSSION	CONCLUSION/ RECOMMENDATION/ RESOLUTION
Opening Prayer	The meetings commenced with a word of prayer which was offered by one community member		
Introduction	DOA introduced the members to the communities in each session of the meetings.		
Opening Remarks	GVH Chiothera welcomed the participants during the first meeting, GVH Makoko did it on the second meeting, the third day, it was GVH Mbalika in the morning session and Kwendekeza in the afternoon session. On fourth day, GVH Chisela did the same. In all these days,		

	Senior Chief Kaphuka in a nut shell introduced the agenda of the meeting which was to do with the acquisition of land for the relocation of the affected graveyards which are in the project area. After the senior chief, the DOA in all the meetings took over and emphasized on the fact that the arrangement is to deal with one thing at a time. He therefore, requested the community members to ask questions only related to the subject at hand. Later, the DOA handed over to Mr. Siwinda who briefly faciltated the entire sessions.		
Minute 001 Recommended		As per the agreement by National Water Secretariat, Lilongwe	

<table>
<tr><td>members for the meeting</td><td></td><td colspan="3">and Dedza teams on the recommended members for the meeting, Mr. Siwinda firstly made sure if the following categories of people were available:-
1. Ward Councilor of the area
2. Group Village Headman
3. DAM Committee members
4. Village Development Committee
5. Dambwe Representatives
6. Concerned Villagers
7. Any influential people from the concerned villages
Note: It was pleasing note that almost all these groups of people were available in all the meetings.</td><td></td></tr>
<tr><td>Minute 002
Land for the relocation of the affected graveyards</td><td>In all the five GVH's (Chiothera, Makoko, Mbalika, Kwendekeza and Chisela) visited, most of them had already identified alternative sites for the relocation of the affected graveyards.</td><td colspan="3">During discussions, it was noted that some chiefs together with their community members sat down prior to the meeting to identify the proposed land for existing graveyard replacement. The names for land owners in the proposed sites were given and the sites were visited by the team.

VILLAGE | GVH | NAME OF LAND OWNER
Kawerenga; i. Kawerenga main graveyard ii. Bonya graveyard | Chiothera | i. Mr. Jandison and Emirida Liyoni (main graveyard) ii. Sketilina Fackson (Bonya graveyard, but will be annexed to the main graveyard)
Tsalakunja | Chiothera | Mr. Roman
Kangulu – Chakukhonde | Mbalila | Suzana Jereman and Majomeka Lesitala</td><td></td></tr>
</table>

		i. Ndingo main graveyard ii. Elders (Chiefs) graveyard iii. Infant (Senye) graveyard	Kwendekeza	Samison Chimbwandira and all graves to be annexed, but since there will be need to relocate entire Ndingo Village, the alternative site was not visited	
		Mnjondo	Chisela	Not yet identified	
Minute 003 General issues raised		**1.** There is only Kawerenga as a village and not Kawerenga 1,2 & 3 as previously shared by Department of Antiquities. **2.** Some people from Tsalakunja Village also use Kawerenga main Graveyard as such there are nine villages that use Kawerenga main graveyard and not eight as previously indicated. **3.** At GVH Makoko, there are three graveyards which are just adjacent to the project buffer zone and these will not be affected during the project implementation. The people at VH Kumtamba in GVH Makoko were sensitized about this and were encouraged to closely monitor construction exercise. **4.** Some people in the affected villages wanted to know if they should instantly stop burying their loved ones in the affected graveyards. **5.** When the Team visited Ndingo Village, GVH Kwendekeza, a member of Dam Project Committee and village subjects		**Resolution:** **On point 2:** Since some people from Tsalakunja were buried in Kawerenga main graveyard, the relocation exercise will not separate the dead bodies. However, the current Tsalakunja Village graveyard is to be relocated to a complete new site as it is a separate village

		brought to the attention of the Task Force Team that Mkhadzulu Graveyard which is situated right along the bank of Nsundudzi River between Ndingo and Mnjondo Graveyards is also earmarked for relocation but was missing on the list **6.** It was noted that the affected graveyard at Mnjondo Village in GVH Chisela belongs to a family of Chikololere. Selestino Chikololere with his wife and children reside close to it. Both the graveyard and Selestino's family are within the project area. When given an opportunity to speak, Selestino was of the view that the graveyard should be relocated to where he will resettle. He reported to have more relatives staying away from Dedza and suggested to consult them on the issue.VH Mnjondo and GVH Chisela thought of replacing the graveyard with the already existing main graveyard. Due to this, it appeared there were two contradicting views between the Selestino's family and the chiefs. **7.** At VH Ntanthira in GVH Chimamba, there are three Cemeteries (Miwunda) which are invisible (faded). One is right along Katete River Bank and the other two are along Diamphwi River Bank. All these Cemeteries were not captured by Department of Antiquities, hence not indicated on the list of affected graveyards in Dedza. **8.** Again, the entire area of GVH Chimamba though planned to be an island in Diamphwe Multipurpose Dam, the soil is too soft and subject to be water – logged. The question that is still unanswered is 'How will the people of Chimamba access services when they will be enclosed by the dam? This needs to be looked into seriously.	**On point 4:** People were advised to be still burying their loved ones in the affected graveyards until proper procedures are done. **On point 5:** The Task Force Team to visit Mkhadzulu Village Graveyard for feedback on alternative site. **On point 6:**Selestino was advised to invite all his relatives together with his village chiefs to discuss the issue and provide a prompt response within a week. Therefore, there will be need for new site

			verification by the Task Force Team **On points 7 & 8:** There is an urgent need for site visit and get feedback for alternative relocation of the cemeteries, and the Project to reconsider possible resettlement of GVH Chimamba and his surrounding villages since should such need arise in future, there will be scarcity of alternative land for reallocation unlike right now.
Minute 004 General observations & recommendations		**1.** The exercise revealed that some graveyards were missed and there is a need to verify the validate of this claim	**Task Force Team to come up with another immediate Work**

		2. The Team suggested having actual sizes (hectarage) for the proposed graveyard sites and not only the pictures. Therefore, it is vital to revisit the sites for mapping exercise with a GPS. **3.** The Team noted that the assessment exercise for compensation was done without involving District Council Staff as is always the norm. The worry is that if something goes wrong then the District Commissioner may not be in good position to respond to any issues that may arise.	**Plan to address all arising issues on the ground and forward it to Project Management for approval of implementation** **The Project Management to communicate urgently to all relevant stakeholders the next course of events and actions taking into consideration time factored by the dictates of project events and outcomes**
Minute 005 Pictures for proposed sites		Pictures were taken from all visited sites for reference as attached	
Closing Remarks	On his final remarks in all the meetings, the Director of Administration assured the affected communities not to		

	worry since the project has no detrimental effect to them. Furthermore, he made it clear that all legal procedures will be followed during the project implementation; He finally thanked all members for coming and attending to the proceedings of such vital meetings.		
Closing Prayer	The meetings ended with a word of prayer which was offered by one community member

1. EXECUTIVE SUMMARY

1.1. Introduction

Ministry of Agriculture, Irrigation and Water Development is intending to construct a multipurpose dam on lower part of Diamphwi River to supply water to Lilongwe City and support large agricultural development such as irrigation and fishing. SMEC international has been hired to assess potential impact of the whole project and prepare detailed Environmental Impact Assessment report. A health specialist was subcontracted to conduct the health impact assessment of the project.

1.2. Methods

The health team conducted the assessment. It included the review of relevant literature and policies, and field visits for direct observations and consultations with communities and relevant stakeholders.

1.3. Major findings and Conclusions

The communities in the area are very happy to welcome the dam project. The communities realise that despite having their major challenges being relocation and loss of land, the project can bring numerous benefits that can help to uplift their health. The potential benefits include safe water supply, irrigation farming for both food and commercial, source of market to produce for the locals, fishing, employment, roads leading to improved access to health services and improved health services. The potential health challenges include poor sanitation, household food insecurity, insecurity, increased disease transmission (malaria, HIV/AIDS, sexually transmitted infections, schistosomiasis), teenage pregnancies, poor access to safe drinking water and health services. In conclusion, the Diampwi multipurpose dam project is a welcome development in the area and this report has outlined several potential benefits and challenges. To ensure that the project achieves its full potential with minimal negative health impacts, we recommend that the planning team should involve key stakeholders such as health, agriculture, education, internal affairs and community development and relevant NGOs operating in project area throughout the project cycle.

TA – Traditional Authority

3. INTRODUCTION

The lower Diamphwi Multipurpose Dam Project is proposed to supply water to Lilongwe city and the surrounding areas until the year 2035, and support large agricultural developments including irrigation and fish farming.

The Ministry of Agriculture Irrigation and Water Development commissioned SMEC International to assess potential impacts arising from the dam and associated structures, and to prepare a detailed Environmental Impact Assessment (ESIA) Report, an Environmental and social management plan(ESMP) and a Resettlement Action(RAP).

SMEC subcontracted a Health Specialist with an assistant specialist to conduct the Health Impact Assessment in the proposed dam site which lies in between Dedza and Lilongwe Districts covering traditional Authorities (TAs) Mazengera, Kalumbu and Chadza in Lilongwe and TA Kaphuka in Dedza.

Consultations were made with various stakeholders in the dam proposed area including health facility staff, Non- Governmental organisations working in the area and District Health Offices. The aim of the study was to get different view but different stakeholders on the health impacts of the proposed project to the Diamphwi River as well as to surrounding communities. The report therefore highlights the key findings of the study and recommendations made to mitigate the negative impacts that the project may bring.

4. SCOPE OF WORK AND PURPOSE OF THE PROJECT

1. Become familiar with the Project and its impact on the Diamphwi River.

2. Collate, review and document all relevant information and data related to Health within the study area. This includes consultations with stakeholders including local villagers and relevant government and other organisations.

3. Gauge community representatives' views on public health issues and proposed public health objectives for the Project.

4. Gauge community representatives' views on local community health services and access needs.

5. Gauge community representatives' views on the same health issues posed to individuals in the population survey.

6. Gather health and health resources information on health issues facing affected communities, current health resources and health care access for those communities from local and district health care workers in the health care sector.

5. LEGAL AND POLICY FRAMEWORK

The health assessment was guided by a number of policies that are related to water resources management, occupation health, public health, environment and other important legislation for carrying out water development projects. The following are some of the guiding policies by the study:

5.1. Environment Management Act (1996)

The Environment Management Act (EMA) is the principal national environmental legislation that provides the administrative framework for environmental management. Section 24 of the EMA requires that the Minister, on recommendation from the National Council for the Environment, publishes a prescribed list of projects, which shall not be implemented unless an ESIA is carried out. In addition, the Act outlines provisions that guide protection of natural resources including water, and pollution control.

The proposed new multi-purpose dam, water treatment plant, pumping station and water pipeline project shall comply with the requirements of the Act.

5.2. Occupational Health and Welfare Act, 1997

The Act regulates the requirements for adequate environmental health and safety measures within workplaces. Employees are prone to accidents and chemical and biological hazards including disease epidemics. Special precautions will therefore be recommended to the contractor to have a safety policy and provide meaningful occupational health safety to all employees and the general public.

5.3. Water Resources Act (2013)

The Act prohibits interference with the flow or pollution of water within the watershed, stream and reservoirs; and provides legal and administrative framework for the protection of water resources from pollution, degradation and depletion. It will be the responsibility of the people managing the dam to reinforce the compliance to this act.

5.4. National Water Policy (2005)

The overall policy goal is sustainable management and utilization of water resources, in order to provide water of acceptable quality in sufficient quantities. It aims to ensure efficient and effective provision of potable water and sanitation that meets the basic needs of every Malawian. It is expected that the project will not only supply safe water to Lilongwe city but also to the communities surrounding the dam.

6. METHODOLOGY

The main methods used in this study include the review of documents, observations and consultations with communities, project committee members, health workers and other stakeholders in the project area.

6.1. Literature review

The team reviewed background documents regarding the Diamphwi dam project and so which were reviewed to get a better understanding**.** The documents reviewed include the maps of the dam site, Environmental and Social Impact Assessment and resettlement action plan for Diamphwi multipurpose dam, Malawi National water policy, Cultural Heritage Impact Assessment among the documents**.**

6.2. Field visits

6.2.1. Direct observations

The team visited the proposed site of the dam construction to assess possible the impacts of the project on Diamphwi River and how the constructed barrier and reservoirs can bring positive and negative health impacts on the surrounding villages.

Part of dam site where a reservoir is proposed to be constructed

6.2.2. Public consultations

In order to have a comprehensive health impact assessment of the project in the area, the Health specialist and the assistant visited the proposed dam site, selected number of communities, health facilities, project committees, District Government Health offices and Nongovernmental Organizations (NGOs) operating in the project area both in Dedza and Lilongwe districts. In all the community visits, the local project committee members organized the meetings and accompanied the team to different places for consultation meetings. Selected communities and Health facilities were informed by the project committees prior to the visits.

The following consultations were made:

6.2.2.1. Community consultations

Community consultations were made to understand community views on the current health situation and the impact of the proposed project on their health. The communities that were consulted included those from Chinkhuti, Kaphwereza and Kumkama villages in Lilongwe and Chidothi, Njiwa and Kamgong'o villages in Dedza. The groups comprised of chiefs, men, women and the youth. This was done in order to understand how different age group viewed the impact of the project on their health. Communities that were consulted were from villages that are earmarked for relocation and those who will not be relocated.

Kunkama community meeting

Kangong''o community meeting

6.2.2.2. Health facilities

The primary target for interview was the health facility in charges in each facility but in some facilities, their representatives were interviewed and at one facility a team of health workers were interviewed. Four health centres are operating in the project area, two in each district and all were visited. These health facilities are Mdeza and Chitowo health centres in Dedza and Diamphwi and Kamphata health centres in Lilongwe. The health workers were interviewed in order to understand the current disease patterns, services being offered, the challenges they are facing, how they think the project will impact the health services delivery and what can be considered in order for the services to respond to the perceived additional needs to be brought by the project implementation. In addition to the interviews, the team reviewed the available service data in order to verify what the communities and health workers said were the main diseases affecting the project area.

Meetibg with Felix Sandikonda at Chitowo Health centre	*Meeting with Health centre team at Diamphwi Health centre*

6.2.2.3. Project committees

The project committees in both Lilongwe and Dedza districts were interviewed to understand their views on how the project is going to affect them and the communities. The committees comprised of chiefs and other community members. The committee members are community leads for all the activities taking place in preparation for the project inception. Both committees were well represented by eight out of ten members during the consultations.

Meeting with project committee of Dedza side	*Meeting with project committee of Lilongwe side*

6.2.2.4. Government representatives

The district environmental health officers for both Lilongwe and Dedza districts were interviewed. The aim was to get an understanding on the current diseases and health problems affecting the area and how the project will affect health service delivery, the anticipated positive and negative health impact be brought by project implementation and to recommend on how best the project can be planned and implemented with minimal negative health impacts.

6.2.2.5. Non-Governmental organization leaders

The NGO leaders were consulted to understand the activities they are implementing in the area and how this is related to the health of the communities, what will be the positive and negative impacts of the project. The NGOs that were visited included, NASFAM, feed the children, CARE, NKhoma Mission, Concern Universal and Kasina Health Centre (Community development department).

7. RESULTS

The results of this assessment have been presented as per the objectives of the assignment.

7.1. The Project and its impact on the Diamphwi River

The team observed that if the project is completed it may have huge impact on the river itself and the surrounding villages. These may include overflowing on upper side, soil erosion leading to extension of the river banks and reduced flow on the lower side. If not checked, it will bring negative health impacts on the surrounding villages. For example, the overflowing of the river will result into flooding into the villages leading displacement of households, sanitary facilities, and poor access to health facilities and contamination of water sources due to flooded toilets. The over flooding can lead to increase of mosquito breeding sites which can cause increase in malaria. Where the reservoir is expected to be constructed, the flow of the river will be controlled and hence more water will be flowing back from where the river is coming from. Therefore, it is expected the river shall be swelling and flooding during the rainy season shall be frequent. The flow of the river downstream will be reduced by the reservoir. Due to this, communities living downstream will have their livelihood affected in terms of food production as well as income leading to nutrition problems.

7.2. Community views on public health issues and proposed public health objectives for the Project.

Through the community consultations with the village members, women chiefs, project committees, the following issues came out as public health negative and positive impacts of the project on those relocated and those remaining.

7.3. Community views on public health issues for those to be relocated

Positive impacts	**Negative impacts**
Some families do not have adequate land for cultivation and may have a chance of getting more land hence improved nutrition status for their families	**Psychological problems** coming in because of moving out of their original homes of their ancestors which will mean losing their belongings and starting anew life.
	Integration problems - They may meet different cultures that will make them not fit

	into such cultures hence psychological problems such as chiefs losing their positions. Such psychological torture might result into conflicts and injuries due to misunderstandings. Some families may integrate within the same communities and scramble for little land and other resources hence diseases due to poor sanitation, congestion, inadequate water supplies and other communicable diseases.
	Weather challenges – where they may be located can be a place which has different weather than what they are used to, this may affect their health well-being and some may die from diseases due to change of weather
	Insecurity problems – community members have the feeling that the reallocated families shall be given compensation in form of money, they feel like they will not be safe to have such amounts of money that will put their lives in danger due to thieves and some may engage themselves into promiscuity that may result in disease transmission
	Infrastructure problems -vulnerable families (elderly, child headed families, widows, physically challenged) shall lose their houses and will not be in a position to construct their own houses in the new sites. This may contribute to open deaf action of such households as they will have no toilets hence transmission of diseases. This may also go hand in hand with weather changes because of lack of proper housing; they may end up getting diseases

	Lack of social amenities – the families may be relocated to places where there are no health centres nearby that may result into no access to health services. Some rely on selling their farm products to get money for food and other basic needs, of which markets may not be readily available in the new settlement leading to malnutrition.
	Poor access to resources - Currently some communities have safe water within their communities, relocation may result into poor access to safe water and hence waterborne diseases may affect them. They also have access to land for cultivation, where they may go, land may not be adequate for food production and therefore, household food insecurity may bring malnutrition problems
	Loss of livestock – some families may not be able to carry their livestock to new site and hence compromise their health status especially nutrition and malnutrition may result

7.4. Community views on public health issues for those remaining communities

Positive impacts	**Negative impacts**
Employment opportunities – the project will create job opportunities for the locals through construction work and other services.	**Increase in disease transmission –** the following diseases are expected: - **HIV /AIDS Sexually Transmitted Infections –** due to integration of people from all walks of life coming to work for the project and different business activities taking place in the area

	- **Malaria and Schistosomiasis –** The Dam may provide breeding sites for these diseases
Fishing – the communities are expecting to engage themselves in fishing activities as a source of livelihood for their families as well as improve their nutrition.	**Compromise of sanitation –**many people will flock to the area for fishing and other business opportunities without having proper housing and latrines, hence open defecation will be promoted
Businesses – business opportunities will increase because of people coming to work in the dam project and the locals will be able to sell their farm products. The project will also bring electricity to the surrounding communities and hence improve the small businesses for the locals	**Increase in early marriages and early pregnancies –**the area already has a problem of early marriages and early pregnancies due to high illiteracy levels. The coming in of the dam, many teenagers may indulge in promiscuity that may accelerate the problem.
Safe water – the locals are expecting to have access to the piped safe water supply	**Pressure on health facilities-** facilities in the area are already experiencing shortage of staff, drugs and space for different services. The project will bring more people, more health problems such as accidents hence pressure on the facilities
Reduction of disease such as diarrhea – access to safe drinking water will assist in reducing the diarrhea diseases that are currently affecting the communities	**Accidents or injuries - th**e project will contribute to increase in road accidents due to more vehicles moving around the community, those digging the trench, dam construction and drowning.
Infrastructure improvement – the project will assist in construction of better roads and bridges that will improve access to health services	**Marriage breakups –** integration of people from different cultures working on the dam or doing business in the community shall bring money to the community. This may result in women getting attracted to men and hence marriage breakups.

7.5. Community proposed public health objectives

The community proposed that project activities should include the following public health objectives:

- Sensitization of communities in the project on hygiene promotion and prevention of diseases such as HIV/AIDS, sexually transmitted diseases (STIs), malaria, diarrhea, schistosomiasis, and others.
- School programmes that will encourage girls in the area to stay in school, delay marriage and avoid teenage pregnancies.
- Provision of social amenities (schools, health facilities, markets, churches) and psychological support to the relocated families.
- Provision of enough land to the relocated people for cultivation and construction of better sanitary facilities and better housing.
- Enhance the collaboration and coordination between government and NGOs in the provision of health services in the area.
- Improve access to the available health facilities (upgrade Diamphwi health centre to rural hospital, ensure uninterrupted supply of drugs, equipment and availability of health workers in the surrounding health centres). Currently access to the health facilities in the area is hindered by poor road networks, lack of drugs and inadequate number of health workers.
- Improve road network for better access to health services by community members
- Improve community outreach activities
- Economic empowerment to vulnerable groups like widows, elderly and child headed households

7.6. Community views on local community health services and access needs.

Views on health services	Views on access needs
All the four health facilities have challenges of drugs, space, equipment and staff. Therefore making it difficult for the communities to get the right services they need	Most villages around the proposed dam area are far from nearest health facilities of Chitowo and Mdeza health centres in Dedza and Diamphwi and Kamphata health centres in Lilongwe District
Chitowo and Mdeza Health centres in Dedza do not have electricity and	Village clinics are in most villages but the Health Surveillance Assistants do not have drugs and

hence making it difficult to offer some services especially at night	other supplies to provide to the communities and are not available in some villages.
Inadequate and old infrastructure making them not able to cope with emerging health issues in the area	The Diamphwi river has no bridge for people in some villages to cross to Chitowo Health and Diamphwi centres. The poor road network is also a challenge to access health services
Most outreach clinics do not take place due to transport problems and inadequate Health Surveillance Assistants in the communities to provide health promotion activities such as water chlorination and sanitation promotion(water chlorination usually done in rain season only despite of water challenges in other periods of the year)	All the four health centres do not have ambulances for referral, hence patients with complications find it difficult to get to either Nkhoma hospital, Dedza and Lilongwe District hospital
	Most communities have poor access to safe drinking water and sanitation facilities

7.7. Summary of results from other stakeholders

The team had consultations with other stakeholders apart from the community and health facilities. Major programs being implemented by these organizations include nutrition, food production and safe motherhood. The following were some of the key issues raised by them**:**

7.7.1. Key assumptions and recommendations from stakeholders

- The dam should indeed be multipurpose as opposed to the other dams in Malawi such as Mpira dam in Ntcheu and Malengunde dam in Lilongwe in which their main purposes is to supply safe drinking water to Ntcheu town and Lilongwe city respectively without benefitting the locals. "*In malengunde dam in Lilongwe, communities use water from rivers, boreholes and directly from the dam itself, they have no piped water but have a dam which supply piped water in Lilongwe city".* Government should ensure that the dam benefits the local communities by supplying them with safe drinking water, fishing, irrigation and tourism. This will ensure local ownership and avoiding sabotage. One stakeholder shared the

experience with this type of work, "*you know, sometimes Ntcheu town stays for over a week without drinking water, if you try to find out why, you find that local communities have broken the pipes and use the water for irrigation purposes and sometimes communities cut pipes because they don't benefit from the dam".*

- When constructing the dam, the company constructing it should prioritize hiring of the locals and government can plan premiership courses such as brick-laying and others relevant to the dam work.
- Cooperate social responsibility should be taken into consideration such as the provision of better education and supply of safe drinking water to the local communities.
- Consideration of climate change issues such as planting trees in the river banks and environmental preservation to prevent water pollution and dam siltation of the dam
- Introduction of regular water quality monitoring systems
- There will be increase in disease burden hence pressure on already stretched health facilities

7.8. Community representatives' views on the same health issues posed to individuals in the population survey.

To get findings from the household survey report

8. HEALTH AND HEALTH RESOURCES ON HEALTH ISSUES FACING AFFECTED COMMUNITIES

8.1. Health Issues

The common health problems that the communities and stakeholders highlighted to be affecting the project area include communicable diseases (malaria, Diarrhea, Acute Respiratory infection, HIV/AIDS, Sexually Transmitted Infections, malnutrition, schistosomiasis), early marriages and teenage pregnancies, high population, poor supply of safe water and poor access to health services due to poor road networks and health centres have no stationed ambulances.

8.2. Health resources

8.2.1. Facility based resources

In the project area, communities receive health services from Chitowo, Mdeza and Kasina Health centres in Dedza and Diamphwi and Kamphata in Lilongwe. Patients with severe illnesses and complications are referred to Dedza district Hospital, Bwaila Hospital and Nkhoma Hospitals. All health facilities offer treatment for common diseases, HIV/AIDS counseling and treatment, family planning services, under five clinic services, antenatal, maternity, tuberculosis, psychiatry, nutrition rehabilitation and treatment of sexually transmitted diseases. The major access problems in the project area include poor road network, lack of transport to refer patients (on ambulances in the health facilities, lack of drugs and inadequate personnel.

8.2.2. Community based resources

The community health services that are offered in the project area are targeted on dealing with poverty, under nutrition, safe water provision, family planning and providing access to health services to under-five children. These services are offered by CARE (village savings loans), NASFAM (food production), and Kasina Health centre (food production and nutrition education), feed the children (nutrition) and Nkhoma Hospital. HSAs support communities to deal with problems of poor sanitation, poor access to health services, and poor access to safe drinking water and malaria by conducting health promotion on sanitation and hygiene,

outreach clinics, water chlorination, health education on common diseases and distribution of mosquito nets.

9. RECOMMENDATIONS AND MITIGATION MEASURES

	Key health impact	Mitigation measures
1.	The relocated communities may suffer from psychological health effects due to change of weather, loss of original homes, identity, power and other related resources	1. The project should consider sensitizing communities on the relocation plan and how their health needs will be met 2. The relocation plan should consider relocating the communities in areas with similar weather, culture and should consider retaining the chieftaincy of the relocated chiefs. 3. The project should consider including plans for programs that will provide psycho-social support to the affected households both in the relocated and remaining communities.
2.	Lack of proper housing and sanitary facilities for those relocated, remaining and the employees of the dam due vulnerability or land scarcity	1. The relocation plan should include the provision of enough land housing, cultivation as well construction of sanitary facilities. 2. The dam construction company should ensure that sanitary facilities are available in construction sites, camps and communities. 3. The project execution plan should include the intensification of hygiene promotion activities in the whole project area 4. The project execution plan should include the construction of houses and sanitary facilities for vulnerable populations such as families headed by the elderly, children, widows and physically challenged.

3.	Increase in communicable diseases (malaria, diarrhea, schistosomiasis, ARI),	1. Health facilities should intensify disease surveillance and monitoring of cases from the community 2. The project should consider conducting a detailed baseline survey for common communicable and non-communicable diseases in the project area 3. HSAs and NGOs in the area should consider intensifying health promotion activities in the community 4. Involve health facility staff in health promotion activities to workers at the dam site 5. The project should include programmes to prevent the common diseases such as Malaria through the provision of long lasting nets, spraying the households and mass treatment of schistosomias
4	Increased pressure on already under-resourced health services	1. Consider provision of extra support to health facilities and upgrading some of them 2. Involve health facility staff to provide outreach services to the workers at the dam 3. The company constructing the dam should plan to have a strong occupation health programme and government should consider renovating and equipping an accident and emergency room at Diamphwi health centre.
5	Increased sexually transmitted infections including HIV/AIDS, early marriages and teenage pregnancies	1. The project planning team should consider including sensitization activities of surrounding communities

		and dam site workers on disease prevention
6	Poor access to safe drinking water	1. Consider supplying piped safe water to the locals, health facilities in the area
7	Overflowing on upper side, soil erosion leading to extension of the river banks and reduced flow on the lower side.	1. Promote use of conservation measure for the environment and train action teams for preservation of the environment
8	Increased accidents at the construction site and the pipeline to Lilongwe including bursting of the dam	1. Health workers on the site to be trained in First Aid 2. Health facilities should be provided with medical supplies 3. The project implementers should ensure that the dam is built to the required standards to avoid future accidents.
9	Population increase in the dam area	1. Government should consider planning a village town that will have market, area for churches/ mosques, business area and residential area This will help those not willing to relocate to buy land and they can cause less trouble and also accommodate those coming to conduct business in the area. 2. The project should consider strengthening family planning activities in the area.

10. CONCLUSIONS

The health impact assessment has revealed several benefits of the proposed dam project on Diamphwi River. It has the potential of improving the health of a large population in both Lilongwe City and the surrounding communities both in Dedza and Lilongwe districts if the dam becomes really multipurpose. The direct positive impact will include reduction of waterborne diseases such as diarrhea both in Lilongwe City and the local communities if communities are provided with piped water. It has the potential to improve the nutrition status improve if irrigation farming and nutrition education programs are integrated in the project implementation. However, the project can have several negative health impacts such as early marriages and teenage pregnancies, sexually transmitted diseases, HIV/AIDS, malaria, schistosomiasis etc. Flooding from overflowing river in the upper part of the river can result in several health consequences. Involving key stakeholders such as health, agriculture, education, internal affairs and community development and relevant NGOs operating in project area throughout the project cycle will help the project to achieve its full potential while minimizing the negative health impacts described in this report.

Att: Mrs. P Kutengule (Safe Guard Specialist)

Dear Sir,

COMPENSATION ASSESSMENT OF LAND, BUILDINGS, FRUIT, INDIGENOUS AND EXOTIC TREES AT A PROPOSED SITE FOR CONSTRUCTION OF A MULT-PURPOESE DAM ALONG DIAMPHWE RIVER IN LILONGWE AND DEDZA DISTRICTS.

Instruction

In accordance with your request and instruction given to us to verify and assess compensation values payable to beneficiaries affected by the proposed construction of Diamphwe multi-purpose Dam on Diamphwe River in Lilongwe and Dedza Districts. I write to confirm that we have had an opportunity of verifying, analyzing and assessing assets in the project affected area provided to us by the consultant SMEC and we had also made enquiries and obtained such further information that we deemed necessary to derive the opinion as to the current values of buildings, land and trees for compensation purposes.

We now certify that having considered all relevant factors regarding the current market values of land, exotic, indigenous and fruit trees in these

areas and based on our knowledge of the market we are of the opinion that the total preliminary compensation values for land, buildings, exotic, indigenous and fruit trees as at 20th March 2016 is in the sum of **K11,588,279,591.34 (ELEVEN BILLION, FIVE HUNDRED EIGHTY EIGHT MILLION TWO HUNDRED SEVENTY NINE THOUSAND, FIVE HUNDRED AND NINETY ONE KWACHA THIRTY FOUR TAMBALA)**

Purpose of Valuation

This valuation is for compensation purpose of buildings, land and trees in an area proposed for the construction of a multi-purpose dam along Diamphwe River starting from Mbalame Village Group Village Headman Makoko, Traditional Authority Kaphuka to Kakhosi village, Group Village headman Chamangwana, Traditional Authority Chilikumwendo in Dedza District and MtsilizikaVillage, Group village Headman Chidziri Traditional Authority Mazengela to Nyamazani village Group village Headman Nyamazani Traditional Authority Chadza in Lilongwe District.

Property Tenure Status

According to records which are kept at Lilongwe Land Registry at Tikwere House floor No. Six indicates that the land in question is customary in nature on Dedza side and customary freehold on the Lilongwe side.

Land/Plot Extent

According to the preliminary survey carried out by members of staff from

The Regional Surveyor General Centre and of the consultant the area to be appropriated extends to approximately 2,486 hectares.

Property Ownership

The subject property is owned by different individual from surrounding villages and it is being used for cultivation of crops and animal grazing fields.

Basis of Valuation

The basis used for this valuation is market value, which is defined as

"The estimated amount for which an asset or liability should exchange on the valuation date between a willing buyer and a willing seller in an arm's-length transaction after proper marketing wherein the parties had each acted knowledgeably, prudently and without compulsion" (RICS Valuation Standards-Global & UK, 2011).

Special Assumptions

As the project affected people will not be given alternative land for loss of land as the case is with most customary arrangement, compensation assessment has considered the provision of the Malawi National Land policy of 2002 (4:16) and World Bank's Safeguard Policy OP 4:12. Based on these provisions, this customary land has been valued on market value basis.

Extent of Investigations

Information from Lilongwe and Dedza District Councils has been relied upon to a great extent especially on forest and fruit trees. In some cases some information was obtained from Chitedze Research Station in Lilongwe and some from the markets on the assessment of fruit trees and indigenous trees. Property market research was conducted in the Districts especially along the stretch of the land to be resumed to ascertain prevailing land values and cost of materials which may form compensation values as attached. The survey which was conducted identified ownership of land parcels and subsequently buildings and trees. The areas of land parcels established by the surveyors have been used to arrive at compensation payable for land taken.

- For the purpose of this report, we have accept and relied upon the information with which we have been supplied on the assumption that it is both accurate and complete.
-

Statement of Approach

There are several principles that have governed this assessment for compensation of the properties along this stretch:

Section 29(1&2) of the Constitution of Malawi says "every person shall be able to acquire property." and that having acquired that property "no person shall be arbitrarily deprived of such property

Section 28 of the Land act (Cap 57:01) provides that any person who suffers any disturbance of, or loss or damage to any interest which he had shall be compensated for such disturbance, loss or damage as is reasonable.

The land Acquisition Act (Cap. 58:04) Section 9 & 10, this Act Provides for the procedures to be followed to assess fair compensation. However, the stipulations in this Act can be superseded by what can be agreed between the parties See Section 10(1).

Chap.4:16 of the Malawi Land Policy (2000) provides for payment of compensation for Customary Land based on open market value (In the meantime, Malawian Laws do not provide for assessment for injurious affection and severance though these heads of claims have been proposed by Special Law commission).

The World Bank's Safeguard Policy OP 4:12 applies to all project-affected people regardless of the number of people affected, the severity of impact and the legality of land holding. It calls for particular attention to the needs of the vulnerable groups especially those below poverty line, the landless, the elderly, women and children, indigenous groups, ethnic minorities and other disadvantaged persons.

Land Particulars

The description of the land falls Traditional authorities Kaphuka and Chilikumwendo in Dedza District, Kalumbu, Mazengela, and Chadza in Lilongwe. The land stretches from Mbalame Village Group Village Head man Makoko Traditional Authority Kaphuka to Kakhosi village, Group

Village headman Chamangwana, Traditional Authority Chilikumwendo in Dedza District and MtsilizikaVillage, Group Village Headman Chidziri Traditional Authority Madzengela to Nyamazani village Group village Headman Nyamazani Traditional Authority Chadza in Lilongwe District Lilongwe.

The Terrain of the area

The land to be expropriated is generally of varied terrain-but mostly hilly and sloppy with few strips of flat land. The land is currently used for agricultural purposes and is currently under customary Law in Dedza District and customary freehold on Lilongwe side. Some of the crops which are being cultivated in the area include maize, groundnuts, beans, soya and tobacco among others. Almost around every home stead, there are trees, such as natural and planted, fruit trees and shrubs almost around the area. It is not uncommon to find these trees in the gardens. Fruit trees such as mangoes are for commercial purposes. The people in this area also rear livestock like cattle, goat and pigs.

Locality and the Surrounding Areas

Expectedly, the area being rural in nature is served by gravel roads. The main road is that of Lilongwe-Blantyre M1 road. This road connects Lilongwe –Dedza-Ntcheu and Blantyre.

Improvements on the land to be appropriated consists shops in some areas, houses some built with common burnt bricks covered with corrugated iron sheets, sundried brick built and others with mud and wattle. The survey also revealed that most of the homestead has other out buildings such kitchens and other structures.

The area has a thriving commercial centre-Bisayi which provides the area with groceries and some daily necessities.

Soil Texture

Though a scientific research has not been carried out but information gathered from the locals indicate that the soil is very fertile therefore making it ideal for agricultural activities and produce good yield of crops such as maize.

Purpose of the proposed Acquisition

The land is being required for the construction of proposed multi-purpose dam. The primary usage of this multi-purpose dam is to increase the water supply capacity for the ever growing population of Lilongwe City and surrounding areas. It will also provide an opportunity for irrigation farming and tourism.

Basis of compensation

Based on the provisions of The Malawi National Land policy (2002) Chap. 4:16 The World Bank's Safeguard Policy OP 4.12 and Land Act Cap. 57:01, Section 28; Land Acquisition Act (CAP. 58:04 the project – affected people will be compensated for:

(i) land taken regardless of the "legality of landholding"
(ii) Loss of livelihood by compensating for fruit, exotic and indigenous trees that maybe destroyed.
(iii) Loss of buildings
(iv) Loss of business

Market Value assessment

In assessing the market value of the land and buildings to be taken, the valuer considered that the value of land and buildings to be taken is the amount which the land and buildings could acquire if sold in an open market by a willing seller might be expected to realize, according to the rules of land and buildings compensation. Further to that, that no allowance was made on account of land and buildings being acquired compulsorily. Neither was the special suitability or adaptability of the land for any purpose taken into account if that purpose could be a purpose to which it could be applied only in pursuance of the statutory powers.

Disturbance

The fundamental principle in compulsory acquisition compensation is the amount so far as money can do so, to put the owner in the same position as if his property has not been acquired. Therefore, compensating the owner at the market value for the property taken from him goes only part of the way to attain this end. So, in addition, monetary compensation has to be payable to reimburse the claimant for 'disturbance' or any other matter not directly based on the value of the property.

Disturbance compensation is a sum added to the purchase price of the property compulsorily acquired. It is not payable in respect of the property retained by the claimant. First there is an acquisition price and, if there is such a price disturbance compensation can be included in it.

From elsewhere, the Milledge principle based on Commonwealth v Milledge (1953), better explains the notion of disturbance. In part it says:

"Disturbance, is relevant only to the assessment of the difference between, on the one hand, the value of the property to a hypothetical purchaser the kind of use to which the owner was putting it at date of resumption, and on the other hand, the value of the property to the actual owner himself for the precise use to which he was putting it at that date.'

It is therefore, noteworthy that compensation for the affected properties taken plus disturbance will not always fulfill the requirements of the principle expressed above. There is an idea of severance and injurious affection which has not been included in this assessment as the current law does not stipulate its use.

The disturbance allowance to be added to the project Affected people related to:

- Cost related to identification of replacement land
- Cost of transportation of salvaged items
- Loss of business(This will include revenue lost during transitional period from the time of demolition to relocation)

Considering the above information it is envisaged that the disturbance claims are reasonably foreseeable and a natural consequence of the acquisition.

Having considered the above information, 30% has been added to values as disturbance compensation relating to transportation of salvaged materials, identification of alternative land and loss of business.

Valuation approach

Methodology

The appropriate approach in determining the amount of compensation is always a question of an act. The most accurate and appropriate methods of valuation for land, trees and improvements on the land acquired are comparison and Contractor's Method.

Direct Comparison Method

This method compares the subject property with the prices obtained for other similar properties almost at the same point in time. That said, however, being a rural area where transactions are not normally registered, the valuer relied on information given by people in the area itself besides having consultation with some other business people close to the area. The valuer, having considered the information obtained and as prevailing in some areas where similar assessments have been done recently like the upgrading of Lilongwe-Kasiya Spur road from gravel to tarmac road, where The Ministry of Transport and Infrastructure Development is upgrading the road, has regarded it as satisfactory to base a decision on.

Comparison method is the most preferred method in the industry and is favored. Direct comparison is seen as the most preferred method as it can be compared against recent transactions which provide the most accurate representation of market trends and is described as 'the conventional valuation technique'

Contractor's Method

For the improvements lost as sales are rare if not non-existent in this area, the contractor's Method was relied upon. This method, alternatively known as the Cost Approach or Depreciated Replacement Cost (DRC), is used for properties for which there is no market or for which there is insufficient direct comparable market evidence. This method analyses the of constructions on replacement basis.

In this approach, the costs of building materials, labour, transportation and any other expenses incurred during construction is analysed. Straight line depreciation is used to bring the cost of structure whose materials, labor and transportation is calculated hypothetically to current position and thus arrived at the compensation rate payable (refer to the Market research results attached).

Tree Assessment

Unlike the assessment of land, the tree assessment was based on Malawi Government Gazette of 2010. This provides different approaches for assessment of trees for both commercial and domestic purposes.

In view of this report which is the subject, assessment for commercial purposes has been considered to be more reasonable. An adjustment of 100% has been made to rate provided by the Forestry department to cater for the prevailing market trends.

Fruit Tree Assessment

In terms of the assessment of fruit trees a consideration was made to use the average yield/tree/year, average current market price and expected productive life span. Fruit Compensation schedule attached and number of each claimant's fruit trees, the assessors obtained the compensation payable to each fruit tree owner basing on the current market.

Considering the productive life only, the establishment cost was calculated by averaging the cost of a tree with the duration and longest duration to production.

In calculating the yield per fruit tree and average prices, the assessor disregarded the size of the trees as is the case with forest tree above.

Statement of Compensation

Subject to stipulations and assumptions contained in this report and a thorough examination of property market information available to us and from our knowledge we certify that preliminary compensation assessment value for the acquisition of the land, building and trees is in the sum of **K11,588,279,591.34 (ELEVEN BILLION, FIVE HUNDRED EIGHTY EIGHT MILLION TWO HUNDRED SEVENTY NINE THOUSAND, FIVE HUNDRED AND NINETY ONE KWACHA THIRTY FOUR TAMBALA)**

Disclosure

In accordance to our normal practice, the report is for the stated purpose and for the sole use of the client. It is confidential to the client and the client's professional advisors. The Surveyor accepts responsibility to the client alone, that the report is prepared with skill, care and diligence reasonably to be expected of a competent Valuation Surveyor ,but accepts no responsibility whatsoever to any parties other than the client. Therefore neither the whole nor any part of this report or references thereto should be included in any published document, circular or statement ,nor published in any way without prior written approval

from the Surveyor. Any such parties who may rely on this report for any other purpose rather than the intended purpose may do so at their own risk.

Validation of the Valuation

The above compensation value is based on the information and data provided to us by the consulting firm SMEC International and may be regarded as valid for a period of six month from the date hereof unless there is a substantial material change in the circumstances.

Recommendation

It is recommended that payment of compensation money be done before the project commences.

Payment should be done at once, and if possible everyone should be paid at the same time.

After payment, the beneficiaries should be given time limit to salvage their belongings if any and an agreement should be made with the village headmen and other stakeholders on the commencement of the project.

R. Sikoti,
For/The Regional Commissioner for Lands ©
Dated 20th March, 2016

APPENDIX A: MARKET RESEARCH RESULTS

MARKET RESEARCH FOR COMPENSATION FOR GREEN BELT.

The market research to determine the cost per square meter of structures in affected area was conducted at some strategic points and surrounding areas. The results of the research are as in Tables 1 and 2 below.

This research was dependent on structures already identified in the area where the project is being implemented. This has necessitated a disregard to some extent of the categories of the structures as carried on the amended building appraisal form. Another set of building categories evolved. As shown on the attachment, there are eight categories now encompassing structures made up of reeds/grass on the sides and on the roof, to those made of burnt bricks, cement mortar and iron roofed.

To arrive at our estimate of the cost per square meter, consideration was made regarding:

- The total acquisition cost of all building materials whether locally found in the area or found elsewhere.
- The total cost of transportation of the materials to the site
- The total cost of labour in construction/erecting the structure

It will be noted that construction statistics in the rural areas of Malawi are not recorded. The Department of Buildings of Malawi Government has some statistics regarding cost/m^2 of building structures. However, such statistics cover mostly the urban and semi-urban areas. If the department or any other body happens to have constructed a structure in the rural areas, it might be schools, teacher's house, clinics and staff houses.

These cannot offer us a good benchmark for cost per square metre of structures in these rural areas, especially in this case where no building is seen to be a match of those standard buildings for government officers. Hence the only option remaining was to consult the labourers how they would charge construction of a building of a particular size. This could be realistic for such a service. This also could be true for

transportation costs of materials to the site. For the cost of materials, inquiries were made from the structure owners and at some selling points.

Furthermore, it is given that in the rural areas labour related to the construction of a house or any structure is usually done by the head of the households except in situations where a 'decent' house is planned. Such labour is not interpreted in monetary terms. This posed a challenge to the estimation of labour cost. However, due diligence was applied to consult different labour service providers as to how much they would charge to erect a structure of a particular size

Having got the costs of each material required for the structure in question, labour and transportation cost; having also got the hypothetical size of the building at hand, the cost per square metre of that type of the building was determined.

Using the above method, the estimated costs per square metre of the categories of building A-H were obtained together with other structures like Kraals, Barns/granaries. It happens that some bathrooms are not roofed. These were considered in a similar way to open kraals and fences i.e. cost per metre was developed.

Type A- Reed/Grass House

Our search revealed that, a medium bundle of grass costs K 250.00 each and a house of about 6m by 4m ($24m^2$) requires about 40 bundles. This could be with or without plastic paper cover on the roof. Each pole was found to be K 120.00 to K 250.00 if bought. This house would normally need 200 poles just for round the four walls. Depending on the demarcations inside, the number of poles may exceed this amount. Cost of labour required is in region of K 25,000.00. Transportation costs were estimated at K 10,000.00. We consider K 2,500.00/m^2 to be fair for this type of structures.

MATERIALS	**UNIT RATE(MK)**	**REMARKS**
Grass	K 200.00/Bundle	
Poles	K 250.00/each	Depending on type
Bamboos	K 150.00	

Table 1: Cost Materials

Type B-Mud and Wattle

This type of structure requires a lot more poles than the one above. Within a meter, it is expected to have at least eight poles or more. This will give us close to 300 poles for our standard structure of about $24m^2$ round the four walls disregarding the internal demarcations. Unlike grass thatched house, this also requires more bamboos and preparation of mud for walls. This necessitated the rise of transportation cost K 10,000.00 to K 12,000.00. They may also increase to region of K 30,000.00. Therefore, depending on the finishing of the structure, the cost per square meter was pegged at K 5,000.00 to K 10,000.00.

Type C: Sun-dried bricks, grass thatched roof, earth floor

Depending on size of the bricks, most sun-dried bricks were found to be in the ranges of K 5.00 to K 10.00 each. About 7000 - 10,000 bricks were found to be enough for a $24m^2$ house. Transportation cost is lower as often times the bricks are moulded close to the site. Labour was found to be K 15,000.00 to K 30,000.00.

Having considered most factors and cost involved in the preparation and erecting of the structure, a cost/sq. m of K 9,000.00 to K 12,000.00 was regarded as fair.

Type D: Sun-dried bricks, iron roofed, earth floor

The structure in all respects is considered to be like that of type C except that it is iron roofed.

Iron sheets are sold slightly over K 2,450.00 per 10ft sheet, planks are usually required. The planks were found to be sold at K 1,000.00 per 17ft. Considering these additional costs, the cost per square meter for this structure has been considered to be in the region of K 9,000.00 to K 15,000.00.

Type E-Burnt brick, grass thatched roof, earth floor

This structure differs from the type C in two respects- it is built of burnt bricks and is iron roofed. Burnt bricks are more expensive than sun-dried bricks. It was said to be between K 5.00 to K 7.00 each. Basing on this, the cost per square meter of such structures was considered to be between K 10,000.00 to K 13,000.00.

Type F-Burnt bricks, iron roofed, earth floor

The only difference here with type E is roofing. This as shown earlier, goes along with planks which add to the cost. Hence this type was pegged at K 13,000.00 to K 18,000.00 per square meter.

Type G-Burnt bricks, iron roofed, cement floor

This represents one of the best types from the area. Still the difference with type E is the floor. While type F is earth floored, type G has a cement floor.

A bag of cement was found to cost around K 6,500.00. When this cost was factored in, coupled with high transportation costs for cement, burnt bricks, sand and cost of labour in the excesses of K 50,000.00 to K 70,000.00, the cost per square meter came to around K 25,000.00 to K 30,000.00

Type H-Burnt brick built walls, cement pointing with corrugated iron roofing sheets

The use of cement mortar and cement pointing marks the difference between this type and the type G above. Thus, more cement is required in this structure. Accordingly, the cost per square meter has been pegged at K 25,000.00 to
K 30, 000.00 per square meter.

Other structures

It will be noted that supporting structures have lower costs per square meter. It is common knowledge that condition of supporting structures like kitchens,

washrooms, pit latrines and others is usually below that of the main houses although built with the same materials. The skills and labour input is usually lower than that required for the main buildings. Further to that, while the main structures above have usually glazed windows or shutters and also wooden doors, supporting structures may not have any of these. They may have grass/reed doors and no windows at all. This can explain why such structures have their costs lowered.

It may be noted too that while some structures are made of similar materials, but the costing is different because of difference in the size of materials used, the skill and time taken to complete each one.

Finally, while this market research has tried to capture what might be considered to be close estimates of transportation costs, material costs and labour, it has been accepted that there were challenges in deducing and arriving at the costs themselves because most labour services in the rural areas are not attached to monetary terms.

Therefore, we are of the view that this is the closest we could get to and that this represents a fair and reasonable cost of materials, labour and transport.

The Malawi Gazette Supplement, dated December,2010

Government Notice No.23

FORESTRY ACT
(CAP.63:03)
FORESTRY(AMMENDMENT) RULES 2010

IN EXERCISE of the powers conferred by section 86 of the Forestry Act, I GRAIN WYSON MALUNGA, Minister of Natural Resources, Energy and Environment, make the following Rules:-

1. These, 2010. Rules may be cited as the Forestry(Amendment) Rules — Citation
2. The Second schedule to the Forestry Rules(hereinafter referred to as the "principle Rules" is Revoked and replaced by the following new schedule:- — Replacement of the second schedule to the Forest Rules.

SECOND SCHEDULE (r. 13(1)
ROYALTIES (para. 2)

1. INDEGENOUS TREES

	Botanical Name	Vernacular Name	Price per cubic metre K	t
Class i	Khaya anthotheca	Mbawa, Muwawa, Bulamwiko	15,000	00
	Entandrophagma excelsum	Mukarikari, Mululu	15,000	00
	Adima microcephala	Mwenya, Chonya, Mwina, Mungwina, Mug'ona Mgwenya, Mluona	15,000	00
	Chloroffhora excelsa	Ngunda, Mvule	15,000	00
	Combretum imberbe	Msimbiti	15,000	00
	Tricilia enotica	Mzikidzi, Msynguti	15,000	00
	Colophospermum mopane	Tsanya, Sanya, Ntsano, Mopani, Mpani	15,000	00
	Dalbergia melanxylon	Pingo, Kasalusalu, Nanyula, Kasarusaru	15,000	00
	Pterocarpus angolensis	Mlombwa, Mtumbati, Mbira, Nawazi	15,000	00
	Pericopsis angelensis	Muwanga, Mubanga,Mabanga, mwanga	15,000	00
Class ii	Ocotea usambarensis	Bokoto	8,000	00
	Strombosia scheffleri	Mvivi	8,000	00
	Entandrophargram caudatum	Nayalai, Naplalali, Gundang'oma	8,000	00
	Apodytes dimidiate	Mzaza, Katole, Mchima, Msuwi, Mtibolo Mnyembebwe	8,000	00
	Burttdavya nyasica	Mbule	8,000	00
	Albizia gummifera	Mtangatanga, Bua, Chikwani, Chicololo, Mpepe Msenjere, Mkalankhanga, Skapya	8,000	00
	Afzelia quanzensis	Mkongomwa, Msambamfumu, Mpapa, Ipapa Mpapadende, Msokosa, Chikunda, Mnangaliondo Mkogwa	8,000	00
	Newtonia buchannii	Mkweranyani	8,000	00
	Podocarpus species	Nanjula, Mwenye, Mkachi, Mkanguni, Mkute	8,000	00
	Burkea Africana	Mkalati, Kalinguti, Kawidzu, Kapanga	8,000	00
	Bombax stolzii	Mtojeranga, Thonjemanga	8,000	00
	Swartizia madagascarensis	Chinyenye, Kampango	8,000	00

Class iii	Chrysophyllum species	Mutu, Chifira, Mufu, Njundo, Njale, Namazuwa, Mlombeya	8,000	00
	Sterculia species	Msetanyani, njale, Mgoza, Mucheska, Mpepe, Chitondo, Muyamba	8,000	00
	Diosypyros mesopiliforms	Msumwa, Mchenje, Mchena, Njelenje	8,000	00
	Dialiopsis Africana	Mtalala, Mlimbauta, Masakala, Mtutumuko Chiwangalanya	8,000	00
	Faurea species	Masese, Chinsese, Chiere	8,000	00
	Mitragyna rubrostipuluta	Mufwafwada	8,000	00
	Cordyla Africa	Mtondo	8,000	00
	Polyscias fulva	Mpembati, Mukwajo, Mwaja, Mwaza	8,000	00
	Terminalia, sericea	Naphini, Mpululu, Njoyi, Nalinsi, Gonondo	8,000	00
	Facolhoa larifolia	Ndopa, Mlunganya, Muuse	8,000	00
	Bridelia micrantha	Mpasa, Msopa, Mlewezi, Mwisya, Chisopa Msongamiso	8,000	00
	Mitragyna rubrostipulata	Mkwerete, Mkhwale, Mthethe, Chingogolo	8,000	00
	Acacia Polycantha	Mgobe	8,000	00
	Rauvolvia caffra	Mwembi, Mvumbamvula, Nanyungu, Muimbi Munyezani, Nyesani	8,000	00

Class iv	Parkia filicoida	Mkundi, Musyepwa, Mgundi	8,000	00
	Xymalos nomospora	Mulaka, Mpelekeso, Mpekeso, Nakaswaga Chikakalaka	8,000	00
	Fargara species	Pupwe, Mkurungu, Mlunguchulu	8,000	00
	Vitex doniana	Mpindimbi, Mfuru, Msimpysa, Mpyambya Mpsyimpsya	8,000	00

Class v	All other non-planted species	8,000	00

Class vi	Widdringtonia cuppresoides	Mkunguza, Mulanje Cedar	20,000	00
	Juniperus procera	Changalume	20,000	00

2. EXOTIC TREES

Cypress species	Mkunguza	10,000	00
Eucalyptus species	Bulugamu	10,000	00
Gmellina arborea	Malayina	10,000	00
Pinus species	Payini	10,000	00

3. POLES

Species	Butt diameter over bark (in centimetres)		
Eucalyptus and other exotic Species not specified Elsewhere in this schedule	less than 6	80	00
	6 but less than 8	100	00
	8 but less than 10	160	00
	10 but less than 12	200	00
	12 but less than 14	240	00
	14 but less than 16	300	00
	16 but less than 18	320	00
	18 but less than 20	240	00

20 and over		by volume	

Indigenous species	less than 6	100	00
	6 but less than 8	160	00
	8 but less than 10	200	00
	10 but less than 12	240	00
	12 but less than 14	320	00
	14 but less than 16	340	00
	16 but less than 18	360	00
	18 but less than 20	380	00
	20 and over	by volume	

4. FUELWOOD

Type			
Exotic fuelwood, cut and Stacked by purchaser	(a) domestic use	700	00
	(b) industrial use	1,000	00
Indigenous fuelwood, cut and Stacked by purchaser	(a) domestic use	700	00
	(b) industrial use	2,500	00
Exotic fuelwood, per headload		20	00
Indigenous fuelwood, per headload		150	00
Indigenous fuelwood, per bicycle		200	00

5. BAMBOO

Butt diameter(in centimeter)		
Less than 5	10	00
5 but less than 10	30	00
10 and over	50	00

6. PALMS

Phoenix reclinata	Kanjedza, Kanchinga, Kanjesa	3,000	00
Hyphanena crinata	Mgwalangwa, Makoma	3,000	00
Borassus aethiopium	Mvumo, Makoma	3,000	00

7. PLANTS

Type		
Wild Cycadas ans succulents	3,000	00

8. NON-WOOD FOREST PRODUCTS(NWFP)

Type

Fruits, vegetables, mushrooms		
Caterpillars,insects, tubes, tubers,thatch grass	(a) domestic use	free
	(b) commercial use	by agreement

9. OTHER FOREST PRODUCE

Royalties in respective other forest produce may be determined by agreement Between the Director of Forest and the buyer.

10. DISCRIPTION

The Director of Forest may sell forest produce in this schedule by competitive Bidding
