Project Development Objectives

Project Development Objective (from Project Appraisal Document)

The Development Objectives of the Electricity Network Reinforcement and Expansion Project are to improve reliability of the electricity network and to increase access to electricity services in Ethiopia.

Has the Project Development Objective been changed since Board Approval of the Project Objective?

No

Public Disclosure Authorized

Implementation Status and Key Decisions

The project closing date for ENREP and ENREP-AF was extended in December 2021 by two years – with a revised closing date of December 29, 2023. The closing date for CiDev grant ended on 30 June 2022 without further extension. The time made available with the last extension to June 30, 2022 would have been used to complete some of the contracts delayed due to COVID-19. Unfortunately, the opportunity was lost and DBE has to return to the WB unused fund by October 30, 2022.

Component 1: Reinforcement and expansion of electricity networks (US\$100 million original credit, US\$90 million AF, total US\$190 million). The transmission strengthening project (Contract H) with the scope of installing a second 230 kV circuit on the existing system is completed - but

12/22/2022 Page 1 of 9

awaits remedial work to install and string five additional towers. The ongoing construction of three single circuit 230 kV lines and substations is also progressing well, except in the case of Metu-Masha transmission line, where the finalization of safeguards documentation has delayed the start of transmission line construction. The Fincha-Shambu line has been completed, though the related communications systems are outstanding. The Azezo-Chilga line is currently under implementation at an advanced stage expected to be completed by November 2022.

Component 2: Access scale up (US\$50 million original credit, US\$70 million AF, total US\$120 million). Work on all the three lots for the Six-Town Project commenced in January and February 2020, but suffered from further delays due to the prevailing COVID pandemic. Earlier, the eight-town project, for the upgrading and expansion of medium voltage (MV) and low voltage (LV) distribution networks was completed. Contracts for 150,000 new connections in cities covered under the eight-town and six-town contracts are being processed.

Component 3: Market development for renewable energy and energy efficient products (US\$20 million original credit, US\$20 million AF, US\$5 million TF0A2302, total US\$45 million). The credit line is now fully subscribed, and 1,375,752 solar lanterns and solar home systems have been procured.

Component 4: Modernization support (US\$10 million original credit, US\$20 million AF, total US\$30 million). The component finances, among others, a new enterprise resource planning (ERP) system for EEU, whose implementation was completed in October 2019. While the contracts for Revenue Protection Program (RPP) awarded, the procurement of Live Line Maintenance (LLM) was cancelled due to prioritizing resources to other more important activities.

The Emission Reduction Purchase Agreement between DBE and CiDev will be amended to reflect the reduced target for carbon emission reductions from Standalone Solar Systems and Clean Cooking Solutions.

There are no major decisions pending in the context of the implementation of this project.
