1.0 PROJECT BRIEFING AND PROJECT BACKGROUND

1.1 Project Background

The Government of India has applied for financial assistance from the Asian/Development Bank (ADB) towards the cost of the proposed North Eastern State Roads Investment Program (NESRIP). NESRIP aims to (i) improve about 430 km of priority road sections under Tranche-1 & tranche-2 in six states in the North Eastern Region (NER) of India and (ii) provide capacity building support to the executing agency of NESRIP: the Ministry of Development of North Eastern Region (MDoNER); and to the implementing agencies (IAs): the State Public Works Department (PWD) or its equivalent in each state.

1.2 Project Description

This Report of RP Implementation is concerned with the sub-project road i.e. SH. The details of concerned sub-project are presented in **Table-1**, the RPs of which is being implemented as a part of project component:

Table-1: Project Road and Length of TR 02

Road Code	Name of the Sub-project Road	Length (in Km.)	District Covered
TR 02	Udaipur - Melaghar	20.28	Gomati and Shipaijala

Source: Resettlement Plan of the sub-project road

The project will rehabilitate the deteriorated and damaged state road corridors to provide reliable road transport services and, hence, reduce poverty in the long term. As far as possible the project aimed at up-gradation and rehabilitation of existing state highways with limited amount of land acquisition following the existing alignment. The purpose of adopting up-gradation and rehabilitation within ROW and following the existing alignment was nothing but to reduce the social impact in its immediate environment to the maximum extent possible.

The condition of the existing road was poor as at many places the pavement was no more exists. There were villages in regular interval with many squatters and encroachers living or doing business along the road.

The section of State Highways is located in Gomoti and Shipaijala districts. It starts from NH-44 Udaipur town and terminates at MDR in Melaghar. It passes through Ramesh Chwmoni, Khilpara, Jamjuri, Palatana, Kakraban, Kishoreganj, Kamrangatoli, Mohanbhog and Melaghar in the districts of Gomoti and Shipaijala (Tripura). The start point of Project road is at Ramesh Chwmoni (Km. 0.000) and end point is at Melaghar (Km. 20.28). The total length of the road is 20.28 Km.

2.0 IMPLEMENTATION OF RESETTLEMENT PLAN: A COMPONENT OF THE PROJECT

The execution of Resettlement Plan of the project is an important component of the project implementation, which has several activities to be performed such as appointment and mobilization of Supervision Consultant (SC), verification of Affected

Persons, preparation of Micro Plan and Identity Card, distribution of compensation and appraisal of other R & R Issues, which is to be executed either before construction work or in between implementation of the project. For compliance of ADB's Resettlement policy, PD of respective PIU was made accountable and responsible for implementation of Resettlement plan with the help of SC, appointed for the exclusive task.

3.0 INSTITUTIONAL ARRANGEMENTS FOR IMPLEMENTATION OF RESETTLEMENT PLAN (RP)

Tripura State PWD Roads & Bridge (R&B), Govt. of Tripura is the executing agency of the Project. The PWD (R&B), Agartalahas established PIU for execution of sub-projects and for proper implementation of Resettlement Plan of concern project. The Implementation of Resettlement Plan of the project is being carried out by the Project Implementation Units (PIU), Udaipur. The Project Director, Project implementation Unit (PIU), ADB Project, O/o the Superintendent Engineer, 3rd Circle, PWD(R&B) Udaipur, Gomati District has overall responsibility for policy guidance, coordination and planning, internal monitoring and overall reporting of the project.

Sub-divisional Officer (SDO) has been placed at the Sub-project level to coordinate the process of RP implementation and to address the adverse impacts on the people along the sub-project roads, if any. CSC was appointed by the EA to assist the PIUs in the effective, timely and efficient implementation of RP.

In addition, an Expert has been appointed by the Executing Agency through the Supervision consultant to monitor the progress of the RP implementation.

4.0 INTERNAL MONITORING

Monitoring is a key activity in RP implementation in order to achieve resettlement objective as per ADB's Policy of Involuntary Resettlement. The Policy says "Monitoring provides both a working system for project managers and channel for the resettle to make known their needs and their reactions to resettlement execution."

External monitoring of RP implementation will provide PIU an effective basis for assessing resettlement process and identifying potential difficulties and problem area for rectification.

The present monitoring exercise deals with a number of selected tasks, which is mentioned in the agreement. The Social Development Unit (SDU) at headquarter and PIU level is monitoring the resettlement progress if any with the help of R&R cum Social Development Expert of Supervision Consultant internally by way of reviewing the progress of the activities. But here nobody is affected due to project implementation.

4.1 Monitoring and Reporting

As discussed above, monitoring of the RP implementation is a critical activity in involuntary resettlement. Monitoring involves periodic checking to ascertain whether activities are carried out according to the RP and in accordance with the existing laws of Govt. of India, Govt. of Tripura), and ADB Guidelines etc. It provides the necessary feedback for project management to keep the programme on schedule.

As per approved RP many affected people's needs to resettle but as per site condition nobody is affected. Here contractor and CSC doing the construction activities with in

available width on site. This is finalized after several discussions with client (PIU) and the decision was that no structure needs to be removed from their original place.

5.0 IDENTIFICATION AND VERIFICATION OF AFFECTED PERSONS AND COMMUNITY PROPERTIES (CPRS)

5.1 Verification of Affected Households

The SC appointed for RP implementation, successfully working on the assignment as per TOR. Resettlement Plan Report, prepared at the time of detailed Design of the project was updated, keeping in mind the impact on population as per final design. At the time of updating of RP, verification of affected households if any was done by the CSC. Accordingly; the final list of affected households was prepared in the process to update the list of affected people. The details of affected households are presented in **Table-2**.

Table-2: Comparative Chart of No of Affected Household as per Approved RP and after verification of affected households

S. No.	Impacts	Impact In RP	Impact at the time of RP Implementation	Remarks
1	Total number of Affected Structures/ Properties	279	NA	The improvement of the road has been constructed within available width, not affecting any structures in the settlement areas.
2	Total number of households affected	279	NA	

Source- Approved Resettlement Plan of sub-project. NA- Not Affected

5.2 Verification of Affected Community Structures (CPRs)

Impact on CPRs is a very critical issue for the point of view of community. The community feeling is attached with the community properties especially with the religious structures.

The demolition of CPRs was avoided for sub-project to minimize the impact. The details of CPRs mentioned in approved RP report and actual impact on CPRs at the time of implementation stage presented in **Table-3**.

Table-3: Community Structures as per Approved RP

Type of Assets	Impact In RP	Impact at the time of RP Implementation	Remarks
Dug wells	1	NA	The improvement has been proposed within available width in the project road corridor (7m-12m)
Tube well	6	NA	
Water Tank	1	NA	
Cattle Shed	3	NA	

Source- Approved Resettlement Plan of sub-project. NA- Not Affected

It is important to mention here that even during interaction of the R&R cum Social Development Expert of Supervision Consultant with community people; it was revealed that the EA has resolved such issue with proper public consultation and providing engineering solution by avoiding impact on common property.

6.0 DISCLOSURE AND DISTRIBUTION OF PUBLIC INFORMATION BROCHURE (PIB) AND ENTITLEMENT MATRIX

Translation of the summary and entitlement matrix of RP in vernacular language and its disclosure to the affected people it was not done by Executing Agency. This task is important because it discloses the entitlement provision of compensation and assistance to the affected people of different categories under Resettlement Framework. During field verification and consultation with stakeholder's, it was revealed that the CSC has to be distribute the translated version of RP to affected people and other stakeholders and same was disclosed to affected people at various identified locations to make them acquainted with the provision of compensation and assistance to affected people if any. The details of EROW as per (Annexure-I)

7.0 COUNSELING (CONSULTATION) WITH LOCAL PEOPLE

The interactions and consultations with other stakeholders especially the village headman (Mukhiya) have brought in an interesting dimension for the consideration of the project authorities in terms of minimizing the further squatting and encroachment across the project stretch. Village headman assured that they would assist in removing encroachments and suggested that notices should be put along the highway to prevent further encroachments.

Training Programme for Income Restoration

Since nobody is affected as per final construction design, that means not required any training programme of the project area.

8.0 APPRAISAL OF OTHER R & R ISSUES

An interaction with officials of Tripura PWD (ADB Project) and other stakeholders and site visit was done by the R&R cum Social Development Expert to substantiate the status of RP implementation executed by the executing agency. During the field verification, the R&R cum Social Development Expert also had interaction with the community people and asked their view on the handling of resettlement issues if any. The decision was finalize with PIU (PD) in the settlement areas where people are affected as per RP, now construction of those areas will be within available width. Accordingly cross section was finalize (Annexure-II & IIA)

8.1 Addressing HIV / AIDS Issues in Road Development Projects

Though road project emphasizes more on engineering aspect like technical and economic viability of the project but in ADB assisted project, social responsibility becomes important. Prevention and control of HIV/AIDS transmission is one of the important social responsibility. Hence prevention and control of transmission of HIV/AIDS have become important social responsibility of present road projects. It is well established that because of improvements of road, mobility of truckers an increases and chances of

transmission of HIV/AIDS. Having understood the requirement of action for the HIV/AIDS Awareness Programme at construction stage in road project.

- a) Action to increase the level of awareness about prevention and control of HIV/AIDS among the different communities in project road.
- b) Action to promote safe sex behavior through promotion of condom use and developing referral awareness for medical care and treatment of STD.
- c) Action for Institutional strengthening capacities of various stakeholders in order to enable an effective behavior change among high-risk groups and vulnerable populations towards the prevention of HIV/AIDS.

In order to make the people aware about the fatal highway diseases, the SC with the help of Contractors have to be conducted HIV/AIDS Awareness Prevention Campaign by conducting HIV/AIDS awareness Camps at different Locations on sub-project roads.

Road construction workers' follow up activities have been conducted in construction camp to provide counseling/ advisory on HIV/AIDS (condom provision), voluntary confidential counseling for testing (VCCT) and STI treatment, provision of condoms and to promote and ensure provision of health and environmental sanitation through latrines and safe drinking water at labour camps of sub-project (Palatana and near Kakraban Camp).

To increased (100%) condom use, the program plans to distribute condoms for community, construction workers and high risk groups along the sub-project. The distributions of condoms have been done carefully so as to facilitate at camp sites of the road construction workers and stakeholders. The camp has been organized. The group of doctor attend the camp to check all the staff as well as all labours. No case has been found positive on camp site. List of participant given in ***Annexure-III***.

In addition, needs to initiate individual interviews, personal contacts, and group discussion at possible hot spots like hotel/ dhaba owners, the potential HIV/AIDS carrier-truckers and their helpers and assistant, pedestrians, local community people etc. for generating awareness among them to prevent the incidence of fatal diseases.

8.2 Compliance of Labour Laws, Prohibition of Child Labour

Children below the age of 14 years should be restricted from getting involved in the construction activities and wage employment. It is the responsibility of PIU, Project Manager and CSC to ensure that no child labour is engaged in the activities. This requires close coordination with the Supervision Consultants for effective monitoring for control on child labour. Any complaint received in this regard necessary action as per the Child Labour (Prohibition & Regulation) Act, 1986 will be taken up. This may include (i) imposing penalty, (ii) Black listing of the firm and (iii) taking other legal measures.

The Engineers (Supervision Consultants) for ensuring the Contractors are abiding by the various provisions of the applicable laws, concerning the worker's safety, health and hygiene and the child labour issues. According to laws, there were specifications regarding the facilities/ requirements at the construction camp/site, including basic health care facilities and facilities for vaccinations, day crèche facilities, etc. It is being monitored by the R&R cum Social Development Expert of Supervision Consultant with the help of Resident Engineer and or representative of the Contractors, to ensure the

compliance of Labour Laws and prohibition of Child Labour in a satisfactory manner and in compliance with Contract agreement.

8.3 Compliance of Gender Issues

From the specific consultation with women group it is revealed that the status of women in the project area which is characterized by low female literacy, distressed health and nutritional conditions, low proportion of women in work participation, etc. It was found that majority of them often uses road for collection of fuel wood, travelling for market place and social work and crosses road quite frequently.

The Engineers (Supervision Consultants) for ensuring the Contractors are abiding by the provisions of the applicable laws, concerning the gender issues. According to laws, there were specifications regarding the facilities/ requirements at the construction camp/site, including basic health care facilities, Mother and Child Welfare units etc. It is also being monitored by the R&R and Socio economic Development Expert of Supervision Consultant with the help of Resident engineers and or representative of the Contractors, to ensure the compliance of Gender Issue in a satisfactory manner. Hence no gender disparity was identified by the Monitoring Team during field investigation.

8.4 Grievance Redressal

It would be pertinent here to refer the Asian Development Bank's policy, which requires proper mechanisms for resolution of disputes that may arise from any aspect of the compensation and development process. The mechanisms should be "affordable and accessible," and third parties independent of the implementers should be available at the appropriate point in the process. The grievance procedure need to be simple, administered in the first instance at the local level to facilitate access, flexibility and open to various proofs taking into account the need for speedy, just and fair resolution of their grievances.

Here no grievance committee has been constituted till date.

Moreover, no problem has been noticed/ observed by the External Monitoring team during field verification to incorporate in the report.

8.5 Local Employment

As because of construction activities local people also benefitted for getting the employment in all level of work. It was seen that number of female worker also participant in the construct activities.

Loan No:- 3073: North Eastern State Roads Investment Program.(Project-2) / L3073- Comments on the Tripura SMR.

Ref:- Your E-mail dated 15th Nov, 2016.

Sir,

With to reference the above, the observation furnished which as follows.

- i. **Letter from client (PD) reason for changing the alignment:-** There is no issue regarding changing of alignment. The road is being upgraded as per DPR provision.
- ii. **Revised Cross Sections of the minimized portion/settlement area where we saved the structures (those are affected as per approved RP done by DPR Consultant):-** As per revenue record the Right of Way(RoW) of the existing road is 12 to 13 mt. at an average. The road is being constructed within the PWD land. In this regard, DPR has been prepared during the year 2008 by the ADB consultant 'SMEC'. During preparation of DPR there were certain encroachments on PWD land with temporary structures, no permanent structure was there. During survey work by SMEC they had conducted group discussion with every Gram Panchayets along the road. Coming to know that the road shall be improved by ADB, every one has removed their temporary structure even before the work started. As such there is no household affected person in this road.
- iii. **Entire road width available Existing Right of Way (RoW) certified by concern Revenue Officials:-** Land availability certificate is enclosed herewith.

This is for information and further needful action please.

Encl:- As stated

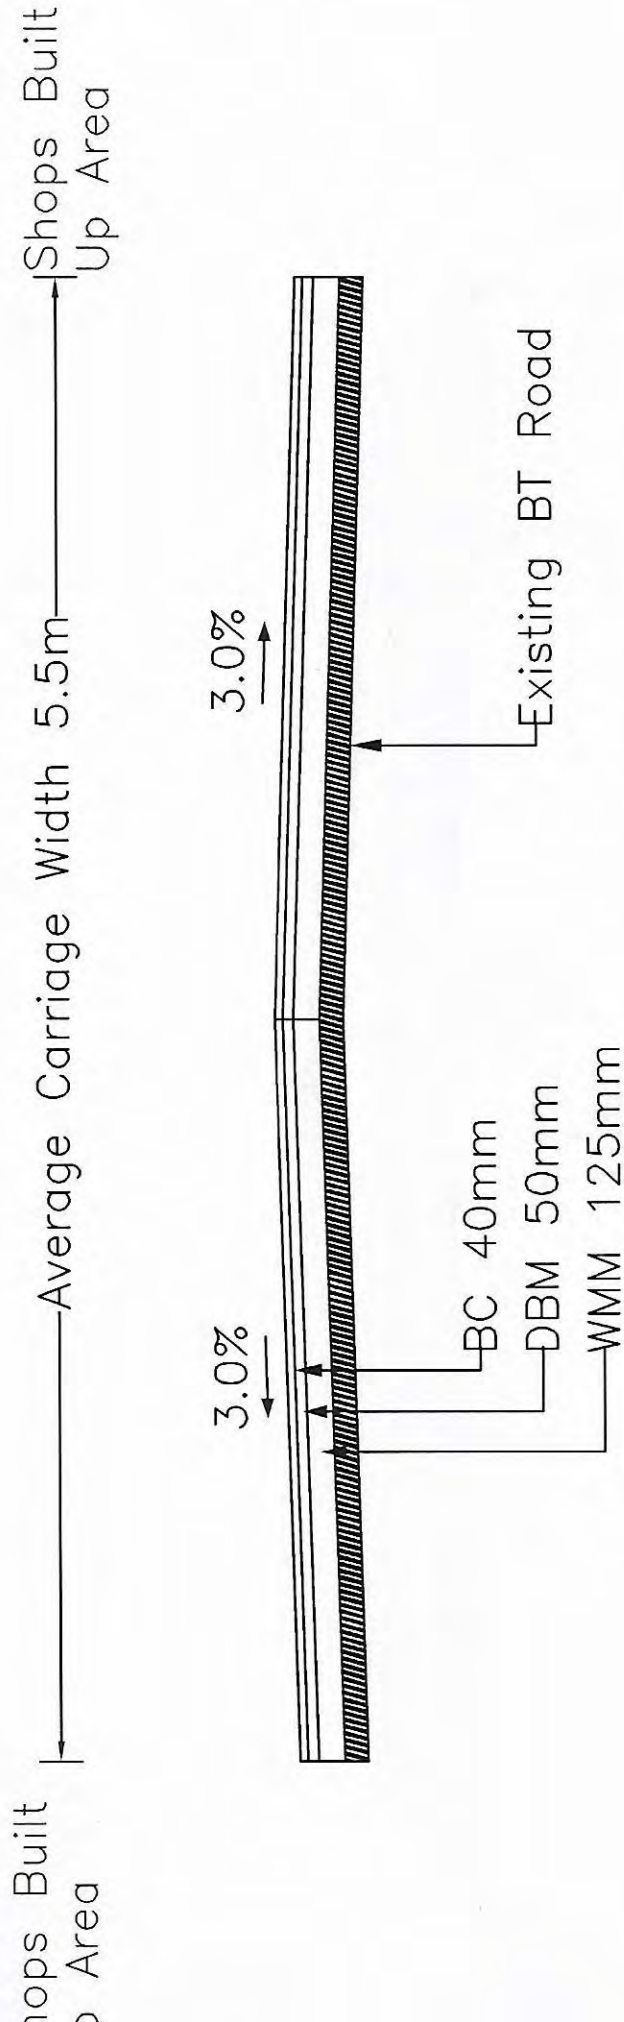

Yours faithfully,
