
	ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017
CSH-1-AM-AM-EIA-0001-0				

5 CHARACTERIZATION OF THE AREA OF INFLUENCE

5.3 SOCIOECONOMIC ENVIRONMENT

5.3.1 Community participation and socialization

5.3.1.1 Participation guidelines.

In accordance with that set out in the terms of reference MM-INA-02 approved by resolution 0751 of March 26, 2015 for the elaboration of the environmental impact study EIS, required for the environmental license process of the road and/or tunnel construction projects with their accesses, and taking into account that the departments and municipalities refer to the larger territorial units while the smaller territorial units correspond to the rural districts; given the characteristics of the project and the area of influence defined, the guidelines for participation were developed through socialization processes with the municipal authorities of Ipiales, Contadero, Iles and Imués; as well as with representatives and the community that generally inhabits the rural districts identified within the area of influence of the Rumichaca - Pasto Dual Carriageway Project, San Juan - Pedregal Section.

The application of the participation guidelines was part of a global strategy, designed to establish an adequate relationship with the communities and with municipal and regional authorities in the project area. In this sense, the process began with a preliminary recognition of the area between February 1 and 3, 2017, carried out by a group of professionals from the social and technical area of the project; likewise, a tour of the municipalities within the area of influence was made to verify the possible territorial expansion of the populated areas with infrastructure from the urban area of the municipalities and of the townships contemplated within the area of influence of the project.

- **Prior survey.**

During the prior survey, the following activities were carried out:

- § Verification of the status of roads and accesses to the territorial units during the displacement.
- § Identification of participants in each of the municipalities and rural districts in order to facilitate the process of convening and logistic organization of the socialization meetings to be held.
- § Establishment of likely dates for meetings and identification of appropriate sites for their realization.

In this sense, information and communication activities were carried out, as well as previous agreements on the dates for the execution of socialization spaces. Under the following scheme, the following are the participation levels:

- **Regional authorities:**

It includes the Nariño Governor's office, which has an influence at departmental level.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017
CSH-1-AM-AM-EIA-0001-0				

o **Local authorities:**

They are authorities democratically elected, constituted as the maximum authority at municipal level (Mayors, Ombudsman and Municipal Councils). The officials of the municipal administrations of Ipiales, Contadero, Iles and Imués were visited, to communicate the project and to coordinate socialization meetings. Officials showed acceptance of the project and provided the necessary information for the preparation of this document.

o **Representatives from the Community Action Boards-J.A.C.- and community leaders:**

The Community Action Boards are the organizations recognized at community level and represent visible head of the community who represents it before different entities according to Law 743 of June 5, 2002. For the case at hand, in all the smaller territorial units of the area of influence, the Community Action Boards are organized, which were approached through telephone calls made to each representative of the smaller territorial units, presenting them the beginning of the activities for the elaboration of the EIS and scheduling the dates of socialization with the communities of the area of influence of the project.

o **Communities:**

It is the group of inhabitants settled in the smaller territorial units of the area of influence of the project; 30 territorial units were identified in total, located in the municipalities of Ipiales, Contadero, Iles and Imués; guidelines for participation were addressed with them, taking into account that they are representative actors in the territory. Except for the ethnic communities present in the area of influence, such as the Aldea de María area and the San Juan Indigenous shelter, according to certifications Nos. 0434 and 0432 of May 9, 2017 issued by the Ministry of the Interior, used as reference for the prior consultation process.

• **Socialization Meetings.**

In drafting the socioeconomic environment in the Environmental Impact Assessment of the Rumichaca - Pasto Divided Highway Project, San Juan - Pedregal Segment and in compliance with the terms of reference MM-INA-02, during the engagement process with the regional authorities, an informative period took place with local authorities and with the communities; three (3) specific moments took place, each preceded by the respective summoning process and information of the activities in the different levels of participation:

The methodology implemented for the development of the meetings during the socialization periods included a presentation, and involved the use video beam equipment and / or billboards, with presentations about the themes corresponding to each of these moments; at each meeting, a printed copy of the minutes was sent to the local authorities and population of the territorial units of the area of influence, which contained the topics and questions and concerns expressed by the community and their respective clarifications and responses.

o **First period:**

Knowledge of the scope of the EIA and overview of the project to be licensed. Collection of primary information.

The objective of this first moment was to inform the local authorities and communities in the area of study about the project overview and the scope and activities to be carried out in the Environmental Impact Study for the Construction Project of the Rumichaca - Pasto Dual Carriageway, Ipiales - San Juan - Pedregal Section; in the framework of environmental licensing before ANLA, in order to comply with the provisions of Law 99

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017
CSH-1-AM-AM-EIA-0001-0				

of 1993 and the Terms of Reference for the preparation of the Environmental Impact Study (EIA) for road construction projects and / or Tunnels. As well as to attend to their different concerns.

Likewise, at the end of each information period, different instruments and techniques for collecting primary information were applied (township map and social cartography), representing the basis for the elaboration of socioeconomic and cultural characterization.

o **Second period, Impact Workshop:**

Workshop for the identification of impacts and management measures.

The objective of this second period was to carry out the workshop for the identification of impacts and the environmental management measures, within the framework of the Environmental Impact Assessment for the Construction Project of the Rumichaca - Pasto Divided Highway, San Juan - Pedregal Segment, in order to comply with the provisions of Law 99 of 1993 and the Terms of Reference for the preparation of the Environmental Impact Study (EIS) for road and / or tunnel construction projects.

This period takes place with the drafting of the identification of the impacts and the management measures in the community; to such end, stages, phases and activities to be carried out during the execution of the project were presented, taking into account the biotic, abiotic and socio-economic components. Thus, butcher's paper posters were placed with the matrices including the stages and phases of the project, working groups were organized where the communities identified the possible impacts generated by the projected activities, as well as the respective measures for the management thereof.

o **Third period, delivery of results:**

Socialization of results with authorities and communities, and once the Environmental Impact Study was prepared, the findings found in each one of the biotic, abiotic and socioeconomic components, the environmental zoning and the use and utilization of natural resources of the study carried out were presented in detail, as well as the measures to be implemented during the development of the project

· **Major Territorial Units.**

o **Regional Authorities.**

The Nariño Government was the regional authority contacted through the written communication sent on April 7, 2017 (See **Annex 13. Social**), requesting some time to present a recount of the process developed in the elaboration and the results of the Environmental Impact Study.

In response to the communication filed, the government assigned some time on May 2, 2017 at 8:00 am; however, because the governor summoned a special meeting of the Governing Council, the meeting was adjourned for May 3, 2017 at 2:00 pm

According to the rescheduling of the meeting, this meeting was held in the office of infrastructure of the Governor's Office with the assistance of the undersecretary and representative of the infrastructure secretariat, representative of the environment secretariat, representatives of the Concessionaire and professionals of GEOCOL CONSULTORES SA (See **Photo 5.1**).

The Agenda was as follows:

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017
CSH-1-AM-AM-EIA-0001-0				

1. Description of the project: project characteristic, layout, classification, elements, transport infrastructure, geotechnical infrastructure, associated infrastructure, management and disposal of surplus excavation and construction and demolition materials and channel occupation.
2. Abiotic medium characterization: soil characterization, hydrology, hydrogeology, geotechnics and sites of landscape interest.
3. Biotic medium characterization: land cover, lifting of protection order, Characterization of epiphytic, rupicola and terrestrial flora - vegetation characterization: amphibians, reptiles, birds, mammals, ecosystem services, compensation plan for loss of biodiversity, Investment of 1%.
4. Socio-economic characterization: Area of influence of the project, territorial unit population in the Area of Influence, coverage of public and social services, main economic activities in the Area of influence, land distribution in the Area of Influence.
5. Use, utilization and / or affectionation of natural resources: They explain what will be the environmental permits for the use and exploitation of natural resources. Collection of surface water, landfills, atmospheric emissions, forestry utilization.
6. Environmental Assessment: environmental assessment scenarios with and without a project: the activities that generate greater positive and negative impacts are presented; as well as the impacts thereof.
7. Environmental Management Plan: the programs of the biotic, abiotic and socioeconomic environment management programs are presented.

Photograph 5.1 Socialization Meeting of the Nariño Governor's Office.

Source: GEOCOL CONSULTORES S.A, 2017.

The participants were attentive in the meeting to the topics presented and asked the following questions:

- Are the ZODMEs projected already approved? The consultant indicated that the ZODMEs are proposed within the Environmental Impact Study; however, the number and location thereof, would be subject to the evaluation carried out by the National Environmental Licensing Authority.
- When is the Environmental Impact Study planned to be filed? The Concessionaire responds that this date would be subject to the preliminary consultation process with the San Juan Reservation, the Aldea de

CSH-1-AM-AM-EIA-0001-0				

María area and the Iles Reservation to be carried out. As well as part of the review processes by the Concessionaire and the Inspectorship.

o **Municipal Authorities.**

As for the moments of socialization, personal contact with public officials of the municipal Administration, municipal legal representative and council of the 4 municipalities was established, written communications were served, which reported on the study, its location and the need for the application of social participation guidelines. (See **Annex 13. Social**).

The municipal authorities held two socialization meetings, the first one aimed at informing Local Authorities about the project overview and the scope and activities to be carried out in the Environmental Impact Study for the Construction Project of the Rumichaca - Pasto Dual Carriageway, San Juan - Pedregal Section and the second one, to present to the local authorities the results of the Environmental Impact Study for the Construction Project of the Rumichaca - Pasto Dual Carriageway, San Juan - Pedregal Section in the framework of environmental licensing before ANLA, to comply with the provisions of Law 99 of 1993 and the Terms of Reference for the preparation of the Environmental Impact Study (EIS) inroads and / or tunnel construction projects.

For the development of these meetings with the municipal authorities, the facilities assigned by delegates were used (municipal mayor's offices) and was attended by representatives of the dependencies of the planning secretariat, government secretariat, agriculture secretariat, Public Works secretariat, Umata and Councilors; as well as with the presence of municipal legal representative.

The agenda foreseen for the first socialization period of the environmental impact study was as follows:

1. Meeting objective
2. Presentation of Concesionaria Vial Unión del Sur S.A.S.
3. Project Overview
4. Technical achievements of the Environmental Impact study: What is an EIA? What is the biotic, abiotic and socioeconomic environment? How do we obtain an environmental license?, methodologies and tools for collecting information on the biotic, abiotic and socioeconomic environments
5. Let's talk: during this space, questions and concerns were raised by the attendees, which were clarified, resolved and recorded in the respective meeting minutes. (See **Annex 13. Social**).
6. Reading and Approval of the Minutes

The agenda foreseen for the presentation of the Environmental Impact Study outcomes was as follows:

1. Description of the project: project characteristic, layout, classification, elements, transport infrastructure, geotechnical infrastructure, associated infrastructure, management and disposal of surplus excavation and construction and demolition materials and channel occupation.
2. Abiotic medium characterization: soil characterization, hydrology, hydrogeology, geotechnics and sites of landscape interest.
3. Biotic medium characterization: land cover, lifting of protection order, Characterization of epiphytic, rupicula and terrestrial flora - vegetation characterization: amphibians, reptiles, birds, mammals, ecosystem services, compensation plan for loss of biodiversity, Investment of 1%.

GEO-002-17-114-EAM			Version 0.	May 2017
CSH-1-AM-AM-EIA-0001-0				

4. Socio-economic characterization: Area of influence of the project, territorial unit population in the Area of Influence, coverage of public and social services, main economic activities in the Area of influence, land distribution in the Area of Influence.
5. Use, utilization and / or affectation of natural resources: They explain what will be the environmental permits for the use and exploitation of natural resources. Collection of surface water, landfills, atmospheric emissions, forestry utilization.
6. Environmental Assessment: environmental assessment scenarios with and without a project: the activities that generate greater positive and negative impacts are presented; as well as the impacts thereof.
7. Environmental Management Plan: the programs of the biotic, abiotic and socioeconomic environment management programs are presented.

Table 5.1 lists the dates of filing of the communications at the offices of the authorities of the respective municipalities, for the socialization moments and **Table 5.2** includes the participants of the Ipiales, Contadero, Iles and Imués meetings.

In the case of the Iles municipality, the meeting to present the results of the Environmental Impact Study was initially scheduled to take place on May 4, 2017; however, on April 26, at the request of Planning Secretary Mr. Armando Molina, it was decided to do the meeting earlier, on Monday, May 2 at 9 a.m. at the Iles Mayor's Office.

Table 5.3 presents a summary of the most relevant aspects of the meeting with municipal authorities. The meetings held include supporting evidence, such as: photographic record, meeting record and attendance list; it is worth mentioning that prior to the execution of these activities, attendees were asked to authorize such activities; at the end of the meeting, the minutes were read, and were approved and signed by the attendees, including the concerns of the attending officials. The meeting minutes are presented in **Annex 13. Social:**

Table 5.3 Doubts and concerns expressed in socialization meetings with authorities.

CONCERNS AND RESPONSES		
MUNICIPALITY	FIRST SOCIALIZATION PERIOD	OUTCOMES DELIVERY
Ipiales	<ul style="list-style-type: none"> - They asked that if the progress of the Environmental Impact Study carried out in September 2016, is part of the same study. The answer is that the present study intends to supplement and go more deeply in the information obtained so far for the construction of the dual carriageway, leading to the concessionaire's engagement of Geocol Consultores. - When does the company expect to deliver the document? The response is that the consulting firm is scheduled to deliver by mid-April and May 2017. - The Secretaries of Government and Environment request to be sent the schedule of meetings to be held in the territorial units in the jurisdiction of the municipality of Ipiales. The response is that as soon as the agenda is confirmed, they will be informed in advance of the schedule of meetings with communities. 	<ul style="list-style-type: none"> - Is there a specific manual for the Environmental Management Plan? The environmental consultant responds that within the Environmental Impact Study, there is a specific chapter called Environmental Management Plan, which describes the environmental management measures to prevent, mitigate, correct or compensate for the negative impacts taking place in furtherance of the project. - Has this study been already filed with ANLA? The environmental consultant responds that the study has not been filed yet, and that at present, the EIS results are being presented. - The Secretary of Government has indicated that resistance has normally been observed with the indigenous reservations, especially with the inhabitants of the district of San Juan. - Have there been any approaches made with these indigenous communities? The answer is yes, but it has not been possible to leave written evidence thereof, according to the guidelines issued by the governor of the indigenous reservation. - How is the project affected by the fact that no information has been collected with the community of San Juan? The environmental consultant responds that within the social component, it has not been possible to characterize the non-ethnic communities settled in the town of El Rosal, San Juan and Boquerón, as well as the respective participation guidelines with non-ethnic communities. - What ministry is concerned with certification of ethnic communities? The Inspectorship responds that it is the Ministry of the Interior, which certifies the presence or absence of indigenous communities in the area of influence of the project. - Is the investment just 1%? The environmental consultant responds that in accordance with Decree 2099 of 2016, no less than 1% of the total investment of the project must be invested for the protection, conservation and preservation of the main basin of the area of influence of the project. - They express concern about the discharges made on the Boquerón river. It is necessary to clarify that these industrial and domestic waters must be treated

CONCERNS AND RESPONSES		
MUNICIPALITY	FIRST SOCIALIZATION PERIOD	OUTCOMES DELIVERY
		<p>prior to their discharge and comply with the parameters required by current regulations.</p> <ul style="list-style-type: none"> - Who does the monitoring and control of the treatment of these waste waters? The Environmental Environmental Licensing Authority is responsible for controlling the discharges made. - Affectation will be caused to very sensitive species; what are the programs in place for the mitigation, compensation and control or recovery of fauna and flora? The response is that there are some management specifications within the Environmental Management Plan aimed at protecting fauna and flora; likewise, another measure considered is the Compensation Plan for loss of biodiversity. - On the part of the Concessionaire, they ask the participants to the meeting, How can the municipal authority help us to mediate to enter the areas of influence that are part of the San Juan and Ipiales Reserves? The government secretariat stated that it will try to request a meeting with governor and landowners, the mayor and the government secretariat to discuss the matter. The planning secretariat requested to issue a general report that explains the difficulties experienced when trying to collect this information, so that the administration can formally convene the indigenous communities to address this issue. - How long can the study filing take, as well as the acquisition of environmental licenses? It is explained that the study can be presented to ANLA to undertake the evaluation process; however, the formalization of the prior consultation processes with ethnic communities will be required by ANLA to issue the license. - Can a copy of the Environmental Impact Study be obtained? It is explained that the document is public and can be accessed at any time; the copy thereof is left at Corponariño; likewise, local authorities such as the municipal administration can request a copy thereof and of the environmental license granted by ANLA. - The planning secretariat requested to submit the number of small lands existing on the affectation area.

CONCERNS AND RESPONSES		
MUNICIPALITY	FIRST SOCIALIZATION PERIOD	OUTCOMES DELIVERY
Contadero	<ul style="list-style-type: none"> - They asked what will happen to the groundwater along the route of the project. The response is that before proposing a design, a diagnosis of alternatives was made that allowed to establish an environmentally viable route to cause minimum affectations. Likewise, with the development of the Environmental Impact Study, a zoning of environmental management will be established in order to protect the most environmentally sensitive areas, such as groundwater and surface water. - It was stated that the toll should be relocated elsewhere and not in the PR11 + 100 sector of Las Cruces according to Concession Contract No. 15 of September 11, 2015, as this would cause socioeconomic impacts for the population that carries out commercial and social service activities. Participants were invited to raise this concern to the ANI so that they can consider the relocation thereof; however, it is made clear that it is necessary to install a toll to give sustainability to the project, as established in the previously mentioned contract. - What processes have been undertaken with the indigenous communities that would be influenced by the project? With the certified indigenous communities, the consultation process will be carried out, according to that set out in the ethnic community management law. - What is the entity in charge of monitoring the activities raised from the project with respect to the tolls? Petitions should be submitted to the ANI. 	<ul style="list-style-type: none"> - The Mayor says that the greatest concern of the community has to do with the value of the properties that will be required for the construction of the dual carriageway. The CVUS professional indicated that the appraisal of the properties is made at a commercial and not a cadastral price, and there are compensations according to the current regulations. However, it is important to file an application through the email of the concessionaire so that all the concerns regarding the issue are addressed in the estates division. - Planning indicated that the communities are supplied from water sources where collection and discharges will take place. So the question is, how will this issue be managed? The response is that, with respect to domestic and industrial water discharges, these will be submitted to a treatment to comply with the permissible parameters of the regulations in force, prior to their disposal. With respect to the collection, it is clarified that collection will only take place in the Boquerón, Sapuyes and Guaitara rivers throughout the year; in the other proposed points, collection is made only in the rainy season. - Question, Will tertiary roads and access points be affected? Response: The construction of the dual carriageway does not mean that the access will be interrupted, on the contrary, the connection with these roads will be guaranteed. The accesses and tertiary roads that connect the rural districts will be respected. - They indicated that the culture of the region will also be affected by the construction of the dual carriageway, how will be the education process to the community in terms of road culture? The concessionaire responds that there is a road culture program that aims to train and educate the community on accident prevention and road safety issues. - Attendees ask, as to the ZODMES, if it is possible to modify the points in order to reduce the impact on the productive zones of the region? The response is that there are some proposed points; however, these are subject to the environmental feasibility and evaluation carried out by ANLA. - Question, when will the road construction begin? Response: the project is in a pre-construction stage, where the respective environmental studies are developed and then presented to ANLA - the authority in charge of granting the environmental license, an indispensable requirement to undertake the construction process. Once the environmental license is obtained, socialization

CONCERNS AND RESPONSES		
MUNICIPALITY	FIRST SOCIALIZATION PERIOD	OUTCOMES DELIVERY
		<p>processes will be carried out with the community to communicate the beginning of the project construction.</p> <ul style="list-style-type: none"> - The Police Inspector of the municipality indicates that the community is reluctant to stop the construction works of houses undertaken on the Panamerican road and do not respect the strip established according to the regulations. The response is that according to the existing regulations, the right of way must be respected, and no construction activities must be carried out on the strip thereon, and that it is the jurisdiction of the municipal authorities to enforce the regulations thereof.
Iles	<ul style="list-style-type: none"> - Is the a road layout defined? The answer is yes, and in the second socialization period, the road layout and the activities to be developed in the impact workshop will be presented. - What processes have been undertaken with the indigenous communities that would be influenced by the project? With the certified indigenous communities, the consultation process will be carried out, according to that set out in the ethnic community management law. - What about the impacts that can be generated with the project? Response: the purpose of the Environmental Impact Study is to identify the impacts that can be generated by the project, and to establish management measures, which are considered within the Environmental Management Plan to be approved by ANLA in the Environmental license for the development of these activities. These measures can include prevention, mitigation, correction and compensation. - What would be the social property compensation? It was explained that this is developed within the framework of social management, through the social property accompaniment, which involves the study of titles, topographical survey and appraisal of land, among others; that according to resolution 545 of 2008, depending on the social characteristics of the families, there may be a right to a socio-economic compensation. 	<ul style="list-style-type: none"> - Question: Does the study contemplate the existence of a sacred territory of the Iles reservation and the customs and habits of this community? CVUS reports that the ethnic community is being approached, and specific work will be carried out with them; a certificate from the Ministry of the Interior is expected to undertake the consultation process. - Question: Will the labor from the area of influence be prioritized in the recruitment of personnel required for the construction of the project? The response is that the concessionaire has a program related to the hiring of labor, where through the website and SENA, it is possible to upload the resume to the database of the concessionaire, or through the mobile offices where information will be provided. So that by the time personnel is required according to the needs of the project, that database is in place. - Question, how is the process being carried out with respect to the courses offered by SENA and the Concessionaire? The CVUS requests the telephone number of the assistant to inform in a timely manner the courses that are undertaken through this institution. - Question Is the layout already defined and when will the construction begin? The CVUS professional responds that according to the study of alternatives, the new route that starts in San Juan, passing through the upper road and ending in El Porvenir is viable. As to the kick-off date, the response is that it depends on the process that takes place with ANLA - the authority in charge of granting the environmental license- an indispensable requirement to undertake the construction process. - Question, As to the estates required for the construction of the project, how is this process carried out? The response is that there is a process of property

CONCERNS AND RESPONSES		
MUNICIPALITY	FIRST SOCIALIZATION PERIOD	OUTCOMES DELIVERY
	<ul style="list-style-type: none"> - What is the criteria for the property purchase? The response is that it is carried out taking into account the commercial appraisal and not the cadastral one. - What about the lands that are under the fraudulent transfer figure? The response is that the area required for the project is freed from fraudulent transfer, clarifying that the rest of the building will still remain under this condition, according to Decree 737 of 2014. 	<p>acquisition previously established, where social-property and legal support is provided.</p> <ul style="list-style-type: none"> - Question, Are prior stability studies required before beginning the construction of a road?, the environmental professional responds that the geotechnical studies allow to identify the risks to subsequently develop management measures. - Question: How is the fraudulent transfer or encompassing property handled; will this be an impediment to approve such a negotiation? The CVUS professional responds that this is within the jurisdiction of the legal area, and that such a topic will be addressed in subsequent meetings, and concerns will be solved with the appropriate professionals. In addition, it is suggested that through the mobile office, the professional of the support program should be contacted, who supports the social-property management to solve their concerns. - Question: Is it possible for them to access information on the results of the environmental impact study? The response is that the study is delivered in a document to ANLA and Corponariño, and once it is approved, it remains as a consultation document that can be formally requested to the corresponding authority.
Imués	<ul style="list-style-type: none"> - The authorities expressed concern about the lack of knowledge of aspects such as the definitive road layout, the area of influence of the EIS, and the possibility of building a tunnel in Pilcuán. The consultant team explained that for the San Juan Pedregal stretch, the area of influence corresponds to the Pilcuán and Silamag rural districts in the municipality of Imués, as well as rural districts in the municipalities of Ipiales, Contadero and Iles. The community was invited to another meeting on March 2 at 3 pm in the Chapel of Pilcuán La Recta, so that the technical area of the Concessionaire reports and clarifies the doubts of the community with respect to the project. 	<ul style="list-style-type: none"> - The legal representative of the municipality of Imués, Miller Díaz, makes a contribution with respect to the territorial units of Pilcúa Viejo and Pilcúa La Recta, expressing the concern of these communities with respect the layout of the Pasto - Rumichaca dual carriageway, due to the population mobilization that can be generated by the project and suggests to expedite the property management and design process so that communities are more certain of their situation. - Likewise, the participants affirmed to be attentive to the different activities of the project, in order to generate adequate processes that do not generate greater affectation to the communities.

- Smaller territorial units.
- Social and Community Organizations.

In order to inform and socialize the project to the different social organizations and population of the area of influence for the Rumichaca-Pasto Dual Carriageway Project, San Juan-Pedregal Section, the intervention strategy was defined, which included three activities: Firstly, a telephone communication was established with each of the presidents of the different Community Action Boards and / or leaders of the territorial units, with whom socialization meetings were scheduled. Secondly, the community in general was convened, through the delivery of notices which indicated the objective of the socialization meetings, and the importance of community participation in these processes, and thirdly, billboards in visible places for the community, indicating the reason for the meeting, date, place and time thereof, and handouts were sent to the socialization meetings (Table 5.4 and Table 5.5). In addition, on the day before the meetings, a megaphone advertising was carried out along the rural districts in order to ensure, through different means, that the community was informed about the activity (Annex 13. Social). x

During the course of the socialization processes, telephone contact with community leaders and the community in general was maintained in order to ensure attendance at scheduled meetings.

The first socialization period took place between February 21 and March 3, 2017, with the participation of representatives of the JAC and the communities of the territorial units identified in the area of study. The agenda of each meeting was:

1. Meeting Purpose
2. Presentation of Concesionaria Vial Unión del Sur S.A.S.
3. Project Overview
4. Technical achievements of the Environmental Impact study: What is an EIA? What is the biotic, abiotic and socioeconomic environment? How do we obtain an environmental license?, methodologies and tools for collecting information on the biotic, abiotic and socioeconomic environments
5. Let's talk: during this space, questions and concerns were raised by the attendees, which were clarified, resolved and recorded in the respective meeting minutes. (See **Annex 13. Social**)
6. Reading and Approval of the Minutes
7. Gathering of primary information (rural district specification and social cartography)

In the process of defining the area of influence, after the time of meetings of the first period, the Loma Alta rural district was included; therefore, this information space took place together with the impact workshop on March 29, 2017. In turn, an additional space was requested with representatives of the JAC and some members of the community, to elaborate the social cartography and fill out the rural district specifications.

The meetings served to compile photograph records, meeting minutes and attendance lists as evidence of the activities developed (**Annex 13. Social**), with the respective authorization of the community members.

During the development of this process, it was proposed to use the participative situational diagnostic methodology which, through a set of methods and tools such as the application of semi-structured surveys of rural district specifications and social cartography, ensured the participation of local communities and authorities

The development of the social mapping workshop (see Table 5.6) was carried out by the attendees by establishing a group that was given a sheet of white paper, pen and colored markers and were asked to identify and draw the sketch of the rural district with elements related to flora, fauna and existing crops, existing bodies of water, social infrastructure such as roads, housing, schools, health posts, wells, etc. ; and the limits of the rural district. (Annex 13. Social).

For its part, for the implementation of the instrument of the Rural District Specification, a space was agreed within the first period with the Presidents of the JAC, and / or with other leaders and residents of the territorial units, whose knowledge and experiences contributed to the identification of other aspects having an impact on the local dynamics, which were considered for the characterization of the area of influence. (See **Table 5.7**).

The rural district specification was a source of primary information, since by completing it, further knowledge was obtained on specific aspects such as general data of the Community Action Board, the population process, censuses and everything related to the historical background of the path. Then, information on public and social services continues, as well as the economic information containing data on livelihood activities. Then, the cultural information regarding the holidays and traditions of the population is obtained. Finally, everything related to the administrative political organization and development trends that refer to the activities and projects developed within the communities is obtained. (See **Annex 13. Social**).

• **Second Socialization Period: Impact workshop.**

The second meetings were held between March 23 and March 29, 2017. According to the strategy proposed, each of the territorial units were convened in order to achieve a better communication of the study and participation in the identification of impacts. Five socialization teams composed of two social and two technicians were formed by the Concesionaria Vial Unión del Sur and the SH Consortium.

The agenda of these sessions was as follows:

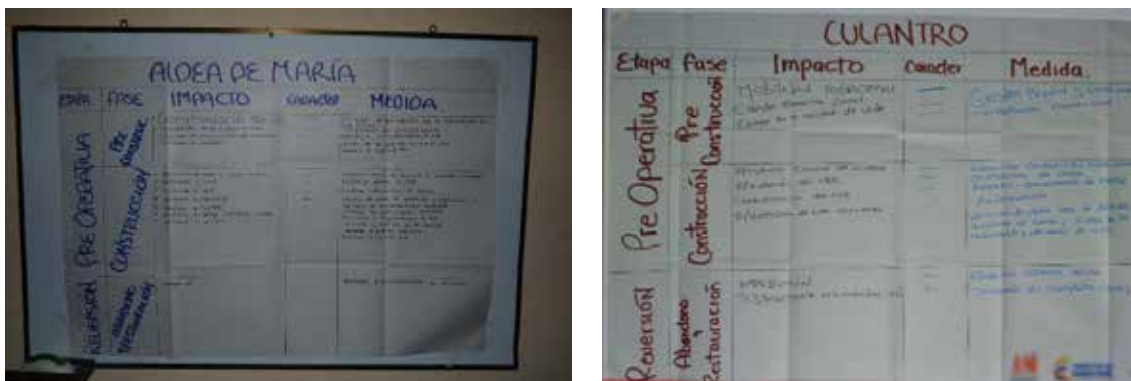

1. Meeting objective
2. Presentation of Concesionaria Vial Unión del Sur S.A.S.
3. Project Overview
4. Area of influence of the project: presentation of the territorial units that are part of the area of influence of the project. In addition, each community was explained why they were part of the area of influence: road layout, ZODMES construction, camps, area of physical - biotic influence.
5. Pre - operative and reversal phases of the project; pre - construction, construction, abandonment and restoration phases; as well as the activities associated with each of these.
6. Use, utilization and / or affectation of natural resources: surface waters, landfills, atmospheric emissions and forest utilization.
7. Impact workshop: What is an impact?, nature of the impacts, What is a management measure?, types of management measures. Space for identification of impacts and management measures, according to the stages, phases and activities of the project. (See **Photo 5.2**).
8. Let's talk
9. Reading and Approval of the Minutes

In the development of these days, some communities such as Pilcuán La Recta and Pilcuán Viejo expressed their nonconformity due to population mobility, generation of expectations, change in health and quality of life of the population that would be generated in families therein settled with the development of the project.

As for the main impacts identified by the community in the Workshop, we may include:

- Population mobility because of the acquisition of land for the construction of the road, ZODMES or camps.
- Change in the economy of each social and territorial unit.
- Affectation to the rural district aqueducts.
- Allocation to surface and groundwater.

Photograph 5.2 Matrices of impact workshops with smaller communities in the area of influence.

Source: GEOCOL CONSULTORES S.A. 2017.

As a result of each day, billboards adjusted and validated by each group were obtained as detailed in **Table 5.8**, which are attached to the present study (See **Annex 13. Social**).

Likewise, it was necessary to reschedule the meetings in the Las Cuevas and Tamburán Rural Districts, due to the visit of the Bishop on March 21 to the chapel of the Los Arrayanes Rural District in the municipality of Iles. However, and despite the compliance of the re-convening protocols (radio advertising, flyers and posters) in these territorial units; given to non-attendance of the Tamburán community, it was not possible to hold the meeting rescheduled for March 29, 2017.

- **Third socialization period: delivery of results.**

The second period meetings were held between April 24 and May 7, 2017. According to the strategy proposed, each of the territorial units were convened in order to achieve a better communication of the study and presentation of results. Three socialization teams composed of technical social professionals from Geocol, Concesionaria Vial Unión del Sur and the SH Consortium were formed. **Figure 5.8** includes the photograph record of these meetings.

The Agenda was as follows:

1. Description of the project: project characteristic, layout, classification, elements, transport infrastructure, geotechnical infrastructure, associated infrastructure, management and disposal of surplus excavation and construction and demolition materials and channel occupation.
2. Abiotic medium characterization: soil characterization, hydrology, hydrogeology, geotechnics and sites of landscape interest.
3. Abiotic medium characterization: land cover, lifting of protection order, Characterization of epiphytic, rupicula and terrestrial flora - vegetation characterization: amphibians, reptiles, birds, mammals, ecosystem services, compensation plan for loss of biodiversity, Investment of 1%.
4. Socio-economic characterization: Area of influence of the project, territorial unit population in the Area of Influence, coverage of public and social services, main economic activities in the Area of influence, land distribution in the Area of Influence.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

5. Use, utilization and / or affectation of natural resources: They explain what will be the environmental permits for the use and exploitation of natural resources. Collection of surface water, landfills, atmospheric emissions, forestry utilization.
6. Environmental Assessment: environmental assessment scenarios with and without a project: the activities that generate greater positive and negative impacts are presented; as well as the impacts thereof.
7. Environmental Management Plan: the programs of the biotic, abiotic and socioeconomic environment management programs are presented.

During this third socialization period, at the request of the communities and their representatives, the meetings were rescheduled in some territorial units:

- Upon request of the president of Iscuzan, the results meeting had to be rescheduled 3 times; the first meeting date was scheduled for April 24, upon his request, it was rescheduled for May 3; However, since that day coincided with the celebration of the patron saint festivities of the rural district, the meeting had to be rescheduled for May 4, 2017.
- In the case of the territorial units of Pilcuán La Recta and Pilcuán Viejo, the communities asked to postpone the meetings that had originally been scheduled for April 29 and May 3, respectively to May 6, 2017.
- On the other hand, in the case of the Porvenir and Capuli de Iles Rural Districts, due to the lack of attendance of these communities to the meeting, scheduled for April 30, it was necessary to reschedule them for May 6 and 7, 2017. (See minutes of meeting April 30, 2017)

On the other hand, with the communities in the Tamburán Rural District, where no impact workshop session was possible due to the low attendance to the scheduled meetings in two occasions for this purpose, there was a space for the socialization of results, in point 6 of the agenda: Environmental assessment; in order for them to identify the impacts that can be generated in the rural district, although this one does not consider the development of the activity and its participation is mainly by the physical - biotic area of influence. The impacts identified by the participants were: decrease in transport prices due to the existence of the a new road, change in the landscape, noise generation and particulate matter due to the nearby ZODMEs.

It is important to note that the community of Pilcuán La Recta requested to record in the results minutes issued during the development of this space, that the inhabitants of the sector agree with the project, but not with the proposed layout in their sector and request to consider the requests made by the supervision commission formed by the community, which made a walkthrough of the route, together with the inspectorship firm and the technical area of the Concessionary, and that the socialization of the technical concept and final layout is yet to be socialized in a next meeting between the community and CVUS.

Table 5.8 Photograph record of the socialization process with the communities.

SOCIALIZATION WITH REPRESENTATIVES OF SOCIAL AND COMMUNITY ORGANIZATIONS				
MUNICIPALITY	TERRITORIAL UNIT	FIRST PERIOD	SECOND PERIOD	THIRD PERIOD
IPIALES	San Juan Indigenous Reserve (El Rosal, Boquerón and San Juan)	<p>On the other hand it worth noting that, in the territorial units of El Rosal, Boquerón and San Juan in the municipality of Ipiales, which make up the Colonial reservation of San Juan, it was not possible to carry out the first socialization period between February 21 and March 3, 2017. The above, because before entering the zone and approaching the representatives of the community action boards, the consent of the governor of the reservation, the corporation and the comprising community was sought, in order to maintain adequate relations and respect the right of the ethnic communities therein settled¹; through a space for the presentation of methodologies for collecting information of the social component for the non-ethnic population that may exist within the reservation, held on March 5, 2017. As a result of this presentation meeting, the attendees proposed to establish a reservation community team to review the methodologies presented therein; however, in the first socialization interval, the review thereof and the access to the area could not take place. In this space, no attendance list or minutes were signed; only the photographic record was executed. (See Photo 5.3).</p>		
		<p>Photograph 5.3 San Juan reservation meetings</p> <div style="display: flex; justify-content: space-around;">    </div> <p style="text-align: center;">Source: GEOCOL CONSULTORES, 2017</p>		

¹ (considering that the Indigenous reservation is a legal and socio-political institution of a special nature, comprised of one or more indigenous communities, which enjoys the private property guarantees with the title it has over its collective estate, it has its own territory and its own governance management, and they have an internal control figure, as it is an autonomous organization with its own indigenous jurisdiction, and its own regulating system. (Article 21, Decree 2164 of 1995).<http://www.mininterior.gov.co/content/resguardo-indigena>.

SOCIALIZATION WITH REPRESENTATIVES OF SOCIAL AND COMMUNITY ORGANIZATIONS				
MUNICIPALITY	TERRITORIAL UNIT	FIRST PERIOD	SECOND PERIOD	THIRD PERIOD
		<p>Similarly, the second socialization of the results workshop was not carried out between March 23 and 29, 2017, with the territorial units of El Rosal, Boquerón and San Juan in the municipality of Ipiales, because the information collection methodologies and participation guidelines had not been reviewed with non-ethnic communities.</p> <p>Finally during the third socialization of the results presentation, on April 28, 2017, it was possible to review the information collection methodologies and participation for non ethnic population with the professionals of the Reservation, and the only pending process for access attendance is the authorization of the governor. (See Annex 13. Social).</p> <p>On May 5, 2017, with the authorization of the governor to enter the reservation, a meeting was held with the professionals thereof, in order to clarify what information and participation processes could be carried out therein with the territorial units of San Juan, Boquerón and El Rosal. During the course of this meeting, it was established that the collection of information through non-ethnic population socioeconomic specifications could begin on May 8, 2017, and community action boards and non-ethnic populations would be convened through the town council meetings for the application of the rural district specification and impact workshops, in order to prevent conflicts of authority within the reservation (See Annex 13. Social). However, on May 8, 2017, the governor of the reservation, Polivio Rosales, requested again a meeting with the professionals of Geocol, CVUS and professionals of the reservation to indicate that the collection of the information cannot be divided between ethnic and No-ethnic population, because the focus of the reservation should be given priority, respecting the authority of the governor and the Town Council. Therefore, he requested the collection of socio-economic specifications to fully compile the affectation area, covering both ethnic and non-ethnic population. In order to move on with the collection of social information, to take into account in the process of prior consultation. (See Annex 13. Social).</p> <p>Likewise, taking into account that the council and the governor are the main authority of the San Juan Reservation; the boards, despite being recognized by the municipal administration and the governor's office; are not the authority within the reservation territory. Therefore, they will internally manage this situation, in order to avoid conflicts in the future. Due to the above, the participation processes would be developed taking into account the guideline given by the governor of the Reservation in the Prior Consultation processes.</p> <p>For further support of what was presented previously, the governor was requested by the representative of prior consultation of the CVUS, to issue a record of the nature of the Community Action Boards within its territory. (See Annex 13. Social).</p>

Table 5.9 Doubts and concerns expressed in socialization meetings with communities.

SOCIALIZATION PERIOD	CONCERNS AND RESPONSES
FIRST PERIOD	<p>The reiterative concerns in the smaller territorial units of the area of influence during the different socialization periods were the following:</p> <ul style="list-style-type: none"> - "In several rural districts, there are construction, expansion and property purchase projects, which are stalled until the final layout is known. It was explained that there is a layout design that could have some small variations, but that would keep the main axis. It was clarified that the definitive design would be announced once ANLA approves the layout and grants the Environmental License. - What knowledge do municipal authorities have regarding the development of the project, since some have requested approval of plans for housing construction? It was answered that the authorities of the municipalities of influence are the first informed about the project, and that they were asked for information from the municipality as the basic source for the study.

SOCIALIZATION PERIOD	CONCERNS AND RESPONSES
	<ul style="list-style-type: none"> - How long does the road construction project last? The response is that these types of projects can normally last from 24 to 72 months, but that the Concessionaire expects not to spend more than 5 years in the whole project. It was clarified that the work kick-off depends on the Environmental Authority granting the license, which can take between 6 and 10 months or up to a year. - What is the criteria for the property purchase? Response: the purchase of land will be done through clear mechanisms of commercial negotiation, through a real estate expert that will make the respective inventories and appraisals, which will be made at the same time with a socio-property support during the process of voluntary transfer and relocation. - The communities express concern about the impact of the water resource, as regards rural district aqueducts and irrigation districts for crops. Response: measures will be implemented to avoid affecting the community and its supply sources. The Concessionaire informed that an aqueduct distribution map will be requested to the presidents of the JACs of the rural districts to be intervened. The community was invited to the second socialization period to participate in the identification of impacts that may be generated by the project activities, as well as respective measures for their management. - They expressed that tree planting compensations should be made with climate-adapted species to ensure their survival. Response: reforestation is not just about planting of trees, but also includes proper monitoring to ensure the respective growth and development of the planted species. - Will the trees that are on the properties to be intervened be paid to their owners? The response is that in the negotiation process, an inventory is made that includes both the social infrastructure as well as the agricultural and forestry crops existing in the property, which is contemplated in the appraisal. - "In case of damage to the environment, what measures will the concessionaire implement to remedy these damages?" It was explained that during the analysis made of the current status characterization of that area with respect to its abiotic, biotic and socio-economic components; it was clarified that in the second period, with the support of the communities, the environmental impacts that can take place in the project are identified and assessed, in order to develop the necessary management measures for their prevention, mitigation, correction and / or compensation, which constitute the roadmap of the Project Management Plan.
Second Period	<ul style="list-style-type: none"> - "How would personnel recruitment take place?" It was explained that by the time the license is already in place for the construction of the road, and the respective activities are carried out for each stage, the employment aspects will be socialized and reviewed in those territorial units where the project undertakes its activities. - "The community asks what is the age limit for hiring staff" Response: during the project stages and phases, certain profiles that do not set out a limit age range will be needed, but they must adhere to the vacancy requirements. - "The communities express concern about the isolation to which rural district roads will be submitted" Response: the core objective of the project is to connect with the existing tertiary routes, thus increasing the competitiveness of the country and the region. - "Who assumes the affectation of houses due to landslides produced by the project execution?" Response: the Concessionaire acquires the lands where the route of the road and the right of way layout is located, corresponding to 30 m on both sides, which decreases the risk of this incident. - "There is concern about the relocation of the social infrastructure affected by the project, such as the Pilcuán Viejo school and chapel." Response: a prior inventory and evaluation of the physical characteristics of the infrastructure, as well as of uses and users will be made, in order to relocate the new infrastructure in equal or better conditions to the existing ones, and to satisfy the needs of the user population. - "Will the trees that are cut be paid in cash?" Response: there is a compensation measure where a reforestation program is established, so that according to the current regulations, the affected species and numbers are paid, within the parameters established by the competent authority. - "Is it possible for the concessionaire to carry out improvement and welfare works for the community?" Response: social programs will be established in the Concessionaire's Social Management plan.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

SOCIALIZATION PERIOD	CONCERNS AND RESPONSES
	<ul style="list-style-type: none"> - "How are the properties with crops purchased?" The response is that in the negotiation process, an inventory is made that includes both the social infrastructure as well as the agricultural and forestry crops existing in the property, which is contemplated in the appraisal made by the real estate expert, to ensure that the commercial value agreed is positive for both parties. - "There is concern that the commercial value considered by the real estate expert be imposed at a value below that estimated by the owners, and that they cannot be located in a site with the same characteristics." Response: the offer is made using clear mechanisms of commercial negotiation - not cadastral- and clarity was made in the socio-property support provided to the inhabitants of the intervened farms. - "How is the socio-property support process?" Response: the socio-property support program requires a particular process for each case but, for all cases, it includes technical, legal and social advisory, before, during and after the transfer to guarantee equal or better housing and / or productive conditions. - "How will the economic impact of the inhabitants affected by the project be managed?" Response: the Social Management program will, at the time, raise the management measures to be implemented for each impact, where the socio-property support is one of the measures, in addition to the training, education and awareness program for the population surrounding the project. - "What is the management measure for the debris generated by the road construction?" Response: ZODMES will be established as zones for the disposal of excavation material and debris management. It was clarified that these materials will be arranged in compacted layers, with handling of terraces and slopes. - "What is the management for bodies of water that increase the flow and can cause flooding?" Response: where necessary, energy dissipators will be built to reduce the speed and strength of water, as well as different hydraulic works for the management of runoff waters and crossings of bodies of water. - "The community states that during the summer, the Humeadora Creek greatly diminishes its flow, so it is not advisable to collect water at that time." Response: the flow monitoring results are expected to determine how to apply for the permit. - "The community is concerned about the water springs located where the ZODMES location is shown." Response: In the environmental Zoning, the water springs remain as a highly sensitive area and, therefore, they will remain as exclusion area with a surrounding protection of 100m in the management zoning. - "The community expressed concern about sewage works and the use of septic tanks in the camps." Response: temporary pipelines will be installed and management measures will be established to reduce the risk where there are bodies of water, springs and deep wells. - "The community asked what happens to people who refuse to sell their properties, considering that the majority are small properties and there is no land to buy in the rural district." Response: there is a regulation that protects the projects of community interest, where the collective interest prevails over the particular one; therefore, the Concessionaire seeks to arrange and exhaust all negotiation instances to prevent enforcing the expropriation. - "The community refers to the fact that there may be cases of insecurity and cattle stealing when the road is in operation." Response: Municipal authorities must implement control and surveillance measures to avoid these incidents. - "The community asked if the fruit dealers, car washes, restaurants and other services could locate their businesses in the new road." Response: the Concessionaire is not competent to do surveillance in this aspect; but it was reported that Corponariño, as the entity in charge for granting the respective environmental permits, as well as to supervise and determine sanctions, is qualified to do that job.
THIRD PERIOD	<ul style="list-style-type: none"> - "Orlando Pupiales of the Alto del Rey rural district, made a suggestion, as to considering ethnic communities." Given this circumstance, the response is that through the prior consultation process, participatory processes will be established with this population group.

SOCIALIZATION PERIOD	CONCERNS AND RESPONSES
	<ul style="list-style-type: none"> - The community asks how the concessionaire supports the private projects that the community has in the areas of influence of the project. The concessionaire responds that within the socio-environmental responsibility program, it is possible to support some institutional management initiatives, as long as they are community-related. - The community asks if the prior consultation process is done with indigenous and non-indigenous communities. The Concessionaire responds that the prior consultation process is only carried out with indigenous communities, but it is framed in the environmental impact studies, where it is necessary to reach the agreement formalization stage with indigenous communities, thus allowing to obtain the license to undertake the road construction. - The community asks the age limit for accessing the vacancies generated by the project. The concessionaire responds that the labor engagement is a program that gives priority to the local population for skilled and unskilled labor where, through the SENA employment website and the concessionaire's website, the Curriculum vitae must be uploaded to the database, as well as the community Education and training program; SENA offers programs for labor skills qualification that aims to qualify and certify the workforce. - A participant in the meeting of the San Andres Rural District asks What comprises the 21.20 meters of the crown? The response is that such area includes internal and external berms, the road and the separator. - Furthermore, as to the epiphytes (vascular) submitted, he wants to know what will be the protection against the species found? It is explained that a rescue plan is established, where the species that could be affected are extracted and transplanted to designated nurseries or places. - An inhabitant of the rural district asks how are the forest plantations of the farms compensated for? It is reported that an economic compensation thereof is made according to the study conducted by the REAL ESTATE EXPERT and in agreement with the owner of the plantation. - The community of the San José de Quisnamuez rural district asks where is the ZODME projected in the rural district located? Response: it is located on the rural district boundary between Ospina Pérez and San José de Quisnamuez, near the projected road. - The community asks how are the returns of existing roads in the area affected? Response: the returns and intersections to connect the road will not affect the roads negatively that the community currently has. The community reformulates the question as to how will the existing roads be affected when the divided highway is built? It is clarified that the construction of interchanges is foreseen, and that the existing crossings will not be closed with the construction of the road. - The community asks if the project is not viable, as there there are rumors that it will not take place. The concessionaire responds that the information is not true; the project will be carried out and, therefore, environmental studies that allow the license to be obtained are being carried out; the ANI National Infrastructure Agency awarded to the Concesionaria Vial Unión del Sur S.A.S. the contract to carry out: studies and final designs, financing, environmental, building and social management, construction, improvement, reconditioning, operation, maintenance and return of the divided highway between Rumichaca and Pasto. The work would last from four to five years. - The community asks how long does it take to approve the environmental license?, the concessionaire responds that the times depend on several factors, including the prior consultation process that should be attached to the environmental impact study. - The community asks when should they find another place in case their home is required for the project? The concessionaire responds that there is a property management program in place that provides support before, during and after the negotiation with a suitable process for the benefit of the communities and the road project. - The community asks about the location of the toll. The concessionaire responds that the construction of a toll is planned in the sector of Las Cruces in the Municipality of Ipiales, in the San Juan-Pedregal segment, and another in the Placer sector. The community manifests its discomfort with the construction

SOCIALIZATION PERIOD	CONCERNS AND RESPONSES
	<p>of two tolls on the road, which generates higher travelling costs towards the municipal hubs of Pasto and Ipiales. Within the San Juan Pedregal section, the installation of a toll is not contemplated.</p> <ul style="list-style-type: none"> - Is the work still delayed? The study developed must be presented to the ANLA, who will make a visit to the area for the corresponding verification and the subsequent acquisition of the Environmental license; such license would lead to the kick-off of the segment construction, but an estimated date has not yet been established. - An inhabitant of the rural district asks, all the flora species shown to us, are in the area of influence, therefore, will they be affected? The Geocol representative responds that what is presented in the socialization is what was found in the area of influence, within the EIS and that is why the environmental inventory and the lifting of the closure is carried out. It is also affirmed that the ANLA, will come to the area and confirm the information base of the study. - Why do you only talk about the basin or the Guaitara River, if here we have more bodies of water? Response: when speaking about the Guaitara river basin, we also talk about all the rivers feeding it, at the hydrological level, the Guaitara river basin is the one that captures several rivers and streams of the area. - Who will carry out the control of the pre-treatment of waters being discharged? The environmental professional of Geocol indicated that that in each camp, there are project and inventory professionals, who will verify that the waste waters comply with the parameters established by the current regulations. - An inhabitant of the rural district indicates that within the presentation, specifically on the slide of the impacts of a scenario with no project, no impact is observed with respect to community displacement. Response: This slide corresponds to the scenario without project, which shows what is currently experienced in the different rural districts. It is explained that the scenario with project does consider that impact, and it is clarified that the most representative and general results that are identified in all the rural districts where the study was realized. - Alfonso Estrella, a member of the community, says that he wants a possible solution to the difficulties that would arise after the passage of the road, asking for alternative solutions. Response: There are management measures contemplated in the Environmental Management Plan to prevent, mitigate and compensate for the potential impacts identified in the biotic, abiotic and socioeconomic environments. - A community member asks if the current route design is feasible. The technical specifications must be made at an upcoming meeting with the technical staff of the concessionaire, after the visit by ANLA, who verify whether the study is accepted or not, seeking to generate the least environmental impact. - An inhabitant of the rural district asks, Will my house disappear after the passage of the road? Response: once the environmental license is obtained, the community will be informed of the properties that will be required for the project, the procedure of acquisition of land will be carried out, developing the support program for the socio-property management. - Mr. Miguel Hernández asked how will properties be paid?, Response: it will be made through an appraisal REAL ESTATE expert; therefore the purchase of the properties and houses will be made under the commercial appraisal and not the cadastral one. - An inhabitant of the rural district asks how far are the exchangers in between? Response: between San Juan and Contadero 1.6 km, between Contadero and Iles 16.9 km and between Iles and Pilcuan 6.8 km. - Is this the last meeting? Response: it is the last meeting of the Environmental Impact Study. - What are the characteristics of the returns? The returns will be in both directions, since there are some that only go in one direction. - An rural district inhabitant asks, How many ZODMES have they planned? Response: approximately 57 ZODMES are considered, but it depends on what is authorized in the environmental license.

SOCIALIZATION PERIOD	CONCERNS AND RESPONSES
	<ul style="list-style-type: none"> - It is clarified that the lifting of a ban is an independent permit required to obtain the Environmental License, which is processed with the Ministry of the Environment and Sustainable Development through the Forests Directorate. - What are the endangered species of reptiles? Response: the endangered species include the lizard scientifically identified as <i>Stenocercus angel</i>. - A rural district inhabitant states that the inhabitants of the former province of Obando are against the placement of a toll and propose that it be placed in another sector. - The president of the JAC refers to his concern about the protection of water sources, since the water of the community offers good quality. Response: There are professionals who carried out the inventory of water sources, according to the current regulations, carrying out a series of infrastructures that will allow the flow of water. It is also explained that ANLA will carry out an inspection with respect to the inventories of bodies of water; therefore, if these bodies are affected, a modification can be made in the proposed design. - What treatment will be applied to rainwater and waste waters? Response: For the first ones, hydraulic works will be constructed for the management of runoff water and, for the second one, there will be no sewage or residual sewage discharges in the rural district, since there are management measures that allow mitigating such actions. - Mr. Ovidio Guelpud requests the inspection of the water spring located in the village of Providencia, which supplies the rural district aqueduct thereof, and that of the Las Delicias rural district located in Finca la Florida. - Mr. Ricardo Ibarra emphasizes that the quality of the water is of outstanding and that he expects a fair compensation with respect to it. He also expresses that as a community, they have several needs like a common meeting room, among others. The concessionaire indicates that money cannot be allocated to things that are not within the contractual object, compensation is made against the affectation caused after the work construction. - A community member asks: How will the acquisition of land be made, if required by the road project? The concessionaire indicates that the company provides socio-property support, and once licenses are in place, the socio-property process will be carried out, in addition to the respective support under the figure of the commercial and non-cadastral appraisal, through an appraisal EXPERT, to subsequently issue a purchase offer. - An inhabitant of the rural district asks: What will be the compensation for the flora? As explained in the presentation of EIA results, there is a compensation plan for biodiversity loss, which establishes the compensation factors depending on the natural coverage to intervene; there is a program called M.A.F.E, which sets out the possible areas where such compensation could be made, aimed at ecological restoration and conservation activities. - An inhabitant of the rural district expresses fear that the proposed compensation will not be met. All activities proposed so far are subject to evaluation by ANLA, who, upon its evaluation of the EIS, will proceed to issue the environmental license, which establishes a series of obligations that the company must comply with. - Mr. Henry Mallama president of the JAC of the Tablón Bajo rural district asked Will the Tablón Bajo rural district cross the route? The image of the area of influence of the route used in the impact workshop to clarify his doubt, as he had not attended the previous meetings, indicating that the road crosses the rural district. - According to the layout, would bodies of water that supply the community aqueduct be affected? It is explained that an inventory is made to create an environmental management plan to mitigate the impact that can be generated and it also is clarified that the springs are restricted. - What benefits would be gained in the event that underground bodies are found after excavations? Response: The Concessionaire will not request exploration of groundwater; however, according to the terms of reference, a characterization of the hydrogeological units and a representative sampling of existing groundwater points along the area of intervention are carried out.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

SOCIALIZATION PERIOD	CONCERNS AND RESPONSES
	<ul style="list-style-type: none"> - An rural district resident refers to his concern about sewers during the rainy season. The concessionaire must implement measures for the activities taking place due to the construction process, such as hydraulic works for runoff management. - Will the training of personnel be through the administration? The concession will be responsible for informing through its programs how the different training sessions will be carried out through the social management of the concessionaire, to the personnel engaged in the project and the community surrounding the project. - How should one deliver the resume of the people interested in the project? The social professional of the concessionaire replies that the registration can be made through the mobile offices, which are responsible for the registering the resumes. It is recommended to be aware of the days when the mobile offices will be in the Urbano rural district. - The community asks what are the requirements to apply for the vacancies required for the execution of the road project? Response: there is a program called User Attention and labor engagement, where information can be obtained in this regard, where through the SENA employment website and the concessionaire's website, people must upload their curriculum vitae to be registered in the database, as well as in the Community Education and training program offered through SENA for the qualification of labor competencies, aimed at qualifying and certifying the workforce. - The community asks how true is it that the project will not take place under the current government? Response: That is not true, as the National Agency of Infrastructure ANI awarded to the Concesionaria Vial Unión del Sur S.A.S. the contract to carry out: final studies and designs, financing, environmental, building and social management, construction, improvement, rehabilitation, operation, maintenance and reversion of the divided highway Rumichaca and Pasto, under the APP scheme 15 of 2015, with contractually defined timeframes. Emphasis is placed on the availability of the mobile office on Wednesday in the urban area of the municipality of Iles, where the concessionaire's staff is willing to resolve any doubts and concerns the community has. - Will the slope be paid if it is required? The Consortium official responds affirmatively, and depending on the stability of the terrain, the construction of the divided highway length can vary. - When the road is build and excavations are made, the water in the micro-watershed is affected, how would they mitigate that situation? They will establish channel occupations and works to prevent water from generating instability of the ground, such as filters and power dissipators, in order to minimize impacts. - Major contamination will be caused by the crushers. A CVUS official responds that all activities are governed by an environmental management plan; shredders will expel particulate material, which will be mitigated by the placement of geomembranes and water irrigation. It is emphasized that it is a temporary activity. - With respect to the sacred sites of the indigenous community of Aldea de Maria, the community indicates that there are "guacas", petroglyphs, how is this managed? Response: when there an indigenous community is present, a prior consultation process must be carried out, which is already being furthered with the community of the current rural district according to the current regulations. - If the road is already built, how far can I build houses? Response: within the new road constructions, there are clearance areas, which according to the current regulations correspond to 30 meters, but can vary depending on the stability required in the slope. - How are they going to pay the square meter of land? The premises are acquired based on the commercial appraisal; prices are not defined by the road concession; an expert ESTATE APPRAISAL firm does such work, which is based on the commercial appraisal and not on the cadastral one. - An inhabitant of the community of Aldea de María reports his discomfort with respect to the frog handover to the research institutes. The concessionaire and officials of Geocol indicated that prior to undertaking the environmental study a research permit was processed with ANLA, in order to collect

SOCIALIZATION PERIOD	CONCERNS AND RESPONSES
	<p>material and conduct sampling. Some of these species were delivered to the Humboldt Institute and Coponariño, in order to register and protect these species. The community by means of guides, provided support to the biologists when carrying out these activities.</p> <ul style="list-style-type: none"> - The president of the JAC of the Aldea de María rural district stated that the community refrains from signing the attendance lists to avoid any commitment, as they are afraid that by signing, it may be assumed that they have accepted the project. Response: it is indicated that the signature does not imply acceptance of commitments, only the attendance to the EIS results socialization, in compliance with the terms of reference. - An inhabitant of the San Francisco rural district asked, As for the discharges, the presentation is excluding the San Antonio creek? The Geocol consultants representative affirms that said creek is proposed for collection, not for discharges. - A San Francisco resident says that one of their bodies of water is being affected due to pollution activities being carried out in the Aldea de María rural district and therefore, water collection proposed from the Yamurayán stream would not be suitable for the aforementioned collection. Geocol explains that the water required for the project is for the industrial processes, like the mixture of concrete, for example. - The president of the San Francisco rural district suggests that a water quality level study be carried out in the Yamurayán creek. Geocol consultants explained that within the study, the respective study and inventory of the bodies of water was carried out, and these results are contained in the Environmental Impact Study document. - The community is talking about the fact that 4 ZODMES will be established in San Francisco, which will cause more damage than the layout itself; and the inhabitants are uncertain as to which areas will be affected, and request to know the the route followed by the road, indicating each property in the rural district. - The community in the San Francisco rural district, asks if they are going to buy the houses within the projected ZODMES? Response: They will be bought, as long as they are environmentally fit for that purpose, although other types of alternatives such as the payment of easements, among others, will also be contemplated. - The community reports that ZODMES will affect productive areas and infrastructure of the San Francisco rural district. The Inspectorship officer indicates that there are various criteria for the location of ZODMES. - The community requires to know the layout that would involve involve their rural districts (San Francisco and Rosal de San Francisco), to identify which properties would be affected. The concessionaire responds that the EIS result is currently being carried out and the socialization of the route will be subsequently carried out. - An inhabitant of the San Francisco rural district asks, "How will I be compensated for the natural cover of my property?" Response: there are two types of compensation; the property one and the biodiversity loss compensation, as explained in the presentation of results of the EIS, there is a manual, which establishes the compensation factors depending on the natural coverage to intervene; there is a program called M.A.F.E, which sets out the possible areas where such compensation could be made, aimed at ecological restoration and conservation activities. - An inhabitant of the El Rosal de San Francisco rural district stated that "It is important analyze if the layout is convenient or not, taking into account the opinion of the community". The Concessionaire representative indicates that, as a company, they are responsible for various processes that are analyzed from the technical, environmental, social and property perspective, seeking the least affectation to the community. - The community of San Francisco and El Rosal de San Francisco ask If an irrigation is lost, how is this managed? The management plan contemplates the protection of the hoses intercepted with the route, taking users into account. In addition, work committees will be created to agree on measures to protect such flows according to the management plan covering networks affected by the project.

SOCIALIZATION PERIOD	CONCERNS AND RESPONSES
	<ul style="list-style-type: none"> - The San Francisco and Rosal rural district community asked Is it possible to establish a community attention office in the rural district? Response: The concessionaire has proposed several communication channels with the community, such as the center of operations; however, there are others, such as mobile offices, which are transferred to municipalities with the aim of providing information and guidance to the community; likewise, there are telephone lines and e-mail, where it is possible to submit the different concerns so that they are processed accordingly. - The community of the San Francisco and Rosal rural district asks if the layout is already defined and when will construction begin? The CVUS professional responds that according to the environmental diagnosis of alternatives, the new route that starts in San Juan, passing through the upper road and ending in El Porvenir is viable. As to the kick-off date, the response is that it depends on the process that takes place with ANLA - the authority in charge of granting the environmental license- an indispensable requirement to undertake the construction process. - The Culantro rural district community asked: Will the labor from the area of influence be prioritized in the recruitment of personnel required for the construction of the project? The response is that the concessionaire has a program related to the hiring of labor, where through the website and SENA, it is possible to upload the resume to the database of the concessionaire, or through the mobile offices where information will be provided. So that by the time personnel is required according to the needs of the project, that database is in place. - The Culantro rural district community asked: How is the fraudulent transfer of property handled; will this be an impediment to approve such a negotiation? The CVUS professional responds that this is within the jurisdiction of the legal area, and that such a topic will be addressed in subsequent meetings, and concerns will be solved with the appropriate professionals. In addition, it is suggested that through the mobile office, the professional of the support program should be contacted, who supports the social-property management to solve their concerns. - The Culantro rural district community asked if the tertiary routes that connect to the zone would be affected? The CVUS professional responds that the existing accesses and the tertiary interconnecting routes between rural districts will be respected. - The community of Culantro, asks if the process of prior consultation is done with ethnic and non-ethnic community? The Concessionaire responds that the consultation process is only with indigenous communities. - The Manzano community asks where is the ZODME located? To respond, the zone map is shown, which indicates the ZODME location; slide used in the impact workshop and explains that it is approximately in the boundaries between San Andrés and Manzano. - The Manzano community asks how the current route connects with the new divided highway? Response: that the existing access roads will be maintained in the rural district, since one of the objectives of the road project is to generate greater connectivity between the regions. - The Manzano community asked if it contemplates the construction of an exchanger or return close the rural district. The concessionaire indicates where the 3 returns and 4 exchangers will be located and emphasizes that it is a route with high technical specifications that reduces traveling time. However, Mr. Luis Antonio Muñoz, member of the community, expresses his disagreement and requests to foresee an interchange closer to the rural district. - The community asked, when will the road construction begin? The CVUS professional indicated that the project is in a pre-construction stage, where the respective environmental studies are developed and then presented to ANLA - the authority in charge of granting the environmental license, an indispensable requirement to undertake the construction process. Once the environmental license is obtained, socialization processes will be made with the community where this information will be released. The professional informs that construction is planned to begin on the next semester and will last from four to five years. - The Cuevas community asked Can the trees marked be used to gather information for the environmental study? Response: These trees are already inside the inventory and that the idea is that the vegetation inventoried should be completely available for the ANLA visit; however if the owners of the property require the use of a tree, they can use it.

SOCIALIZATION PERIOD	CONCERNS AND RESPONSES
	<ul style="list-style-type: none"> - The community of Las Cuevas asked if the area will be placed at risk due to the civil works carried out in the zone? The concessionaire responds that the necessary management measures will be developed and implemented during the construction process in order to prevent, control and mitigate the impacts that may be caused to the community and especially in those areas at risk. - The Capulí community residents in Iles asked if the 1% investment will be made at the project collection points? The environmental consultant professional indicated that the regional authority administers the 1% investment in the water sources of the Guaitara River basin, according to the evaluation undertaken. - What does coverage affectation compensation means? The environmental professional mentions that there is a management plan that addresses the compensation for the affectation to the coverage; this is based on the M.A.F.E tool, which indicates the compensation zones where this type of management must be performed. - Is the construction of pedestrian bridges considered? The CVUS professional stated that within the Environmental Impact Study preparation, mobility exercises are carried out to identify critical points that will serve as input to establish the spaces to locate and install pedestrian bridges. - The Capulí community in Iles wants to know if the divided highway will cross the rural district. The professional indicated that no divided highway will be built in the divided highway; then, the community requests the detailed geographical location of the rural district with respect to the approved layout. It is clarified that the current road is enabled for vehicle traffic. The current meeting is necessary for the transition to the construction phase. The environmental professional stated that it is a regulatory requirement to notify the communities about the kick-off and results of the environmental impact studies, for purposes of environmental licensing by ANLA. An inhabitant tells the community that it is important to take into account that ANLA will make a follow-up visit to the Pedregal - Catambuco sector, and they will soon be in the zone for the environmental license of the San Juan - Pedregal segment. - A community participant of the La Esperanza rural district asks if the water sources bordering the path will become contaminated? It is indicated that, on the one hand, to avoid the affectation of the bodies of water by the spills that may take place, water will be treated, prior to their discharge; in addition to the above, measures related to the management of debris and excavation material, erosion control, handling of building materials, crossings over bodies of water, liquid waste will also be established; among others. - A resident of Tamburán asks what is the distance between the returns in place along the divided highway? It is reported that the first return and the next will have a distance of approximately 9 kilometers; between the next and the last, there will be an average distance of 5 kilometers, emphasizing that these distances could vary depending on the needs of operation. - Mr. Giraldo Ayala of the Las Delicias rural district requests information on the management of the runoff waters, once the divided highway is built. It is explained that works are constructed, such as sewers and water wedges, which will take water to natural channels spots, where they will be discharged, without causing erosion and affecting the stability of the land. - The community of the Las Delicias rural district are concerned for the possible effects that may be caused on their aqueduct supply sources (springs); it was explained that during the study development, a visit was made to identify such sites to establish protection rounds to avoid the affectation thereof; likewise, it is explained that prior to the works, a new verification visit is made to ensure that they have all been duly identified. - An inhabitant of the Porvenir rural district asked Will tunnels be built in the path? It is reported that within the Rumichaca - Pasto divided highway construction project, no tunnel construction is envisaged. - The Pilcúa La Recta community asked What is the area of influence of the project? Response: the socioeconomic area of influence comprises the territorial units of the municipalities of Ipiales, Conatadero, Iles and Imues. - The community asked - in Pilcuan la Recta, what is the area of influence of the project? Response: according to the area of socioeconomic influence, the area of influence covers the whole territorial unit of Pilcúan.

5.3.2 Demographic component.

The description of the demographic component presented below shows the contextualization of the settlement process, according to its geographical location and the different historical, social, economic and cultural facts that have characterized the municipalities of Ipiales, Contadero, Iles and Imues located in the department of Nariño and the smaller territorial units present in the area of influence of the project. The demographic behavior is summarized, based on the data referenced by the DANE, analyzing the trends and indicators related to distribution by gender, age, information consolidated in its numerical dimension and in its structure, identifying indexes, coverage and projections. For the smaller territorial units, primary data collection exercises carried out with the community were used as the main source. (See **Annex 13. Social**).

5.3.2.1 Demographic dimension of major territorial units.

This section presents the population dynamics and the demographic trends of the municipalities of Ipiales, Contadero, Iles and Imues, which represent the major territorial unit for the "Environmental Impact Study for the Rumichaca - Pasto divided high project, San Juan - Pedregal Segment."

- **Population dynamic.**

The following are the most important historical events that have had an effect on the regional population dynamics, identifying the type of population settled and the outstanding economic activities; this section also describes the rural and urban distribution and the population density.

- **Historical events that have marked the population dynamics.**

Historically, the population has been distributed according to the incidence of abiotic factors such as climate, topography, soil quality, water resources, etc., factors that are essential for the development of domestic and productive activities that constitute the basis of food and subsistence; in addition, there are social factors, which include economic, political and cultural factors that also affect distribution and settlement patterns. On the other hand, the effect of the policy is based on the fact that, through governmental decision-making, the concentration of population in a given region or territory can be stimulated or not; they also allow the population to adapt or not to their forms of power.

From the economic point of view, the population of the municipalities is concentrated in the sites of great agricultural and livestock activity, specifically Imues, Iles and Contadero. Ipiales delves around livestock and agriculture, but also subsists with minerals such as oil in the Churuyaco jungle, stone quarries and handicrafts in Las Lajas, gravel in Puente Viejo and clay in El Tejar².

- **Geographical aspects of major territorial units.**

The density and number of territorial divisions historically depend on factors such as economic development, existing communication channels, living conditions and migration volume. The historical perspective of the economy in these territories, demonstrates the current relation between the economic dynamics and the type of population. It is important to remember that the first settlements occurred with indigenous groups, which gradually changed their way of life and culture because of the contact they had with Spaniards, who came with other forms of social life, generating changes that are currently reflected in each municipality. The

• **First inhabitants.**

Table 5.11 shows the settlement of the first inhabitants who came to the territory, motivated mainly by improving their living conditions, attracted by mountains, climate, water sources, fertile land, which became important elements in the economy, family and social welfare. The prevailing and transversal economy in the population was always agriculture, which is still a constant as a means of subsistence.

Table 5.11 Historical events of settlement - major territorial units in the area of influence.

MAJOR TERRITORIAL UNIT	HISTORICAL POPULATION EVENT
Ipiales	<p>Historically, they are descendants from the Pastos culture, which geographically comes from the old town of Tuza (San Gabriel) in Ecuador; the highlands of Túquerres, Ipiales, Tulcán and areas surrounding the elevations of Cumbal, Chiles and Colimba. All the municipalities of the former Obando Province, populations located in the middle of the "Pastarán" (Guáitara or Carchi) river and, to the north, to the municipality of Yacuanquer", together with the cultural integrity of the territory, should be referred to as the "Great Territory Pasto - Karanqui". The foundation of Ipiales is not really documented; however there are several versions that point to Mercedarian parents with their evangelizing mission; in 1615, by means of a document, it was known that they informed to the king that the town of Ipiales was comprised of 12 houses with 23 people, with lands suitable for the sowing and a hermitage.</p> <p>After the foundation of Ipiales, until the Colombian independence of Colombia, it is said that there was an enthronement of the Spanish culture, through language, religion, the implementation of a productive system, social economic relations and territorial governance.</p> <p>On the other hand, the change of Ipiales gives rise to a revolution and, therefore, a development. In the second half of the nineteenth century, new routes were opened for trade between the coast and the Sierra, the operation of the telegraph was presented, which implied the need for eucalyptus poles (In Ipiales in 1880 the sowing of this species began, proliferating its species at present, causing a great impact in soil and in water). In 1,872 there were 9 schools in the sovereign state of Cauca and 1 of them was located in Obando; in 1,886 the fathers of the Oratorium arrived.</p> <p>In recent history, there are events that affect the life of people; the construction of the San Luis airport (1940); the design and construction of the aqueduct system (1,945). Also, in the early years of the twentieth century, factories and businesses were settled in Ipiales, representing the foundation of its current economic structure; some of these initiatives indicate the route of work and others are a benchmark to consider the reactivation with improved criteria: factories of buttons, stockings, textiles, coffee, soft</p>

MAJOR TERRITORIAL UNIT	HISTORICAL POPULATION EVENT
	<p>drinks, are activities listed as business initiatives. In 1,930 the Ecuadorean citizen, Fernando Pérez Pallarez opened a textile and gas factory and a power plant in Las Lajas, among other companies, generating jobs and development.</p> <p>In the 1940s, Bavaria came to redirect the productive structure of the agricultural sector and in the south. A product such as barley that was not part of the agricultural supply becomes intensively cultivated. For 5 decades, the company works, demanding that product, influencing the behavior of other sectors, such as trade, transportation, services, etc. The implementation of the Neoliberal model allows the entry of barley and other agricultural products from countries with competitive advantages; local activity declines with the consequent closure of the company.</p> <p>In recent years, it is possible to refer to the fact that the local economy becomes similar to that inherited by the ancestors, especially based in the agricultural sector, the commercial sector, transport, micro industrial, micro business and crafts, tourism, services and informal economy¹⁵.</p>
Contadero	<p>The first settlers of the municipality of Contadero were the Pastos, who occupied and the territory between San Gabriel (Ecuador) to the convergence of the Bobo and the Guaitara Rivers, to its mouth with the Patía river, including the area of Yacuanquer and leaks of Pasto. These aboriginal peoples according to JIJON and CAAMAÑO in the seventeenth century, were divided into the Pastos themselves, Barbacoas or Coayqueres, Muellamueses and Colimas. In the province of Obando, tombs have been found, where the pottery reflects their beliefs and customs.</p> <p>The organization of the Pastos was based on chiefdoms, where the Puerres, Pupiales, Túrreques, Cumbal, Mallama, Mallasquer, Cuaspud, stand out; it is known that there was a small indigenous settlement called Putisnan, which is now known as the Aldea de María. These indigenous communities were especially dedicated to agriculture, which they exchanged for gold and chaquiras; they worked with cotton and made blankets, knew about pottery, loom and rock engraving; they were respectful of nature.</p> <p>In the Putisnan population, they slept, impersonated the Funes and continued towards the north. There was a road called "Camino del Rey", which descended through the Zuras area passing through the plains of Contadero, climbing up to the hill of Iscuazan, used by the Incas of Peru when travelling to the north. ¹⁶</p> <p>In 1711, at the request of the Gualmatán indigenous group with their representative Don Pedro Fernandez de las Barcenas, requested to the Pasto commissioner representative at the government of the Gran Cauca, "the eye-sight clarification of the</p>

MAJOR TERRITORIAL UNIT	HISTORICAL POPULATION EVENT
	<p>corresponding limits between the petition, on the condition that they should be placed under the leadership of the town council of indigenous people who inhabited the region and to be given their proportionate share. " Don Alejandro de la Torre Cosio, Don Pedro de Santa Maria, Marcos de Ubidia and Don Pedro Fernandez de las Barcenas served as witnesses. Then, given the illness of the it was recognized and the decision was favorable, and subpoenaed again to Don Juan Garcia Tulcanaza, chief of the town of Iles, through communication dated to December 2, 1711. On December 20, 1711, a commission comprised of the judge commissioned and Don Juan Garcia Tulcanaza went to the Iles, Gualmatán and Putisnán towns. They issued the marks, as ordered by the king, leaving boundaries with Iles, Gualmatán and Putis. After this denomination called De Cosio, the town council of San Juan de Pasto auctioned these lands and upon Don Martín Rosero's taking possession in 1712, in July of that same year, they are granted through donation deed to the Jesuit priests.</p> <p>Father Ignacio Ormeguí, on behalf of Father Francisco Sierra, accepted the donation of the lands, taking possession thereof two years later in November 1714 before Captain Francisco de Argota, the ordinary Mayor of Pasto, the reverend Leonardo Dubble, of the Jesuit priests school, granted deeds of sale in favor of Nicholas Chamorro and Juan de Morales for a value of one thousand "patacones".</p> <p>En 1868, presbyter Carlos Guerrero Chamorro obtains the permission to found the Contadero, buying from Dona Dominga, widow of Chamorro the property lot necessary to found the population, and on October 1, 1869 the foundation of Contadero is declared and begins with the construction of the church for three years, eight months and 22 days. The sacristan of that time was Mr. Jose Maria Morillo.</p> <p>On April 14, 1871 El Contadero was elevated to the category of district, by Ordinance number four of book 107, of the statistical yearbook of Popayán, belonging to the Province of Obando. In this year, the municipality of Obando erected the district of Contadero, annexing the district of Iles, in 1874 the same assembly of the old Cauca, segregated Iles and suppressed the district of Gualmatán that united it to El Contadero, later Gualmatán regained the category of district and El Contadero was added the sections of San Juan, Yanalá and Chaguaipa. In 1911, the Assembly of Nariño returned these sections to Ipiales, adding La Aldea de María to the district of Contadero.</p> <p>The name of Contadero is possibly derived from the activity carried out by the Jesuits to count cattle. The Contadero had a simple chapel, with a small tower for the bells, a wooden door with an arch and two pilasters on both sides; its small square with stone steps, above, on top of the main door, a window gave light to the interior of the choir, in front of the curial house there was a large wooden trunk to tie the horses that arrived with their loads to pay tithes and obligation pledges per year to each of the parishioners. Its streets were not cobbled, there was a square in the park, four walnut trees adorned</p>

MAJOR TERRITORIAL UNIT	HISTORICAL POPULATION EVENT
	<p>the square in each corner, there was a pile of water near the door of forgiveness of the church, from which the first inhabitants were supplied with water.</p> <p>The road from San Juan to Contadero was made with the support of the presbyter José Manuel Bravo and Don Leopoldo Mercado, owner of the flour industry at that time, and subsequently installed the postal services that communicated Ipiales, Contadero, Gualmatán and Iles. It was one of the first municipalities to have electric light because the flour industry built a dam on the Boquerón river to generate electric power for the factory's engines, which was exempt from taxes as long as energy was supplied for lighting the town. On the Cutipáz river, there were also 5 stone mills, of which there is only one in the Yaez rural district, used at that time to grind barley grains, Moroccan corn and capy corn. Gradually, El Contadero was populated, and it is confirmed that the families who arrived after the foundation were the Polo, Davila, Herrera, Jacome, Guerrero, Chamorro, Figueroa, Vallejo and Bravo. Indigenous surnames correspond to Chalapud, Cuayal, Quendies, Tulcaná, Palma, Ilisman, Guasachir and Guapucal. Each one of these families was forging the development of the municipality, thus becoming promising municipality, with friendly and cultured people and a rich historical legacy, testimony of the passage and the Spanish colonization¹⁷.</p>
Iles	<p>The municipality was founded in 1,711 by an expedition heading to Popayán from Quito. The municipality takes name in memory of the Juan García Tulcazana Ilisman chief, being legally recognized at the Popayán governor's office.</p> <p>From 1,538 to 1,711, the south and the center of Nariño was dominated by the Quillacinga tribe, who with its primitive command systems, subjected these areas; therefore, it was called the "Providence of Quillacinga", a tribe that gave rise to other families that, with the passage of time, sought to become independent in search of suitable places to live, where the land could provide enough food for all.</p> <p><u>From the Royal Audience of Quito, an expedition to the "PROVIDENCE OF QUILLACINGA" (Northern Ecuadorian period) was authorized to normalize the ruling anarchy and preserve peace between tribes and communities: therefore, they tried to establish themselves in sites apart from each other and form territorial jurisdiction in the establishment of the supremacy authority of Quito, which depended on The Royal Spanish crown, thus establishing their domain therein, and imposing their primitive customs of Religion and of control.</u></p> <p>According to the oral tradition, in 1.787 a commission of Spaniards coming from Quito, arrived to the incipient Iles village, that only 30 or 40 huts, all in poor condition and a chapel, with an image of Our Lady.</p>

¹⁷ Official page of the Contadero municipality. http://www.contadero-narino.gov.co/informacion_general.shtml. Enquired in February 2017.

MAJOR TERRITORIAL UNIT	HISTORICAL POPULATION EVENT
Imues	<p>The municipality was founded in the sixteenth century, in 1572, according to the Departmental Statistical Plan of 1991-1992. It was founded by the Carlos Quiscaltud de Imués chief, who settled with his family in the territory, as a strategic point for the visibility it had to be attacked at some time by his enemies; the family had all the necessary comforts, ie firewood, water, fertile land for agriculture. The main access road known as the old bolivar road or royal road; was the main road or corridor of communication with the neighboring towns. With the arrival of other inhabitants of neighboring places, around the Guaitara River and called the Quillacingas, as the case of Guaitarilla, Ancuya, Consaca, Yacuanquer, Tangua, Samaniego, Funes, Contadero and others, the great family of the chiefdom of the time was created¹⁸.</p> <p>In 1849, the municipality of Imues was considered a province, belonging to the municipality of Túrreques and from that date was considered a municipality of the department of Nariño. IMUES, means HIDDEN WATER. At times of intense sun, the population used leather, which they used to climbed up to the Cambutes hill near the Vocanas site, where there was a water spring, and that is where they performed their rituals to avoid the drought¹⁹.</p>

Source: Municipal Development Plans 2016-2019 - Ipiales - Contadores-Iles-Imues.

- **Population settled in major territorial units.**

The population settled in the major territorial units of the project is a product of the combination of basic ethnic elements such as mestizo, white and indigenous. The migration process was mainly due to the indigenous population that settled in the region, with the aim to live in the territory and thus seeking their own identity, dedicated mainly to the exploitation of land suitable for agriculture and livestock.

- **Ipiales:**

There are several ethnic groups in the Pasto, Kofan, Inga, Awa and Nasa communities, distributed in 8 indigenous councils, the population estimated according to the Municipal Development Plan is 38,438 inhabitants; Likewise the presence of Afro community and ROM population, with an estimated population of 530 inhabitants.²⁰

- **Contadero:**

¹⁸ Official web page of the municipality of Imues. http://www.imues-narino.gov.co/informacion_general.shtml. Enquired in February 2017

¹⁹ Ibidem.

²⁰ Municipal Development Plan "IPIALES, CAPITAL OF THE SOUTH" 2016-2019. Enquired in February 2017.

According to the Municipal Development Plan, there is the Aldea de María Indigenous Council present, with a population distributed in fifteen (15) rural districts. The total estimated population is 3,171, corresponding to 54% of the estimated total population in the municipality

• **Iles:**

The ethnic composition is eminently mestizo, with a presence of indigenous population duly recognized by the Ministry of the Interior and Justice, which refers to 397 families and a total population of 1,536 people, who represent 18.41% of the total population of the municipality. ²¹

• **Imues:**

In the municipality, there is the highest concentration of indigenous population attached to the Tuquerres reservation, in the Santa Ana township territory. The indigenous population, with approximately 1,030 members, corresponds to 16.51% of the total population and 10 Afrodescendants who are highly vulnerable from the socio-demographic standpoint, and with less development conditions. ²²

Table 5.12 presents the type of population settled in each of the municipalities identified in the area of influence.

Table 5.12 Type of population settled in the territorial units of the area of influence.

MAJOR TERRITORIAL UNIT	ETHNIC OWNERSHIP	ESTIMATED POPULATION	TOTAL POPULATION
Ipiales	Indigenous	38.438	138.980
	Afrodescendants	530	
	Mestizo non ethnic	100.012	
Contadero	Indigenous	3.171	6.954
	Mestizo non ethnic	3.783	
Iles	Indigenous	1.536	8074

	Mestizo non ethnic	5.196	
--	--------------------	-------	--

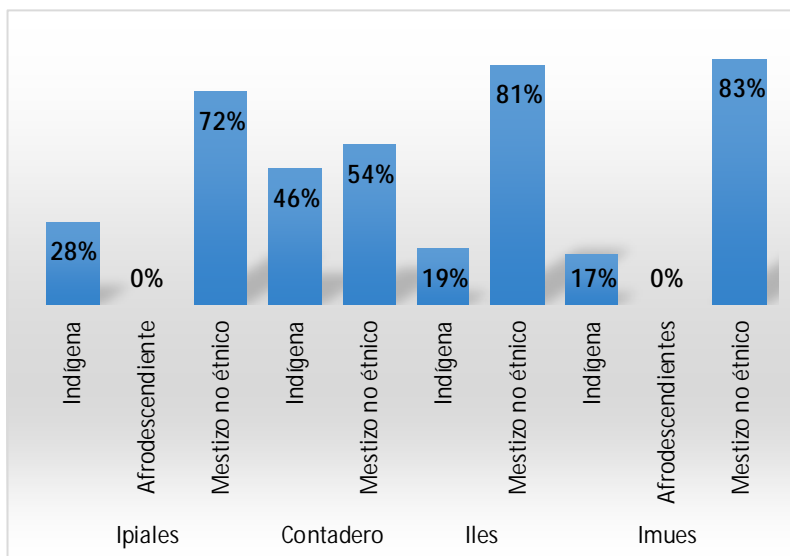

Source: PDM 201-2019 - EOT - Major territorial units of the Area of Influence of the project. 2017.

Taking into account the total population per municipality, and as shown in **Figure 5.1**, the highest percentage of indigenous population is reported by the municipality of Contadero, with 46%, followed by the municipality of Ipiales with 28%; the largest number of mestizo non-ethnic population is the municipality of Imues, followed by the municipality of Iles with 81% and Ipiales with 72%. The Afro-descendant community present in the municipalities of Imues and Ipiales does not exceed 1%. Likewise, there is no evidence in any document of the degree of organization of these groups, they are only identified as inhabitants.

The foregoing indicates that despite the high percentage of non-ethnic population, there is a high number of indigenous population that remains from the origins in each Territory, prevailing their culture, their customs, their language; likewise, the State has protected these differential communities with the legalization of land, guaranteeing its settlement and food security through the exploitation of crops.

The non-ethnic mestizo population settled in the territory, with the interest of exploiting the fertile lands for family and commercial sustenance; hence their interest in forging the development of a department that is commercially important for the country and for entrepreneurs who come with eyes of optimism growth a territory.

• **Population displaced by internal armed conflict.**

Any any person who has been forced to migrate within the national territory leaving his or her place of regular residence or economic activities, because their life, their physical integrity, their security or personal freedom have been violated or directly threatened in any of the following situations, are considered displaced: internal armed conflict, internal disturbances and tensions, widespread violence, gross violations of human rights, breaches of international humanitarian law or other circumstances arising out of the previous situations, or who may alter or drastically alter public order". Article 1 of law 387 of 1997.²³

The situation of forced displacement and progress in the policy of prevention and care of the displaced population in Colombia has moved on in relation to the development of official government information, prevention and care policies, institutional supply as support as well as the proposal to mitigate or suspend the forced displacement process in the most vulnerable regions of the country; affecting indigenous, peasant and afro-descendant communities.

Although the phenomenon of displacement continues to be present in Colombia, it should be noted that security conditions in the country have improved significantly, despite the fact that violence is still affecting a minority, which should not be disregarded in the municipalities of the area of influence of the project. Below is information found in the official documents of the local administrations of the Ipiales, Contadero, Iles and Imues municipalities. To date, local administrations continue to project and support the population through

²³ Presidential report- Social Action. http://www.acnur.org/t3/uploads/media/COI_2821.pdf. Enquired in March 2017.

programs and projects to improve the quality of life, which has become a challenge because they have often become recipient territories of the population.

o **Ipiales.**

The information of displaced population in the municipality of Ipiales is scarce, the PDM does not evidence a diagnosis of this population; nevertheless, it is included within the strategic axis QUALITY OF LIFE, in the sector of population, victims of the conflict, for the program HEALTHY AND EDUCATED SOCIETY, which aims to improve working conditions reinserted people, taking as a performance indicator the *total households displaced by violence who live in the municipality*, referencing a total of 3,589 households²⁴.

Likewise, the CHILDHOOD, FAMILY AND ADOLESCENCE area, whose objective is NO ABUSE, ABUSED, OR VICTIM OF INTERNAL CONFLICT GENERATED BY OUTLAWED GROUPS, establishing as an indicator the PERCENTAGE OF CHILDREN BELOW THE AGE OF 18 DISPLACED BY VIOLENCE²⁵.

o **Contadero.**

Just as in the municipality of Ipiales, the local administration does not report in their official documents, information of displaced population; however, in PDM 2016-2019, they refer to Law 387 of 1997 which adopts measures for the prevention of forced displacement; the attention, protection, consolidation, and socioeconomic stabilization of internally displaced persons by violence in the Republic of Colombia. This indicates that the local administration is interested in the support and attention to displaced families, offering protection against the vulnerability of their rights caught by acts of violence.

Within the Families in Action program, the PDM 2016-2019 supports 100% of the population with specific programs in education, specifically. On the other hand, guarantee through local programs healthy school feeding, in the educational sector.

o **Iles.**

In the municipality of Iles, the displaced population represents 4.47% of the total population of the municipality, making it a receiving municipality of displaced families, who are mostly rooted in the municipality. For the management of the population displaced by the internal armed conflict, the municipality relies on the Municipal Committee for Transitional Justice, whose objective is to identify, attend, prevent and report on people who are vulnerable due to the armed conflict.

The displaced population embraced by the municipality of Iles is organized in an association and its main need is housing, where 25 families (145 people) require this solution and the development of productive projects.

The municipality is 100% recipient of families displaced by the armed conflict with 0% expulsion of displacement, since there are no armed conflict actors in the jurisdiction and, therefore, no land restitution case is reported. See **Table 5.13**.

Table 5.13 Displaced population in the municipality of Iles.

Source: Municipal development plan - Iles - 2016-2019.

o **Imues.**

The Municipality of Imues, given its geographic location, has not faced confrontation between outlawed groups, raised in arms, and the law enforcement agencies; however, the Imues territory has become a site for people and families displaced by the armed conflict in other regions of the country, such as the provincial department of Putumayo, Cauca and other municipalities in the department of Nariño.

The 2012 statistical base has established 240 persons registered as displaced (PDM 2012-2015) . According to information from the office of assistance to victims of conflict, there is a 2015 report with 292 people, reflecting an increase, and the municipal administration must carry out a new characterization in order to have timely and reliable statistics of vulnerable population suffering for displacement.²⁶

Imues it has no history of guerrilla raids or attacks from other outlawed groups, but 292 victims of the conflict, who were displaced from other places in Colombia is evident; therefore, they are seeking for recognition of the general society and life opportunities in Imues.²⁷

Vulnerable population: Families in vulnerable conditions established in 158 families by RED UNIDOS in 2012 has increased to 561 according to the 2015 Imues Municipal Specification territorial KIT report, which implies that Conditions have not been overcome, requiring the current municipal administration protect these families to guarantee their legitimate rights.

²⁶ Municipal Development Plan 2016-2019 “Imues for a better future”. Enquired in March 2017.

²⁷ Ibidem.

With respect to persons in conditions of disability, there is no basic information available; therefore, the management will characterize those persons with disability. However, the victims attention program will consider all those vulnerable individuals.

- **Outstanding economic activities.**

Traditionally, the major territorial units of the project have been based on the economy of agricultural and livestock activities. The quality of the lands allows for a large extension of the territories to be used for the commercialization of products and for the subsistence of the families. See **Table 5.14**.

Table 5.14 Main economic activities of the major territorial units of the project.

• **Population distribution in rural and urban areas.**

According to information provided by the Administrative Department of Statistics DANE, corresponding to the 2005 census, the municipality of Ipiales has the largest population, with 109,865 inhabitants, followed by the municipality of Iles with an approximately 7.867, people; in a lower proportion, the municipality of Imues is identified with 7,387 people and the municipality of Contadero with 6,639 inhabitants. See **Table 5.15**.

Table 5.15 Rural - Urban Population - Larger territorial units of the area of influence of the project.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

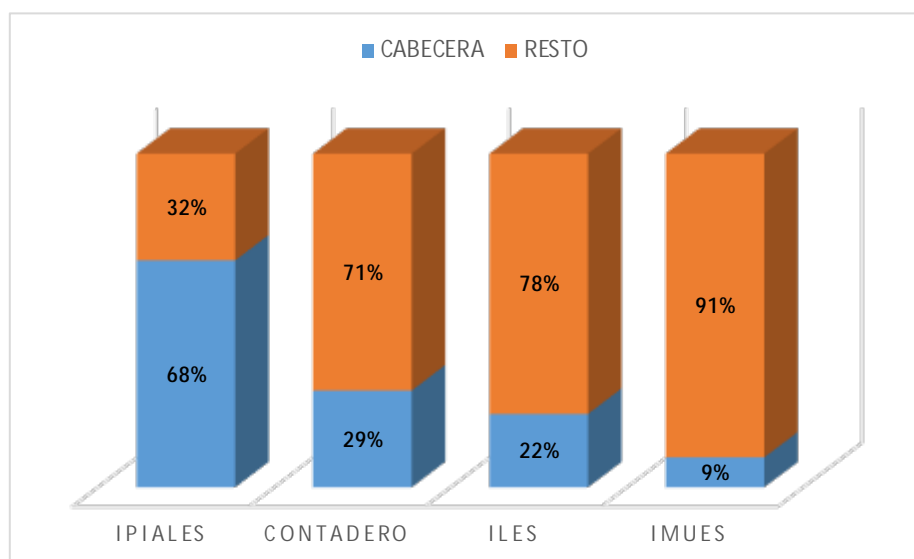

Figure 5.2 shows that of 100% of the total rural population of the major territorial units of the project, the Imues municipality represents the highest concentration with 91%, followed by Iles with 78%, and Contadero with 71%; the lowest percentage is represented by the municipality of Ipiales with 32%.

With respect to the total population concentrated in the urban area (100%) referenced by the DANE (2005 census), of the municipalities of the area of influence, that is to say (688 inhabitants), the municipality of Ipiales is the one with the greater number of inhabitants, with 68% followed by Contadero with 29%, Iles with 22%, and Imues, with the lowest percentage, 9%.

It is important to note that the municipal center of Ipiales is characterized by the exchange of products and merchandise with other regions of the country and with Ecuador, and is known as Border District, thus representing the largest concentration of inhabitants. Likewise, the Tulcán - Ipiales binational conurbation is related to the metropolitan area of Ecuador and Colombia (northern border of Ecuador and southern Colombia). Tulcán is an eminently commercial city, where businesses and shopping are established, among other activities. Traditionally for some years there has been a strong exchange of goods, which is due to the flow of floating population and to the fact that Ipiales is the one with the highest population concentration in comparison to the other major territorial units of the project. ³⁴

³⁴ EcuRed. Tulcán-Ecuador. <https://www.ecured.cu/Tulc%C3%A1n> (Ecuador). Enquired on March 1, 2017.

- Population increase.

Of the population in the larger territorial units in the urban area as well as in the rural area varies according to the particularities of each territory, however these particularities revolve around aspects such as economic, climatic, labor, among others.

Table 5.16 shows the population increase of the territorial units in the last three decades, according to the information projected by the DANE (Population projections 2005-2020).

Table 5.16 Population increase territorial units greater of the project.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Source: National Statistics Administration Department - DANE - 1985-2020 population projections.

IPIALES: Between 1987 and 1997, the urban area increased by 17%, from 52849 inhabitants to 63,454, that is to say, 10605 people decided to settle in the territory; by 2007 (78575 inhabitants), the increase was 20% and for 2017 (105875 inhabitants) the growth reached 26%, with the arrival of 23700 people. The motivation for growth per decade is primarily due to the peculiarity of Ipiales, as frontier with Ecuador, which allows an exchange of trade, work, family ties with people living in the border area; likewise, because the city guarantees citizens' rights in relation to social aspects, health and basic sanitation, thus becoming a challenge for municipal administrations.

Regarding the rural area, Ipiales has had a variation in its population density, during the three (3) decades since 1987, when the population was 20737, and decreased by 3% (63,454 inhabitants); in the decade of 2007, it increased by 44%, that is to say 15887 people settled in the territory with the purpose of seeking economic stability; despite the public order problems, insecurity and lack of incentives in agriculture, by the decade of 2017 there was an increase of 8% (39198 people), which indicates that the problem decreased, and some people decided to return, given their preference to live in the country side, also because for peasants, it is difficult to live in the cities, for their dynamics, for what they offer and the skills that are alien to their talents in relation to agricultural activities.

CONTADERO: According to information obtained by DANE, based on the population projection, the urban area in 1987 accounted for 1091 inhabitants; in 1997, the population increased by 26%, that is to say, 1477 inhabitants - 386 more inhabitants; in the decade of 2007, it increases again by 27%, referencing an estimated of 2012 inhabitants (535 more inhabitants); in 2017 the increase was 16%.

Like with the municipalities of Imues and Iles, Contadero is characterized by having the largest population in the rural area; in 1987, the population included 4859 inhabitants; in 1997 it increased to 5014, (3%), that is to say, 155 more inhabitants settled therein. The decision to settle in the territory allowed to exploit the land with crops for family and commercial consumption, as well as the breeding of smaller livestock and species. Between the decade of 2007 and 2017 the population declined by only 2%, (98 people). The decline in population may be associated with the migratory issue, with the purpose of improving working conditions, education, health, housing, easy access to goods and services, and guaranteeing public services. The problem currently facing the administration of the municipality is the lack of resources to invest in projects that promote agricultural activities and the coverage of infrastructure of public and social services to provide for better living conditions among its inhabitants. However, it is important to point out that for the local government it is even more difficult to cover the population that lives scattered, because of their peculiarities.

ILES: For 1987 in the urban area, the population included 1450 inhabitants, a figure that increased by 3.3% during the next decade (1997), that is to say 51 inhabitants came from nearby territories in order to improve their living conditions (health, education, work among others), the estimated population to date was 1501 inhabitants; in 2007, the population grows 15%, reaching 1767 inhabitants, that is to say 266 people who arrived, forced by displacement and the drug traffic generated in the rural area; by in 2017, the population increased by 11%, with 1982 inhabitants.

The population of the rural area has always been higher than in the urban, due to the demand in agricultural activities; by 1987 the population was 5215 inhabitants, increasing by 3% during the following decade (1997) to 5365 inhabitants; in 2007, according to the DANE, population increased by 14% - 848 inhabitants, referring a total of 6213 inhabitants; in 2017, the projection was reflected by a 10% growth with 6889 inhabitants.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Nevertheless, the local government reports that from 2007 to 2011, there was a migratory movement from rural to urban, caused by wars and forced displacement in areas of conflict and drug trafficking. In general, 98% of the displaced population returns to their territory, without restitution and land rights.

On the other hand, population emigration from the municipality of Iles was estimated to be 2% on average per year during the years 2007 to 2011; the motivation to leave to other municipalities of the department and to Ecuador is random, and they are due to factors of expulsion or abandonment. However, there are other reasons why the population decides to emigrate, and it is the hope to obtain better and steady labor offers; which is why they prefer Ecuador; having relatives in the neighboring country allows them to emigrate and seek double nationality and guarantee health, education and welfare facilities.³⁵

IMUES: In 1987, the population in the urban area was of 795 inhabitants, by 1997 it increased by only 1%; that is to say, 6 inhabitants; in the following decade (2007), there was a decrease of 15% ie of 789 inhabitants, it decreased to 674; in 2017, it decreases again to 16%, leaving the estimated population at 564 inhabitants. This fluctuating population dynamics can have several trends, among them, the decline in motivated fertility, the growth of the adult population, the increase in the educational level that allows the population to seek employment opportunities other than those offered by the municipality.

In the rural area, the population in 1987 included 7067 inhabitants; in the next decade (1997), the population increased by 515 inhabitants, corresponding to 7%; agricultural activities became the axis of the economy, labor opportunities in the countryside became appealing for some families who decided settle in the territory, thus improving the quality of life. However, in 2007 there is a sudden change in the economy, climate change has affected the water resource in the territory, forcing the population to abandon their lands and seek new horizons in nearby municipalities or other regions of the country; the population decreased from 7582 inhabitants to 6542; that is to say 1040 inhabitants left their territory, representing 14%; by 2017, the population again decreases to 5440 inhabitants, by 17%.

- **Demographic Trends.**

The main demographic indicators are described below, making a longitudinal analysis based on the national censuses by the DANE. The analysis is performed taking into account the population pyramids of the last three censuses, compared to the population projections for the year 2017.

- **Longitudinal analysis of the population growth.**

The number of inhabitants of a region is not a constant value, but may increase or decrease over time; these variations may be due to the dynamics of birth and mortality; to migratory movements or to unforeseen catastrophes, such as earthquakes. The dynamics of a population refers to its size, growth, distribution and territorial mobility in a given time and space. These dynamics reflect the effect of economic, social, cultural, environmental and political processes that have manifested themselves in the different global countries and regions throughout their history. Population dynamics can be analyzed through cross-sectional studies and longitudinal studies.

As can be seen in **Table 5.17**, the population of the major territorial units municipalities in the project have had a variation in the last 30 years.

³⁵ Official information. Municipal administration. Enquired on March 2, 2017.

Source: DANE population census - Population projections 2005-2020.

IPIALES: The municipality of Ipiales, given its characteristics, represents the highest population in the three decades, evidencing a difference of 71487 inhabitants. The censuses established by the DANE reflect that females predominate with a very slight increase on the total base of the population. In 1997, the female population rose from 44003 to 58590 in 2007; a projection of 73511 women is expected, due to an increase of 14921 women.

CONTADERO: The municipality of Contadero in its last three decades has r an increase of 1053 inhabitants. According to the Census of DANE, the largest number of people are male with an increase of 1290 men, i.e. 65% compared to a minimum increase of 450 women. The above is due to agricultural activities, as the central axis of the economy of the territory.

ILES: In the municipality of Iles, the population increase was 2206 inhabitants during the three decades; the DANE projection censuses indicate that the largest number of registered population was represented by male, from 3368 men (1997), to 4072 (2007), that is to say, 704 men who arrived at the territory attracted by the labor opportunities. By 2017 the population is expected to increase to 4617 men, or 545 people, which corresponds to 12%.

IMUES: In the municipality of Imues, the population increase during the three decades was 6004 people; the population censuses projected by the DANE reflect that the females prevailed; between 1987 and 1997, the growth was 299 women; in the following decade, that is to say to the 2007, it decreased to 679 women, perhaps because of the economic conditions associated with the lack of stable employment to subsist with their families. A decrease of 534 women, or 15% less than the previous year, is expected for 2017.

• **Population structure.**

In the major territorial units of the project's area of influence, according to the DANE 2005 Census, the population projection by 2017 is presented below in terms of population structure. See **Table 5.18**.

Table 5.18 Major territorial unit population in the project - Projected by 2017.

Source: Population projections by 2017. 2005 Census.

As regards the distribution of population by groups, in the major territorial units of the project, it is evident that the preponderant ranges correspond to population under 20 years (0 to 19 years); taking into account

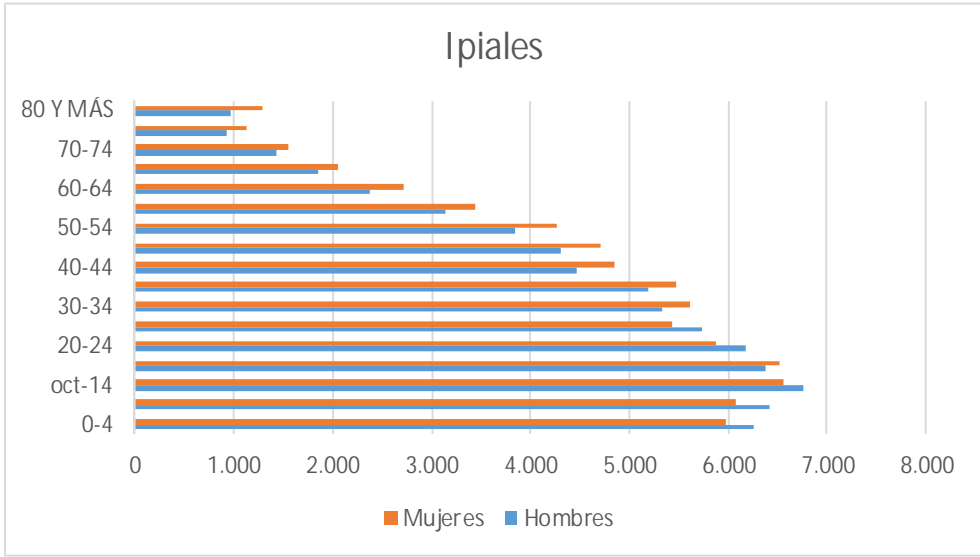

the total population per municipality, Imues shows 40% with 1692 inhabitants; the municipality of Iles 24%, with 2831 inhabitants; the municipality of Contadero, 29% with 2848 inhabitants; and the municipality of Ipiiales, 26% with 50,912 inhabitants. See **Figure 5.3**.

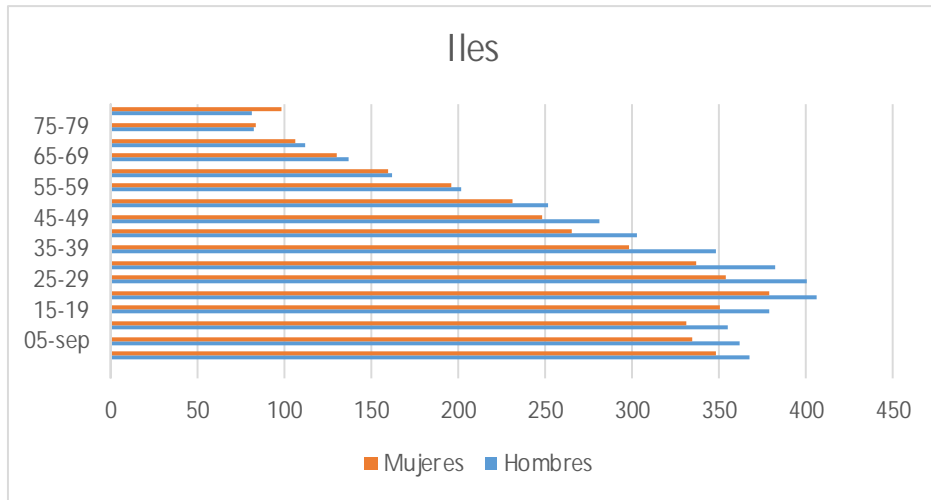

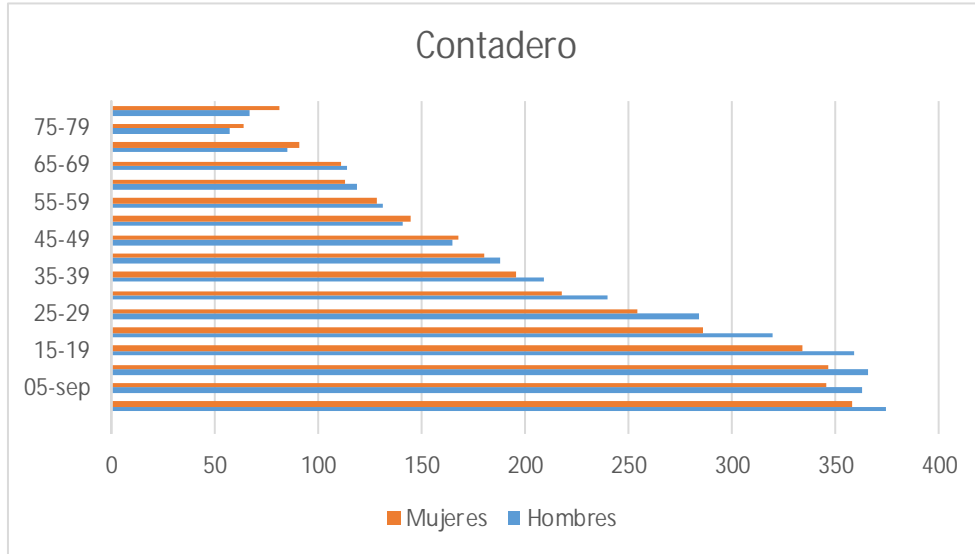

Regularly, municipalities ensure preschool, primary and secondary education in urban and rural areas; the population of cities and some municipal centers provide the opportunity to access higher education; the contrary occurs with the population of rural areas, who cannot easily access this type of education, forcing many young people to settle in the cities, thus being able to fulfill the established goals within their project of life. As a consequence of the above, the growth and development of a territory is limited, which forces local administrations to manage, at the departmental and national level, resources to cover demand and thus mitigate or prevent the decline of a population that projects development in a territory.

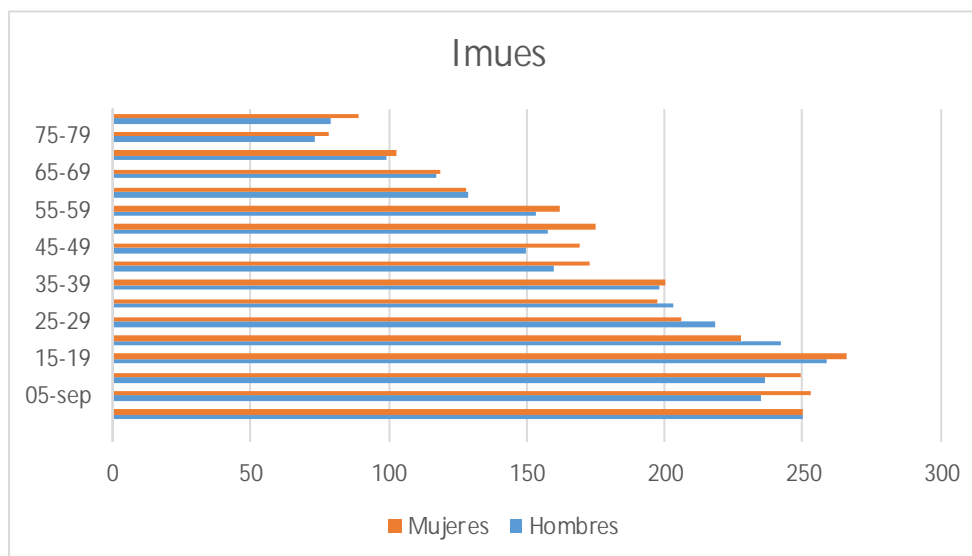

On the other hand there is the possibility that some young people do not have the necessary funds to invest in higher education, forcing many to start their working life at a very early stage, in activities other than those projected. Although the territory mostly subsists on agricultural activities, there would be the possibility that many would take this route as an option, making reference to the population residing in the rural part; those who live in the cities would have the possibility to work in street vending or as employees in activities that require physical activity.

As regards the population with the lowest number, we evidence an elder population, that is to say 60 to 80 years and more. The municipality of Imues presents 14%, with 1014 inhabitants; the municipality of Iles, 11%, with 1152 inhabitants; the municipality of Contadero, 11%, with 902 inhabitants and the municipality of Ipiiales, 10% with 16312 inhabitants. The adult population demands resources for health, social welfare programs and projects among others, which creates pressure on local governments to manage resources, thus covering the entire population in question. See **Figure 5.3**.

Figure 5.3 Population density in major territorial units of the project.

71.562	73.511	145.073	3583	3420	7003	4617	4254	8871	2959	3045	6004

Source: Population projections by 2017. 2005 Census.

According to the population projected by gender in 2017, according to DANE, the largest number of men is reported by the municipality of Ipiales with 86% or 71,562; a high number compared to the municipality of Iles with 6%, (4617) and Contadero (3583) and Imues (2959) with 4%. It is important to note that the percentage established was made, taking into account 100% of the total population of men in the municipalities of the area of influence. See **Figure 5.4**.

In relation to the number of women in the area of influence, the highest percentage is reported by the municipality of Ipiales with 87%, representing 73,511; a smaller percentage is reported by the municipalities of Iles (4,254) and Imues (3045) with 5%, and the municipality of Contadero with 4%. See **Figure 5.5**.

The percentages are due to the particular conditions of each municipality, i.e. in Ipiales, better job opportunities are presented, the supply of goods and services is diverse, the commercial and tourist relationship they have with the city of Tulcán - Carchi in the neighboring country (Ecuador), as well as the

opportunities to access a better quality education system, among others; however, it is important to emphasize that the remaining municipalities stand out for the exploitation of the lands for agricultural activities. However, the quality of life of the rural population is not always the best, due to poor coverage of public and social services and difficult access to housing, among others.

Figure 5.4 Percentage of men in the larger territorial units of the project.

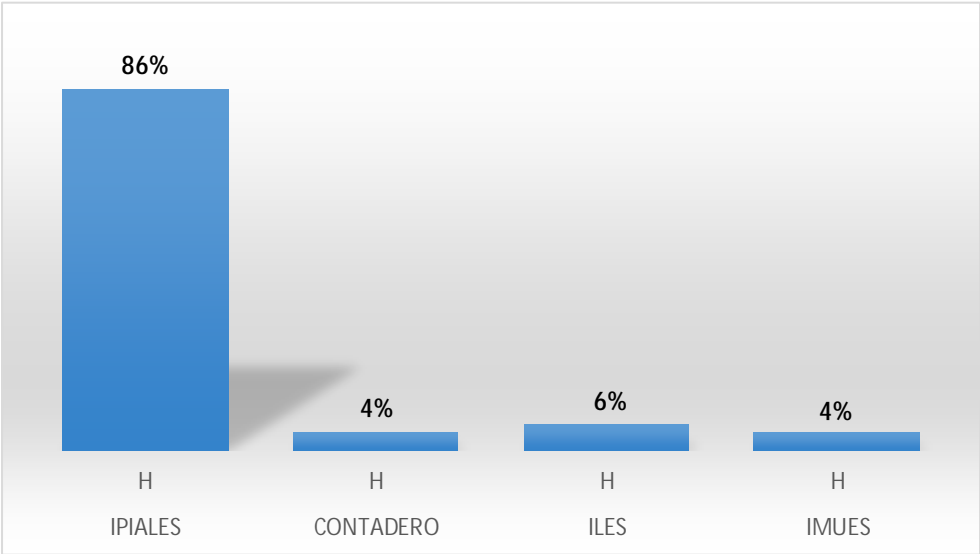

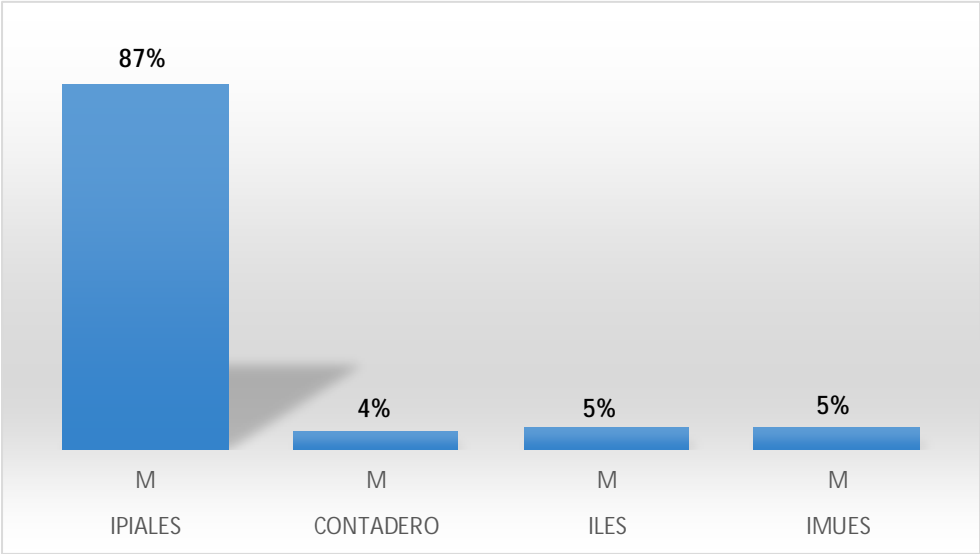

Figure 5.5 Percentage of women in the larger territorial units of the project.

- **Unsatisfied Basic Needs Index (UBN) of the population.**

The UBN methodology seeks to determine, with the support of some simple indicators, if the basic needs of the population are covered. Groups that do not reach a minimum threshold set, are classified as poor.

The simple indicators selected are: inadequate housing, overcrowded housing, inadequately serviced housing, highly economically dependent housing, and housing with school-age children who do not attend school (2005 General Census Bulletin - Unsatisfied Basic Needs).

In Latin America, the percentage of NBI is a well-managed index, based on the suggestion and use made by the Economic Commission for Latin America and the Caribbean-ECLA since the 80s. ECLA suggests creating the basic needs index from the outline proposed in **Table 5.20**.

Table 5.20 Variables to be taken into account to estimate the NBI index.

BASIC NEEDS	DIMENSIONS	CENSUS VARIABLES
Access to housing	Overcrowding	Number of people in the household
		Number of rooms in the house
	Quality of life	Construction materials used in floor, walls and ceiling
Access to sanitary services	Availability of potable water Type of excreta disposal system	Water supply source in the home
		Sanitary service availability
		Excreta disposal system
Access to education	Attendance of school-age children to an educational establishment	Age of household members Assistance
Economic capacity	Probability of insufficient household income	Age of household members
		Last educational level approved
		Number of people in the household
		Activity condition

Source: ECLAC, Economic Commission for Latin America and the Caribbean 2017.

The highest percentage of unsatisfied basic needs of the major territorial units in the area of influence of the project is presented by the municipality of Contadero with 65.45%, according to census data of the DANE, 2005, and the lowest percentage is reported by the municipality of Ipiales with 30.66%; the percentages of the rural area in the two smaller territorial units are considered the highest vis-à-vis the urban area, 57.67% and 68.94%; which indicates that the conditions of habitability, employment, are low, the existing public and social services do not present the best quality and coverage in the face of a high population demand. It is important to point out that part of the rural population is dispersed, which allows them to be disadvantaged in relation to the settlements in urban hubs, because they have better infrastructure conditions and coverage of their basic needs. This constant is generally present in all rural areas of all municipalities in the country; local administrations do not have the necessary resources to meet the needs of the population, either due to the conditions or characteristics of the rural area, and / or the scarce resources that come to their territories to meet the needs of the population settled in their municipality.

Table 5.21 Unsatisfied Basic Needs, larger territorial units.

AREA	IPIALES %	CONTADERO %	ILES %	IMUES %
Urban center	17,67	57,00	37,63	35,52
Remainder	57,67	68,94	66,55	57,50
TOTAL	30,66	65,45	60,19	55,43

5.3.2.2 Minor Territorial Units.

The analysis of the demographic context of the minor territorial units of the project is focused on the characterization of population groups, along with their dynamics and structures, describing demographic trends. Likewise the land tenure, identification of displaced population and existing settlement patterns. The information contained in this document is a product of the collection of primary information taking into account the mechanisms of citizen participation recognized in the current regulations for the development of this study. See **Annex 13. Social**.

It is worth clarifying that for the development of this section, as regards the characterization of the urban perimeter of Contadero, which is part of the area of influence of the project, its characterization is contained in the larger territorial units. On the other hand, the communities of the area of influence corresponding to the municipality of Ipiales include: Boquerón, El Rosal and San Juan, will not be characterized since these are part of the San Juan and Ipiales reservations and, therefore their characterization will be included in terms of the cultural component: ethnic communities.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Finally, the San Francisco and Rosal de San Francisco rural districts in the municipality of Contadero were worked together, since the community verbally refers to the existence of a single territory with two community action boards (JAC), which work as a single unit.

- **Characterization of population groups.**

The population settled in the minor territorial units of the project is mestizo, product of the union between Spanish conquerors and indigenous people who, in aboriginal times, were settled in the territory. The white population is also characterized by the Spanish descent of the colony, where Italian and German-origin people added. Indigenous communities have had a significant reduction throughout history, as a result of exploitation by the Spaniards who took possession a large part of the territory, mainly due to the potential of lands, natural resources, fertility of land and existing water sources to form settlements.

The predominant population group (mestizo) is mainly devoted to agricultural activities. Given the need to make the territory more productive, new relations arose that revolved around the exploitation of the land, especially for the subsistence of families as utilization of the resources that nature offered, and that it continues to offer.

The above allows to see that there are several population groups in the minor territorial units, the peasant-farmer, in charge of exploiting his land and subsisting on the crops he sows in his plot, an activity that transcends the population of the 27 territorial units of the project; likewise, the breeding of major and minor species (cattle, pigs, poultry); the second group is the day laborer dedicated to the activities and tasks of the farm, who permanently seeks job opportunities as a means of subsistence; most of them lack a labor contract but are hired according to the needs of the owners of the estates. The workers identified as peasants who carry out construction or masonry activities as a result of the growth of the territorial units present in the project, an activity especially performed by the population of the village of Tablón Bajo in the municipality of Iles and the Pilcuán la Recta rural district in the municipality of Imues; the third group consists of traders-employees, focused on subsisting on tourism, jobs in goods and services for the settled population and / or floating population, such as the population of the Pilcuán Viejo rural district in the jurisdiction of the municipality of Imues, and population employed in State institutions, such as mayors of the municipalities, identifying personnel of the San Francisco rural district in the municipality of El Contadero.

- **Population dynamics.**

According to the engagement with the communities of the area of influence of the project, we became aware of the events that historically marked the territory, supplementing the information with the data collected in the rural district specifications; the following is a summary of the main findings:

- ü The settlement of the population of the communities in the territory was basically due to the attraction they had for the lands, the diversity of natural resources, and their landscapes, which allowed fostering settlements to exploit the land in sustainable crops for subsistence. The exploitation of land in crops made it economically possible to become the activity of the primary sector in the majority of the population, and it is still the sector representing the economic base of the settled families. It is important to point out that the population of the rural districts bring, as inheritance, sowing and resource exploitation culture of the indigenous communities, since from aboriginal beginnings, they settled in the territory with the same purpose - to exploit the lands and to live quietly from the natural resources offered by the territory.

- ü With the arrival of the Spaniards in the fifteenth century, an exchange of beliefs and doctrines of faith and morality was introduced into indigenous communities, consolidating over time, and raising on the communities of the rural districts created the permanence and affirmation of the profession of faith. This identity has led to the projection of temples that will serve for the growth of faith of the new generations.
- ü The community shows that the growth of the settlements has allowed the consolidation of the JAC as organizational entities and managers before the local government to cover their basic needs, such is the case of the construction of schools in different territorial units as axes for society development. In spite of the few resources entering the territorial units, the JAC and its members continue with the management of projects in favor of the community. It is important to emphasize that at the beginning of the creation of territorial units, some settlers became an example for their inhabitants because of the commitment to manage resources for the execution of projects for the benefit of all.
- ü According to the information on the rural district specifications, the oldest territorial units correspond to San Francisco (municipality of Contadero), which dates back to 1870, and the Pilcuán Viejo and Pilcuán la Recta rural districts in jurisdiction of the municipality of Imues, which date back to 1837 and 1850. Other territorial units, such as the Delicias rural district, previously called Josefina and towards part of the territory of the rural districts currently known with the name of El Juncal, Las Delicias, Providencia and Josefina; Likewise, the Las Cuevas rural district also reports the same characteristic, since its territory was part of the Ospina Perez rural district. The division of the latter was made only twelve years ago, that is to say in 2005, in jurisdiction of the municipality of Contadero. The same case occurs in the municipality of Imues in the Silamag rural district, which formerly belonged to the Pilcuan Alto rural district; and in the jurisdiction of the municipality of Imues, a territorial division took place with the El Porvenir rural district; it was an estate, territorially, and when divided, others like the El Porvenir, Capulí and La Esperanza rural districts were created.

Table 5.22 illustrates the population dynamics of the minor territorial units of the project, corresponding to the municipality of Contadero, Iles and Imues, as part of the larger territorial units of the area of influence.

Table 5.22 Population dynamics in the smaller territorial units of the area of influence.

municipality	Territorial Unit	Creation date	HISTORICAL EVENTS
CONTADERO	SAN FRANCISCO RURAL DISTRICT	1870	Some settlers have managed projects for the improvement of the quality of life of their inhabitants. Its first settlers were Adalberto Morillo who managed irrigation projects and Mr. Antonio Dávila, who managed the construction of the chapel and Mr. Antonio Escobar, who donated land for the construction of the chapel, as a benefit for the Catholic population. The rural district was named after Saint Francis of Assisi.

municipality	Territorial Unit	Creation date	HISTORICAL EVENTS
	ALDEA MARÍA RURAL DISTRICT	1917	<p>Their first settlers were indigenous.</p> <p>As a significant event, the church was built and the capitol offices were modernized. The parish priest of the village church named it Aldea de María; it was previously called Putismal, which origin is unknown.</p>
	EL CAPULÍ	1930	<p>The name of the Capulí rural district was derived from the name of a piece of land in the area. A historical fact is that a member of the community action board, Segundo Narváez, contributed to the management of the construction of the road and the aqueduct.</p>
	EL JUNCAL RURAL DISTRICT	1919	<p>The territory was previously populated by indigenous people.</p> <p>The first settlers came from the Alto del Rey rural district in the jurisdiction of the municipality of Iles. The community, for the improvement of the quality of life of its inhabitants, is planning the construction of a school. The project started its management through the JAC. The name of the rural district is derived from the rods to make baskets.</p>
	PROVIDENCIA RURAL DISTRICT	1920	<p>The first settlers came from the Contadero rural district.</p> <p>Once the rural district is established, the community plans to build of a school to promote the education of their children, as well as the construction of a chapel in honor of the virgin of Fatima, thus characterizing itself as a Catholic community.</p> <p>On a commercial and connective level with other territorial units, the community sees positively the construction of the Pan-American Road, given the opportunity to open markets in relation to goods and services with merchants from other neighboring territorial units and to the ease of mobility as a means of transport; this construction facilitates the approach to other places.</p> <p>The rural district's name is derived from the idea of one of the settlers there.</p>

municipality	Territorial Unit	Creation date	HISTORICAL EVENTS
	OSPINA PEREZ INSPECTION	1977	Formerly named Olaya Herrera; it was a prior indigenous territory, and at the time of Mariano Ospina Perez, his political management was representative for the community, as a member of the conservative party; this is why this rural district was named after him.
	LAS DELICIAS RURAL DISTRICT	1980	Prior to the rural district's foundation, the territory was populated by the Pastos ethnic group. In its beginnings, the rural district was named Josefina, and included the El Juncal, Las Delicias, Providencia and Josefina rural districts. The name of the path derives from the name of a property owned by Mr. Felipe Quiroz. A well renowned person in town at that time.
	CULANTRO RURAL DISTRICT	1950	Before its foundation, the territory was inhabited by the Pastos indigenous group. Once the rural district is formed, the population proceeds to consolidate community projects such as the construction of a school, a sports field as a recreation and sports space for the community in general. With the advent of the energy grid, the living conditions of its inhabitants will be further improved by accessing technologies that facilitate daily activities. Likewise, access to the rural district aqueduct. On the other hand, there was a economical change in the exploitation of the land, with improved crops for their subsistence.
	ISCUAZAN RURAL DISTRICT	1967	The first settlers were the indigenous people of the Pastos ethnic group. Once the rural district was formed, the population decided to undertake the construction of a school, towards the 80's. Management that arose from the need to promote the educational development of children in the rural district. The rural district is named Iscuazán due to the name of the place where certain antennas are located.
	LAS CUEVAS RURAL DISTRICT	1980	Its name comes from the time of the Indians, due to the existence of caves as places of punishment.

municipality	Territorial Unit	Creation date	HISTORICAL EVENTS
			It previously belonged to the territory of the Ospina Pérez rural district; twelve years ago they were only one. At present, each divided territory has its own JAC.
	EL MANZANO RURAL DISTRICT	1950	<p>The first settlers were the Pantoja, Garzón, Vilota, Guapucal families. As a relevant fact, the community formed the Chapel, around the year in which it was founded.</p> <p>The rural district was formerly called Los Arrayanes because of the abundance of Arrayan trees; likewise, the access to the road was formed along with the creek of the same name, Manzano.</p>
	SAN ANDRÉS RURAL DISTRICT	1985	<p>As a significant fact expressed by the community is the arrival of shared water from the Iscuazán rural district, thus improving part of their basic needs, such as house cleanliness and hygiene, consumption for the family and the animals.</p> <p>The name of the rural district was given by the same settlers.</p>
	SAN JOSÉ DE QUISNAMUEZ RURAL DISTRICT	1920	<p>The first settlers came from the Ospina Pérez inspection in jurisdiction of the municipality of Contadero.</p> <p>As a significant event for the community, they referred to the construction of the school, managed by Mrs. Myriam Unigona. This construction made it possible to guarantee basic education to resident children.</p>
ILES	ALTO DEL REY	1950	<p>Before being populated by mestizos, the territory was inhabited by indigenous people. The current community does not report data of historical events.</p> <p>The year of creation of the rural date is estimated, the community does not track of the exact date.</p>
	CAPULÍ	1970	<p>The territory, prior to its creation as a rural district, was colonized by Jesuits, who took advantage of the land to cultivate figue.</p> <p>The first settlers came from the urban center of the municipality of Iles, the municipality of Funes and Ipiales.</p>

municipality	Territorial Unit	Creation date	HISTORICAL EVENTS
			<p>The outstanding families at that time were the Zúñiga, Enríquez, Peña, Herrera, Riascos, Jiménez.</p> <p>As an important event for the community, they refer to the construction of the Pan-American highway, as an economic corridor and as a connector with other territories.</p>
	EL PORVENIR RURAL DISTRICT	1990	<p>The first settlers came from the territorial units of the municipalities of Imues, El Contadero, Tangua and Samaná.</p> <p>It was territorially part of the Capulí and La Esperanza rural districts. The first founders were Teresa Riascos, Mardoqueo Rosero, Manuel Malte, Silvia, Chava, and Tonquinó.</p> <p>The name of the rural district comes from the name of a farm with a large extension called Capulí, and when divided, it was called Porvenir.</p>
	EL ROSARIO RURAL DISTRICT	1985	<p>The area of the El Rosario rural district was previously a large estate called San Javier, which was settled by groups; there was a JAC; the houses that settled scattered decided to create a JAC formalizing the rural district under the name of El Rosal. The territorial division allowed each of the rural districts to manage resources to meet the needs of its inhabitants.</p>
	LA ESPERANZA RURAL DISTRICT	No report	<p>They were formerly lands where the natives lived; however, the community does not report any type of event.</p>
	LOMA ALTA RURAL DISTRICT	No report	<p>The settlers are natives from the region. The presence of three people marked some historical events in the rural district - Mr. Virgilio López served as a commissioner and support to the inhabitants at the time, covering needs related to their activity. Mr. Justo Riascos supported with the remodeling of the school, and Mr. Segundo R. managed resources for the construction of the rural district aqueduct.</p>

municipality	Territorial Unit	Creation date	HISTORICAL EVENTS
	TABLÓN ALTO RURAL DISTRICT	80s	<p>In the past, the territory was denominated Tablón, belonged to the territory of Capulí; soon a division was made, which generally takes place with the creation of the JAC to manage projects and resources for the community.</p> <p>The first families settled were Mr. Cesar Dávila, José Riascos, Messiah, Keina, Cornelio, Celimo Andrade.</p> <p>The territorial unit was created with the purpose of forming not only a community but to manage resources for the creation of a school.</p> <p>The community manifests as a significant event the paving of the road in 2016, which improved trade and connectivity among other territorial units.</p>
	TABLÓN BAJO RURAL DISTRICT	1990	<p>The first settlers came from the El Tablón rural district. The first families settled in the territory were the Acosta, Beltrán, Escobar, Benavides, Riascos; at present, relatives like the Elías Acosta, Beltrán among others remain.</p>
	TAMBURÁN RURAL DISTRICT	1890	<p>Before being a rural district, it was a large farm called Tamburán, which later became a rural district.</p> <p>As historical facts, the community refers to the construction of the school, the adaptation of access roads, the installation of electricity grids, and the creation of the aqueduct, which were previously supplied with deep wells.</p> <p>At the beginning, ten families were motivated by work activities in the agricultural sector.</p>
	URBANO RURAL DISTRICT	1930	<p>The first settlers arrived at the territory motivated by the wealth of the earth to exploit it, cultivating at that time wheat and barley.</p> <p>As historical facts that had an effect on the community in relation to the improvement of the quality of life of all was the installation of electrical networks, construction of the school, and the adaptation of the tertiary road that would facilitate trade and the mobilization of all.</p>
	YARQUI RURAL DISTRICT	1980	<p>The first settlers were part of the jurisdiction of the municipality of Iles.</p>

municipality	Territorial Unit	Creation date	HISTORICAL EVENTS
			The territory was part of the Alto del Rey rural district; they created their JAC and now became independent with the creation of the Yarqui rural district. La population mainly lives of agricultural activities.
IMUES	SILAMAG RURAL DISTRICT	1957	Previously part of the territory of the Pilcuán rural district, called Pilcuan Alto. It was named as Silamag by Mr. Rómulo Quiscualtud, who admired a beautiful woman who also exerted leadership among the people.
	PILUCAN LA RECTA RURAL DISTRICT	1850	It was populated in its beginnings by people who settled in wasteland, from the municipality of Funes and Imues. The access between Ipiales and Pasto facilitated the barter activity as a way of subsistence. The inhabitants who inhabited the territorial unit were the Tello, Quiscualtud, Lizcano, and Roque. Families who saw in the territory the opportunity to stay for its lands and its climate.
	PILCUÁN VIEJO RURAL DISTRICT	1837	One of the oldest rural districts in the area of influence of the project. Its name dates from ancient times, from the settlement in the territory of the Pilcuan chief, of the clan of the Pilcuanes belonging to the Chiefdom. With the passage of time it was populated with families with last names like Murillos, Mafla, Cruz, Bonilla Erazo. The climate and the fertility of the lands allowed these families to seek permanent settlement and thus to be able to have identity in a territory.

Source: GEOCOL CONSULTORES SA, Rural District Information, GEOCOL CONSULTORES SA, 2017.

The communities of the area of influence have expressed diverse facts of mobilization that have allowed the population density to vary. Within the events, the facts of violence and threats by gangs or criminal organizations are reported; a situation that strongly affected the San Francisco rural district. The population prefers to move to the neighboring country Ecuador, possibly due to familiarity with relatives residing there.

Regarding the economic and labor aspects, some members of the rural district population decide to move to other places in search of better opportunities, especially for the young population in working age; a situation that endangers the economy of a territory and the growth of the population, as only older adults will remain, who do not have the same physical strength to carry out agricultural activities. The few job offers force the population to settle in places with better social and economic conditions, generally looking for municipal centers or populated centers with a more active economy. Such is the case of the villages Aldea de María, El

Juncal, Providencia, Culantro, Iscuazán in jurisdiction of the municipality of Contadero; the same applies to the Pilcuán Viejo rural district in the municipality of Imues and the Tablón Bajo rural center in the municipality of Iles. The places referenced by the communities are the city of Ipiales, Pasto, Bogotá, Cali, Villavicencio, municipality of Tuquerres in Nariño; rural districts like San Juan, Pilcuán or the provincial departments of Putumayo, Tolima, Cauca.

The status of the roads is another reason why the population refers to their movement to other places; it usually happens with those families that are located in dispersed houses, making it difficult for them to move from the population centers or hamlets to their homes, the roads are unpaved and, in the rainy season, access is difficult, and the conditions of these accesses do not allow agricultural products to be taken out for commercialization, raising costs and, at times, leading to lost production. This aspect forces some of the settlers to change their activities, that is to say, they go from commercializing to being employed as day laborers.

On the other hand, the children who finish their primary basic education, must move to places that guarantee the secondary and, in case of technical or professional education, territorial units do not cover the need at times, which means that young people should seek to settle in cities or places with greater education coverage. Such is the case of the population of the Manzano rural district, some members of the community have planned the transfer to the city of Ipiales, Pasto, Cumbal, Cali, or Peru.

On the other hand, there are activities that increase the Population with the characteristic of being settled in the territory to build recreational farms, in particular they see the territory as tourist potential for its landscapes and its climate. The population comes from Pasto, Puerres and Ecuador. This dynamic gives rise to the generation of jobs in the construction sector for those living in from a day's work, thus ensuring a period of stability and income for their family.

- **Demographic Trends.**

The following is the total population in each of the minor territorial units of the project, which are part of the area of influence. The total population estimated is 9,707 inhabitants, as referenced by communities in the exercise of participatory situational diagnosis and referenced in the 2016-2019 Municipal Development Plans of the area of influence. See **Table 5.23**.

--------------------------	--------------

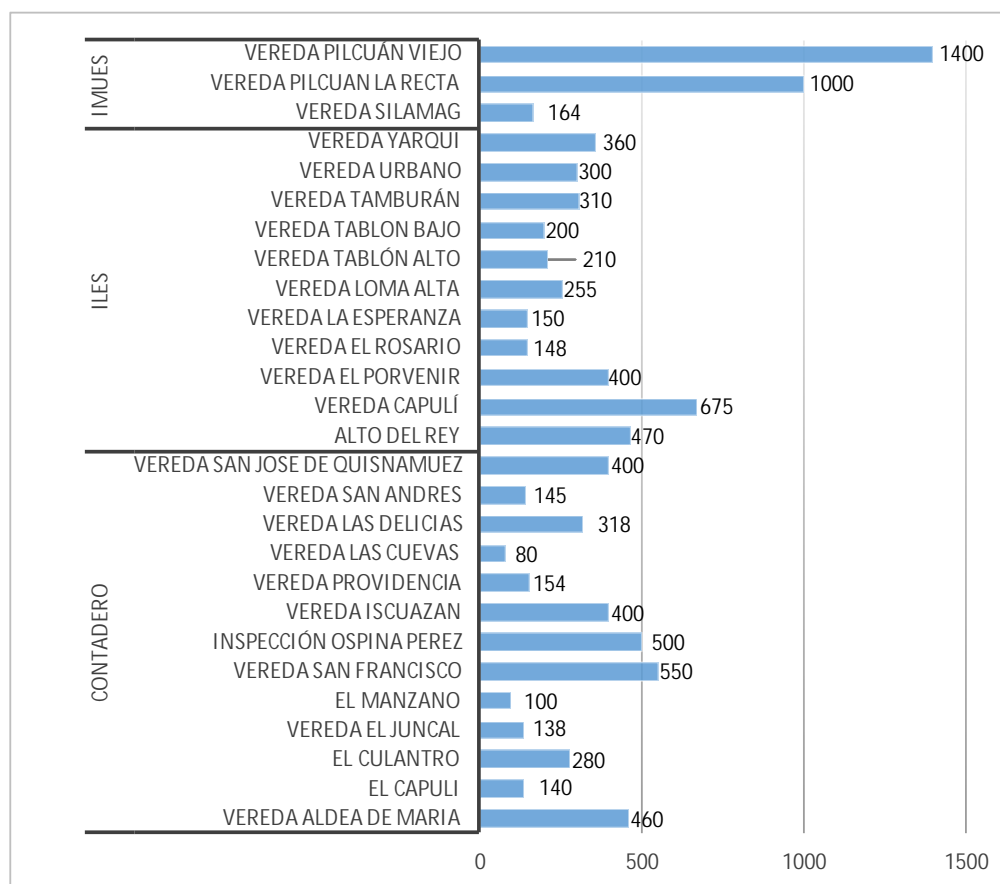

Source GEOCOL CONSULTORES SA Rural District Specification Application, 2017- PDM 2016-2019.

As shown in **Figure 5.6**, the greatest number of population concentrations is reported by the Pilcuán Viejo rural district in the municipality of Imues with 1,400 inhabitants, 95% of which are located in the Populated center and 5% dispersed. The rural district is a tourism area, so some people from other places see this condition as an opportunity to generate stable economic income for their family. In this way, the implementation of mobile business units allows the ensuring a certain amount of labor stability, which in turn covers a large part of the basic needs of households. Likewise, peace and good living in community allow it to be an attractive place to settle.

The rural district with the smallest population is Las Cuevas in the municipality of Contadero with 80 inhabitants, who indicate that the population figure is stable due to the conditions of the territorial unit; despite the attractive landscapes it has, it is not a tourist territory, its economy is purely agricultural, it does not have a road network that allows it to improve the commercial corridors of some cultivators and the coverage of public and social services is low. These variables do not allow population growth to be generated on a large scale. Nevertheless, the coexistence environment is good for its inhabitants.

However, there is a variable that causes the population decrease and it is the migration of young people who wish to continue with their educational formation in the cities or places that demand the supply, such is the case of Ipiales and other cities of the country, this also depends on the economic conditions of the migrants.

Figure 5.6 Total population in minor territorial units of the project.

• **Population structure.**

Table 5.24 shows the population structure of the minor territorial units of the project in relation to the totality of people residing in each rural district. Next, an identification of the largest and smallest population by territorial unit is made.

The total population referenced by the communities of the area of influence in furtherance of the participatory situational diagnosis is 9,707 inhabitants, 5,512 out of which correspond to the population between 18 to 65 years of age. This range presents the largest number of settled population in the minor territorial units. The total number of inhabitants per rural district is, therefore 100%, as well as the number and percentage (%) corresponding to the population identified in this range:

For the municipality of Contadero, the smaller territorial units such as the rural districts of Aldea de Maria has 460 inhabitants (100%), 310 people (67%); Capulí with 140 inhabitants (100%), 96 people (68%); El Culantro

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

with 280 inhabitants (100%), 144 people (51%); El Juncal with 138 inhabitants (100%), 82 people (59%); El Manzano with 100 inhabitants (100%), 58 people (58%); San Francisco with 550 inhabitants (100%), 270 people (49%); Inspección Ospina Pérez with 500 inhabitants (100%), 250 people (50%); Providencia with 154 inhabitants (100%), 100 people (65%); Las Cuevas with 80 inhabitants (100%), 40 people (50%); Las Delicias with 310 inhabitants (100%), 200 people (63%); San Andrés with 145 inhabitants (100%), 75 people (51%); and San José de Quisnamuez with 400 inhabitants (100%), 292 people (73%).

For the smaller territorial units corresponding to the municipality of Iles, such as the rural district of Alto El Rey with 470 inhabitants (100%), 258 people (55%); Capulí with 675 inhabitants (100%), 307 people (45%); El Porvenir with 400 inhabitants (100%), 280 people (70%); El Rosario with 148 inhabitants (100%), 84 people (57%); La Esperanza with 150 inhabitants (100%), 106 people (71%); Loma Alta 255 inhabitants (100%), 165 people (68%); Tabón Bajo 200 inhabitants (100%), 97 people (49%); Tamburán with 310 inhabitants (100%), 230 people (74%); Urbano with 300 inhabitants (100%), 227 people (76%); and with Yarquí 360 inhabitants (100%), 278 people (76%).

And for the smaller territorial units of the municipality of Imues, specifically in the Silamag Rural District with 164 inhabitants (100%), 115 people (70%); Pilcuán La Recta with 1000 inhabitants (100%), 600 people (60%); and Pilcuán Viejo, with 1400 inhabitants (100%), 784 people (56%).

On the other hand, unlike the aforementioned minor territorial units, which show a greater concentration of population from 18 to 65 years, three minor territorial units are identified with higher concentration of elder population, such as the rural district of Iscuazan with a total of 400 inhabitants, 196 out of which correspond to the mentioned range, that is to say 49% (territorial units of the municipality of Contadero); and the Tablón Alto rural district with a total of 210 inhabitants (100%), 167 out of which are elder, that is to say 79%, territorial unit of the municipality of Iles. The high rate of adult population in a territory indicates that the reduction of birth rate is high, due to population migration at a young age to other places in search of better living conditions.

On the other hand, there is the demand currently observed with the young adults who often do not show an interest to settle in a family, they live in the countryside, work in agricultural activities and look after the elderly in their family.

The condition of the elderly in rural areas is poor, due to the difficulties in access to basic services, technology, situations of neglect and poverty, and the lack of support networks by local government, which does not allow them to enjoy a good quality of life. In general terms, the vast majority of elderly people living in rural areas do not have a pension that guarantees them basic needs, thus increasing even more the crisis, disease and basic needs. The lack of public policies in the rural area is generating a social problem that is increasingly more noticeable because of the conditions exposed by this vulnerable population in society.

Within the population structure, the lowest rank is evidenced among children from 0 to 5 years with a percentage ranging between 2% and 15%. This low percentage in the area of influence may be associated with causes of fertility reduction in young women. For the new generations, agricultural activities have lost their value, technologies and modern society are advancing by leaps and bounds with new lifestyles that include educational, economic, and social growth but in large cities.

In general terms, the rural areas are characterized by having a high incidence of poverty in multidimensional terms, setting wellness gaps in comparison with the inhabitants that usually reside in the urban areas. Low access to goods and services in some smaller territorial units, together with economic constraints, lead to the migration of women to other places that provide better living conditions, i.e. cities that demand good quality

of goods and services, technologies and labor opportunities, according to their needs. In this regard, the population of a territory would be seriously threatened, since its population would not increase, instead it will decrease, thus limiting its growth and development.

• **Distribution of the population by gender in minor territorial units.**

According to the information referenced by the communities in the project's area of influence, in relation to the distribution by gender, and as can be seen in **Table 5.25**, the largest number is represented by men with a total of 4,884 people; that is, 61 more people, representing 51% in relation to 4,823 women with 49%. Perhaps the largest number of men is related to agricultural activities, since they demand greater strength and physical capacity than the women demand, without disqualifying that some of them combine the activities of the household with the sowing activities.

· Working-Age Population

According to the DANE, working age population (PET) is made up of people aged 12 and over in the urban area and 10 years and over in the rural area³⁶, who offer their workforce; this is distributed in occupied and unemployed people; it is worth clarifying the working age population is set according to the conditions and the national context of each country, which does not allow a minimum age limit at the international level. In Colombia, the working age is regulated through article 35 of the Children and Adolescents Code, which provides that **"MINIMUM WORKING AGE AND RIGHT TO THE LABOR PROTECTION OF ADOLESCENTS AUTHORIZED TO WORK**. The minimum age for admission to work is fifteen (15) years. To work, adolescents between the ages of 15 and 17 require the respective authorization issued by the Labor Inspector or, failing that, by the local territorial entity and shall enjoy the labor protections enshrined in the Colombian labor system, the norms that supplement it, International treaties and conventions ratified by Colombia, the Political Constitution and the rights and guarantees enshrined in this code. Adolescents authorized to work have the right to the training and specialization that enables them to freely exercise an occupation, art, trade or profession and to receive it during the exercise of their work activity".³⁷

For the present study and in relation to the information referenced by the communities of the area of influence of the project, the range of 18 to 65 years is taken as population of working age; it is considered that before the age of 18, this population must have attended school; it is important to clarify that the existence of minors doing work in agricultural activities is unknown, taking into account that agriculture is the primary activity as the basis of the economy in the territorial units. Young people often start planting work cohesively by family members, but the importance lies on highlighting and analyzing the workforce in place in the territory, according to economic revenue.

Of the entire population referenced by the community in the territorial units, this represents 9,707 inhabitants, working age population corresponds to 5,360 people. See **Table 5.26**.

- Presence of displaced population.

Back in the 80s, the illegal armed groups, FARC and ELN were present in the department of Nariño, expecting to undertake drug trafficking activities, together with organized crime groups who, given the situation, decided to make alliances or engage in disputes to appropriate the income from the illicit business and the different stages of Coca processing; therefore, the department was targeted for areas of illicit crops, laboratories, crystallization and mobility corridors that allowed the transit of chemicals among others. This scenario became more evident since the implementation of the Plan Patriota that generated the transfer of activities related to the illegal business from Putumayo and Caquetá to this department. Likewise, the border peculiarity that Nariño presents with the neighboring country Ecuador turned it into an outgoing route for drug and an incoming route for arms, becoming an area of difficult control, which provoked a confrontation between countries; for example the border area was used as rearguard area by the Farc, generating population displacement from Narino and impacts on crops in Ecuador due to the Colombian government's spraying.³⁸

By virtue of the above as general context, it can be said that some of the minor territorial units of the project are identified as receiving territories of displaced population. Such is the case of the Aldea de María, Capulí, El Juncal, Providencia (municipality of Contadero); Alto del Rey, El Rosario, La Esperanza, Tablón Bajo, Urbano (municipality of Iles) rural districts; and Pilcuan Viejo in the municipality of Imues, with population coming from the department of Putumayo, municipality of Ipiales and Pasto among others. In the case of the San Francisco, San José de Quisnamuez (Contadero municipality) and Tambur rural districts in the municipality of Iles, there are displaced people from Ecuador. See **Table 5.27**.

According to the community participating in the participatory situational diagnosis, displaced families reached the territory in search of physical and integral security of their lives, as well as new opportunities in the work, family, and social environment. At present, the local government of the receiving municipalities has set targets to provide food security, and education support to the displaced population.

Table 5.27 Displaced population identified in the minor territorial units of the project.

• **Settlement patterns.**

The dispersed settlement is common in the minor territorial units of the project, whose dynamics revolve around the Agricultural activities as the base of the economy. On the other hand, small group settlements were identified, which emerged spontaneously; dwellings are very close to each other. These small group settlements are generally linked to roads, which facilitate mobility and access to some public and social services. Within the small group settlements, the Aldea de María, El Juncal with two sectors (Juncal Alto and Juncal Bajo); San Francisco with the high sector called the Rosal are evidenced, where a part called the Plan, low sector and the Mayuel sector are identified. The community presents an irrigation district that benefits families having pea and potato crops, common in the territory. Likewise the Las Delicias rural district has two sectors (municipality of Contadero); Alto del Rey presents a small group settlement called La Ciénaga, El Porvenir has a settlement called the Balcones "condominio" (municipality of Iles); Pilcuan La Recta has a settlement called La Recta and Pilcuan Viejo, which presents linear settlement along the road (municipality of Imues). See **Table 5.28**.

5.3.3 Spatial component.

The spatial component of the this study describes the current public and social services of the major territorial units identified as the municipalities of Ipiales, Contadero, Iles and Imues (Department of Nariño) and the minor territorial units, specifying the coverage, quality and infrastructure associated with each of the services.

It is important to note that the public and social services in Colombia contribute to the satisfaction of the basic needs and improvement of the quality of life of the population in a territory, actions that from the designation of the Nation as a Social State of Law, focuses on the protection of human dignity and compliance with fundamental rights.

Law 142 of 1994 established that public home services correspond to aqueduct, sewage, toilet, energy, fuel gas and telephony. The adequate provision of these permits enables better living conditions according to the basic needs, the exercise of citizen rights and the protection of the environment.

The Colombian Political Constitution of 1991, Title II, chapter 3 on the Rights, Guarantees and Duties, Art 78 and Title XII Chapter 5, Art 365, (provision of public services) refers to the social purpose of the State and the public utilities.

For the case of major territorial units, the description was made from the available secondary information and for the minor territorial units, primary information obtained in the participation exercises carried out with the community was used. **Annex 13. Social.**

5.3.3.1 Spatial dimension in major territorial units-

The following is a description of the existing public and social services in the major territorial units of the project, considering as public services: access to aqueduct, sewage systems, collection and disposal of solid waste, energy service, public transport, telecommunications; likewise, the domestic gas service; education, housing, recreation and sport, health, road and transport infrastructure, the media, the presence of small group centers of influence for commercialization are described in social services.

5.3.3.1.1 Public utilities.

According to what is established by the Colombian Political Constitution, the provision of public domiciliary services is part of the social purposes of the State. In accordance with Law 60 of 1993 and Law 41 of 1991, the municipal authorities have responsibility for guaranteeing to the community the basic aqueduct, sewerage, electricity, toilet, communications and other service infrastructure, either directly or in partnership with other public entities or through contracting with private or community companies.

- Aqueduct.

In the municipalities of Ipiales, Contadero, Iles and Imués, aqueduct service coverage in the urban sector ranges from 67% for the municipality of Imués and 99% for Contadero. In all municipalities except for Imués, coverage is lower in the rural sector, a characteristic explained mainly by the distribution of housing and low population density. Coverage in the rural sector varies between 34% for the municipality of Ipiales and 95% for the municipality of Iles. **Table 5.29** provides information on the provision of this service in each of the territorial units identified as major.

Table 5.29 Coverage, quality and infrastructure associated with the aqueduct service, in major territorial units.

MAJOR TERRITORIAL UNIT	AQUEDUCT SERVICE DESCRIPTION									
Ipiales	<p>Coverage: At the urban level, the coverage of this service reaches 97%, but at the rural level the coverage only reaches 34%, mainly due to the fact that houses in this sector are spread all over the area. Below is the service coverage, according to information provided by the SISBEN of Ipiales (National Certified Base - Cut-off: January 2017)³⁹.</p> <div data-bbox="544 625 1226 1123" data-label="Figure"> <table border="1"> <caption>Aqueduct Coverage in Ipiales</caption> <thead> <tr> <th>Category</th> <th>Con acueducto (%)</th> <th>Sin acueducto (%)</th> </tr> </thead> <tbody> <tr> <td>Urbano</td> <td>97%</td> <td>3%</td> </tr> <tr> <td>Rural</td> <td>34%</td> <td>66%</td> </tr> </tbody> </table> </div> <p>Number of aqueducts: In the rural sector there are 33 aqueducts⁴⁰. The city of Ipiales has one aqueduct⁴¹.</p> <p>Continuity and quality: In the urban area of the Municipality of Ipiales, the service is provided 24 hours and the quality of water for human consumption has a Water Quality Risk Index (IRCA) of NO RISK; therefore the main objective of the company providing this service is to maintain this index. In the rural sector, the service quality is poor: the IRCA is HIGH because of the neglect by the community and the Municipality to reactivate the existing disinfection systems and to increase the construction of new systems for the treatment of potable water⁴².</p> <p>Supply sources: For collection purposes, three systems are used per water intake and water is taken from the Blanco River in the municipality of Carlosama as a source of supply. Water is taken from the water intake to the degreaser by adduction. The Blanco river in summer times presents a worrying minimum flow according to hydrological studies of 730 L.P.S. In the physical-chemical and bacteriological analyzes of the river waters, it has been established that there are bacteriological contamination issues caused by the discharge of the sewerage of the Municipality of Cumbal, 8 kilometers upstream of the water intake of the municipal aqueduct of Ipiales⁴³.</p> <p>The result of the analyzes shows color values between 15 and 35 units of cobalt platinum (UPC) that generally exceed the legal standard. Regarding the turbidity parameter, most results also exceed the permitted values⁴⁴. The Blanco</p>	Category	Con acueducto (%)	Sin acueducto (%)	Urbano	97%	3%	Rural	34%	66%

MAJOR TERRITORIAL UNIT	AQUEDUCT SERVICE DESCRIPTION
	 <p>Number of aqueducts: The municipality has twenty-two (22) aqueducts; one urban and the rest located in the rural area⁵⁸.</p> <p>Continuity and quality: The Municipality of Imues has a great limitation in the collection source for the supply of water to the population, which allows to guarantee the supply 24 hours a day for the 2,213 users in the urban and rural sectors⁵⁹. Of the twenty-two (22) aqueducts, only five (5) have disinfection systems; the Urbano, El Pedregal Centro, El Pedregal urbanization, Pilcuán La Recta and Pilcuán Viejo aqueducts.</p> <p>As to the aqueducts that do not have disinfection systems, the construction of chlorine structures is pending. Additionally, the urban aqueduct requires the construction of the chlorination booth in the Chiristes neighborhood storage tank and the aqueduct of El Portachuel needs to be built again because it operates by pumping system⁶⁰.</p> <p>Supply sources: The supply for the urban center comes from the La Chorrera source of the Municipality of Túquerres. The rural districts are supplied from different surface sources of water resources that are usually located in the jurisdiction of the same rural district⁶¹.</p> <p>Service provider company: The aqueduct service is provided by ASUASPIM⁶². In the Pedregal, Pilcuán Viejo and Pilcuán la Recta townships, the service is in charge of the Administering Boards and in the remaining rural districts, the management of the aqueducts is in the hands of the Communal Action Boards.</p>

⁶¹ Imués Municipal Development Plan 2012 - 2015.

⁶² Imués Municipal Development Plan "Imues with a better future" 2016-2019.

With respect to the excreta disposal service, in the department of Nariño only 46% of the houses have a sewage connection, evidencing poor coverage⁶³. In the urban sector of the major territorial units of influence of the project, the coverage of this service ranges from 89% (Municipality of Contadero) and 100% (Municipality of Imués). In the rural sector, the coverage is lower in Ipiales, Contadero and Imués, with values between 7% (Municipality of Contadero) and 43% (Municipality of Imués). Below is the description of the sewer service in each major territorial unit of influence of the project (Table 5.30).

Table 5.30 Coverage, quality and infrastructure associated with the sewage service, in major territorial units.

MAJOR TERRITORIAL UNIT	SEWER SERVICE DESCRIPTION									
Ipiales	<p>Coverage: In the municipality, the sewage service presents failures in coverage and distribution. According to the information supplied by the SISBEN of Ipiales, the sewage coverage in the urban area is 95% while in the rural area it is 87% (National Certified Base - Cut-off: January 2017, total population: 75,965).⁶⁴</p> <div data-bbox="544 835 1226 1333" data-label="Figure"> <table border="1"> <caption>Wastewater Coverage Data</caption> <thead> <tr> <th>Area</th> <th>Con alcantarillado (%)</th> <th>Sin alcantarillado (%)</th> </tr> </thead> <tbody> <tr> <td>Urbano</td> <td>95</td> <td>5</td> </tr> <tr> <td>Rural</td> <td>87</td> <td>13</td> </tr> </tbody> </table> </div> <p>Quality: Given the urban growth of Ipiales, the available infrastructure is not technically adequate to cover the current requirements, causing deficiencies in the provision of the service and contributing in addition to the pollution of the environment. The networks have a 40-year utilization, presenting a high level of deterioration⁶⁵.</p> <p>Discharges: According to the Regional Development Plan of the former province of Obando, final disposal of wastewater is made to the final issuer located in El Barrio el Charco and there are another six that discharge directly to the Guáitara River⁶⁶. In the municipality there is high contamination of the water resource due to inadequate management and control of the waste water⁶⁷.</p>	Area	Con alcantarillado (%)	Sin alcantarillado (%)	Urbano	95	5	Rural	87	13

⁷⁶ Iles Municipal Development Plan "With equity and social commitment, living with dignity is possible" 2016-2019.

MAJOR TERRITORIAL UNIT	SEWER SERVICE DESCRIPTION
	<p>In the rural area, houses have septic tanks, sinkholes and waste water wells, which mostly have connections to the open countryside. The sewage coverage in the rural area is minimal, since the only locality with a sewage system is the San Francisco rural district, which has a coverage that does not exceed 50% of homes; the coverage of sanitary units and septic or absorption wells at the rural level is 79.0%, leaving a large percentage of households to be covered⁷⁷.</p>  <p>Discharges: Discharges are made to the body of water called La Llave Creek, which generates contamination in Soils mainly destined to agricultural activity⁷⁸.</p> <p>Service provider company: The sewer service is provided by the Public Water, Sewer and Aqueduct Utilities Company - EMCOILES ESP.⁷⁹</p>
Imués	<p>The Municipality of Imués has a large deficit of water sources, for the supply of drinking water, so that several aqueducts are supplied from micro-watersheds of neighboring municipalities. In this context, it is very important to search for water sources in the groundwater levels and throughout the territory⁸⁰.</p> <p>Coverage: According to information from the Office of Basic Sanitation of the Municipality of Imués, by 2015 the sewerage network had 1,378 users with a coverage of 71.25% between the rural and urban sector. The coverage in the urban sector is 100%, while that of the rural sector was only 42.5%⁸¹. In this sense, it is necessary to build rural sewerage systems⁸² to reduce phytosanitary problems in the region⁸³.</p>

• **Solid waste collection systems.**

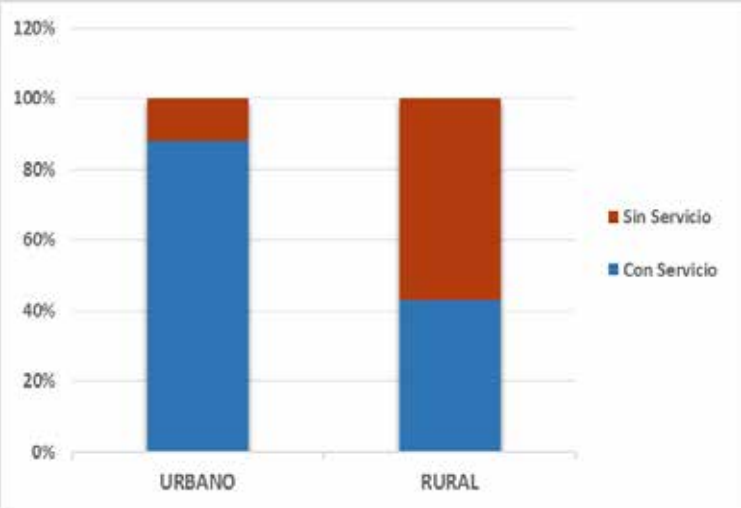

With respect to the solid waste (toilet) collection service in the urban sector of the major territorial units of influence of the project, the coverage of this service is high, ranging between 90 and 99%. Below is the description of the cleaning service in each major territorial unit (Table 5.31).

Table 5.31 Coverage, quality and infrastructure associated with the solid waste collection service in the largest territorial units.

⁸⁴ Flórez, L.C. 2016. Formulation of the Environmental Management Plan in the municipality of Imués - Department of Nariño. Thesis (Local environmental management specialization). Universidad Tecnológica de Pereira. San Juan de Pasto. 100 p. + annexes.

⁸⁵ Flórez, L.C. 2016. Formulation of the Environmental Management Plan in the municipality of Imués - Department of Nariño. Thesis (Local environmental management specialization). Universidad Tecnológica de Pereira. San Juan de Pasto. 100 p. + annexes.

⁸⁶ Imués Municipal Development Plan "Imues with a better future" 2016-2019.

MAJOR TERRITORIAL UNIT	SOLID WASTE COLLECTION SERVICE DESCRIPTION									
Ipiales	<p>Coverage: According to the information provided by the SISBEN of Ipiales, the coverage of the cleaning service in the municipality of Ipiales, in the urban sector is 88.5% and in the rural sector 43% (National Certified Base - Court : January 2017, total population: 75.965)⁸⁷.</p>  <table border="1"> <caption>Waste Collection Service Coverage Data</caption> <thead> <tr> <th>Sector</th> <th>Con Servicio (%)</th> <th>Sin Servicio (%)</th> </tr> </thead> <tbody> <tr> <td>URBANO</td> <td>88.5</td> <td>11.5</td> </tr> <tr> <td>RURAL</td> <td>43</td> <td>57</td> </tr> </tbody> </table> <p>Continuity and quality: The cleaning service and in general, the PGIRS process of the municipality of Ipiales reports failures in the coverage of the collection, sweeping and cleaning processes, transportation, distribution and exploitation of solid waste⁸⁸.</p> <p>Final waste disposal: The cleaning service in the municipality has shortcomings, as regards the final disposal of solid waste; causing serious effects on the environment and the well-being of the community⁸⁹. For 2011, the municipality had two systems for the use of organic and inorganic solid waste: the composting plant and the separation plant⁹⁰. Between 2008 and 2011, the final disposal process of solid waste presented serious difficulties due to the compliance with the useful life of the La Victoria landfill; this was evidenced by a precarious disposal of solid waste and an impact on the environment and the general population due to the lack of control of the sources of contamination in the air by the emission of polluting substances and the sources of water due to leachate spills.</p> <p>Service provider company: In the Municipality of Ipiales, solid waste collection is carried out by the Institute of Public Services ISERVI, which uses the landfill as end point, located 7 kilometers on the road from Ipiales to the La Victoria Township^{91, 92}, which was built about 24 years ago, with a lifespan of only 9 years. For the provision of this service, the company in charge, ISERVI (Institute of several services of Ipiales ESP) has implemented 3 macro-routes and 26 micro routes for the collection and transport of solid waste (5 compactor vehicles); the service frequency is 4 days a week (Monday, Thursday, Friday and Saturday) for organic waste and 3 days a week (Tuesday, Wednesday and Friday)</p>	Sector	Con Servicio (%)	Sin Servicio (%)	URBANO	88.5	11.5	RURAL	43	57

MAJOR TERRITORIAL UNIT	ENERGY SERVICE DESCRIPTION
	 <p>Service provider company: The power supply service is provided by Centrales Eléctricas de Nariño CEDENAR SA E.S.P.^{131,132}. The public lighting service in the urban and rural sector is provided by agreement between CEDENAR and the Municipality of Imues¹³³.</p>

- **Domiciliary gas.**

The provision of natural gas in the country has allowed the generation of benefits in the environmental area. Its use for domestic purposes represents only one fifth of the hydroelectricity cost; its production is reduced in relation to fuels such as ACPM, fuel, Oil, gasoline, fuelwood and coal. It is considered as a clean resource for presenting lower emissions than other fossil fuels in the country. The Colombian Gas Association seeks to improve the service year after year seeking to improve access and coverage to the entire population of the country, noting that in rural areas, coverage is non-existent. In the municipalities identified as major territorial units, there is no natural gas coverage, so the population must be supplied with cylinder gas or propane; he company in charge of distribution is called Montagas.

MUNICIPALITY OF IPIALES: In relation to the distribution of fuel gas or domestic gas service, the coverage is 0%, according to the secondary sources consulted (Development Plans and EOT). Given this panorama, the population has sought alternatives such as the use of propane gas through the sale of 33 and 100 pound pipettes and use of firewood for the rural area. It should be noted that the municipal governments have raised as their government strategy, a plan to manage the procurement of this service. The projects associated with the Municipal Development Plan programs of the municipality of IpiALES (2016-2019) include the elaboration of a feasibility study for the implementation of household gas.¹³⁴

¹³¹ Imués Municipal Development Plan 2012 - 2015.

¹³² Imués Municipal Development Plan "Imues with a better future" 2016-2019.

¹³³ Imués Municipal Development Plan "Imues with a better future" 2016-2019.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

MUNICIPALITY OF CONTADERO: By the year 2015, houses in the urban area of the Municipality did not have gas service at home¹³⁵. The distribution of natural gas is done through cylinders through authorized companies.

MUNICIPALITY OF ILES: natural gas is distributed through authorized companies using cylinders, a subsidy is applied, but its price is still high, leading the community to use firewood for domestic work, causing environmental degradation. In 2011, the cost of a 30 pound cylinder was \$ 45,250¹³⁶. The Iles Municipal Development Plan (2012-2015) proposes an alternative for the use of Domiciliary Natural Gas at minimum costs for the population and protection of the environment is the formulation of the Domiciliary Gas by Networks Project in the urban center of the Municipality of Iles, which is expected to initially benefit 427 families in the urban area¹³⁷.

MUNICIPALITY OF IMUÉS: According to information from DANE, in 2015 the municipal housing had no natural gas service.¹³⁸ One of the goals of the Municipal Development Plan of Imués (2016-2019) is to manage projects to provide the domestic gas service¹³⁹.

• **Telecommunications.**

Telecommunications are the form of transmission and reception of signals that allows the exchange of messages at different distances. In Colombia, telecommunications are regulated by the Communications Regulatory Commission (CRC), fulfilling the mission of promoting competition, investment, protection of users' rights in accordance with state guidelines, guaranteeing the effective provision of Telecommunication services and the development of the sector within the framework of convergence and the information society.

At the departmental level, in each of the municipalities, the public switched telephone network telephony, whether basic, local extended, national and international is provided by the former Telecommunications Company, TELECOM, currently COLOMBIA TELECOMUNICACIONES¹⁴⁰.

MUNICIPALITY OF IPIALES: According to information supplied by SISBEN141, in the urban sector of the municipality of Ipiales, 10% of the population has fixed telephone service coverage and in the rural sector there is no coverage (Figure 5.9). Cell phone operators like Claro¹⁴², Movistar¹⁴³ and Tigo¹⁴⁴ have coverage in the municipality of Ipiales. Cable television is provided by private companies such as Cablepisur or Cable Unión de Occidente.

Figure 5.9 Telephone coverage in the municipality of Ipiales.

Source: SISBEN (2017)¹⁴⁵

MUNICIPALITY OF CONTADERO: Claro¹⁴⁶, Movistar¹⁴⁷ and Tigo¹⁴⁸ cell phone operators have coverage in the town. At the television level, national channels are seen. In general, the system is poor in the municipality and the television signals are complete only in particular cases through the use of own parabolic antennas. One of the most disadvantaged sectors corresponds to the Pan-American sector where the television signal is null. At the municipality level, the media do not provide satisfactory service¹⁴⁹. In the rural districts, townships or neighborhoods: Contaderito, Capulí, Iscuazán, San Andrés, Chorrera Negra, Simón Bolívar, Providencia, Las Delicias, El Juncal, Rosal of San Francisco Alto, San Francisco, Yaez, La Paz, Las Cuevas, El Manzano, Quisnamuez, El Culantro and Santa Isabel, there is a precarious coverage of public television (repeating antenna).¹⁵⁰

MUNICIPALITY OF ILES: As in the rest of the department, there is a telephone service provided by the company Colombia Telecomunicaciones S.A., formerly Telecom; with its own plant and national and international coverage infrastructure, as well as the cell phone concessionaire Comcel, Movistar and Tigo with a troublesome signal. It also has TV signal for the National and International channels, with a poor signal whose service is provided by the Iles Cable Community TV. Mail usually works with Servicios Postales Nacionales S.A. and Interapidísimo. The money transfer services are made through Invercosta, Gira, SIN, 4-72 and Banco Agrario and packages are sent through transport companies of the zone and the newspaper service is provided by Diario del Sur, with regional coverage.¹⁵¹

MUNICIPALITY OF IMUÉS: The mobile telephony service, Internet and subscription TV are provided by private companies such as Movistar, Claro, Tigo among others, with limitations that will be improved over the course of time by the companies mentioned¹⁵².

• **Public Transportation:**

MUNICIPALITY OF IPIALES: According to the Municipal Development Plan (2016-2019), the supply of means of transportation in Ipiales is limited and public transport is deficient¹⁵³. In this context, in the Urbano del Plan strategic axis, one of the products associated with the "Infrastructure for competitiveness, innovation and technology" program is the extension of public transport coverage and the implementation of new public transport solutions. In 2015, the public transportation fares were as follows: urban bus (\$ 1,200), collective taxi (\$ 1,200), taxi ride (\$ 3,500), taxi hour (\$ 13,500), ride to the airport (\$ 16,000), Ipiales - Rumichaca ride (\$ 7,600), Ipiales - Las Lajas (\$10,000), Las Lajas - Rumichaca (\$15,000), Rumichaca - airport (\$18,000), Rumichaca - Las Lajas (\$ 8,000), terminal - Las Lajas (\$ 10,000)¹⁵⁴. In the Municipality, the firm Transpiales S.A. operates, which transports passengers from the city of Ipiales to Cali and vice versa¹⁵⁵. The Empresa de Transportes Colectivos Ciudad de Ipiales SA, transports passengers from Ipiales to Tumaco, Cali, Valle Municipalities and the coffee area in vehicles with a capacity of 25-30 passengers.

MUNICIPALITY OF CONTADERO: In the municipality, there is a passenger transport company called COOTRANCON, which provides services to the city of Ipiales and the different roads that make up the municipality. This company generates an important number of jobs, apart from providing a service that facilitates marketing and management processes in diverse areas for the inhabitants. Within the informal transport, an association of motorcyclists has been constituted, which renders services between the township of San Juan, the municipal center and towards the rural districts. This Association is not legally constituted to provide such service and lacks security measures. However, users have welcomed the service because of the speed, opportunity and friendliness of its drivers¹⁵⁶.

MUNICIPALITY OF ILES: In the Municipality, three passenger transport companies operate: Transportes San Juan de Pasto S.A, Transportes Sandona S.A and Cootranar, operating from Monday to Sunday¹⁵⁷. The greatest influx of passengers and freight is recorded in the following routes: Pasto, Ipiales and Taqueras. Different types of vehicles are used for this purpose: ladder buses, 4x4s, buses, bus and truck buses, which cover intermunicipal routes¹⁵⁸. The rural district transport faces serious inconveniences due to the low coverage of the service, high rates and overloads of passengers and cargo. Camper-type vehicles, ladder buses and pickup trucks, many of them in poor condition, sporadically cover some routes¹⁵⁹. In 2011, between 25 and 30 vehicles of this nature were available for the provision of the service, most of which lack accident insurance, a problem that must be taken into consideration by the owners, given the high accident rates due to the topographic characteristics of the area¹⁶⁰.

MUNICIPALITY OF IMUÉS: The rural territory of Imués has rural district roads, which allow the whole community to move between their homes and the urban center and vice versa, so as to take their products on horseback and be transported in small cars that supply the local and regional trade¹⁶¹. In the Municipal Development Plan (2012-2015), one of the objectives in terms of roads and mobility was to "Improve the mobility of the Municipality by adapting the road infrastructure and means of transport" and one of the projects "Enabling passenger Public Transport Companies, both individual and collective taxis, special and mixed to optimize the transport of passengers and goods in the Municipal jurisdiction."¹⁶²

- **Internet Access.**

MUNICIPALITY OF IPIALES: According to the Municipal Development Plan of Ipiales (2016-2019), in 2015 of each 100 inhabitants the 3,4 had internet service.¹⁶³

MUNICIPALITY OF CONTADERO: The municipality has a Vive Digital point. The Vive Digital point is located in the Centro neighborhood of the Urban sector, it has 6 areas distributed as follows: internet access area, training area, area of rapid consultation, entertainment area, area of supplementary services, reception area and storage area¹⁶⁴.

MUNICIPALITY OF ILES: by the year 2015, 20% of the population benefited from internet. This year, two Vive Digital points were available.¹⁶⁵

MUNICIPALITY OF IMUÉS: The subscription internet service is provided by private companies such as Movistar, Claro, Tigo among others, with limitations that will be improved over the course of time by the companies mentioned¹⁶⁶. One of the goals of the Municipal Development Plan of Imués (2016-2019) is to increase public sites with access to the internet in the urban sector.¹⁶⁷

5.3.3.1.2 Social services.

Social services are a system that includes a series of programs and resources that address specific social problems; a set of promotion and social action service provision that attends the social needs comprehensively. In this case, the social services present in the municipality of Orito will be evidenced as the major territorial unit of the project, including education, health, recreational and sports infrastructure, housing, road infrastructure and transport and communication media.

- **Education infrastructure.**

The Colombian education system is made up of initial education, pre-school education, basic education (primary, five grades, and secondary four grades), secondary education (two grades and ends with bachelor's degree), and higher education. In Colombia education is defined as a process of permanent, personal, cultural

and social formation that is based on an integral conception of the human individual, his/her dignity, his/her rights and his/her duties¹⁶⁸.

In the Colombian Political Constitution, the fundamental notes of the nature of the educational service are given. It indicates, for example that it is a right of the person, a public service that has a social function and that it is the State's duty to regulate and exercise the supreme inspection and supervision regarding the educational service in order to ensure quality, fulfillment of its purposes and the best moral, intellectual and physical education of the students. It also establishes that the adequate coverage of the service must be guaranteed and the necessary conditions for access and permanence in the educational system must be ensured to the children.

Table 5.33 presents the identification, location and other general aspects of the educational infrastructure in the municipalities of Ipiales, Contadero, Iles and Imués.

Table 5.33 Identification and location of the educational infrastructure of the major territorial units.

MAJOR TERRITORIAL UNIT	EDUCATIONAL INFRASTRUCTURE DESCRIPTION
Ipiales	<p>In the rural area of the Municipality, in 1999 there were six Educational Institutions of Basic Secondary and Vocational, Which welcomed a population of 1,112 students, which in turn contemplate academic modality (3) and Agroindustrial Technician modality (3)¹⁶⁹. For primary education, there were 45 schools and a school room in Santa Rosa de Sucumbios. These institutions are public¹⁷⁰.</p> <p>As far as the service offered by the I.C.B.F, there are two types of Family Child Care Homes, Community Homes, 56 are in operation and offer a maximum capacity of 15 children from 6 months to 5 years of age and FAMI homes, 21, which hold a maximum quota of 15 pregnant or lactating mothers¹⁷¹.</p> <p style="text-align: center;">Colegio Mixto San Felipe de Neri, municipality of Ipiales.</p>  <p>In the urban sector, there were 52 educational institutions of pre-school, primary and secondary education¹⁷². In terms of University Education, there are the following educational centers: Universidad Mariana, Universidad C.U.N, Universidad Autónoma de Nariño, Centro Superior Profesional and Universidad de Nariño¹⁷³. In the Municipality, the gross education coverage in 2015 ranged between 66% (medium) and 91% (primary). As shown in the graph, the net coverage is well below the gross, which reflects the high school dropout rate.</p>

	studies; these indicators represent a low level of education in the municipality, due to factors such as school dropout, low coverage, poor quality of education, lack of professional orientation to link to higher education levels and poverty.

· **Health infrastructure.**

The health service has a fundamental right relationship, including timely, acceptable, affordable and satisfactory quality sanitary attention. The State as a guarantor of the rights and duties of citizens, is responsible for providing guarantees that allow healthy living, without limiting the provision of the service in sickness conditions by promoting projects and programs fostering the promotion of physical and mental health among the population.

The Colombian Political Constitution - chapter II of the rights, guarantees and duties specifically set out in articles 48, 49, and 50, guarantees the provision of social security as the exercise of mandatory compliance in accordance with the principles of efficiency, universality and solidarity, in the terms established by law. In the municipality of Orito, the service is governed by what is established in laws 715 of 2011, 1122 and 1151 of 2007 and 1438 of 2011. In addition to actions that make up the assurance, the Public Health Plan for Collective Interventions and some related activities with respect to the competence of health service provision.

The identification, location and other general aspects of the health infrastructure of the municipalities with influence of the project (Ipiales, Contadero, Iles and Imués) are presented in **Table 5.34**.

Table 5.34 Identification and location of the health infrastructure of the major territorial units.

MAJOR TERRITORIAL UNIT	HEALTH INFRASTRUCTURE DESCRIPTION
Ipiales	The La Victoria Township has a Hospital Center, which attends a large influx of patients from both La Victoria and from neighboring rural district, offering emergency services 24 hours a day. It has a full-time doctor, dentistry service, delivery room, beds for hospitalization ¹⁹¹ .

GEO-002-17-114-EAM			Version 0.	May 2017

MAJOR TERRITORIAL UNIT	HEALTH INFRASTRUCTURE DESCRIPTION
	 <p style="text-align: center;"><i>Source: Planning Secretary of the El Contadero Municipality, 2016¹⁹⁶</i> Unidad médica móvil del Centro de Salud Sagrado Corazón de Jesús E.S.S</p> <p>According to the Planning Secretary of the Municipality (2016) management for the construction of a Health center in a strategic part is required for the best provision of health services to the community in the rural area¹⁹⁷.</p>
Iles	<p>The municipality has a Health Institution, such as the State Social Enterprise called "Centro de Salud Iles E.S.E.", which provides first level services such as: emergency room, outpatient clinic, dentistry, low complexity clinical laboratory, pharmacy, psychology, vaccination, basic care transport and promotion and prevention programs¹⁹⁸.</p> <p>In recent years, coverage for affiliation to the general social security system in health, especially the subsidized system, has had a maintenance behavior; however, since there are no industries and formal sources of employment, coverage in the contributory regime is not representative, affecting solidarity of the system. By 2015, 7,053 people were subsidized population, 227 contributory population and 1,566 related population¹⁹⁹. The largest amount of population in the municipality is young, a factor that becomes a potential for the socioeconomic development of the Municipality; however the health of this population is mainly affected by pains or diseases such as: abdominal pains, essential hypertension, diarrhea and gastroenteritis caused by infectious origins. Emergency cases are registered for quarrels or fights²⁰⁰.</p> <p>The Municipality of Iles has a qualified Vaccination Service; however the low coverage of the program is due to the great difference of population between the DANE census and the actual population of the Municipality. Taking the above into account, vaccination coverage according to DANE is always reflecting less than 95%; however in the vaccination monitoring carried out by the Local Health Department, there is a 100% coverage in vaccine application²⁰¹. According to the Municipal Development Plan (2016-2019), in order to provide a health service with quality and efficiency, it is necessary to: strengthen infrastructure, provide personal equipment, implement programs to generate greater coverage in care and prevention in the Urban and rural zones.</p>

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

MAJOR TERRITORIAL UNIT	HEALTH INFRASTRUCTURE DESCRIPTION
	 <p data-bbox="651 821 1120 869"><i>Source: Official website of "Centro de Salud Iles E.S.E." Health Center, Municipality of Iles.</i></p>
Imués	<p data-bbox="386 875 1385 1024">According to the information provided by the local Health Department of the municipality of Imués (2017)²⁰², this has a state social enterprise, the Centro de Salud Santiago Apóstol Imues with its three satellite centers located in the Santa Ana, Pedregal and Pilcuan townships, corresponding to first level attention. The population is affiliated to the following subsidized regime administrators: Caja de compensación familiar de Nariño, Emmsanar, Mallamas EPS Indígena and Nueva EPS. In the contributory scheme, they are enrolled in the Cafesalud, Coomeva and Nueva EPS-RS health administrators.</p> <p data-bbox="386 1056 1385 1205">In March 2016, the Municipality had 6,236 inhabitants, 5,406 BDUA (87%) out of which were subscribed to the Subsidized Regime, and 217 (3.5%) from the population in a contributory scheme, and 9.8% of the inhabitants are outside the general health system, without any affiliation²⁰³. According to the information provided by the ESE Santiago Apóstol Imués each month, in the last quarter of 2016 and January 2017, the main causes of morbidity were: essential hypertension (primary), dentine caries, gastritis, duodenitis, and gastroenteritis of presumed infectious origin²⁰⁴. In 2016, the infant mortality rate was 17.7% and the DTP vaccination coverage was 69%²⁰⁵.</p> <p data-bbox="386 1236 1385 1386">According to the Municipal Development Plan (2016-2019) there is little use of health services due to poor quality and opportunity; this is why users go to the hospitals of Tuquerrez, Funes, Iles or Tangua and in some cases to the city of Pasto and Ipiales. The social enterprise of the state ESE Santiago Apóstol is in Low Risk, in process of verification and certification, which is a matter of concern. The physical conditions are not optimal, a health center in total abandonment (case of the Cuarchud health post), so it is necessary to establish goals and achievements to recover and commission the hospital network of the Municipality²⁰⁶.</p> <p data-bbox="386 1417 1385 1518">The municipality of Imués in its 2016-2019 period, will carry out the following in the health sector: a) Adaptation of the new facilities for the ESE Santiago Apóstol Imues for an estimated value of \$ 330,000,000 million pesos, b) Fiscal and financial consolidation for \$ 600,000,000 million pesos legal currency and c) Acquisition of a new ambulance for the provision of health service in the municipality²⁰⁷.</p>

²⁰⁷ Imués Mayor's Office. 2017. Communication No. GA-047-17 addressed to CONCESIONARIA VIAL UNIÓN DEL SUR S.A.S.

According to the Political Constitution, all people have the right to recreation, the practice of sports and the use of leisure time; likewise, they are part of education or are considered as supplemental activities to education, health, environment, tourism and culture; therefore they should be included in social spending and it is the competence of the municipality to adapt the sports infrastructure and promote sports and recreation in its territory.

Recreation and sport are exercises of respect and promotion by the Colombian State, aimed at children and adolescents; as a right, it should be given to the population of the national territory, promoting through artistic spaces and recreation the physical, intellectual and affective strengthening of the population benefiting from such right. It is also an effective means to approach to the most vulnerable population victims of violence and displacement.

The identification, location and other general aspects of the recreational and health infrastructure of the municipalities with influence of the project (Ipiales, Contadero, Iles and Imués) are presented in **Table 5.35**.

Table 5.35 Identification and location of the recreation and health infrastructure of the major territorial units.

MAJOR TERRITORIAL UNIT	RECREATIONAL AND SPORTS INFRASTRUCTURE DESCRIPTION
Ipiales	<p>In the municipality, there is an Organization for recreation and sport of Ipiales-ORDEPI -.</p> <p>The municipality of Ipiales has the following infrastructure for the use of spare time:</p> <ul style="list-style-type: none"> • Architectural: the Lajas Sanctuary, the town center of Las Lajas, the Casa de Aduana; parks, temples, republican mansions of the historic center, El Gólgota neighborhood and other sectors; the buildings of the City Hall, the Cabal military group, the stadium, the coliseum, the Ipiales Recreation Center 2000, the Transport Terminal, the Central Bank, the Center for University Studies, El Carácter association, The House of Culture , the San Felipe Neri convent, among others. • Religious: pilgrimage and feast of the Virgin of the Lajas, Holy Week in Ipiales; the images, temples and chapels of the urban and rural sector of Ipiales • Cultural: the Multicolor Carnival of the Border, the ephemeris of the Municipality of Obando, the museum of Las Lajas; several events carried out by cultural entities and educational institutions. • Environmental: the Simón Bolívar recreational center, the Guáytara river canyon; the Puente del Negrito wetland near the city, and the Cerote in Yaramal; the waterfalls of: Teques, Boquerón, Inagán; the forest of Churuyaco and the valley of Cofanía; the hills: Negro, La Quinta and Troya. Several ecological trails. • Landscaping: "the viewpoint" of the city, to observe the Chiles and Cumbal volcanoes, the clouds and their sunsets, the Lajas Sanctuary, the Guáytara river canyon, the waterfalls, the peaks of the Western Mountain Chain, the Andean plateau with its minifundio, its fields, its native arborization. • Recreation: the Recreation Center Ipiales 2000, the Simón Bolívar; and with a vision for the future: the recreational park Los Mártires and the ecological zone of Chorro Grande.

MAJOR TERRITORIAL UNIT	RECREATIONAL AND SPORTS INFRASTRUCTURE DESCRIPTION
	 <p data-bbox="516 835 1260 884">Source: Ipiales Municipal Development Plan "Ipiales, Capital of the South" 2016-2019. Sports areas in the Municipal center of Ipiales.</p>
Contadero	<p data-bbox="386 890 1385 1020">In the urban sector, the municipality has 6 scenarios to practice sports, located in the different neighborhoods of the municipal center; however they are in poor condition. At the rural level, there are 24 sports centers, 8 of which are in good condition; they are mostly located in the existing educational centers. The municipality has the INDERCONT sports institute in charge of the management and improvement of the different sports scenarios, as well as the promotion of different activities related to culture, sports and recreation.</p>  <p data-bbox="703 1776 1068 1795">Source: GEOCOL CONSULTORES S.A., 2017.</p>

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

MAJOR TERRITORIAL UNIT	RECREATIONAL AND SPORTS INFRASTRUCTURE DESCRIPTION
	<p style="text-align: center;"><i>Sports Areas in the Municipal Center of Contadero.</i></p> <p>At present, a culture house is being built for the inhabitants of the Contadero municipality.²⁰⁸</p> <div style="text-align: center;">  </div> <p style="text-align: center;"><i>Source: GEOCOL CONSULTORES S.A., 2017.</i></p> <p style="text-align: center;">House of culture under construction located in the Contadero urban center.</p>
Iles	<p>In the municipality, there are no sports training schools; the "Zarandéate Nariño" Physical Activity departmental program is being developed focusing in 2015 all the groups in the municipality with a participation of 400 regular people (they practice physical activity sessions at least three times a week) and 1000 non-regular people (who participate in massive events). In Iles, there is no entity that directs policies on sports, recreation, culture, and tourism, to offer more options for sports, recreation and leisure time; to generate a healthy coexistence. The sports practiced recreationally in the area are the following: soccer, micro-football, basketball, volleyball and "chaza"; it has been identified that about 1900 people are engaged in a certain sport activity, with the largest participation of the Institutions and Educational Centers due to the physical education class and the SUPERATE tests attended by 400 students. The problem is focused on the scarce culture of practicing a sport among the children and young people in the municipality, the lack of motivation because there is no support for these activities, little training of clubs and sports organizations, as well as the lack of adaptation and construction of sports spaces with the right technical specifications. Due to the above, it is required to strengthen sports, recreational and physical activities, but with a more inclusive and participatory approach towards children, adolescents, adults, single mothers and elderly people, to generate healthy habits among the entire Iles population, with adaptation and construction of sports spaces and the creation of schools of recreational and competitive sports training. In the rural area, there are no multi-sports courts, only lots of land with simple adjustments to practice football and chaza, specifically in the rural districts of: San Francisco, Alto del Rey, Bolivar, San Antonio, Tablón Bajo, Urbano and Yarqui and a field in poor condition in the San Javier rural district; in the urban sector there are 3 areas for practicing sports such as: soccer, indoor football, basketball, chaza field and coliseum, which are not in good condition and require constant maintenance²⁰⁹.</p>
Imués	<p>The municipal sports fund is the dependency responsible for planning, coordinating and promoting sports practices in all its forms. The most practiced sports are soccer, micro-football, basketball, volleyball, chaza and athletics, but with low levels of performance, since the investment in this sector is very low and does not allow to develop and to massify the practice of sports.</p> <p><u>Infrastructure:</u> In the municipality, the following places for cultural and recreational practices stand out:</p> <ul style="list-style-type: none"> • Religious sites such as: Santiago Apostle Parish Church, Monte de los Olivos, Chirristes Grotto, among others.

²⁰⁸ Development Plan of El Contadero "Let's work together to rescue and achieve progress in El Contadero" 2016-2019".

²⁰⁹ Iles Municipal Development Plan - 2012-2015.

MAJOR TERRITORIAL UNIT	RECREATIONAL AND SPORTS INFRASTRUCTURE DESCRIPTION
	<ul style="list-style-type: none"> House of culture: it is a modern and ample stature where different artistic, playful and musical recreation activities take place, where the young people are the main participants and those who foster and promote the Imueseña culture. Municipal library: the municipality has the municipal library with books and teaching materials that facilitate learning processes for the student population. It has free Internet access, so that its students or others can search for their material through this means²¹⁰.

· **Housing.**

Adequate housing was recognized as a human right in 1948, with the Universal Declaration of Human Rights, becoming a universal human right accepted and applicable everywhere in the world as one of the fundamental rights for the lives of people.

Adequate housing should include: a) Legal security implies living in a place without fear of being evicted or receiving undue or unexpected threats. b) Services, public goods and infrastructure, such as electricity, sanitation and garbage collection. c) Environmental assets such as water, land and a balanced environment. d) Affordable price or subsidies or financing that guarantee costs according to their income. e) Preferential access ie for groups in situations of vulnerability or discrimination. f) Adequate location, with health services, schools, roads, among others. g) Cultural adaptation or constructed with materials, structures and spatial arrangement for all family members²¹¹.

For its part, the Colombian Political Constitution enshrines the right to housing for all Colombians through article 51 *"All Colombians are entitled to decent housing. The State shall establish the necessary conditions to give effect to this right and promote social housing schemes, adequate long-term financing systems and associative forms of implementation of these housing programs."*

Table 5.36 presents the typification of characteristics of the dwellings for the population settled in the major territorial units of influence of the project; the municipalities of Ipiales, Contadero, Iles and Imués.

Table 5.36 Typification of the characteristics of the dwellings of the major territorial units.

MAJOR TERRITORIAL UNIT	HOUSING DESCRIPTION
Ipiales	<p>The houses of the Municipality of Ipiales are 27,906, 19,707 out of which are urban dwellings and 8,199 are rural; the housing deficit in the Municipality of Ipiales is approximately 46%, with 12,840 homes in deficit.</p> <p>The housing sector in the Municipality presents a quantitative deficit of 15% and a qualitative deficit of 27%, lack of support to housing organizations, rustic housing constructions in a risk zone; the low income of the community has given rise to high qualitative and quantitative housing deficit. The Administration in this sector is focused on contributing to the reduction of the qualitative deficit by improving housing both in the urban sector and in the rural sector, and on the other hand, the reduction of the quantitative deficit through subsidies. The need to accompany the delivery of these contributions is clear, with an institutional management aimed at formulating housing guidelines and habitat that guarantee the fulfillment of basic standards, which not only respond to the particular conditions required by housing in a geographical environment, but to the cultural environments that are specific to the region²¹².</p>

²¹⁰ Imués Municipal Development Plan "Imues with a better future" 2016-2019.

²¹¹ http://direitoamoradia.org/?page_id=46&lang=es. Housing is a human right. September 2016.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

MAJOR TERRITORIAL UNIT	HOUSING DESCRIPTION
Contadero	<p>In the municipality in 2016 the total housing was 1,292, 296 out of which are in the municipal center and 996 in the rural sector. The average number of inhabitants per dwelling at the level of the whole municipality is 5. The majority of dwellings (84.07%) are built with materials such as plastered wall or adobe, which means that its structure is relatively old and therefore requires maintenance and repairs to ensure the safety of its inhabitants; housing with new materials like Block, brick, stone or polished wood and which are considered as new or recent, only reach 12.42%²¹³.</p>  <p style="text-align: center;"><i>Source: GEOCOL CONSULTORES S.A., 2017. Typical houses in the municipality of Contadero.</i></p>
Iles	<p>The houses of the Municipality of Iles are 2,210, 628 out of which are urban dwellings and 1,582 are rural; the housing deficit in the Municipality of Ipiales is approximately 71.41%, with 1,446 homes in deficit. ²¹⁴ To solve the housing deficit, the municipal administration has been working on housing projects since 2012, and two have been built for such purpose: Mirador del Andes and Rosario with a total coverage of 124.</p>
Imués	<p>According to DANE, almost 50% of existing houses in the municipality are dwellings built in mud walls, roof in wooden structure, covered in clay tile, floors of earth or cement. x 20% are homes of social interest that have been built in with the support of different entities such as the Banco Agrario and of course the municipal mayor's office with the support of the housing ministry. These buildings are built with the economic contributions that the nation provides, and are built for people with limited resources; these are buildings that improve the quality of life of people and are worthy for the progress of families²¹⁵. The remaining 30% are buildings that have been remodeled by their owners and are buildings that do not exceed 2 floors.</p> <p>In the municipality, several housing projects have been carried out, such as the Blanca Luz urbanization; social interest houses located in the municipal center, and recently a project that benefits 40 families of scarce resources, supported by the departmental government, municipal mayor's office, FINDETER and Banco Agrario.</p>

• **Road and transport infrastructure.**

²¹⁴ Iles Municipal Development Plan - 2012-2015.

²¹⁵ Imués Municipal Development Plan "Imues with a better future" 2016-2019.

Table 5.36 presents the typification of characteristics of the dwellings for the population settled in the major territorial units of influence of the project; the municipalities of Ipiales, Contadero, Iles and Imués.

Table 5.37 Description of transport infrastructure in major territorial units.

MAJOR TERRITORIAL UNIT	TRANSPORT INFRASTRUCTURE DESCRIPTION
Ipiales	<p>The municipality of Ipiales has the most important road at the national level, such as the Pan-American Highway, which offers traffic to the cities of Ipiales (Colombia) and the city of Tulcán (Ecuador). This route, because of its importance, is of an international character and, therefore, must be maintained by INVIAS²¹⁶. Ipiales communicates with the municipalities of Aldana, Guachucal and Túquerres, through the old road to the north, which currently has the rolling envelope in very poor condition for vehicular traffic²¹⁷. Ipiales also connects to the municipalities of Pupiales and Gualmatán through a road that has a pavement with a rolling envelop adequate light traffic; since these regions offer high agricultural production, there are flows of vehicles of high tonnage²¹⁸.</p> <p>The municipality also connects to the Las Lajas township and the municipality of Potosí; the road is highly deteriorated at present in its asphaltic layer in the 7Km stretch to the Las Lajas township and, therefore, the vehicular traffic is done in extreme conditions of danger. The municipality of Potosí is reached through an unpaved road of 3.5 km long, affirmed in very regular conditions of service²¹⁹.</p> <p>Aldana - Guachucal and Túquerre (63 km): paved road. Pupiales - Gualmatan (21 km): paved road. Potosí (10 km): paved road. Road network (among rural districts)²²⁰: Puente Nuevo – Teques (20 km) La Orejuela (13,5 km) Santa Fe (7 km) El Rosario (7 km)</p>
Contadero	<p>The Municipality of El Contadero comprises a complicated road network, given the rough topography of the terrain and to the conditions of the region (Geology, climate, etc.); this leads to continuous maintenance to be carried out in each one of the roads in the Municipality, which are of vital importance for the outflow of agricultural products of the Municipality towards other sectors of the region²²¹.</p> <p>El Contadero is connected to other municipalities through the main access road that connects with Ipiales, Gualmatán and Iles²²². The different rural districts of the municipality are connected to each other and to the urban zone through a road network, rural district paths or bridle paths; which are difficult to use during the rainy season, and does not allow communication with the agricultural and cattle ranches of the municipality, which are the source of supply of the nearby marketplaces²²³.</p> <p>The Municipality of El Contadero comprises routes of three types (Main, secondary and tertiary). It is composed almost entirely by tertiary roads; some of them with small sections intervened, but greater efforts must be made if the intent is to achieve good communication between sectors, and with other municipalities²²⁴. According to the Municipal Development Plan (2016-2019), one of the main needs of El Contadero is the adequacy and maintenance</p>

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

MAJOR TERRITORIAL UNIT	TRANSPORT INFRASTRUCTURE DESCRIPTION
	<p>of the roads as well as the continued paving of the road that connects us with the municipality of Gualmatán, which is approximately 0.5 km.</p> <div style="text-align: center;">  </div> <p style="text-align: center;"><i>Source: GEOCOL CONSULTORES S.A., 2017. Roads located in the municipal center.</i></p>
Iles	<p>Iles crosses the Pan-American road longitudinally, on the Northeast of the municipality, through the El Porvenir, El Capulí and La Esperanza rural districts. The municipality, is connected to the Department of Nariño and the other municipalities through the road that connects the La Esperanza (Panamerican road) - El Tablón Bajo - Iles points, with a 17 km paved section. There are also variants that communicate with neighboring municipalities: Gualmatán and Contadero to the South, and Ospina to the west; roads in poor condition.</p> <p>The roads are classified as main roads, which correspond to the South Pan-American Highway segment that passes through the El Capulí Village, El Porvenir rural district, La Esperanza and reaches the Humeadora creek with a length of 9.5 kilometers; the Regional secondary roads are those that connect the town center to the main national or departmental road. In the municipality of Iles, the roads that meet the characteristics of this category are the following:</p> <p>Iles - La Esperanza with 18.5 Km of paved roads; and the Iles-Contadero-Gualmatan road, 14 km in poor condition; tertiary roads or rural district roads are those that connect the urban area with the rural area and roads that communicate the rural districts among them.</p>

MAJOR TERRITORIAL UNIT	TRANSPORT INFRASTRUCTURE DESCRIPTION
	<p>Several sectors of the municipality lack communication routes seriously affecting the commercialization of products and consequently deteriorating the quality of life of the inhabitants, the transport is made through bridle paths that, given the lack of maintenance, are destroyed²²⁵.</p>
Imués	<p>The primary network consists mainly of the Pan-American route, in a section that connects El Pedregal with the city of Ipiales. Another section is derived from the road to Tumaco, on the Pedregal-Tuquerres route with a length of approximately 31.5 km of paved road. From there, there are roads that connect the Municipality with urban areas or rural district settlements, as the road that connects the sector of Chirristés with the Municipality of Guaitarilla, which is paved and is 10.5 km long²²⁶.</p> <p>The tertiary road network, which allows the intercommunication between roads and rural districts and with the municipal center is in poor condition and during the rainy season, roads are hard to access for motor vehicles and pedestrians²²⁷. According to the information of the Secretary of Planning and Works of the Municipality, there are 14 tertiary roads from 1.5 to 31.0 km. Of these, only one is paved (7.1%), ten with road surfacing (71.4%) and one paved (7.1%)²²⁸.</p> <p>Most rural roads are in poor condition, except for the road connects Pedregal to Santa Ana, because traffic moves through the Pan-American Highway, which is in permanent maintenance at present. The Chirristes - Camuestes (paved) road is also in good transit condition²²⁹.</p> <p>The urban road network, corresponding to the area set out within the urban perimeter of the municipal center of Imués, is distributed as follows: Carrera 2a. It comprises the main entrance and the following neighborhoods: Los estudiantes, las delicias, libertad, urbanización María Luz, barrio Santa Rosa, the cementary and the main square; Carrera 1ª. It is the route of lesser activity or second order, and connects with the Santiago and María Luz neighborhoods²³⁰.</p> <div data-bbox="581 1094 1195 1472" data-label="Image"> </div> <p style="text-align: center;"><i>Source: Imués Municipal Development Plan (2016-2019)</i> Main roads in the Municipality of Imués</p>

- **Core influence center for trading and access to social services.**

The dynamic of the core centers in terms of commercialization and access to services has been affected by the high cost of products, sometimes generated by the bad condition of roads, which delays the arrival and departure of products, increasing the investment costs; this implies in a decrease in profits and limits access to new markets.

Table 5.38 presents the description of the core centers of influence for commercialization and access to social services of the major territorial units of influence of the project; the municipalities of Ipiales, Contadero, Iles and Imués.

Table 5.38 Description of the Core influence center for trading and access to social services.

MAJOR TERRITORIAL UNIT	DESCRIPTION OF CORE CENTERS
Ipiales	<p>The municipal center of Ipiales is defined as the privileged place in the municipality to establish commercialization processes, in addition to focusing attention on public and social services. The market place is defined as the place where mainly perishable food is sold, which must have technical, sanitary and endowment conditions to guarantee the quality of the products marketed there.</p> <p>The city of Ipiales, despite the market place, Los Mártires and the Galería Central it has, these do not meet the minimum requirements required to be considered as food stores.</p> <p>The market places currently operating in the Municipality have a very limited infrastructure, which does not allow locating and technically differentiating separate areas according to the products and their specific characteristics. The sanitary facilities show notorious deficiencies and there is inadequate temporary disposal of the waste generated in the commercialization process.</p>
Contadero	<p>The municipal center comprises the main trading center, followed by the populated centers. The municipality of El Contadero is part of the sub-region of the Nariño Department, which has historically been known as the Former Province of Obando and which includes another 12 municipalities, Aldana, Cordoba, Cuaspud, Cumbal, Funes, Guachucal, Gualmatán, Iles, Potosí, Puerres, Pupiales and Ipiales, which have become the marketing, information and political - administrative management core of the whole area. The location as a border of this whole area has boosted activities such as trade and freight transport that generates a significant number of jobs²³¹.</p>
Iles	<p>It is very important to note that the inhabitants of the municipal center are mostly engaged in the commercialization of products and services to meet the demand of the inhabitants of the municipality, visitors and passing-by people, "loncherías", drugstores, fast foods and "fritangas", hardware stores, assorted product stores, stationery, clothing stores and footwear and with great characterization, because due to the lack of employment, the traditional canteens where alcoholic beverages have succeeded as places of entertainment like billiards and "canchas de sapo".</p> <p>There are small family businesses dedicated to the processing of dairy products especially double cream cheese that is distributed in Pasto, Popayán and Cali.</p> <p>There are swimming pools, restaurants and hostels in the northeastern part of the Municipality (El Porvenir, El Capulí and La Esperanza - tempered climate) used by locals and foreigners on the weekends.</p> <p>The traditional trade of Iles is a regional center that gathers a sector of the informal economy, that odd job economy that fills the market square and the streets; these references represent the image and size of unemployment that supports the municipality²³².</p>
Imués	<p>The municipal center gathers the attention and optimization of public and social services, especially for those who live in the rural zone²³³.</p>

GEO-002-17-114-EAM			Version 0.	May 2017

- **Media.**

The media are instruments used in today's society to inform and communicate messages in textual, sound, visual or audiovisual versions. At times they are applied to communicate massively, as is the case of television, social networks, the local, regional or national press.

Every day, individuals and communities access information material that describes, explains and analyzes political, social, economic and cultural data and events, both locally and globally. By the beginning of the twenty-first century, and in almost every society in the world, newspapers, radio stations and web pages are examples of the complex nature of the media. In our societies, these channels are essential for the establishment and development of all processes of human interaction. The media are the physical materialization of the humans' need to connect to each other. They describe situations and problems typical of our reality. In most of the opportunities, analyzes are presented, which contribute to their discussion. The media allow to establish processes of knowledge exchange and debates of a social nature.

MUNICIPALITY OF IPIALES: The municipality of Ipiales has the Radio Viva²³⁴, Ondas del Sur²³⁵, Ipiales al Aire²³⁶, Rumba Estéreo 104.7²³⁷, among other stations.

MUNICIPALITY OF CONTADERO: The radio signal is not clear, national radio stations such as RCN, Caracol, Colmundo Radio, and local stations such as Ondas del Mayo, Ecos de Pasto and the Gualmatán Verde Stereo station are active. In 2001, the municipality did not have its own station to establish a channel of communication and a social service to the community²³⁸.

MUNICIPALITY OF ILES: radio coverage is made by regional stations with Frequency Modulation or High Frequency; there is a local community station covering the whole municipality called "Iles Primavera Estéreo" which is the most commonly used means of communication by the local and provincial population²³⁹.

MUNICIPALITY OF IMUÉS: The municipality has a community radio station called "Radio de Luz."²⁴⁰

- **Graveyards and cemeteries.**

MUNICIPALITY OF IPIALES: The Interparroquial Cemetery of Ipiales is located in Barrio Palermo, via the so-called Puente Nuevo, which by tradition has been reserved as the burial place of loved ones²⁴¹. This cemetery has grown over the years in a disorganized way, and requires significant infrastructure works necessary for its proper functioning and proportional to the cost of the land on site. The access roads to the interior are deficient, there are no public parking spaces inside or outside. Facilities are scarce. Green areas are poor. The pedestrian circulation areas are not demarcated and are minimal. There is no rainwater collection system, drainage, or wastewater treatment²⁴². The Jardines de Paz El Santuario cemetery is located in the section of Paz El Santuario in the urban sector of the city of Ipiales. It is equipped with public water, energy and

²⁴² Ipiales Municipality Territorial Planning Basic Plan. Urban Diagnosis. Ipiales, 2000.

telephone services. this place can be reached by the road from Ipiales to the San Luis Airport, turning left by Puenes, 200 meters approximately, allowing easy access to the users²⁴³.

MUNICIPALITY OF CONTADERO: The cemetery operates in the municipal center. The municipal administration carries out continuous maintenance activities to the municipal cemetery, and has assigned a permanent worker who is in charge of these works. On the other hand, the only rural district that has its own Cemetery is Aldea de María, which serves as burial site for all the rural of the sector; it currently has little space for individual vaults, so it is necessary to build blocks or collective tombs for the burial of the deceased.

MUNICIPALITY OF ILES: The cemetery park is located in the municipal center, which is owned by the San Juan Bautista de Iles parish. The municipality does not have the adequate facilities for the practice of necropsies to corpses in state of decomposition.

MUNICIPALITY OF IMUÉS: The cemetery is located in the urban perimeter, and it is managed by the parish²⁴⁴.

· **Market places and plants of animal slaughter plants.**

Table 5.39 presents the identification, location and other general aspects of the market place infrastructure and animal slaughter plants in the municipalities of Ipiales, Contadero, Iles and Imués.

Table 5.39 Identification and location of the Infrastructure of market places and animal slaughter plants of the major territorial units.

MAJOR TERRITORIAL UNIT	DESCRIPTION OF MARKET PLACE INFRASTRUCTURE AND ANIMAL SLAUGHTER PLANTS
Ipiales	<p>Market place: The city of Ipiales has the Los Mártires and the Central Gallery market places. However, these do not meet the minimum requirements required to be considered as food outlets. The market places currently operating in the Municipality have a very limited infrastructure, which does not allow locating and technically differentiating separate areas according to the products and their specific characteristics. The sanitary facilities show notorious deficiencies and there is inadequate temporary disposal of the waste generated in the commercialization process²⁴⁵.</p> <p>Animal slaughter plant: The municipal slaughter plant of Ipiales does not have the adequate infrastructure for the slaughtering of cattle and pigs. These activities are performed under anti-technical and anti-hygienic conditions, disregarding the pertinent requirements of the current legislation. At 2009, it did not have a sanitary license or environmental license; however, the place has not been closed, as this situation would bring greater problems due to the proliferation of clandestine, uncontrolled slaughter sites²⁴⁶. This slaughterhouse has the following services: aqueduct, sewage, electricity and transport. The workers who carry out the slaughter work do not have an adequate endowment, thus increasing the risk of getting any infection that threatens the health thereof and / or causing product contamination.</p> <p>Slaughter schedules are not exactly established; they usually start at 3:00 AM, causing alterations in areas near the slaughterhouse due to the noise generated. On the other hand, the poor lighting in the slaughter pavilions at those hours makes it difficult to conduct a sanitary inspection²⁴⁷. At present, the slaughterhouse is under the responsibility of the Meat Expenders Union of the Municipality, through a lease with ISERVI²⁴⁸.</p>
Contadero	The Municipality does not have an animal slaughter plant or market place; animal slaughter is done in the houses of meat traders in both, urban and rural sectors. The number of animals slaughtered on a weekly

MAJOR TERRITORIAL UNIT	DESCRIPTION OF MARKET PLACE INFRASTRUCTURE AND ANIMAL SLAUGHTER PLANTS
	basis is very low (2 cattle and 7 pigs), which is why the construction of a slaughterhouse is not a priority. However, the Administration must focus efforts to ensure that the slaughtering is made in the best sanitary and hygiene conditions, carrying out constant monitoring by the official of the Office of Basic Sanitation. ²⁴⁹
Iles	Market place: It is located near in the urban center in carrera 6A, between streets 3 and 4; it is known as the Santander Market Square. Its first stage is built in an area of approximately 1,400 m ² - insufficient space given the great commercial dynamics experienced, a factor that ranks it as a regional market, where traders from the cities of Pasto, Ipiales, Túquerres and Tulcán (Ecuador) converge. Due to lack of space in infrastructure, the public space is invaded, especially on the market shopping day (Sunday), thus demanding the construction of its second stage. Animal slaughter plant: There is none in the Municipality; this is essential to ensure the hygienic conditions and quality of the meat that is sold in the municipal center.
Imués	Market place: Small infrastructure located in the center of the urban zone of Imués, since the commercial activity is limited to few users; this is why the community gets its supplies from the Municipalities of Guaitarilla, Tuquerrez, Pasto and Ipiales ²⁵⁰ . This market place is built in cement and brick, fully covered, has public toilets, laundries, spaces for the sale of fruits, meats, dairy, as well as other miscellaneous products ²⁵¹ . Animal slaughter plant: there is no animal slaughter plant or "slaughterhouse" in the Municipality ²⁵² .

5.3.3.2 Spatial component of minor territorial units.

Under the constitutional State framework, Colombia is designated as a social State of law; that is, all actions aimed at the socio-economic development of the country must be based on the protection of human dignity and compliance with fundamental rights. In this regard and in the specific case of the component, the provision of both public domiciliary and social services, contributes to the satisfaction of basic needs and implies an interrelation effect on the quality of human life.

The concept of social state of law has allowed to change how services are provided and accessed in both urban and rural territorial units; from 1875 to 1930, together with the 1886 constitution and the concepts of unitary, centralist and presidentialist republic, public and social services were the exclusive use of the upper social classes; although their quality was low, rudimentary and unhealthy, rural areas fully lacked those services, as the perception thereof was highly expensive and difficult to access; at that time, the role of the nation was null and the regulatory capacity of municipalities was weak in terms of tariffs and coverage, a situation entirely linked to the management of services by private companies associated with foreign capital.

From the decade of the 30s along with the acceleration in the economic dynamics, the manufacturing production and the urban construction process of the country, the improvement in the conditions of life of the communities became an urgent aspect to solve; this is how the State's responsibility for intervention and regulation of issues in direct economic participation and productive activity was delegated through the reform to the constitution in 1936, transforming the management and delivery of services, especially drinking water. Then, in 1945 to 1990 in the cities, especially the larger ones, decentralized institutes were created in order

²⁵² Flórez, L.C. 2016. Formulation of the Environmental Management Plan in the municipality of Imués - Department of Nariño. Thesis (Local environmental management specialization). Universidad Tecnológica de Pereira. San Juan de Pasto. 100 p. + annexes.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

to provide services; however, the model fell in the 80s, especially in the energy sector which ended with the so-called 1992 Blackout²⁵³.

Currently, and in compliance with the 1991 charter of the nation, the provision of public residential and social services becomes one pertaining to the access for the promotion of general prosperity aimed at protecting the individual rights of the population. Within the constitutional regulations, Article 365 sets out the enforceability and responsibility of the Colombian State to provide its citizens with public domiciliary services; "Public services are inherent in the social purpose of the State. It is the duty of the State to ensure its efficient provision to all inhabitants of the national territory"; likewise, article 367, provides that the law will establish the competencies and responsibilities related to the provision of domiciliary public services, their coverage, quality and financing and the rate regime that will take into account, in addition to the cost criteria, solidarity and income redistribution.

Thus, the enforceability of social services is established by a robust legal norm that provides that they are more than services, they are fundamental rights.

In compliance with the above, the Colombian State has the duty to ensure the efficient provision to all Colombian inhabitants, both public domiciliary and social services, as well as to ensure universal coverage and quality in the provision thereof. Law 142 of 1994, "Law on public services", provides to the state the provision of services, as well as to the departments and municipalities, as long as they have the capacity in terms of efficiency, quality and sustainability for the benefit of users.

At present, however, service delivery is concentrated in municipal centers and / or populated centers, replicating, as in previous years, the difficult access to rural areas, either because of the distance or high costs of their supply and maintenance, a fact that disregards on the idea where the quality and timely delivery, as well as the continuous improvement of residential or social public utilities strengthens the socioeconomic and environmental sectors of a nation. The importance of guaranteeing the provision of these services allows the promotion of communities with high literacy, physical and mental health, access to housing with security, peace and dignity, and the direct enjoyment of the right to play, to sports and recreation, as well as free access to the world of commerce, fragmentation of territorial borders with the use of IT and communications, access to healthy spaces and successful resistance to unexpected climate events.

As to the specific case of the environmental study, the territorial units of influence are not foreign to this situation; coverage in public and social services is poor or in most cases nonexistent, forcing the inhabitants to move to the surrounding towns and / or municipal center for the provision of services and satisfaction of basic needs.

Below is a detailed description of the quality, coverage and forms of supply or scope of each of the public domiciliary and social services in the territorial units of influence of the project, based on primary information collected in the field and the sources of secondary information obtained through the respective municipal offices.

²⁵³1992 energy crisis: It was a crisis experienced during the term of president César Gaviria, from May 2, 1992 to February 7, 1993, caused by the El Niño phenomenon. The climate phenomenon caused draughts in Colombia, affecting as well the levels of hydroelectric power generation dams and a general crisis of the public state utility company called Interconexión Eléctrica S.A. (ISA). Source: Semana Magazine, enquired on March 20, 2017.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

5.3.3.2.1 Public utilities.

Public services include aqueduct, excreta disposal, solid waste collection and disposal systems, energy and telecommunications services, as well as home gas service, liquid waste management and disposal (sewer).

For the purpose of the study, the existence of each public service in the territorial units of influence is considered, as long as they are provided by a public, mixed or private company.

- **Aqueduct.**

The aqueduct is a set of coupled systems constructed by man that allow to carry water in the form of continuous flow from a natural place where it is accessible, to a point of distant consumption.²⁵⁴

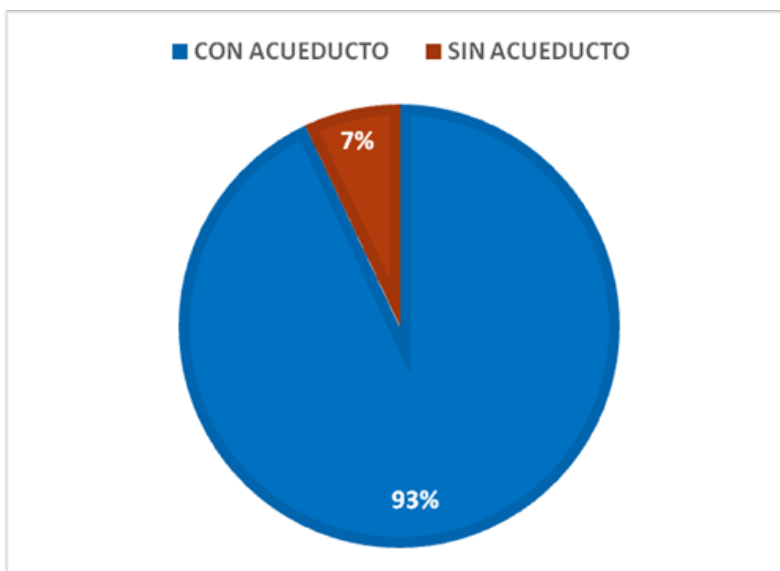

Table 5.40 describes the existence and coverage of the sewerage service in each of the territorial units of influence or their prevailing alternative form of water supply.

The community aqueducts are under the responsibility of committees conformed by J.A.C. or by management boards who are in charge of maintaining the system, charging for the service and for the payment of the plumber.

Ninety-three percent of the minor territorial units have community water mains, with coverage varying between 90 to 100%; in general, systems are classified as good with purification processes. The users do not pay for the consumption made, but they have established quotas that cover the values related to the infrastructure maintenance and the payment of a plumber among others. Only two rural districts: Manzano and La Providencia do not have community aqueduct, so they go to alternate sources located on farms such as springs and cisterns. Water from these sources does not receive any kind of treatment by the community, creating gastrointestinal diseases risk in the population, especially in children under 10 years and adults over 60 years.

Figure 5.10 Coverage of the aqueduct service in minor territorial units.

²⁵⁴ Popayán Aqueduct. On line: <http://www.acueductopopayan.com.co>. Enquired on March 22, 2017

Source: GEOCOL CONSULTORES S.A. Rural district specifications raised in the information gathering process. 2017.

Below are the general access characteristics that the communities identified as minor with respect to the water resource, showing the presence or absence of community aqueducts, coverages, quality of service, among others.

Table 5.40 Existence and coverage of the aqueduct service or existing forms of resource supply in the minor territorial units of influence of the project.

MAJOR TERRITORIAL UNIT	MINOR TERRITORIAL UNIT	SERVICE EXISTENCE	% SERVICE COVERAGE	SERVICE QUALITY	CHARACTERISTICS OF THE SYSTEM/ ALTERNATE FORMS OF SUPPLY
Contadero	Aldea de María	YES	100	INS	The service has a cost of \$ 25,000 per dwelling.
	El Capulí	YES	100	Average	In summer time they have no water. The cost is \$ 1,600,000 for the entire path every four years.
	El Culantro	YES	100	Good	The cost of the service is \$ 8,000 per year per household.
	El Juncal	YES	100	INS	They have purification. The streams nearby supply the rural district aqueduct.
	El Manzano	NO	N.A.	N.A.	As an alternative, the community takes water from the wells without a pump called jagüey (cistern) in 80% of the population. The water is yellow so the community boils it before consuming it.
	IP Ospina Pérez	YES	100	Good	For access, it is divided into 3 sectors, each of them gets the service for 3 days a week. It supplies itself from three streams, \$ 5,000 are charged per user each year for the payment of the plumber.
	Iscuazan	YES	100	Good	\$ 10,000 are charged annually for network maintenance. The water turns dark during the rainy season; but the studies show that it is suitable for human consumption.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

MAJOR TERRITORIAL UNIT	MINOR TERRITORIAL UNIT	SERVICE EXISTENCE	% SERVICE COVERAGE	SERVICE QUALITY	CHARACTERISTICS OF THE SYSTEM/ ALTERNATE FORMS OF SUPPLY
	La Providencia	NO	N.A.	N.A.	They take water from the tributaries located in the María Baja rural district. The water spring is affected during the dry and rainy seasons, which decreases the quality and frequency of water.
	Las Cuevas	YES	100	INS	Water is taken from the Chuzalongo stream. For system maintenance, \$ 5,000 pesos are charged per house, per year.
	Las Delicias	YES	100	Good	Service is permanent. They have purification. The rural district has two aqueducts one for the school sector and another on the upper part of the rural district; each aqueduct has its own management board and a \$ 20,000 pesos fee is charged per year for maintenance.
	San Andrés	YES	100	INS	The spring is located in the yoqui and iscuazar rural district and \$ 200,000 per year are charged.
	San Francisco	YES	100	Good	The aqueduct works through an association that manages the service of the two rural districts, named San Francisco and El Rosal. They have purification. During the dry season, the service is suspended in the evenings. The cost is \$ 20,000 per year.
	San José de Quisnamuez	YES	100	INS	Water is taken from the La Humeadora Creek and an average of \$ 2,000 per year is paid.
Iles	Alto del Rey	YES	80	Good	The water quality is not good, because it has no treatment.
	Capulí	YES	95	Good	The service is administered by the JAL. The rural district has: Four aqueduct systems, three of which are located in resorts and one in the housing area. Water is treated under the sanitary control of the public health and environmental sanitation entities. There is an intake, conduit networks, treatment plant, storage tanks. The cost is determined by the meter, but without a fixed rate.
	El Porvenir	YES	100	Good	The company in charge of the service is El Salado de Iles. They have purification. The service is provided 24 hours a day. There is an intake in Ospina, with treatment plant so the water is suitable for consumption.
	El Rosario	YES	100	Good	No aqueduct service is paid; it is provided every day, 24 hours. No treatment is performed. The infrastructure is not very good.
	La Esperanza	YES	50	Average	Water is not suitable for human consumption because it is not potable. The service is constant during the day. A \$ 10,000 is paid per year. The water is stored in a tank and distributed by hose. The remaining families take water from the existing springs on each farm.
	Loma Alta	YES	100	Poor	The service is provided only two hours a day. A \$ 10,000 fee is paid per year. Not potable.
	Tablón Alto	YES	100	Good	There is a concession in place. \$ 600,000 are paid every 5 years. A pipe is used to bring it to the distribution tank.

MAJOR TERRITORIAL UNIT	MINOR TERRITORIAL UNIT	SERVICE EXISTENCE	% SERVICE COVERAGE	SERVICE QUALITY	CHARACTERISTICS OF THE SYSTEM/ ALTERNATE FORMS OF SUPPLY
	Tablón Bajo	YES	100	Good	The service is provided 24 hours a day. The spring is located in the Maco property. They have storage tanks which are maintained every month.
	Tamburán	YES	100	Good	The service is provided on a permanent basis and has purification processes.
	Urban	YES	100	INS	At times the structure suffers damages which affect the service; the community pays a 140,000 pesos per rural district a year to Corponariño.
	Yarqui	YES	100	Average	The aqueduct condition is fair. Service is provided for 8 hours a day.
Imués	Pilcuán La Recta	YES	90	Good	There is an administration board in charge of the operation of the aqueduct. They have purification. The service is provided 24 hours a day. The aqueduct is supplied from Ospina with a pipeline network.
	Pilcuán Viejo	YES	100	Good	An association is in charge of the service administration. They have purification. The service is provided 3 hours in the morning and 4 hours in the afternoon; during the rainy season, service is provided all day. There is a treatment plant, a PVC pipe is used to bring it from Iles and Imués del salado and silamag (springs). There are 185 users.
	Silamag	YES	100	Good	Rationing takes place during the dry season. A \$ 10,000 pesos fee is paid for the service. The aqueduct was built by the inhabitants themselves.

Source: GEOCOL CONSULTORES S.A. Rural district specifications raised in the information gathering process. 2017. 2017.

• **Waste water disposal.**

Residual or wastewater is the collection of liquid waste generated by domestic, industrial or economic activities; in the case of housing, wastewater comprises two categories: grey water, from domestic use, such as that used to wash clothes, utensils and people's bathing; these types of water can be reused; sewage waters are those liquid wastes contaminated with fecal matter and urine; this type of waste needs a pipeline, treatment and eviccion system known as sewer. Currently, only 15% of the territorial units have sewage, this situation can trigger a scenario of contamination of water for human consumption, as liquid waste without pipeline leaks into the soil, contaminating underground aquifers; likewise, the population gets exposed in their health, as they may get contagious with different diseases that can derive from the lack of basic sanitation.

Seventy-six percent of the territorial units have a septic system to properly manage the wastewater produced by the different homes, but they tend to get filled, or fail to fulfil their function when they are not maintained in a timely manner. Due to the lack of an adequate system to dispose of domestic wastewater, or sewerage or a network to a treatment system, only localized treatments are observed through the installation of septic tanks and their corresponding conduit pipes from the sanitary batteries, which are mostly non-compliant with technical designs that allow an adequate removal of the load constantly. The tributaries are discharged into the open field to be infiltrated to the soil.

Figure 5.11 Wastewater management in minor territorial units.

Source: GEOCOL CONSULTORES S.A. Rural district specifications raised in the information gathering process. 2017. 2017.

Likewise, 9% of the population discharges directly to the open air, which implies a high degree of contamination of land and water sources. Only 15% of the territorial units have a sewerage system. It is important to mention that this coverage is low, although it reflects the characteristics of the rural areas of the country, where the housing distribution does not facilitate access to different public utilities.

The management that the minor communities make of their wastewater, evidencing the presence or absence of systems such as sewerage, their coverage and general characteristics, is presented below.

Table 5.41 Forms of wastewater management in minor territorial units of influence of the project.

MAJOR TERRITORIAL UNIT	MINOR TERRITORIAL UNIT	SYSTEM CHARACTERISTICS	SERVICE COVERAGE
Contadero	Aldea de María	There is a sewerage structure, but at present it does not work.	100% Septic Tank
	El Capulí	Individual management by means of septic wells.	100% Septic Tank
	El Culantro	Individual management by means of septic wells.	50% Septic Tank
	El Juncal	There is a sewer system. The quality of the service is regular due to damages noticed in the pipe.	100% Sewage.
	El Manzano	They manage their waste waters manually, ending in the ground.	60% Septic Tank
	IP Ospina Pérez	Individual management by means of septic wells.	50% Septic Tank
	Iscuazan	Individual management by means of septic wells.	95% Septic Tank 5% Open Sky
	La Providencia	The community has requested the service, but it is not progressing, as this is a high risk zone.	100% Septic Tank

	Las Cuevas	Individual management by means of septic wells.	50% Septic Tank 50% Toilet without septic tank.
	Las Delicias	They have no sewage, there are individual management pipes that lead to the open environment.	50% Septic Tank
	San Andrés	Individual management by means of septic wells.	100% Septic Tank
	San Francisco	Residual and rain waters are used in draughts and in roads. Sewage water is sent to septic wells.	5% Septic Tank
	San José de Quisnamuez	The final disposal is made to the open field.	3% Septic Tank
Iles	Alto del Rey	Individual management by means of septic wells.	100% Septic Tank
	Capulí	Managed individually through septic tanks and 2 filtration wells at the end of the system.	25% Sewage. 40% Septic Tank
	El Porvenir	There is a sewer system.	30% Sewage. 70% Septic Tank
	El Rosario	The community does not have any system for the management of its residual waters.	100% Open Environment
	La Esperanza	Individual management by means of septic wells.	50% Septic Well 50% Toilet without septic tank.
	Loma Alta	Individual management by means of septic wells.	100% Septic Well
	Tablón Alto	Individual management by means of septic wells.	100% Septic Well
	Tablón Bajo	Individual management by means of septic wells.	95% Septic Well
	Tamburán	Individual management by means of septic wells. Poured in a place close to the houses.	100% Septic Well
	Urban	Individual management by means of septic wells.	100% Septic Well
Yarqui	Individual management by means of septic wells.	100% Septic Well	
Imués	Pilcuán La Recta	There is a sewerage managed by the board of aqueduct and sewage. The quality of the service is regular because its structure collapsed.	95% Sewage. 5% Septic Well
	Pilcuán Viejo	There is a sewer system. The service quality is good. The final management is done through a rural district tank.	50% Sewage. 50% Septic Well
	Silamag	Individual management by means of septic wells.	100% Septic Well

Source: GEOCOL CONSULTORES S.A. Rural district specifications raised in the information gathering process. 2017. 2017.

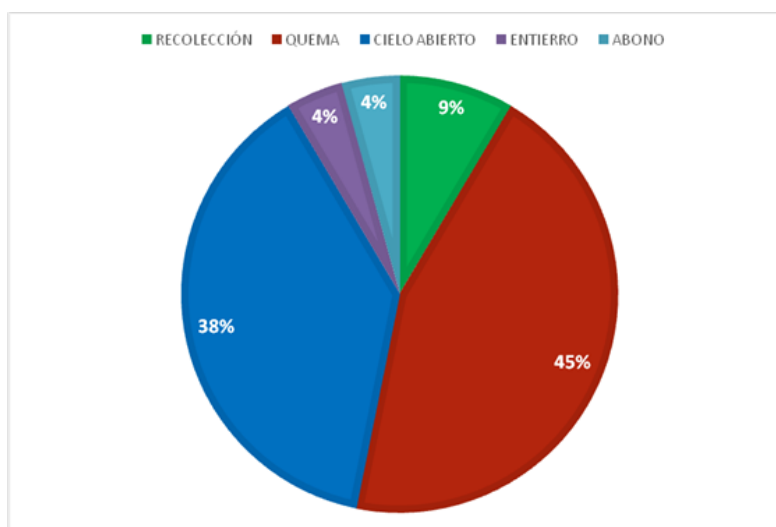

• Solid waste collection systems.

Solid waste is the set of material wastes produced by different human activities; its sources of generation include homes, markets, industries, educational centers, hospitals, restaurants, among others. Solid wastes are susceptible to utilization and transformation (or not) for another purpose or direct use. This type of material waste is divided for its adequate collection and disposal in organic and inorganic; on the other part, the organic ones are those that decompose rapidly, such as fruit peels, food scraps, herbs, leaves, paper, cardboard, among others, and inorganic residues have to do with those wastes where their decomposition requires very long cycles of degradation; these include plastics, crockery, glass, cans, among others.

In Colombia, the material collection and disposal system was addressed from the sanitary need, where the community placed the waste in the public road so that they could be picked up by someone without prior planning for the final disposal thereof; the waste was not separated from each other, disregarding the opportunity to reduce pollution and increase the economic income through the commercialization of reusable and recyclable wastes, as well as the reduction of volume in the disposal sites.

With 45%, burning is the most commonly used practice for the management of solid waste generated, which leads to major pollution problems. Open environment disposal and burial are other common practices among inhabitants, with 38% and 4% respectively. Recently, municipal administrations carried out campaigns to collect elements such as plastic and fumigation containers to reduce the burning percentage. Only four territorial units: Capulí, Tablón bajo, Palcuan La Recta and Palcuan Viejo, benefit from waste collection services, which represents a coverage of 4% of the total minor territorial units.

Figure 5.12 Solid waste management in minor territorial units.

Source: GEOCOL CONSULTORES S.A. Rural district specifications raised in the information gathering process. 2017. 2017.

As to solid waste management, the general population does not have a collection service; therefore the system they use is handmade; The organic wastes are mixed with soil for planting, spreading them into the soil as fertilizer or used in to feed pigs and chicken. Residues such as glass, cans and others that cannot be burned or added to the soil, are deposited in holes for burial. Therefore, the quality of waste management is poor, because they do not have enough information or training on the matter; as reflected in the information gathering results. Below are the general characteristics of the management given by the communities to their solid waste, identifying practices such as burning, burial and others.

Table 5.42. Management system of organic and inorganic solid waste in the minor territorial units under the influence of the project.

MAJOR TERRITORIAL UNIT	MINOR TERRITORIAL UNIT	SYSTEM CHARACTERISTICS	SERVICE COVERAGE
Contadero	Aldea de María	The waste management takes place in the open air. Burning is also practiced.	Open air: 50% Burning: 50%
	El Capulí	The waste management takes place in the open air. Burning is also practiced.	Open air: 50% Burning: 50%
	El Culantro	The waste management takes place in the open air. Burning is also practiced.	Open air: 50% Burning: 50%

- **Energy service.**

The electricity service is a system that allows the transmission, distribution and commercialization of electric energy to a whole population; having the service in safe conditions, with great capacity of coverage and on a permanent basis, allows the economic, human and environmental development of a region; energy can contribute to the natural transformation of raw material products and their derivatives, and can promote free access to a better quality of life with the consumption of drinking water, use of telecommunications, increased levels of health and prevention of diseases, access to education and preservation of nature with the use of renewable energies.

The electricity service has the greatest coverage in the minor territorial units, attaining 100%. The company in charge of guaranteeing the provision of the service is Centrales Eléctricas de Nariño S.A. ESP-Cedemar-. In general, the service is considered good because it is provided on a permanent basis. The value of the service ranges from \$ 10,000 to \$ 400,000 depending on consumption.

Below are the general characteristics of access to the electricity service by the minor territorial units, highlighting aspects such as coverage and value of the service.

Table 5.43 Electric resource available the minor territorial units of influence of the project.

- **Food Cooking.**

The implementation of the natural gas resource in the country has allowed the generation of environmental benefits; its use for domestic purposes accounts for only a fifth of the value of hydropower, produces less waste compared to fuels such as ACPM, fuel oil, gasoline, fuelwood and coal; is considered as a clean resource, where its emissions are lower than those of other fossil fuels of the country; the Colombian Association of Natural Gas, year after year, seeks to improve the access and coverage of the resource to all the population of the national territory; however, in some rural areas of the country, the provision of the service is still non-existent.

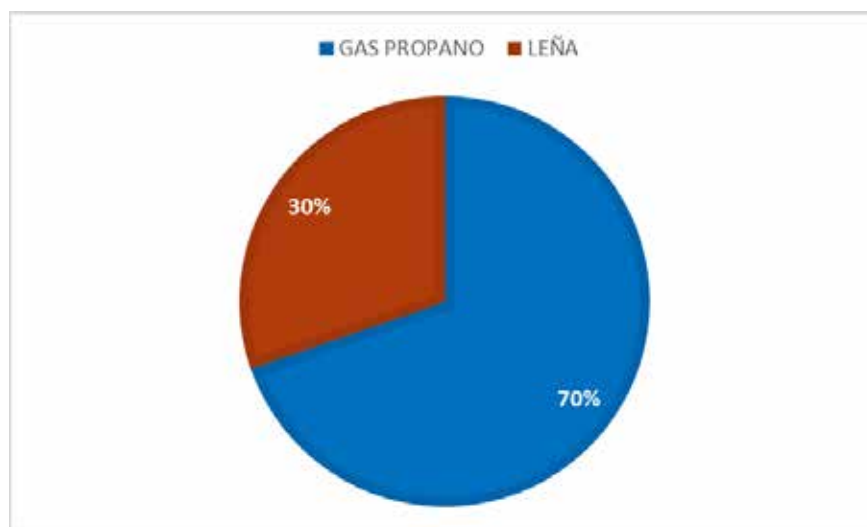

For its part, the minor territorial units of influence of the study do not have residential gas service; their different forms to supply the resource include the purchase of propane gas or the use of firewood; facts that affect the economy of the inhabitants and intensifies environmental pollution with the unlimited use and exploitation of wood.

The population is supplied with cylinder gas or propane through the company in charge of distribution, Montagas and Supergas, which have local supply points in each of the territorial units to attend the community demands in a timely manner.

The smaller territorial units do not have the natural gas service, usually families cook their food with firewood and propane, the latter seems expensive, contrary to what happens with firewood that is a resource easy to get and not Generates expenses, but the smoke emitted by these practices makes people prone to diseases such as: Acute Respiratory Infection (IRA) and Arthritis, simultaneously contributing to environmental pollution and the accelerated process of tree felling.

70% of the population cooks with propane gas, in contrast with 30% that does with firewood; however in practice, the two sources are alternated to decrease the frequency in the purchase de to the high cost thereof. The cost of the 30-pound cylinder is \$ 45,000, however a subsidy is currently applied by the municipal administration, providing the service to the population at 50%.

Figure 5.13 Elements used for the cooking of Food in minor territorial units.

Source: GEOCOL CONSULTORES S.A. Rural district specifications raised in the information gathering process. 2017.

Below are the practices that the community implements when cooking of food, taking into account that there is no access to household gas; therefore, propane gas and firewood are used.

• Telecommunications.

Telecommunications is the form of transmission and receipt of signals, which allows for the exchange of messages in a long distance; in Colombia, telecommunications are regulated by the Communications Regulatory Commission (CRC), fulfilling the mission of promoting competition, investment, protection of users' rights in accordance with state guidelines, guaranteeing the effective provision of Telecommunication services and the development of the sector within the framework of convergence and the information society".²⁵⁵

The presence of this form of communication within the territorial units under the influence of the project, allows establishing proximity with other territorial units of interest, whether economic, cultural, environmental or any other; however, poor coverage related to the provision of the mobile telephone service has led certain inhabitants to be totally closed off with their external environment, forcing them to travel several kilometers of their property to access the service. Only in the Iscuzan rural district, the provision of the fixed telephone service was identified with a beneficiary family identified.

²⁵⁵ National Spectrum Agency. On-line: <http://www.ane.gov.co/index.php/conozca-la-ane/entidades-relacionadas/comision-de-regulacion-de-comunicaciones.html>. Enquired on March 22, 2017.

There are cellular telephones with different companies that have coverage in the region. Internet access is also available in 9 territorial units, especially in educational centers.

The following are the characteristics that the communities have with respect to mobile telephony and internet access.

Table 5.45 Companies operating the mobile telephone service with greater presence in the minor territorial units under the influence of the project.

5.3.3.2.2 Social services.

The social services to be described in the following section correspond to education, health, recreation and sports, housing, transport and media, identifying the infrastructure, coverage and quality corresponding to each; it will also describe information related to core centers of influence for the commercialization and access to social services demanded by territorial units of influence.

- **Education.**

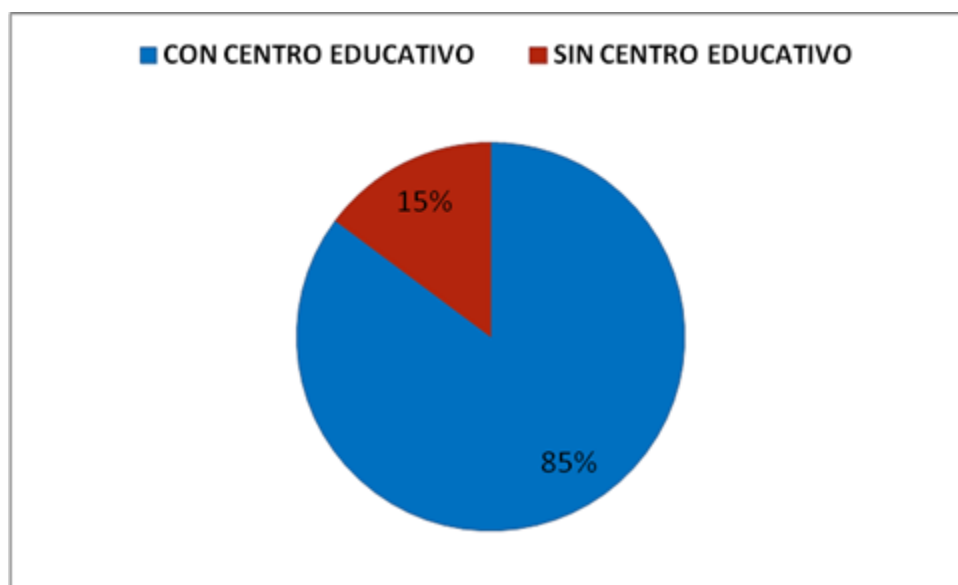

Education in Colombia is more than a service, it is a compulsory right exercised by the State in the entire national territory; within the Colombian political constitution of 1991, specifically in the chapter of social, economic and cultural rights, article 67 provides that the education is "a right of the individual and a public service with a social function; it seeks access to knowledge, science, technology, and other benefits and values of culture"²⁵⁶.

It is fully conceived that education is one of the main tools for the progress and advancement of a nation, especially in the pursuit of respect, the exercise of human and environmental rights, as well as in the peace-building, inclusion and equity processes. In the rural districts of influence of the project, education is one of the social services that must be acquired outside of their area, either by the absence of teachers and / or students or by the lack of adequate infrastructure for the exercise thereof.

Educational coverage in the minor communities is 85%. Only 4 territorial units do not have schools, and they are El Manzano, El Capulí, Las Cuevas and La Esperanza, in which case the school-aged children need to travel to nearby schools. All of the schools have a school restaurant.

Figure 5.14 Presence of educational centers in minor territorial units.

²⁵⁶ Colombian Political Constitution. On-line: <http://www.constitucioncolombia.com/titulo-2/capitulo-2/articulo-67>. Enquired on March 25, 2017.

Source: GEOCOL CONSULTORES S.A. Rural district specifications raised in the information gathering process. 2017.

The general characteristics of education in each of the territorial units identified as minor are shown below, evidencing the presence of the educational center, the specific conditions thereof and the educational coverage.

Table 5.46 Characteristics of the education in the minor territorial units of influence of the project.

Source: GEOCOL CONSULTORES S.A. Rural district specifications raised in the information gathering process. 2017.

As can be seen below, the school population with access to schools amounts to 493 students, of whom 110 are concentrated in the Las Delicias de Contadero rural district, followed by Alto de Rey and Pilcuán Viejo with 50 each. The rural district with the fewest students is Tablón Alto with 5.

Figure 5.15 Total population in minor territorial units.

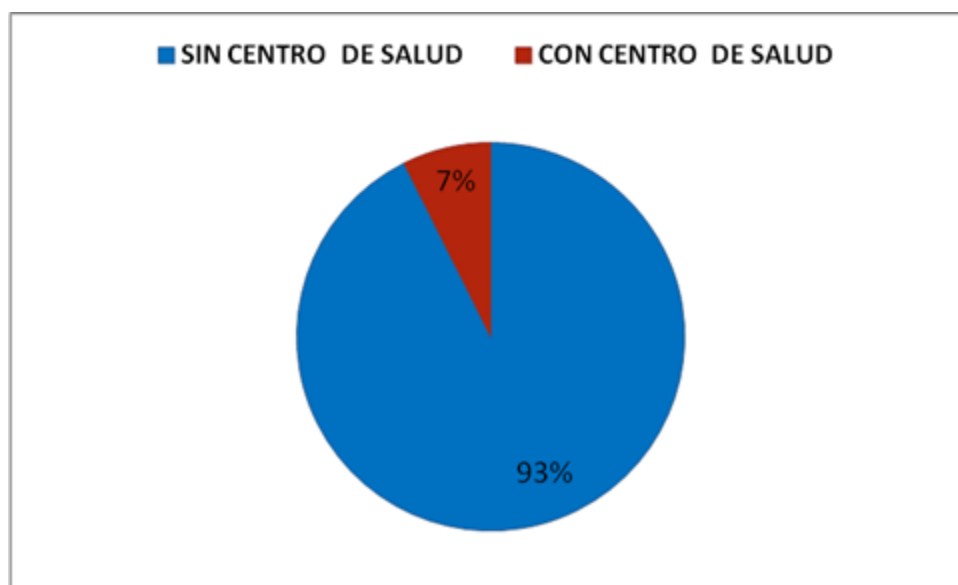

Source: GEOCOL CONSULTORES S.A. Rural district specifications raised in the information gathering process. 2017.

• **Health.**

The health service, just like education, has a fundamental right connotation, and includes timely, acceptable, affordable and satisfactory quality sanitary attention. The State, as a guarantor of the rights and duties of citizens, is responsible for providing conditions that allow all people to live as healthy as possible, ie, the health service should not be limited to the provision thereof under conditions of illness, but to jointly foster projects and programs to promote and prevent the physical and mental health of the population; the Colombian Political Constitution, in its Heading II regarding rights, guarantees and duties, specifically in articles 48, 49 and 50, guarantees the provision of social security as an exercise of mandatory compliance subject to the principles of efficiency, universality and solidarity, with the terms established by the Law.

Populations residing in rural territorial units are the most exposed to high rates of disease and affection to integral health, since their minimum living conditions and high precariousness of resources used for human consumption exacerbate said situation, leading to an efficient coverage and provision of the service to these populations. In the particular case of the minor territorial units of influence, only two territorial units (I.P Ospina Pérez and Pilcuán Viejo) have a healthcare Centre. The people from the remaining areas must travel to the closest healthcare centers, or turn to traditional practices to deal with any discomfort or illness. For personalized attention, they need to go to the municipality of Pasto, located at an average distance of 2 hours.

Figure 5.16 Presence of health centers in minor territorial units.

Source: GEOCOL CONSULTORES S.A. Rural district specifications raised in the information gathering process. 2017.

It is important to point out that for the specific case of Ospina Pérez, attention is not permanent and in the Pilcuán Viejo rural district, attention is from Monday to Thursday from 8-12 and 1-4 pm. The services they provide are general medicine in external consultation, dentistry, prevention and promotion, early childhood care with programs such as vaccination and control of a healthy child.

The main diseases of the inhabitants are related to flu and respiratory illnesses, taking into account distances of the municipal centers, limitations on transportation, cost and road conditions; traditional practices are still in place, where self-medication and the use of medicinal plants prevails, especially for minor ailments that require no specialized attention.

• **Recreational and sports infrastructure.**

Recreation and sports are exercises conveying respect and promotion by the Colombian State, especially aimed at children and adolescents; as a right, it must be offered to all the inhabitants of the national territory, stimulating and promoting, through artistic spaces and recreation, the inclusion, physical, intellectual and affective strengthening of the population benefiting from such a right; recreation and sports represent an effective means to approach the most vulnerable population, victim of violence and displacement among other factors, that aggravate depression, exclusion and abandonment, in order to restore their physical and mental balance, reincorporating them in the Social environment as people capable of self-realization and to support the country's social development.

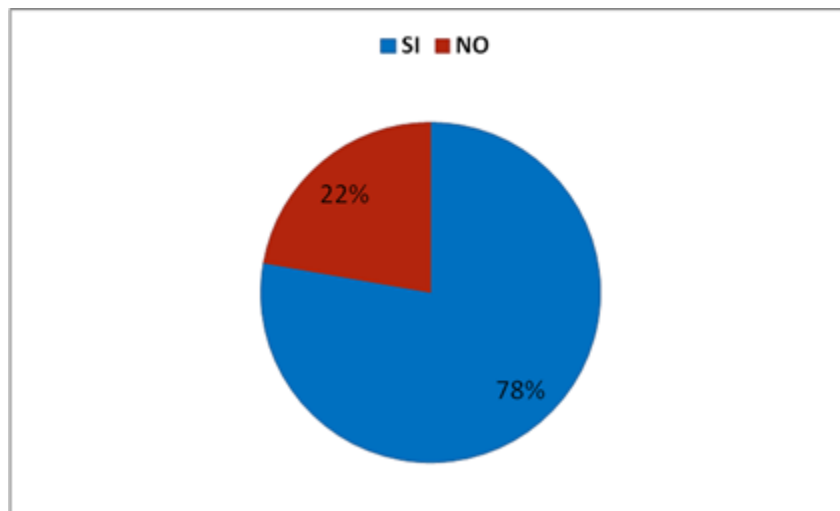

According to UNICEF's publication, "sports, recreation and games strengthen the body and prevent diseases, prepare children from an early age for their future learning, reduce the symptoms of stress and depression; and they also improve self-esteem, prevent smoking and illicit drug use and reduce crime."²⁵⁷

The coverage with respect to sports scenarios amounts to 78%, located mostly in schools; they follow traditional practices of typical sports such as Chaza and others such as Micro-football, football and Volleyball.

²⁵⁷United Nations Fund for Childhood. UNICEF. On-line: http://www.unicef.org/republicadominicana/politics_11167.htm. Enquired on March 25, 2017.

At present, these scenarios report deterioration, which has caused the communities to go to nearby rural districts that offer better sports facilities.

Figure 5.17 Recreational spaces in minor territorial units.

Source: GEOCOL CONSULTORES S.A. Rural district specifications raised in the information gathering process. 2017.

In the municipal centers, there are scenarios for the practice of various sport disciplines such as football, micro-football, basketball and volleyball; but the main problem faced by these spaces is the lack of maintenance of their structure. In addition, the rural area has several sports scenarios generally close to the schools in the rural districts.

The following are general characteristics of the sports venues present in minor territorial units:

Table 5.48 Recreational or sports areas in minor territorial units of influence of the project.

MAJOR TERRITORIAL UNIT	TERRITORIAL UNIT	CHARACTERISTICS			
		RECREATION SPACES	DESCRIPTION	STATUS	SPORTS ACTIVITIES

· Housing.

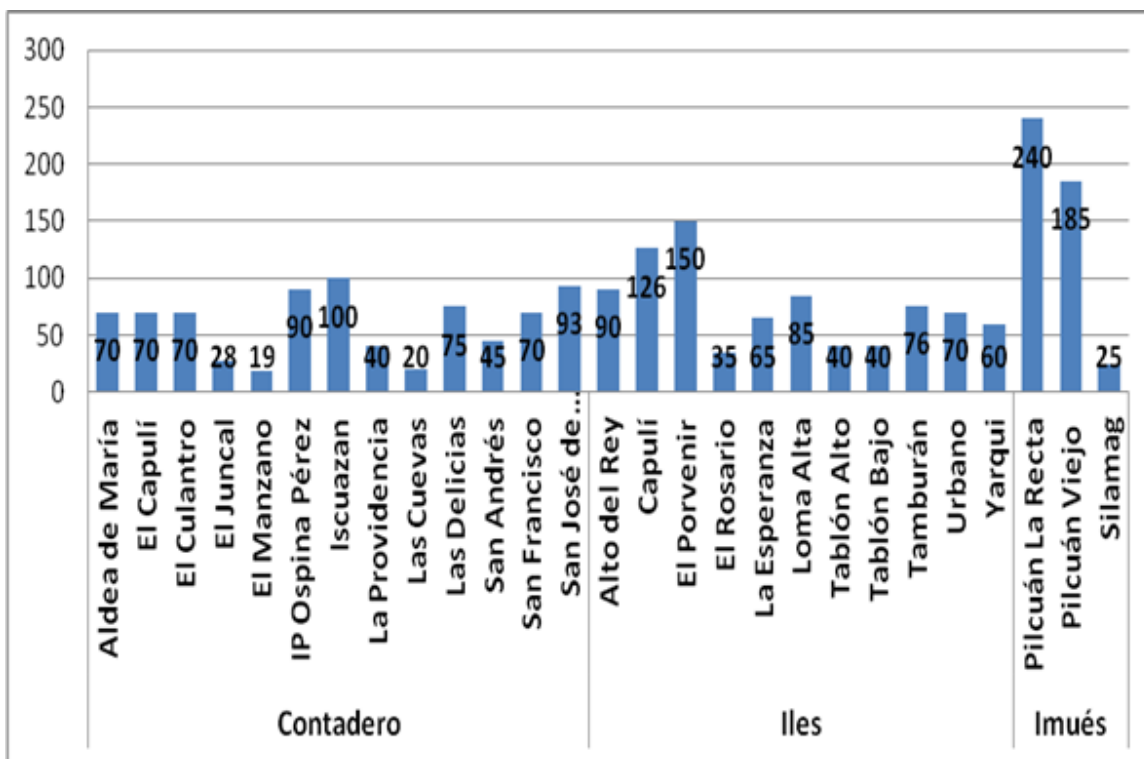

The concept of housing involves the existence of a building for purposes of shelter and protection against climate events mainly; in the broadest sense, housing is conceived as a right with the quality of dignity, where every individual not only has access to a dwelling, but it must also fulfill the conditions of dignity, that is, to provide protection, peace and security.

In the political constitution of 1991, it is the duty of the Colombian State to provide conditions necessary to enforce the right to decent housing for all inhabitants of the national territory. "All Colombians are entitled to decent housing. The State shall establish the necessary conditions to give effect to this right and promote social housing schemes, adequate long-term financing systems and associative forms of implementation of these housing programs."²⁵⁸

In the total of territorial units identified there are 2,077 housing units. To give context to the information in the table below that describes the characteristics of housing, it can be said that the rural district lacks qualitative housing, as the characteristics thereof do not meet the minimum conditions to ensure the welfare of the resident family; it is more noticeable in the dispersed rural area, where the family income is low, the distances of the houses and the conditions of accessibility do not allow to improve the structures thereof.

As can be seen, the greater number of houses is concentrated in Pilcuán La Recta, with 240 houses, followed by Pilcuán Viejo with 185. The Manzano urban district is the one with the lowest number of houses- 19, followed by Las Cuevas with 20.

Figure 5.18 Number of houses in minor territorial units.

²⁵⁸ Attorney General's Office. On-line: http://www.procuraduria.gov.co/guiamp/media/file/Macroproceso%20Disciplinario/Constitucion_Politica_de_Colombia.htm. Enquired on MARCH 27, 2017.

As for materials used in the construction of houses in the area, the use of traditional elements is observed; although with the improvement of access to urban centers, other materials have been introduced such as block, brick and zinc tiles. As shown in **Table 5.49**, it is the mud wall the main element used in the construction of the housing structure. This is precisely because of the ease of access to this resource within the same rural district. It is important to remember that most territorial units do not have transportation and the condition of the roads is poor, so the costs for the mobilization of material from the municipal center are very high.

The following describes the characteristics of the houses present in minor territorial units, describing how many are there and the predominant materials in both floors, ceilings and walls.

Table 5.49 Characteristics of housing in the minor territorial units of influence of the project.

• **Road and transport infrastructure.**

The territorial units have tertiary roads or routes within the rural districts with particular characteristics at different times of the year, ie during the dry season, the roads can be used, although they affect the health of the population (respiratory problems) using them due to the lifting of particulate material by the passage of the vehicles. On the other hand, in the rainy season, access is difficult, due to the deterioration of the road system, productively affecting the population that sells products sown in the region.

Table 5.50 Characteristics of the road infrastructure in the minor territorial units of influence of the project.

The characteristics of transport in each of the territorial units are shown below; however, it is worth mentioning that although 100% do not have a public transport service, they do have alternatives that allow them to move between rural districts and between municipal centers, where they exchange most of their goods and services.

Table 5.51 Characteristics of the transport system in the minor territorial units of influence of the project.

MAJOR TERRITORIAL UNIT	MINOR TERRITORIAL UNIT	CHARACTERISTICS
Contadero	Aldea de María	Land transportation with 100% coverage. Transandoma - provision company. The transport ticket costs \$ 6,000 to the municipality of Ipiales.
	El Capulí	The community is mobilized mainly through the existing land routes in animals, motorcycles or vehicles.
	El Culantro	There is no public transport, the population must be transferred to the municipality of contadero.
	El Juncal	Land transportation with 100% coverage. Intermunicipal Mototaxi - provision company.
	El Manzano	Land transportation with 50% coverage. Contrascacon - provision company.
	IP Ospina Pérez	Land transportation with 100% coverage. Private vans provide service to the community for the market day on Sunday.
	Iscuzan	Land transportation with 100% coverage.
	La Providencia	Land transportation with 50% coverage. Contrascacon - provision company.
	Las Cuevas	The most commonly used means of transport corresponds to the private one represented in the motorcycles of the inhabitants. To go to Contadero, you pay 3,000, otherwise you pay 25,000, on Sundays there are pick-up trucks, and taxis are used on weekdays.
	Las Delicias	Land transportation with 100% coverage. Contrascacon - provision company.
	San Andrés	The rural district has no public transport; the travels by motorcycle or private car. The transport cost is \$ 6,000 from the municipal center.
	San Francisco	Land transportation with 70% coverage. Empresa Asomotos
	San José de Quisnamuez	The movement from the rural district to the urban center of Iles is 7,000 by motorcycle and 2,000 by car.
Iles	Alto del Rey	Ground transport is commonly used. The trips are made in mototaxi at \$ 5,000 pesos from the rural district to the municipal center.
	Capulí	Land transportation with 100% coverage. Transport companies: SUPERTAXI, COOTRAMAR, SAN JUAN DE PASTO, RUTAS DEL SUR, COTRAZONAS, BOLIVARIANO AND TRASANDOMA
	El Porvenir	Land transportation with 100% coverage. The moto-taxis modality is common.
	El Rosario	The main means of transportation used by the community is the motorcycle.
	La Esperanza	They have transport companies for population movement, such as Cotrandi and Supertaxis.
	Loma Alta	The main means of transportation used by the community is the motorcycle.
	Tablón Alto	INS
	Tablón Bajo	The main means of transport is ground transportation, which operates all day through the main route between Iles and Pasto.
Tamburán	Land transportation with 100% coverage. They are transported in private vehicles and motorcycles, when it is not possible, they walk.	

MAJOR TERRITORIAL UNIT	MINOR TERRITORIAL UNIT	CHARACTERISTICS
	Urban	Land transportation with 100% coverage. The community is transported on private vehicles and motorbikes.
	Yarqui	The community uses horses, motorcycles and walk to the different places.
Imués	Pilcuán La Recta	Land transportation with 100% coverage. Transport companies: Cotranar, transipiales, supertaxi, expreso San Juan, frontera, among others.
	Pilcuán Viejo	Land transportation with 100% coverage. Transport companies such as: TRANSIPIALES, SNADONÁ, RUTAS DEL SOL.
	Silamag	Land transportation with 100% coverage. Service provision companies: Cootrana-Transipiales

- **Core influence center for trading and access to social services.**

The core centers for the commercialization and access to social services, which are more recurrent by the minor territorial units of interest correspond to the municipal centers identified as major territorial units: Ipiales, Contadero, Iles and Imués.

The displacements made by the inhabitants to the different core centers are focused on the acquisition of inputs for agricultural production, as well as for the sale of animals and access to services such as health and education; in addition to these core centers, the rural districts and the influence sector also establish commercial relations with other nearby villages, especially for the sale of agricultural products.

- **Communication means.**

Communication is one of the most recurrent exercises within populations to build community; people are constantly conveying messages of interest to each other in order to be informed, to carry out an activity, to open spaces for debate and feedback or simply to maintain a communion; likewise, the media are essential in the development of a society, establishing a direct channel with the social, political, economic, cultural and environmental dynamics of its local or external environment, whether municipal, regional, national or international.

At present, a community with issues in the provision of communication services or low acquisition capacity with respect thereto is relegated to the exclusion and, therefore, to the social, economic and technological development processes that are being developed at the moment.

The most commonly means used by the inhabitants is the voice to voice, and they also use posters glued in stores or in the edge of the road. The school is used as a means of communication for the messages that are sent by the teacher in the children's notebooks to the parents.

Table 5.52 Means of communication in minor territorial units under the influence of the project.

MAJOR TERRITORIAL UNIT	MINOR TERRITORIAL UNIT	COMMUNICATION MEANS
Contadero	Aldea de María	The main communication medium is radio with 100%.
	El Capulí	100% of the population listen to radio, receive the signal from the indigenous station of Contadero and the municipality of Iles.

MAJOR TERRITORIAL UNIT	MINOR TERRITORIAL UNIT	COMMUNICATION MEANS
	El Culantro	The signal of the stations of the closest municipalities and of Ecuador is received.
	El Juncal	Cell phone is main communication medium.
	El Manzano	The main communication medium is radio with 100%.
	IP Ospina Pérez	The stations of Iles and Pasto are heard by the community.
	Iscuazan	The main communication medium is radio with 100%.
	La Providencia	They do not have an antenna to get the TV signal.
	Las Cuevas	The stations of Iles and Coroloba are heard by the community.
	Las Delicias	The most commonly used media are radio and television.
	San Andrés	The main means of communication is the Primavera Estéreo station. The Colombian television signals are not received, only the Ecuadorian.
	San Francisco	Radio: radio stations from Ipiales, rumba estéreo, radio viva, and radio estéreo Ipiales.
	San José de Quisnamuez	In the upper part, the luz estéreo, primavera and policia nacional stations are heard.
Iles	Alto del Rey	The main means of communication is the radio with 100% with stations such as Guarani Estéreo and Primavera Estereo. As to TV channels, they watch caracol, RCN, canal 1 and institucional.
	Capulí	The pasto stations like Caracol, Rcn and Colmundo are heard.
	El Porvenir	The main communication medium is radio with 100%. The Imués stations are heard.
	El Rosario	The main communication medium is radio with 100%, with stations such as the national police, RCN and caracol.
	La Esperanza	The main communication medium is radio with 100%. Luz Estéreo is the most commonly heard station. RCN and CARACOL are the most commonly watched on tv.
	Loma Alta	The main communication medium is radio with 100%.
	Tablón Alto	INS
	Tablón Bajo	The main communication medium is radio with 70%.
	Tamburán	The main communication medium is radio with 100%.
	Urban	The main communication medium is radio with 100%. Iles stations and other municipalities.
	Yarqui	The main communication medium is radio with 100%.
Imués	Pilcuán La Recta	The main communication medium is radio with 100%.
	Pilcuán Viejo	INS
	Silamag	The main communication medium is radio with 100%.

5.3.4 Economic Component.

The analysis of the local economic dynamics of the area of influence of the project, which is delimited by the major territorial units (Ipiales, Contadero, Iles and Imues) and the minor territorial units, is presented below. This component is developed in order to specify what is required in the terms of reference, addressing the structure of the property, forms of land tenure, productive and technological processes of the different sectors of the economy.

The information contained in the document is presented at the municipal and rural district level, with reference to the Municipal Development Plans of the territorial units of the area of influence and other documents related to the matter; likewise, the information provided by the communities of minor territorial units through the instruments applied (rural district specifications, cartography).

5.3.4.1 Major Territorial Units.

When reference is made to the economy of a territory, reference is being made to a multi-dimensional framework where social, territorial, cultural, institutional, environmental and social aspects that represent the basis of local economic development converge.

The department of Nariño reports high levels of poverty, which places it as the third department in Colombia with higher UBN after Choco and Sucre. The department's economy is based on smallholding agriculture, with limited access to technology and capital. The productive structure of the municipalities of Ipiales, El Contadero, Iles and Imues, is based on the primary sector, agricultural subsector, which is characterized by small-scale production, with the use of family labor and low technology.

According to the Departmental Competitiveness Index (IDC) 2016, the department of Nariño ascends four places to place 17, compared to the previous year, with a score of 4.15. **Table 5.53** shows the final score of the IDC and the factors used in the index of the department of Nariño, and specifies some economic indicators.

Table 5.53 Departmental Competitiveness Index (IDC) 2016.

Department	IDC 2016		FACTORS					
			Basic conditions		Efficiency		Sophistication and innovation	
	Score (0-10)	Position (among 26)	Score (0-10)	Position (among 26)	Score (0-10)	Position (among 26)	Score (0-10)	Position (among 26)
Nariño	4,15	17	4,25	20	3,31	18	2,75	15
INDICATORS								
GDP 2014p (billion pesos)					11.675

- **Property structure.**

In Colombia, the official sources of statistics for the analysis of the distribution of the structure of rural property have been processed through entities like the Agustin Codazzi Geographic Institute and National Cadastre. In this sense, there are sectoral statistics, whose information is included in the agricultural samples, agricultural censuses, the large integrated household survey, among others.

It should be noted that the cadastral statistics were the basis for the studies and design of the agricultural census methodologies. Today, various methods are used to characterize the structure of the property, such as those defined by the Colombian Institute of Rural Development -Incoder that takes the Agricultural Family Units UAF's as units of measure.

The Family Agricultural Units (UAF) are institutionally defined in Law 60 of 1994 and in Resolution 041 of 1996 of the Colombian Institute of Agrarian Reform -Incora-, which defines the sizes of the UAFs, according to the characterization of the areas and land use in activities such as agriculture, livestock, fishing, among others.

The structure of land ownership, as an essential part of the agrarian structure, largely defines rural landscapes; especially through the size and shape of the plots and their limits or fencing. Depending on the size of the property, you can define the large property (large holdings) and the small property (small holdings). Large property can be transformed and evolved to small property, if the inheritance system favors partition, or if its sale or assignment is made to the peasants working on it. Small properties can also be transformed and evolved to large properties, if the hereditary system favors concentration or if there are phenomena of adjacent land purchases by the rural capitalists (for various reasons, such as their low price or the possibility of establishing plantation systems demanded by the market).

According to the Economic Commission for Latin America and the Caribbean (ECLAC) (2001), the Gini coefficient is calculated from the proportion of the areas in the Lorenz curve diagram. It distributes its values between 0 and 1, where zero is the perfect distribution of the land and one (1) is the degree of absolute inequality. According to ECLAC (2011) the concentration of land is expressed as the weighted sum of land, whose weights represent the order of the ranges of the number of the area of each hectare, with respect to the number of owners. Also, when using the Gini coefficient, it is expected to observe collective well-being with such weights. In this sense, the Gini concentration index is often calculated using Brown's formula.

The structure of the property of the major territorial units of the project is shown below, according to information obtained from the official entities where information was focused. See

Table 5.54 Property structure - major territorial units.

IPIALES
<p>72% of the population of the municipality of Ipiales is located in the urban area and the remaining 28% in the rural area²⁵⁹. In general, the small holding predominates, out of a total of 9,827 rural properties occupying 163,988 hectares, nearly 67% belong to properties with less than one (1) Ha, and the highest percentage of owners (65% approx.). 25% corresponds to properties between 1 - 5 Ha, with 27% of the owners, 21% out of which have properties between 1 and 3 Ha. Only 0.5% of the farms are over 50 hectares. The generalized form of land tenure is property with 76.0%; in the form of sharecroppers, 8.1%; tenants 1.8% and other forms of tenure represent 14.1%. This structure affects agricultural activities which, together with other factors such as inadequate practices, low technology, the status of the road infrastructure and weather factors, directly affect the production, commercialization and, therefore, the generation of income of the population.</p> <p>The small holding is one of the most serious problems of the rural sector, the most affected being the Indigenous Reserves, who in 90% own plots that do not reach 2 ha per family; in the peasant area, the small holding is concentrated in the populated centers, which begin to acquire urban characteristics.</p> <p>The land tenure in the Indigenous Reserves is not clear, as there is a deed of ownership and / or document of the indigenous council or both (2) at the time, which allows the Indian to sell his lands, causing social conflicts such as the construction of social housing, hotels, restaurants, bakeries, gasoline pumps, among others, in an indigenous territory; only 6.09% of indigenous people have a document from the indigenous council, while 93.9% have deed of property. The Ipiales Reservation has the highest index of land concentration, as 75% of the territory is in the possession of about 151 private owners, who occupy approximately 4,817.76 Ha, while community members only have 1,571.5 ha²⁶⁰.</p> <p>As far as land use is concerned, it is not carried in the proper way, since soils not suitable for agricultural work are used in this activity and are developed out of necessity without contemplating the real soil suitability, such is the case of the moorlands and forests; this situation evident in the La Victoria township and in Yaramal.</p>

²⁵⁹ Ipiales Development Plan, Capital of the South" 2016-2019. 2016. Municipal Ipiales Mayor's Office Enquired in March 2017.

²⁶⁰ Territorial Arrangement Basic Plan – Rural diagnosis (no year). Enquired in 2017.

CONTADERO

In the municipality of El Contadero, small holdings prevail; situation that together with the inadequate use of the soil determine a low agricultural productivity that drastically affects the income of the population; this aspect, in turn, affects to a large extent the expansion of the agricultural frontier that occurs when these small extensions of land, which are non-productive, extend to the highlands destroying natural ecosystems such as forests and moors, generating conflicts of use in many cases irreversible²⁶¹.

46% of the properties of the municipality have less than 1 ha, which confirms that the highest percentage corresponds to micro-small holdings, followed by the intervals between 1 - 3 ha with 40%, 3 - 5 ha (8,4%), 5- 10 (4,3%), 10-15 and 20-50 (0.3%), and 15-20 hectares (0.2%). The concentration of the large estates is carried out in the rural districts of Las Delicias, La Josefina, Aldea de María, San Francisco, La Providencia, Quisnamuez and the upper part of the Chorrera Negra rural district. Likewise, the concentration of property is evident among small owners who, in the municipality, correspond to 3604 owners who represent 93.8% of the municipality and have properties between 1 and 5 hectares, which are distributed in the central part of the municipality at the level of all the rural districts, followed by mid-sized producers, 220 in total (5 - 20 ha), representing 5.7% of the total number of owners and large producers (> 20-50 ha), totaling 19 and representing 0.5% of the total owners²⁶².

Under these circumstances, it can be concluded that the small holding is characteristic in the municipality and it is in these small extensions that the agricultural activities determined by crops of cold climates, milk farming in smaller scale and breeding, raising and production of minor species, such as pigs, guinea pigs and chickens are carried out.

ILES

In the rural area, there are 2,196 farms belonging to 2,891 owners of 7,771.5 hectares; not all of them are suitable for agriculture, as some part belongs to areas of moorland or natural stubble. Of the 7,771.5 ha in the municipality of Iles, 33.6% belong to 903 smallholder owners, who have less than one (1) ha and 12 landowners own 278.5 hectares representing 3.58% of the total distributed in two properties of more than 100 ha each²⁶³.

Family gardens are extensions of a quarter of a hectare dedicated to the cultivation of subsistence crops, generally of vegetables, integrated by a family group of four (4) people, where the boss is dedicated to day-to-day work and the lady as a housewife guarantees the food in her home. Farms with extensions between 1 and 5 ha are considered as peasant economy; family income comes from the exploitation of plots, they have various crops of short vegetative period and milk or fattening cattle²⁶⁴.

The above statistics demonstrate the eminently smallholding characteristic of the municipality. This factor is a structural cause that explains the stagnation of the agricultural sector; Its minimum extent hardly allows subsistence activities that do not generate profitability. The excessive fragmentation of the land leads to the intensive exploitation thereof, causing deterioration, progressive impoverishment and, consequently, the obtaining of diminished returns²⁶⁵.

IMUES

96.2% of the 6,386 properties (7,250 ha) of the Municipality are less than seven (7) Ha, representing a total area that corresponds to 3,203 hectares and representing 44.2% of the total area of the territory, which confirms that it is an agrarian system where the small holding prevails²⁶⁶.

Of the units of coverage, the most important is the one that corresponds to annual crops with traditional agriculture of 3,863-4,150 ha, which represents 47.4% of the total area; followed in its order by eroded lands for protection, highly extensive grazing and

Figure 5.19 Distribution of land by municipality.

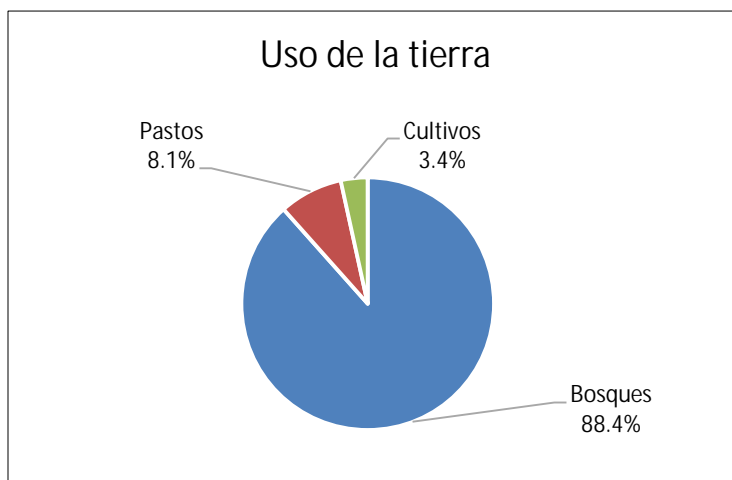

- Productive and technology processes.
 - Ipiiales.

Ipiiales has 163,988 hectares of, 5.763 out of which are devoted to crops (3.4%), 13,662 to pasture lands (8.2%), and 148,343 ha are forests (88%). See Figure 5.20. It contributes 55% of the GDP of the municipality and its main products are the potato, peas and vegetables in the agricultural part; in the livestock part, milk production stands out, which requires significant unskilled labor, generating sources of employment in this sector of the municipal economy. Of the 10% of the private land used for agricultural work, 80% is devoted to potato crops, ancestral activity that allows the livelihood of the locality by 14% and the remainder 86% is

²⁶⁷ Ibidem.

destined for national consumption, and is used for maximum exploitation, that has generated substantial changes in productivity, especially in the potato crops²⁶⁸. See **Photograph 5.7**.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

The rural sector is characterized by important water resources, forest reserve areas, land with high productive capacity, peasants and indigenous people with agricultural vocation, and mainly traditional and inefficient agricultural practices, low working capital, disorganized land structure and production systems, inefficient technical assistance with limited access to technology and practices of contemporary agriculture; factors that determine the level of competitiveness and the transformation of the field, and which prevent this sector from becoming an economically profitable, environmentally sustainable activity that rebuilds the social fabric²⁶⁹.

The small holding generates low productivity; therefore, the rural inhabitant resorts to the inappropriate use of agrochemicals in order to increase production in his land, affecting the soil resource, deteriorating it and causing its wear and nutrient shortage, which has an evident effect on the quality and volume of production. This problem is more noticeable in the Ipiales Reservoir and in several sectors of La Victoria.

Scarcity of land generated by population growth, especially of the indigenous sector, exerts pressure on the expansion of the agricultural frontier, increasing, according to Corponariño data, by 1927 ha per year; of these, only 10% remains in agricultural use, the remainder is abandoned due to low productivity. These are usually native forest soils which, once felled, are difficult to recover. This problem occurs in the Victoria area and in the Yaramal moorland sectors, with the environmental problems caused on moorlands, forests and water sources.

The local economy is based on agricultural, commercial, transport, micro industrial, micro business and crafts, tourism, services, the informal economy, among others. The Municipality of Ipiales has a large share in the agricultural sector, which is evident in its contribution to the Gross Domestic Product. While the border port has a 55% agricultural participation in the GDP, Nariño has 35.5% and Colombia 18.2%²⁷⁰.

The low technological training is another serious problem for productive activity, as 85% of the producers are unaware of the quantities and the adequate agrochemicals for the type of soil; this problem is most evident in the Yaramal and La Victoria townships.

Agricultural sector:

The primary sector, and particularly the agricultural subsector in the region, face a deep crisis due to structural problems of the current development model, aggravated by natural problems where rain or drought periods undermine productive potential²⁷¹. Within this sector, agriculture, livestock and the wood extraction stand out. These economic activities are characterized by being exploited in a predominant small holding, based on the small plot, which production is directed to the commercialization in the region and at extra-regional level, using the surplus for the consumption of the families. The predominant crops in the region, according to the number of hectares devoted to these are: potatoes, wheat, barley and corn. Potato crops are the most important ones, and Ipiales fulfills the regional collection and marketing function²⁷².

Livestock sector:

The fact that the municipality has high and flat lands, allows the soils to be used for the livestock production. Livestock production is mainly based on the production of milk cattle and breeding cattle. Smaller species include guinea pig breeding, pig and poultry breeding. These activities are intensively carried out in small

²⁶⁹ Ciesi and Chamber of Commerce of Ipiales. 2011. Socioeconomic Study of Ipiales. Enquired in March 2017.

²⁷⁰ Ibidem.

²⁷¹ Ipiales Development Plan, Capital of the South” 2016-2019. Municipal Ipiales Mayor’s Office. Enquired in March 2017.

²⁷² Ciesi and Chamber of Commerce of Ipiales. 2011. Socioeconomic Study of Ipiales.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

holdings, mostly with total absence of innovation processes. In terms of livestock, the products derived from this activity supply the local and regional market and the exploitation thereof is done by hand, with intensive use of labor; milk production is mostly processed in plants located in the departments of Cauca and Valle²⁷³.

For 2009, of the total number of species present, beef cattle represented 18%, porcine 10%, poultry 15% and other species (horse, pig, sheep and goats) 55%; of this, 89% corresponded to guinea pig breeding. Beef cattle were registered according to the type of exploitation; 58% for milk, 25% for meat and 17% for dual purpose, for a total milk of 51,912 l and 92,712 in 2011 l. In relation to the aquaculture sector, fish production in 2009 reported varieties of cachama (13.4 tonnes) and trout (10.1 tonnes)²⁷⁴.

Trade sector:

Given its location, Ipiales shows great dynamism in this sector, because given bordering location, it may exchange products with Ecuador; however, it has some disadvantages that affect the local industry. The structure of the trading sector of the city is not foreign to the rest of the economic lines, since it denotes a massive micro-business presence in the sector (even in wholesale trade) that according to absolute measures, such as the value of its assets and the number of employees, defined under Law 590 of 2000, exercised primacy in the jurisdiction of the Entity; the microenterprise figure with a 96.9% share, only 2.1% corresponds to small business, a 0.4% for medium-sized enterprises and 0.4% for large companies²⁷⁵.

Tourism sector:

The importance of the tourism sector is relevant, as it is one of the most important elements of the local economy and a generator of commerce and service activities and, therefore, employment and income, which increase the social, economic and cultural dynamics of the city and the region; therefore, Ipiales has one of the most important tourist centers in Latin America, "The Sanctuary of Our Lady of the Rosary of Las Lajas."²⁷⁶

Industrial sector:

Its development is slow due to several factors including the historical trend of the region towards other activities, national policies, lack of organizational capacity, deficiencies in its technical infrastructure and lack of use of binational integration, among other reasons.

5.3.4.1.1 El Contadero.

The main source of the economic income of the municipality of El Contadero is based on agricultural, agroindustrial and traditional production, characterized by its productive structure concentrated in the family. Despite being linked to the markets in disadvantageous relationship, it continues its activity as far as possible to support the family and, to such end, they resort to multiple strategies. Hence, they contribute products to the demand of the country's markets, at the cost of their growing decrease in the quality of life and the detriment of their land. The economy is based on a production model where the highest percentage (90%) of the production is destined for commercialization and a low percentage (10%) for the internal consumption of the families.

²⁷³ Ibidem.

²⁷⁴ Official information of the municipality of Ipiales. March 2017.

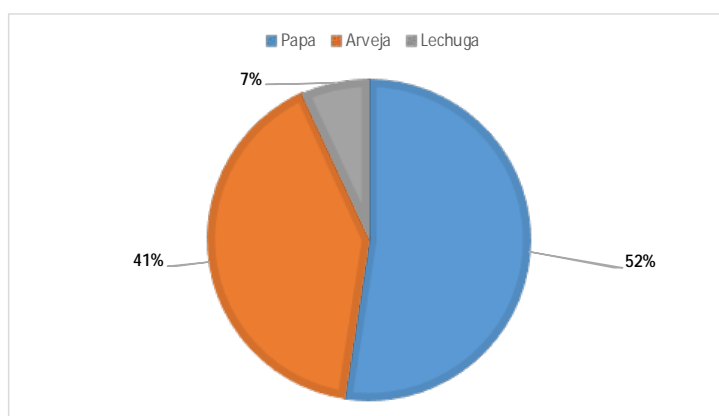

²⁷⁵ Ministry of Labor 2011. National Technical Assistance Program for the Strengthening of Employment, Entrepreneurship and Income Generation Policies in the Regional and Local environment.

²⁷⁶ Ciesi and Chamber of Commerce of Ipiales. 2011. Socioeconomic Study of Ipiales.

Agricultural Sector

The municipality has several thermal levels that strengthen the agricultural sector, implementing a variety of crops among which we have: potatoes, peas, lettuce, corn, beans, garlic, tree tomatoes, mulberry, granadilla, among others. 98.8% of the production is comprised of potato (52%), peas (41%) and lettuce (7%). See **Figure 5.21**. The total area cultivated in 2016 was 929 ha, 64.6% dedicated to pea crops and 32.3% to potato crops²⁷⁷. See **Photograph 5.8**.

GEO-002-17-114-EAM			Version 0.	May 2017

Source: GEOCOL CONSULTORES S.A., 2017.

Livestock sector

Livestock production is focused on milk production, multipurpose livestock, pigs, guinea pigs, poultry, trout and other minor species of great commercial value. Poultry production is represented by 4,000 laying birds and 213,000 fattening birds per year. The inventory of beef cattle in 2016 was 7,225 animals. The inventory of cows and milk production was 1172 animals²⁷⁸.

Among the major species are the Holstein crossbreeding with creole, mostly dedicated to milk production, with an average production of 7 liters / day. The exploitation is extensive, on average two to three animals per hectare are placed. There are no intensive farms, the maximum number of animals in the municipality for a single owner is 14 heads; the location of the farms is predominantly in the upper part of the municipality²⁷⁹.

• Iles.

Agricultural production:

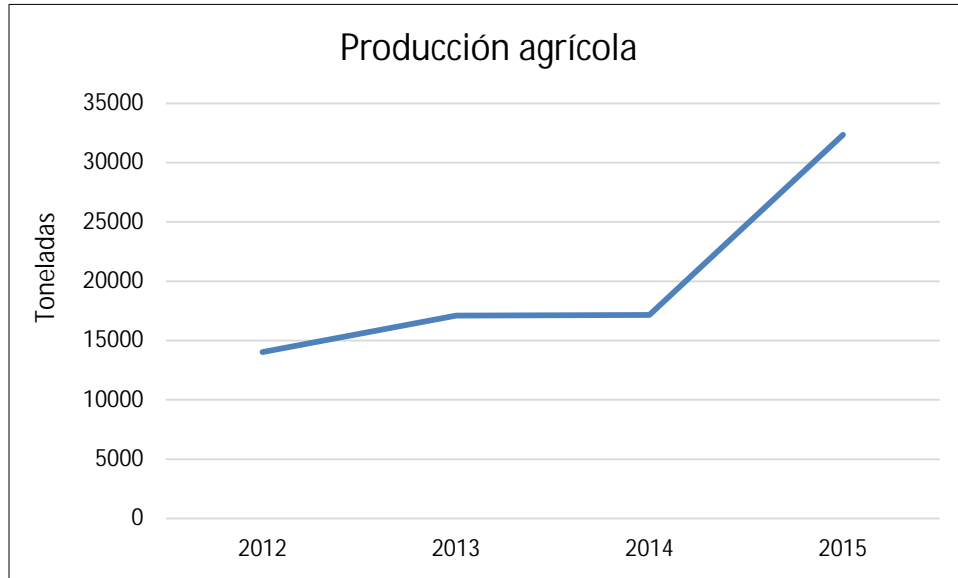

In the municipality of Iles, like most of the municipalities in the region of the former province of Obando, the economy revolves around agricultural culture, generating income for the rural population that in Iles covers about 78% of the total population. Iles produces transient crops which harvest twice a year, such as: peas, barley, onion, potato, salad tomato and wheat; permanent crops among which we have coffee, fruit trees such as avocado and strawberry and annual crops such as corn. The total area harvested with these crops was 940 ha in 2015. Within this, a production of 14,023, 17,099, 17,148 and 32,338 tons. was obtained in 2012, 2013, 2014 and 2015 respectively. The need to strengthen this sector with technology is evident; culture in the use of chemicals, as these in turn weaken the soil and contaminate water sources; directly affecting production without gaining profit and loss of interest by the inhabitants in the development of this activity, thus allowing emigration to the urban area of the municipality, as well as to other cities of the country or Ecuador, in search of better opportunities²⁸⁰.

²⁷⁸Ibidem.

²⁷⁹ Territorial Planning Scheme of the Municipality of El Contadero - Nariño 2001. El Contadero Municipal Mayor's Office. Enquired in March 2017.

²⁸⁰ Iles Municipal Development Plan 2016-2019 "With security and social commitment, living with dignity is possible". 2016. Imués Municipal Mayor's Office.

Figure 5.22 Agricultural production (ton) in Iles between 2012 and 2015.

Source: Iles Municipal Development Plan 2016-2019 "With security and social commitment, living with dignity is possible". 2016. Imués Municipal Mayor's Office.

The dynamics of this sector vary according to climatic, natural, social and economic conditions of supply and demand of the product. Producers focus on growing more prosperous crops in yield, quality and supply, there are products that remain in the sowing culture, such as potatoes, onions and peas, and products with little representative crops such as wheat, barley and maize. Likewise, there is a very small participation in permanent products such as coffee, avocado, salad tomato and strawberry, and the participation in vegetables and fruits is null; this brings as a consequence the poor nutrition in the inhabitants of the municipality²⁸¹.

²⁸¹ Iles Municipal Development Plan 2016-2019 "With security and social commitment, living with dignity is possible". 2016. Imués Municipal Mayor's Office.

GEO-002-17-114-EAM			Version 0.	May 2017

Photograph 5.9 Agricultural sector of the municipality of Iles.

Source: GEOCOL CONSULTORES S.A., 2017.

Livestock production:

Livestock is one of the most important lines and increases every year; by 2015 there are about 10,115 heads of beef cattle and a total of 2,571 milking cows that produce an average of 19,025 liters of milk a day, with an average milk production per cow of 7.4 liters. Other important increasing lines is the livestock, poultry, pork and guinea pig breeding production. Animals are mostly sold weekly in the livestock market that takes place on Sundays; this presents poor technical specifications, and not only provides the service to the municipality but also to neighboring municipalities such as: El Contadero, Ospina, Gualmatán, and it is of vital importance in the region because it is licensed by the Colombian Agricultural Institute (ICA) to operate like the cattle markets of Guachucal, Pasto, Tuquerres and Ipiales; 4,800 - 5,100 animals are commercialized annually in average²⁸².

• **Imues.**

The inhabitants of the municipality of Imues are engaged in primary production in the countryside, their agricultural activity is the source of income, which does not meet the unsatisfied basic needs of their family nucleus, because their production is rudimentary, and they do not have access to technological innovations, such as improving the quality of production per square meter of fertile land²⁸³.

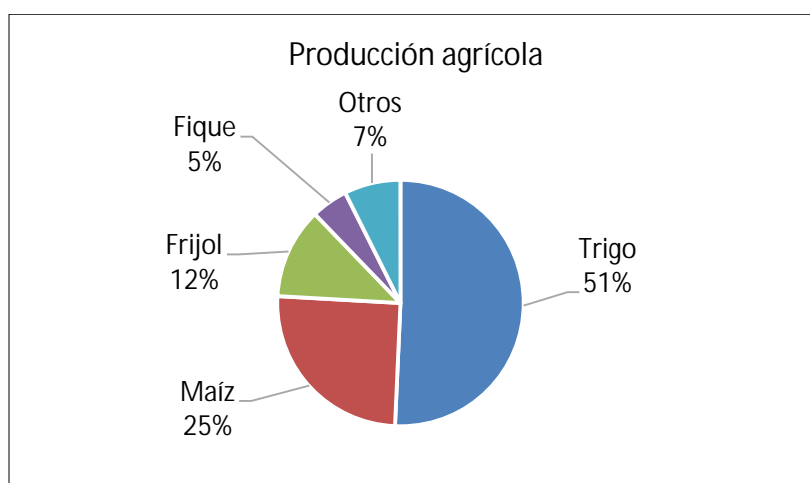

The economy of the municipality of Imues is based on agriculture, in spite of the little land destined to this end, with the difficult topography in which it is located, earth affected by the erosion and of great aridity, hence the epistemological meaning of the municipality being Imues "Hidden Water". In any case, the peasant, the indigenous artisan exploits his field seeking the best results. In the past decades, wheat has been the leading crop product, due to the climate and altitude conditions (2000 to 2900 m.a.s.l.), it is currently the most important, followed by products such as corn, peas and beans. In the sectors of Pedregal Alto, Pedregal Bajo, Silamag and San José, beans, maize, some fruit trees such as custard apple and tree species such as Guayacán,

²⁸²Ibidem.

²⁸³ Imues Municipal Development Plan 2016-2019 Imues for a better future. Together for the change of Imues. 2016. Imués Municipal Mayor's Office.

Palo Moto and Cucharo are grown; in Pilcuán and Silamag, corn, beans, tomatoes, paprika, beans, coffee, guava, custard apple, avocado are harvested; these are areas very close to the Pan-American road network, which provide easy transport to Pasto, Ipiales, Túquerres and the Pacific Coast and, of course, the inner part of the country and the neighboring country, Ecuador²⁸⁴. According to Nariño's consolidated agriculture data, of the total area cultivated (3,776 ha) in the municipality of Imues, 50.7% was devoted to planting wheat, 25.2% was devoted to annual maize, 11.9% to bean, 4.8% to fique, and the rest of the area was planted with barley, onion, potato, pea, salad and tree tomato, and strawberries ²⁸⁵(Figure 5.23).

Figure 5.23 Agricultural production in Imues.

Not all the rural districts like Santa Rosa and Piconero have the irrigation system that allows greater competitiveness and productivity in diverse agricultural products, which makes it necessary to deepen and bet on the progress of the countryside, within the national purpose of País Verde. In the municipality of Imues, there are other crops such as tomatoes, tree tomatoes, barley, potatoes, ulluco, cabbage, custard apple, guava, onion; out of the crops, a minimum is used for self consumption and surpluses for marketing, which generates to the producer at times the recovery of costs, since the crop cultivation processes are done in a traditional way with ox plow and some tractors; there is no technology or collection centers.

²⁸⁴ Ibidem.

²⁸⁵ Formulation of the Environmental Management Plan in the municipality of Imués - Department of Nariño. 2016. Universidad Tecnológica de Pereira Faculty of Environmental Sciences San Juan de Pasto.

Photograph 5.10 Agricultural sector of the municipality of Imues.

Source: Weekly bulletin wholesale prices- Min Agriculture and DANE. 2014.
https://www.dane.gov.co/files/investigaciones/agropecuario/sipsa/Semana_1mar_7mar_2014.pdf.

The characteristic of the territory of Imues is the small holdings, for that reason the cattle ranch is a secondary activity, without disregarding its importance. Beef cattle serves a dual purpose (milk and meat), representing an additional income for the peasantry in the production of cheese, which is marketed through intermediaries, and the sale of cattle in the Túquerres and Pasto fairs. In the Municipality of Imues there is a total inventory of 2,907 heads of cattle, located in 647 farms; the exploitation of dual purpose cattle prevails with 80.9% of exploitation, 11.8% of dairy cattle, and only 7.2% for the exclusive exploitation of beef cattle. There are 920 milk production cows with an average of 6.5 liters per day, with a total production of 5,980 liters per day. The product is partly used for local consumption and manufacture of peasant cheese and the rest of the production is marketed through intermediaries towards the city of Túquerres. For beef cattle production, 3,111 hectares of pasture lands are available, with a load capacity of 0.8 UGG / ha²⁸⁶.

In the municipality of Imues, there are two farming systems; technified pig farming, where 10 breeding farms are exploited with a production of 2.250 piglets per year; 7 full-cycle farms with a production of 1,050 piglets per year and 8 breeding and feeding farms with a production of 320 pigs a year and traditional or traditional pig farming with 145 producing farms and an estimated production of 580 pigs a year. The sale of piglets is done for the local market and for neighboring municipalities like Túquerres, Guaitarilla, Funes, Pasto and Ipiales, at the rate of \$ 100,000 on average per piglet; the distribution of the channel is for the different restaurants of El Pedregal and for the general public, where the sacrifice is done in the underground, and other markets for standing sale are Túquerres and Pasto²⁸⁷.

In the region, there are some technified poultry sheds and other traditional ones, where chicken production is marketed in Pedregal ground and some restaurants in Pasto. In the Municipality of Imues, other livestock species are farmed and traded, such as the raising of guinea pigs, rabbits, horses, sheep and buffalo, whose production is made in a traditional way without technology, with the household labor and is produced for self-consumption, for the local market and the marketable surpluses are sold directly to restaurants in Pinzón

²⁸⁶ Official information- Municipal administration. March 2017

²⁸⁷ 2012 - 2015 Development Plan in the municipality of Imués. Imués Municipal Mayor's Office.

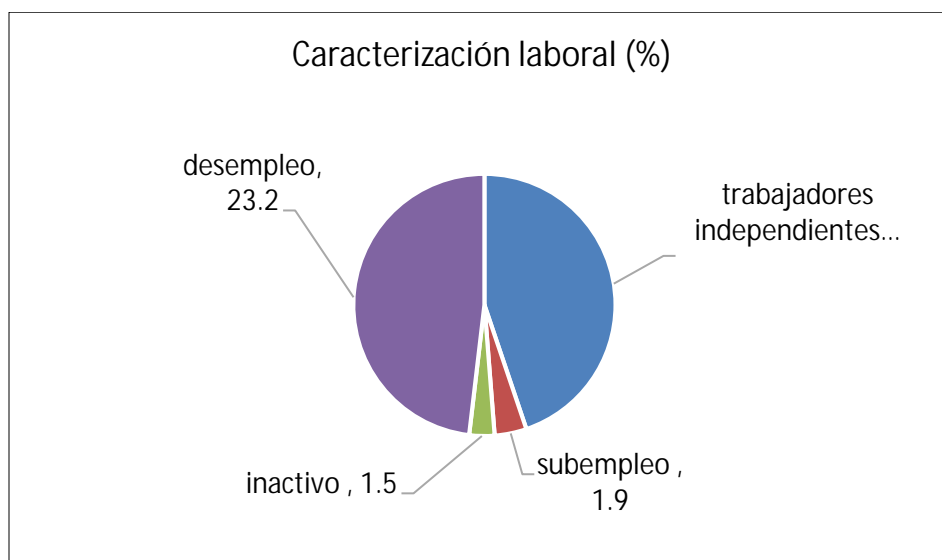

(Túquerres), El Charco Ipiales and Pasto²⁸⁸. The poultry inventory of the municipality includes 136,400 birds, of which 122,400 are exploited in sheds with some type of technology and 14,000 birds exploited without any type of livestock technique. Chicken production is distributed to Pasto and Ipiales broilers, with whom they have a pre-purchase agreement and its price is \$ 8,000 on average for a 2 kilogram chicken. The price of Creole hen is in average \$ 20,000 and its consumption is local and in the markets of Túquerres, Guaitarilla and Ipiales²⁸⁹.

5.3.4.2 Characterization of the current labor market.

5.3.4.2.1 Ipiales.

51.8% of people in Ipiales are employed, while there is a 48.2% that is not contracted; this does not mean that unemployment is so high because the self-employed represent 21.6%, underemployment 1.9% (either per hour, skills or salary), 1.5% are inactive (retired and elderly) and 23.2% say affirm to be unemployed (Figure 5.24). It is important to mention that the highest unemployment rate is found in socioeconomic level 1 (53.9%) and 2 (17.3%), which means that in these sectors, there is more freelance work, basically informal; this confirms that a higher unemployment results in the need to generate subsistence and low-skilled jobs²⁹⁰.

Figure 5.24 Labor characterization in Ipiales.

Workers who have a job (84.4%), have a certain stability in their work activity, which generates greater conformity in the job and decreases the search for other economic inputs. There is a group of 9.8% with two (2) jobs and those with three (3) or four (4) jobs represent 3.7% and 2.1%, respectively. According to the

²⁸⁸ Imues Municipal Development Plan 2016-2019 Imues for a better future. Together for the change of Imues. 2016. Imués Municipal Mayor's Office.

²⁸⁹ Ibidem.

²⁹⁰ Ciesi and Chamber of Commerce of Ipiales. 2011. Socioeconomic Study of Ipiales.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

number of jobs, trade (wholesale and retail) and vehicle repair accounts for 43% of the labor market. It is followed by transport, storage and communications with 14.4%, manufacturing industry 9.4%, financial intermediation with 6.8%, hotels and restaurants 6.8% and real estate activities 5.8%. The remaining economic activities accounted for 13.8% of a total of 3472 jobs²⁹¹.

By scale of employed personnel, 91.7% of the city's establishments are micro-enterprises (1 to 10 workers) and 2.6% are SMEs (11 to 200 employees). The remaining 5.7% corresponds to large companies (more than 200 workers). Like the whole country, the importance of micro, small and medium-sized enterprises is clear as primary creators of employment and product in the city²⁹².

5.3.4.2.2 El Contadero.

The municipality of El Contadero is part of the sub-region of the Nariño Department, which has historically been known as the Former Province of Obando and which includes another 12 municipalities, Aldana, Cordoba, Cuaspud, Cumbal, Funes, Guachucal, Gualmatán, Iles, Potosí, Puerres, Pupiales and Ipiales, which have become the marketing, information and political - administrative management core of the whole area. The location as a border of this whole area has boosted activities such as trade and freight transport that generates a significant number of jobs²⁹³. Meanwhile, informal employment reaches 97.7% of the labor market in El Contadero.

A major breakthrough in the municipality of Contadero is the establishment of associations by the peasant community, with the participation of nearly 445 members who work in agroindustrial activities, as a tool to jointly address the design, implementation and execution of policies, programs, projects and actions of common interest for both territorial and national authorities, applying the principles of coordination, concurrence, subsidiarity and complementarity for contribute to the sustainable, equitable and competitive development of the territories²⁹⁴.

5.3.4.2.3 Iles.

The economic sources of employment developed by the inhabitants of the municipality are based on the primary, secondary and tertiary sectors, highlighting the agricultural and dairy activity, with the creation of small microenterprises²⁹⁵. In any case, permanent employment is not very representative; the majority of the workers are temporarily engaged, generating a large labor mobility inside and outside the municipality. Of the economically active population, 13% are unemployed, 78.3% are engaged in agriculture and livestock activities, 5.4% of the population is engaged in small dairy industry, barns and stores and 3.7% work in public or private entities²⁹⁶ (Figure 5.25).

²⁹¹ Ministry of Labor 2011. National Technical Assistance Program for the Strengthening of Employment, Entrepreneurship and Income Generation Policies in the Regional and Local environment.

²⁹² Ibidem.

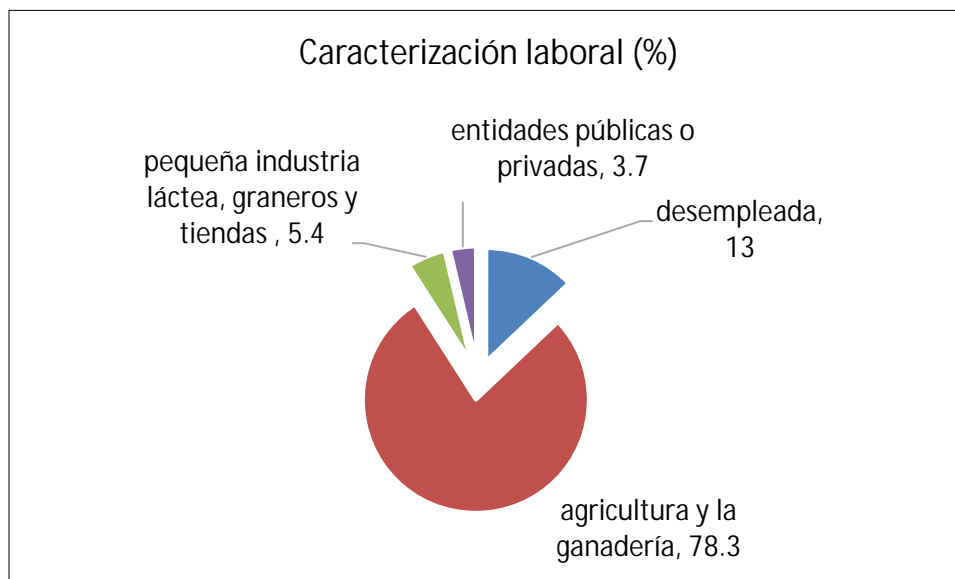

²⁹³ Official information of the municipality of Contadero - 2012. Enquired in March 2017.

²⁹⁵ Iles Municipal Development Plan 2016-2019 "With security and social commitment, living with dignity is possible". 2016. Imués Municipal Mayor's Office.

²⁹⁶ Ibidem.

Figure 5.25 Labor characterization in Iles.

It is very important to note that the inhabitants of the urban center are mostly engaged in the commercialization of products and services to meet the demand of the inhabitants of the municipality, visitors and passing-by people, "loncherías", drugstores, fast foods, hardware stores, assorted product stores, stationery, clothing stores and footwear and with great characterization, because due to the lack of employment, the traditional canteens where alcoholic beverages have succeeded as places of entertainment like billiards and "canchas de sapo". There are small family businesses dedicated to the processing of dairy products especially double cream cheese that is distributed in Pasto, Popayán and Cali. There are swimming pools, restaurants and hostels in the northeastern part of the Municipality (El Porvenir, El Capulí and La Esperanza - tempered climate) used by locals and foreigners on the weekends²⁹⁷.

At a local level, there is the Santander market square on Sundays; as a strategic point of exchange of products of the family basket with neighboring municipalities. At the moment, its infrastructure presents / displays deterioration and poor conditions due to hygiene and vendor organization. More than 200 persons work therein (160 sales posts), contributing 30% to the overall economy of the municipality²⁹⁸.

The transformation of milk generates added value to this product and, in turn, allows the inhabitants of the municipality to generate employment and, likewise, gains economic importance; generates 17 direct jobs and more than 200 indirect jobs; the market for these products takes place locally and in the cities of Pasto, Cali and Bogotá.

²⁹⁷ Iles Municipal Development Plan 2016-2019 "With security and social commitment, living with dignity is possible". 2016. Imués Municipal Mayor's Office.

²⁹⁸ Ibidem.

5.3.4.2.4 Imues.

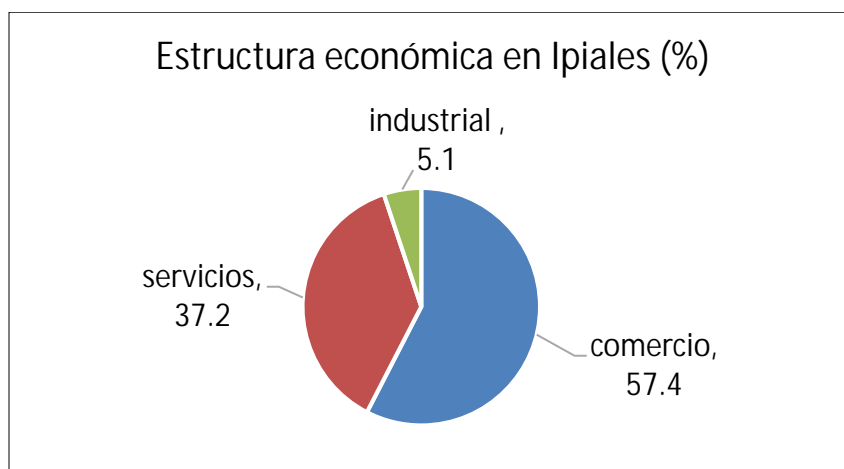

El agricultural sector generates the first self employment, because it is the integral family group, father, mother and children the ones engaged in the primary production of the field; therefore, agriculture is the source of income for the family, with technological limitations and land conditions. The first generator of employment is the Municipal administration, which in terms of public management and the execution of operation resources and social investment, is the main party that demands qualified and unqualified employment²⁹⁹.

5.3.4.3 Development and/or landscape poles that interact with the component area of influence, component groups or environment.

5.3.4.3.1 Ipiales.

In the economic structure of the municipality, the primary and tertiary sector stand out; the latter, due to the commercial activity given its strategic location, where tourism also plays an important role, and where the main tourist attraction is represented by the Las Lajas Sanctuary. 57.4% of the establishments are dedicated to commerce, and 37.2% are dedicated to the services sector, while industrial activity only reaches 5.1%.

Figure 5.26 Economic structure in Ipiales.

The proximity of Ipiales, an integrating municipality in the region, with the border with the Republic of Ecuador, conditions the commercial dynamics to the constant variations of the economy of the neighboring country; this is evidenced in the cyclical recessions generated by the exchange problems. At present, this currency exchange situation has generated a significant commercial flow of customers from Ecuador,

²⁹⁹ Imues Municipal Development Plan 2016-2019 Imues for a better future. Together for the change of Imues. 2016. Imués Municipal Mayor's Office.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

increasing the demand for goods (and in a lower proportion, services) that exert pressure on prices, with an inflationary effect that increases the price of products of first need in Ipiales³⁰⁰.

The fact that it is the center of the former province of Obando, turns the city of Ipiales into the point where the twelve economic activities of the municipalities converge, which comprise: Cumbal, Carlosama, Ipiales, Guachucal, Aldana, Pupiales, Contadero, Gualmatán, Córdoba, Puerres, Potosí and Iles, in addition to the Municipality of Funes, which has been functionally included in this regional identity. This does not suggest that Ipiales should be considered merely as a regional center; however, the economic dynamics are framed in a broader context, where human beings converge with needs, expectations and difficulties, but also with ideas, alternatives, actions and efforts to improve reality, through the optimal, rational and functional use of resources, in an ancestral identity process³⁰¹.

In recent years, the number of wholesale establishments has increased, which given the border position operate as distribution centers to other regions, especially the department and to a lesser extent to the country; it can be said that it is above 80/20 of the national average of participation of the trade sectors. It is affirmed that the highest in participation is the retail trade sub-sector³⁰².

The main cities that provide trade to the city of Ipiales are, in general, Cali and Bogotá; an important presence of Pasto and Medellín, while the presence of the same city of Ipiales and of the neighboring country of Ecuador seems to be low. Products from the city of Cali are sold by 63.5% of the wholesale trade and 59.7% of the retail trade; in Bogotá, the preference is 51.9% and 50% respectively, Pasto is 32.7% and 33.3%, Medellín is 32.7% and 28.5%, Ipiales is 11.5% and 18.1%, Ecuadorian cities 7.7% and 11.1%. This shows a structural flaw in the city's market; the low level of manufacturing and industrial production reveals disruption in the production-consumption chain. It indicates a distribution network built between the same city and other departments, being the city the one that receives the merchandise³⁰³.

It can be said that the wholesale trade markets products from outside the department of Nariño and even from abroad, and that the retail trade is the one that sells more products from the department and the region, structuring the shaping of regional and local markets from a suburban distribution network; goods are purchased in the same city, or in the region. However, medium and large companies, while maintaining the importance of the local supply network (in the same city), have expanded their places of purchase more frequently to other Departments and abroad³⁰⁴.

5.3.4.3.2 El Contadero.

Primary sector. The area devoted to agricultural production is 421 ha with pasture lands and 2,985 ha with crops; the profitability achieved is 30.7% for agricultural activity and 32% in the livestock sector; however, the expansion of the agricultural frontier can increase the agricultural area in 513 ha for 2009, maintaining low margins of profitability, significant presence of monoculture, expansion of the agricultural frontier, high production costs, low use of sustainable models, scarce growth of promising crops and lack of diversification

³⁰⁰ Ipiales Development Plan, Capital of the South" 2016-2019. 2016. Municipal Ipiales Mayor's Office.

³⁰³ Ibidem.

³⁰⁴ Ibidem.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

in production. The level of technical assistance will be low and the resources provided by the municipality will not cover the needs of small and medium producers³⁰⁵.

Secondary Sector: At present there is low development of the sector compared to previous years, when there were factories such as cloths, cigars, furniture and carpets, which closed due to lack of support and competition presented by national and international industries. Of these, there are still some hand-made carpet factories and the flour factory, which definitely tend to disappear and thus generate backlog in the municipality, as well as the lack of job sources and alternatives for population development. The secondary sector will still be characterized by the backwardness of small and medium industry, the raw material for processing will not be used, nor will the agribusiness be strengthened at the municipal level³⁰⁶.

The Tertiary Sector is insignificant in the municipality due to the low economic situation of the municipality, there are no commercial establishments, hotels or restaurants. The trade is based on small stores of food and groceries for lesser domestic consumption. Due to the above, we may see that the tertiary sector is null in this region and is not developed; therefore, revenues by industry and trade are not significant within the municipality.

5.3.4.3.3 Iles.

In the municipality of Iles, there are three (3) types of economy clearly identified: the small peasant economy, specific to the mini and micro holdings worked by their owners and generating insufficient yields for their self-sustenance, forcing them to work as day laborers, whether permanent or temporary, thus obtaining additional income for their maintenance. This group is called proletarian producers. On the other hand, there is the full peasant economy that generates income for family support and for reinvestment in the productive process of the plots. In a smaller proportion are the small agricultural and processing enterprises that use permanent wage labor; their activity generates surpluses that enable capital accumulation on a minimal scale. This characteristic is inherent to potato, pea, onion, corn and cattle farms.

There have been actions to improve agricultural production; 53.6% of the lots have irrigation; but there is a need to work in the improvement of the road infrastructure, as it is another important factor for the development of this activity; access to agricultural land is now difficult, since the roads do not allow the entry of cargo vehicles, and this leads to the contracting of additional freight transport with cargo horses and small vehicles increasing production prices. The territory is affected by the rainy seasons or by the high temperatures, causing losses of crops, increasing the costs of production, product shortages and risk in food security³⁰⁷.

5.3.4.3.4 Imues.

El municipality of Imues, in the townships of Santa Ana and Pedregal are the locations with the greatest impact on tourism and trade activities, due to their geographical location. Pedregal is the road corridor between the neighboring countries of Colombia and Ecuador; road network for the Pacific coast municipality of Tumaco. Santa Ana is a passing-by site for the municipalities of Guaitarilla, Tuquerrez, Sapuyes Ospina, Guachucal,

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Samaniego, Providencia, Santacruz Guachavez and Barbacoas among other sites of the department of Nariño³⁰⁸.

The climate of Pedregal, Santa Rosa and Pilcuan, given the benefits thereof, the warmth of its people, their honesty and work, allow them to be tourist centers for visitors from Pasto, Ipiales and other municipalities of the Department of Nariño, and tourists from Ecuador. At present, these sites have hotels, restaurants, swimming pools, sports courts and other attractions.

5.3.4.4 Commercial structure, commercialization networks, productive chains and their relation on regional economic dynamics.

5.3.4.4.1 Ipiales.

In the municipality of Ipiales, the crops that have reported, traditionally, greater participation are: potato, pea, carrot and vegetables and fruits from cold climates; all these crops, without exception, have faced problems of competitiveness, to the point that products such as barley and wheat have practically been extinguished. In the region, one of the crops of great interest is potato, for which Ipiales participates with approximately 25% of the regional production. In the national context, the former province of Obando contributes 6% of the total production of the tuber. With the local and regional boom of milk processing companies, livestock activity has acquired a great relevance in the last years, the products derived from this activity supply a significant segment of the market, even at national level, and its exploitation is carried out alternately with the extensive use of unskilled labor, but with ancestral experience³⁰⁹.

Most of the producers are smallholders, 82% of the farms are less than 5 ha, a factor that makes it difficult to standardize the management of the production chains, as each producer, according to its capacities and with a local reference of market, selects the products to cultivate, the practices for the handling thereof and, generally, ends up in a production not in line with the demand, low quality, and they all harvest in the same season.

The marketing of the main products grown in the region is important and limitations have been identified that imply the commercialization of agricultural production, which is more markedly emphasized for smallholder products in traditional crops characterized by small farms, direct consumer goods, highly perishable due lack of adequate storage systems. As far as livestock production is concerned, the market is between 75.0 and 50.0% with respect to milk, and in the case of species such as sheep, pork, it amounts to 100% and the percentage reported on cows is variable³¹⁰.

The traditional commercial system is one of the factors that has prevented producers from having a fair income, an improvement in their quality of life and greater capacity of investment in the rural area. Currently, the intermediaries keep the highest percentage of profit. It is not logical that while all products increase their price for the final consumer, the producer continues to sell his fruits and vegetables at low prices; that is, because the intermediary does not transfer the behavior of the markets to the small producer, leading to a double critical situation; the end consumer is less and less likely to buy the products because of the high cost, and the producer continues to produce without obtaining a fair return. It is necessary to eliminate this

³⁰⁸ Imues Municipal Development Plan 2016-2019 Imues for a better future. Together for the change of Imues. 2016. Imués Municipal Mayor's Office.

³⁰⁹ Ipiales Development Plan, Capital of the South" 2016-2019. 2016. Municipal Ipiales Mayor's Office.

³¹⁰ Ibidem.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

commercial system and strengthen producers in all aspects required to directly access the final consumer or eliminating links that undermine the profitability of the sector.

5.3.4.4.2 El contadero.

Agricultural products are sold in the point of sale to Intermediaries, who transport them in small trucks to the collection centers in the cities of Ipiales, Pasto, Pupiales and Iles. The main crop of the municipality is the potato, which price between producer and consumer implies a 50% increase over its initial cost. The products that are mostly sold to the intermediaries are potato, beans and peas; the other products produced, like barley, wheat and corn are for self consumption. The milk produced in the municipality is sold to small intermediaries that transport it to the main road to be taken to the cities of Ipiales, Pasto, Pupiales, Iles and José María Hernández. Beef cattle and pigs are sold directly at the fairs of Ipiales and Pasto; animals are transported by truck and are picked up on Saturdays and Mondays. On average every Monday, 20 pigs are sold, 15 heads of cattle on Saturdays and 30 on Mondays³¹¹.

The majority of existing sheds in the municipality belong to chicken broiler owners located in the city of Pasto. The other producers sell the chicken to barbecue restaurants also located in Pasto and some distribute them within the municipality. The guinea pigs observed in the municipality are sold to the same population and for self consumption³¹².

Dairy Chain. The Nariño Highland in itself has been classified as a dairy area thanks to the excellent weather conditions for its development. The exploitation is extensive, on average two to three animals per hectare are placed. Milk is sold in the point of sale to intermediaries, who collect it in the different rural districts of the municipality. The proximity of the municipality with municipalities such as Pasto, Ipiales, Guachucal and Tuquerres mainly represents a potential to develop this activity at the municipal level, as milk collectors and processors can easily settle at the municipality level and capture the raw product for processing into dairy or pasteurization. It is also possible to train the producers through the SENA with the purpose of establishing microenterprises producing dairy products such as cheeses, yogurt, kumis, curd, etc. thereby increasing income at the small producers' level. Dairy products are included within the productive chains for Nariño, with a wide range of opportunities to preserve and expand their markets, by establishing strategic alliances with national and / or multinational companies to generate economies of scale, promote innovation and expand distribution channels. There is as a strength- a Nariño company called COLACTEOS with presence in collection centers in the area and processing plants. Threats include the serious alteration of the public order due to stoppages, attacks to the transport vehicles, robberies, imports of milk powder, mainly³¹³.

Potato Chain. It is currently the most representative crop at the municipality level and is the basis of the regional and departmental economy. The average production is between 10 and 12 tons per hectare, some producers usually sell it directly on the farm to the intermediaries, other producers take it to sell to Ipiales and Pasto, the serious problem reported with this product is the price fluctuation. At the time, the area planted with potatoes has declined considerably, due to problems mainly of a political nature, since the state with the economic opening led to the import of this product from other countries, and the price of the product is very unstable, leading producers to yield losses and not earnings. Another problem facing this crop is the attack of pests and diseases such as the different viruses that in recent months have proliferated considerably.

³¹¹ Territorial Planning Scheme of the Municipality of El Contadero - Nariño 2001. El Contadero Municipal Mayor's Office.

³¹² Ibidem.

³¹³ Ibidem.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

The potato is a product that is within the productive chain for Nariño and its main strength is the presence of public and private entities that have qualified human resources, germplasm banks, programs and projects to generate research and, thus, develop their own local technologies. In Nariño as well as in the municipality there are specialized producers, soils with agricultural adequacy, global technologies for industrialization, access to external markets, the existence of the collection center in Ipiales, unmet demand for processed potatoes. Threats stem from illicit crop cultivation, disruption of public order, imports destined for consumption, indiscriminate use of agrochemicals, high costs of soil preparation, high costs of production, to name a few³¹⁴.

5.3.4.4.3 Iles.

The municipality production is agricultural and livestock. Breeding livestock and milk have allowed the creation of small microenterprises of dairy products and derivatives such as yogurts, cheeses and curds, exporting to large cities such as Pasto, Cali and Medellín. As an economic alternative, the poultry industry that produces small-scale semi-industrial chicken in small sheds in the El Salado, El Capulí, El Porvenir and La Esperanza sectors stands out. Agriculture, especially the potato, wheat and barley crops have been pushed into the background by the high costs of agricultural inputs and the low sales price. Meanwhile, the minor commerce of the municipality is based on small food stores, informal clothing stores, bakeries, gas stations, carpentries, repair shops, footwear and ice cream shops. Porcine livestock occupies another important line in the local economy, its production also traditional and almost domestic; it satisfies local consumption, and are mostly marketed on Sunday in the traditional local market³¹⁵.

The production of potato, pea and onion and others are marketed in local and national markets, the cultivation of these three products has led to emigration and loss of the native seeds which were the sustenance of the settlers.

5.3.4.4.4 Imues.

In the Municipality of Imues, there are 11 productive organizations of associative nature for service activities, agricultural production and livestock³¹⁶. The industrial activity in Imues is very precarious, it has the transforming fique associates (255 AMPRAFIN partners). In Santa Ana, there is a milk cooling plant with a capacity to handle 350 liters per day, 7 single-family companies producing peasant cheese with traditional processing. In Santa Ana, there are 3 sheds with furnace for the manufacture of brick, a production made with firewood, and electric motor for ground grinding, which requires immediate intervention for these families to use the gas or coal system to avoid logging and damaging the environment³¹⁷. The selling price is: small brick or rectangular to \$ 200 per unit, and the block at \$ 400 per unit and its distribution is for local consumption and for the bordering Municipalities like Túquerres, Guaitarilla, Ipiales, Pasto, Funes, Iles, Tumaco, among others³¹⁸.

³¹⁸ Official information of the Imues municipal Mayor's Office

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

There are three mines of rock exploitation, located in Santa Clara, El Pedregal and Pilcuán, the destination of production is for local consumption and sale to neighboring municipalities. The traditional production is 336 m³ of rock and 16.800m³ of crushed material of different volume with machine crusher. Price of rubble stone, \$ 20,000 per m³; Stone or slab to embellish walls \$ 85,000 per m³ and price of crushing in average, \$ 54,000 per m³³¹⁹.

5.3.4.5 Productive companies in the primary, secondary and tertiary sectors.

5.3.4.5.1 Ipiales.

Agroindustrial development is minimal; there are unproductive plants with a high investment and are currently unemployed; the alternatives for the transformation of products and by-products are limited, existing plants still have an ambiguous production system, traditional infrastructure and minimal access to technology and communications. The production is atomized preventing the setting of a north for agroindustrial development.

Primary sector: Within this sector, agriculture, livestock and the wood extraction are worth highlighting. These economic activities undertaken are characterized by being located in a predominant small holding; its exploitation is carried out based on the small plot, whose production is directed to trading in a regional and extra regional area and the surplus is destined to the consumption of the families³²⁰. In summary, the characteristics of the primary sector are, among others:

- Traditional relative importance.
- High productivity of the land, in a local and regional context, but low at national and international level.
- Generalized presence of small holdings.
- Low technology of production processes.
- There is no generation of added value.
- Difficulties for access to credit.
- There are difficulties in legitimizing land ownership.
- Persistence of archaic forms in production relations (typical of the feudal system of production).
- There are no productive links.
- The diversification of production does not generate significant family income.

The predominant crops in the region, according to the number of hectares devoted to these are: potato 41.5%, wheat 20.7%, barley 22.0% and maize 15.8%. Potato crops are considered highly important, where Ipiales participates with 24.4% of the regional production of the former province of Obando and for which Ipiales fulfills the function of collection and regional marketing center³²¹.

³¹⁹ Ibidem.

³²⁰ 2.000 – 2.003 Ipiales municipality environmental management plan.

³²¹ 2.000 – 2.003 Ipiales municipality environmental management plan.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Secondary sector: In the municipality of Ipiales, there are some small light-processing industries, such as the production of wheat flour, coffee roaster, tile factories, quarries for the production of brick, manufacture of textiles and clothing, sausage producers and other establishments that can be classified as industrial because of the nature of their activity, but there is really an intensive use of capital, important generation of added value, incorporation of labor and other characteristics that make the sector representative.

There are other activities classified in the industrial sector, which can qualify as micro-entrepreneurs engaged in carpentry activities, wool weaving, cabinetmaking, shoemaking, ceramics, handicrafts, among others, with minor relative importance. These small companies use on average three people, generally belonging to the family group, without social security and other labor guarantees. For these reasons, it is possible to affirm that microenterprise activity has a component of marginality. Of the total number of companies located in the secondary sector of the economy, 98.7% correspond to small and micro enterprises, whose contribution to local and regional GDP is minimal³²².

In summary, the characteristics of the secondary sector are:

- There is no industrial vocation.
- There is no attitude of involvement in investment activities that
- Involve processes of transformation.
- Industrial quantification (in GDP) is provided by micro-enterprises.
- There is no intensive use, neither capital nor labor.
- Generation of sectoral employment is family-based.

Other services: There are also private transport services, Hotels, restaurants, schools, banks, workshops, among others. These services and institutions are a determining factor for the articulation of industrial processes. In some municipalities of the former Obando Province, there are deficiencies in the allocation of these services. For example: hotels, restaurants and transportation. While it is true that they are associated with demand, it is desirable that there be an offer thereof, because it depends on the development means. In Ipiales, due to its border condition the presence of general storage facilitate the commercial exchange of goods, which sustains the greater specific weight of that sector, in the urban area³²³.

Transport Subsector: Traditionally it has presented great activity due to the need of intermunicipal communication (at regional and national level) and the constant relationship with the border. In the small municipalities, there are companies in the form of Cooperative that provide the intermunicipal service, in a regular and organized form; the urban transport service in Ipiales is provided by collective taxis, public service, and buses; the rural district transport is offered by several companies with trucks, 4x4s, mixed transport of load and passengers, and even in taxi-type vehicles. The transport of cargo is representative both at the level of the municipality of Ipiales and in the other municipalities of the former Obando Province, which mobilize products of agricultural origin to the interior of the country and return with a different cargo, generating a significant commercial dynamic³²⁴.

³²² Ipiales Development Plan, Capital of the South” 2016-2019. 2016. Municipal Ipiales Mayor’s Office.

³²³ Ibidem.

³²⁴ Ipiales Development Plan, Capital of the South” 2016-2019. 2016. Municipal Ipiales Mayor’s Office.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

It is important to note that one of the most dynamic activities in Ipiales and southern Nariño is the transport of heavy cargo and passengers, although there are precise rules and decisions of the Andean Community, in the sense that there must be free transit in the border area, and this is partially accomplished. Colombia respects the provisions and allows the free movement of Ecuadorian drivers; while Ecuadorians do not allow for Colombians transit Ecuador. In this sense, the CAN has signed a contract with suitable people in the area, from which corrective measures will be released to this situation, which should be defined by the Foreign Ministries of the two (2) countries³²⁵.

Trade Sector: In 2010, there were 5,273 Companies registered in the Chamber of Commerce of Ipiales, including joint ventures and private individuals, conceived in unitary form, who carry out commercial activities³²⁶. In the Ipiales 2016-2019 Development Plan, taking into account a total population of 138,679 people, the following relationships are presented: One Company or business for every 26 inhabitants. Based on a typical family, we have one company for every 5.1 families. On average, each company has 3.1 people, which means that the number of jobs granted by commerce is significant for the city. The services sector represents 14% of the total establishments, and uses 27% of personnel; retail trade accounts for 46% of all establishments and occupies only 19.3% of the working population. These comparisons allow us to conclude that the sectors that occupy the most personnel are: services (workshops), education, health, transportation and restaurants. Of the total number of persons involved, 53% are men and the remaining 47% are women. Retail, health, restaurant and service activities are mostly used by women, while the workshops (other services), transportation, and several sectors employ more men. As for the wages paid by commercial establishments in the city of Ipiales, it is noted that 60% of employees earn a minimum wage or less and only 1% earn more than four minimum wages. This situation means that the population does not have the possibility to boost the aggregate demand and, consequently, it affects the indicators of income and investment.

Financial sector: This sector covers the following entities, which for their service can be grouped as follows: Banks 10, Financial Corporations 4, Cooperatives and Financial Savings and Credit Organizations belonging to Solidarity Economy 3 (Solidarios, Cupocrédito and Coopdesarrollo), Insurance Offices 4 (Estado, Confianza, Bolívar, La Nacional), several Exchange Houses and the Ipiales Exchange Union.³²⁷

According to the Central Bank data, bank deposits exceed growth rates of 20.0% per annum. This activity is stimulated by the commercial movement resulting from the exchange situation of the border. They support the economic dynamics of the region and, in particular, the city of Ipiales and the development of its main agricultural activities, trade and the provision of supplementary services to them. With the technological progress, possibilities of modernization have agility and efficiency in its operations

5.3.4.5.2 El Contadero.

Agroindustry in the municipality has been growing in the participation of socio-economic development influencing poverty reduction and food security. On the positive side, the Contadora Dairy Association, ASOLACC, is responding to a strong consumer demand for high value products, and the SOLARETA company with its prepared foods offers the farmer new markets and opportunities to add value to the fruit crops. On the other hand, the traditional supply of the handicraft sector contributes to the livelihood of many families

³²⁵ Ibidem.

³²⁶ Ipiales Development Plan, Capital of the South" 2016-2019. 2016. Municipal Ipiales Mayor's Office.

³²⁷ 2.000 – 2.003 Ipiales municipality environmental management plan.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

that produce wool products such as carpets and ruanas, as well as the production of reed baskets; it should be noted that with economic opening, artisans need to assume new challenges to develop competitiveness conditions in order to maintain or expand their market share in a competitive market³²⁸.

A major breakthrough in the municipality of Contadero is the establishment of associations by the peasant community, as a tool to jointly address the design, implementation and execution of policies, programs, projects and actions of common interest for both territorial and national authorities, applying the principles of coordination, concurrence, subsidiarity and complementarity for contribute to the sustainable, equitable and competitive development of the territories. There are approximately 55 associations in Contadero, of which the top five (5) are made up of about 445 members dedicated to the production of milk, agriculture and poultry.

Formerly in the municipality, there were factories such as cloths, then cigarette manufacturers, furniture and carpets, which closed due to lack of support and competition presented by national and international industries, like in the case of the neighboring country Ecuador. There is a flour mill called Diana mills, which uses a mill powered by a stream of water from the Boquerón River. It consists of an infrastructure installed more than 60 years ago, which uses for its operation the waters of the Boquerón river. The daily production of flour is 2 tons, the yield in flour is every 1.4 tons of wheat produce 1 ton of flour and 400 kg of by-products such as wheat bran, "mogolla" and flour, all used for animal feeding. The products are marketed in the municipality, as well as in Ipiales and Pasto, mostly with distribution at the departmental and national levels. The generation of direct labor is low since about six (6) operators work in the whole mill that is located on the access road to the municipality, 1 kilometer away from the urban center. The raw material that in this case is wheat is collected in the municipalities of Ipiales, Gualmatán, Tuquerres, Sapuyes and Iles mainly, although at certain times, certain areas such as rotational cultivation are planted in El Contadero; this product in some cases is bought directly from the producer, but most are bought from intermediaries who are the ones who bulk up the grain to sell it not only to this mill but also to those of Pasto³²⁹.

There are also two (2) private microenterprises located in the urban center, dedicated to the manual elaboration of carpets, including: Artesanías La Oriental, which has a trajectory of more than 23 years, and employs more than 80 families in this sector. The carpets were sold to suppliers in cities such as Medellín, Cali and Bogotá; the commercialization is presently carried out directly with the city of Bogotá. The raw material used is the virgin wool, which is subjected to a process of dyeing and combination, for the subsequent elaboration of carpets, gobelins and ruanas. This micro-enterprise has not been projected due to the lack of economic support for the acquisition of machinery and the low existing demand³³⁰.

5.3.4.5.3 Iles.

There are four dairy companies for the processing of milk: Lácteos La Pradera, Santa Rosa, Andina de Iles and Cooperativa Lechera Nuevo Amanecer which are dedicated to the production of double cream cheese, curd cheese. Furthermore, there are small family businesses dedicated to the processing of dairy products especially double cream cheese that is distributed in Pasto, Popayán and Cali.

³²⁸ Development Plan "Let's work together to rescue and achieve progress in El Contadero" 2016-2019. 2016. El Contadero Municipal Mayor's Office.

³²⁹ Territorial Planning Scheme of the Municipality of El Contadero - Nariño 2001. El Contadero Municipal Mayor's Office.

Meanwhile, the minor commerce of the municipality is based on small food stores, informal clothing stores, bakeries, gas stations, carpentries, repair shops, footwear and ice cream shops.

5.3.4.5.4 Imues.

8.4% of establishments are dedicated to industry; 37.9% to trade; 43% to services and 10.7% to another activity. 98.3% of the establishments engaged between 1 and 10 employees in the month prior to the 2010 census³³¹.

The inhabitants of the urban area and of the towns of Pedregal, Santa Rosa, Pilcuan, and Santa Ana are mostly engaged in the trading activity, the purchase of goods and services through small shops, supermarkets, stationery, restaurants, drugstores, fast food, hardware stores, clothing stores and footwear, among other types of establishments, which accrue for the municipal administration industry and trade tax.

In the municipality of Imues, there are 173 economic units dedicated to the tertiary sector, of which 53.18% are services and 46.82% are dedicated to trade. The industrial sector reports great backwardness in the municipality of Imues, only 8.3% of the economic units are dedicated to industrial activities, which are characterized by incipient machinery and application of craft techniques in production. The production of bakery products, tanneries, iron and steel products, mattresses and other manufacturing industries are highlighted. They do not have enough capital and technology investment to boost the sector. The municipality does not have branches of banks to allow for the payments and transfers, they must be made in the city of Pasto or, for more proximity in the municipalities of Túquerres and Ipiales³³².

5.3.4.6 Minor territorial units.

Below is the characterization of the economic environment of minor territorial, units taking into account the requirements of the terms of reference. As already mentioned, the rural districts of the municipality of Ipiales will be developed at the time of the prior consultation, given the characteristics of the existing population.

5.3.4.7 Property structure.

5.3.4.7.1 Contadero.

Table 5.56 presents the Characteristics of land distribution reported in the territorial units of Contadero

Table 5.56 Distribution of the property in territorial units smaller than Contadero.

TERRITORIAL UNIT	SIZE	SHAREHOLDING	HOLDING	INTEREST
Aldea De María	Micro-holdings	70%	Owner	100%
	Small-holding	30%		
El Capulí	Micro-holdings	100%	Owner	100%
El Culantro	Micro-holding	100%	Owner	100%
El Juncal	Micro-holding	100%	Owner	100%

³³¹ 2012 - 2015 Development Plan in the municipality of Imués. Imués Municipal Mayor's Office.

³³² Formulation of the Environmental Management Plan in the municipality of Imués - Department of Nariño. 2016. Universidad Tecnológica de Pereira Faculty of Environmental Sciences San Juan de Pasto.

TERRITORIAL UNIT	SIZE	SHAREHOLDING	HOLDING	INTEREST
El Manzano	Micro-holding	100%	Owner	100%
Ip Ospina Pérez	Micro-holding	100%	Owner	100%
Iscuazan	Micro-holding	100%	Collective	100%
La Providencia	Micro-holding	100%	Owner	100%

San Francisco	Micro-holding	100%	Owner	70%
			Lessee	10%
			Sharecropping	20%
San José De Quisnamuez	Micro-holding	100%	Owner	100%

Source: GEOCOL CONSULTORES S.A., 2017.

Based on the above information, it is concluded that in terms of distribution of the land the micro properties are the most common in the districts studied, and the land is held under the mode of property ownership.

Only in the San Francisco rural district, holding under sharecropping is reported. In Iscuazan tenure is reported under the collective land modality.

5.3.4.7.2 Ilés.

The territorial units in Ilés are characterized by a distribution of the land where micro properties prevail, followed by small holdings. Most properties are held under the mode of property ownership, with some cases of rental and sharecropping, as observed in Table 5.57.

Table 5.57 Distribution of the property in territorial units smaller than Ilés.

TERRITORIAL UNIT	SIZE	SHAREHOLDING	HOLDING	INTEREST
Alto El Rey	Micro-holding	97%	Owner	98%
	Small-holding	3%	Lessee	2%
Capulí	Micro-holding	72%	Owner Lessee Sharecropping	70%
	Small-holding	25%		15%
	Small	2%		15%
	Medium	1%		
El Porvenir	Micro-holding	90%	Owner	90%
	Small	10%	Lessee	10%

	Small-holding	10%		
Yarqui	Micro-holding	96%	Owner	98%
	Small-holding	4%	Lessee	2%

Source: GEOCOL CONSULTORES S.A., 2017.

In the rural districts of Capulí and El Rosario it is observed that in a small proportion, there are properties classified as small and medium property. This distribution is most significant in El Rosario where 13% of the farms are in the range of 20 to 200 hectares.

5.3.4.7.3 Imués

According to the information gathered in the field, it was established that 100% of the properties located in minor units are classified as micro properties, with less than three hectares. Its holding is mainly with owners as shown in Table 5.58.

Table 5.58 Distribution of the property in territorial units smaller than Imués.

TERRITORIAL UNIT	SIZE	SHAREHOLDING	HOLDING	SHAREHOLDING
La Recta Rural District	Micro-holding	100%	Owner	100%
Pilcuan viejo	Micro-holding	100%	Owner	90%
			Lessee	10%
Similag	Micro-holding	100%	No information	

Source: GEOCOL CONSULTORES S.A., 2017.

According to the above information, there is consistency with what is described in the behavior of the property structure of the municipality, where micro-holdings prevail and land tenure is given in a percentage greater than 70% with property titles.

5.3.4.8 Land use.

5.3.4.8.1 Contadero.

Land use in the territorial units studied in Contadero is concentrated in agriculture, forestry or subsistence and commercial fishing as shown in Table 5.59.

Table 5.59 Distribution of the land use in territorial units smaller than Contadero.

TERRITORIAL UNIT	LAND USE.	INTEREST
Aldea de María	Residential	100%
El Capulí	Agricultural, forestry or subsistence and commercial fishing	100%
El Culantro	Residential	100%
El Juncal	Agricultural, forestry or commercial fishing	97%
	Crafted	3%
El Manzano	Agricultural, forestry or commercial fishing	100%
Ip Ospina Pérez	Agricultural, forestry or subsistence and commercial fishing	100%
Iscuazan	Residential	100%
La Providencia	Residential	100%
Las Cuevas	Agricultural, forestry or subsistence fishing	100%
Las Delicias	Agricultural, forestry or subsistence fishing	10%
	Agricultural, forestry or commercial fishing	90%
	There are three properties used as car wash	
San Andrés	Agricultural, forestry or subsistence fishing	100%
San Francisco	Agricultural, forestry or subsistence and commercial fishing	100%
San José De Quisnamuez	Agricultural, forestry or subsistence and commercial fishing	100%

Source: GEOCOL CONSULTORES S.A., 2017.

The use of soil focuses on agricultural activities for subsistence and trade. In Iscuazan and La Providencia the land use is mainly residential.

5.3.4.8.2 Ilés.

In the eleven rural districts studied in Ilés, it is observed that in all, the predominant land use is defined as agriculture, forestry or fishing for subsistence and commercial purposes. (See **Table 5.60**).

In addition, in the district of Capulí, there is industrial land use related to mining, extracting construction materials, and land use for the purpose of tourism. This situation is directly related to the productive activities developed in the zone.

Table 5.60 Distribution of the land use in territorial units smaller than Ilés.

TERRITORIAL UNIT	LAND USE.	INTEREST
Alto del Rey	Agricultural, forestry or subsistence and urban fishing	100%
Capulí	Agricultural, forestry or subsistence fishing	60%
	Agricultural, forestry or commercial fishing	15%
	Industrial related to mining	5%
	Services oriented to the provision of tourism services	20%
El Porvenir	Agricultural, forestry or subsistence fishing	100%

TERRITORIAL UNIT	LAND USE.	INTEREST
El Rosario	Agricultural, forestry or subsistence and urban fishing	100%
La Esperanza	Agricultural, forestry or subsistence and urban fishing	100%
Loma Alta	Agricultural, forestry or subsistence fishing	20%
	Agricultural, forestry or commercial fishing	80%
Tablón Alto	Agricultural, forestry or subsistence fishing	100%
Tablón Bajo	Agricultural, forestry or subsistence fishing	100%
Tamburán	Agricultural, forestry or subsistence fishing	100%
Urban	Agricultural, forestry or subsistence and urban fishing	100%
Yarqui	Agricultural, forestry or subsistence and urban fishing	100%

Source: GEOCOL CONSULTORES S.A., 2017.

5.3.4.8.3 Imués.

The use of land in the rural districts of Pilcuan La Recta and Pilcuan Viejo are concentrated in agricultural, commercial and tourism activities. **Table 5.61** shows the percentage distribution reported during the survey.

Table 5.61 Distribution of the land use in territorial units smaller than Imués.

TERRITORIAL UNIT	LAND USE.	INTEREST
La Recta Rural District	Agricultural, forestry or subsistence fishing	40%
	Trade-driven services	10%
	Tourism sector-driven services	50%
Pilcuan viejo	Agricultural, forestry or subsistence fishing	30%
	Agricultural, forestry or commercial fishing	10%
	Trade-driven services	10%
	Tourism sector-driven services	50%

Source: GEOCOL CONSULTORES S.A., 2017.

As observed in the two rural districts, 50% of the land is devoted to the tourism sector, followed by agricultural use with 40%, 10% in both cases is destined for the trade sector.

For the Silimag rural district, it is not possible to establish the distribution of land use due to lack of information provided by the community.

In the three rural districts, land use is also reported for residential purposes.

5.3.4.9 Productive and technology processes.

5.3.4.9.1 Contadero.

The productive processes and economic activities of the territorial units are concentrated in the primary sector, especially in the agriculture with potato and pea crops mainly. The production is used for self-consumption and trade in a 10-90 ratio, respectively.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

The sale of surplus production is carried out by means of intermediaries who distribute the production in the market of Ipiales and Pasto. See **Table 5.62** and **Photograph 5.11**.

Photograph 5.11 Activity of the primary sector in minor territorial units of Contadero.

Source: GEOCOL CONSULTORES S.A., 2017.

The La Providencia rural district is the only one not economically dependent on agricultural activity and its economy focuses on the provision of services and trade as observed hereinafter.

In the El Juncal district there is mining for gravel material. (See **Photograph 5.11**).

5.3.4.9.2 Ilés.

The main productive activity developed in the minor territorial units of Ilés is agriculture, producing mainly potatoes, onions, peas, and kidney beans. The production is traditional, with the exception of the Capulí rural district, where tools such as harvesting machines (coffee) and soil preparation processes are used. The destination of the production is for self-consumption and sale of surplus, where the latter range between 80 and 90% of the total production.

Marketing is widespread through intermediaries who carry products to the municipality of Ipiales and Pasto; in some cases, distribution is reported to the city Bogota, Medellin and Cali.

Table 5.63 includes a breakdown of the agricultural and livestock production for each of the eleven rural districts under study. See **Photograph 5.12**.

Table 5.63 Activity of the primary sector in minor territorial units of Ilés.

Mining sector activity is registered in the rural districts of Rosario and Capulí, in the first there is extraction of stone and gravel used for Construction and is sold to the Ilés Mayor's office. In Capulí there is extraction of material which is employed in road construction, the extraction is done in the Guaitará river.

5.3.4.9.3 Imués.

The economy of Pilcuan de la Recta is concentrated in the primary sector with agricultural and livestock production. In the agricultural sector, production is traditional, where 50% of production is destined for self-

consumption and the remaining 50% is sold to tourists arriving in the area. This activity takes place in ten hectares.

The livestock sector focuses on poultry and pork production, covering four hectares where poultry and pork farms exist; unlike agricultural activity, livestock activity demands additional labor, in addition to the owner of the property where it is developed. This activity is developed in a technological way and its destination is 100% commercial; those who demand production are the restaurants and butchers located in the area.

In the Pilcuan Viejo rural district, there is traditional agricultural activity, where 80% of the production is for own consumption and 20% is marketed in the Ipiales and Pasto markets. There is labor demand for this work. In this rural district, no agricultural activity is reported.

In Silimag, there is agricultural activity for self consumption purposes.

Table 5.64 shows the production reported in each of the rural districts

Table 5.64 Activity of the primary sector in minor territorial units of Imués.

TERRITORIAL UNIT	ACTIVITY	PRODUCTION
La Recta Rural District	Agricultural	Bean Corn Coffee Plantain Fruit trees
	Livestock	Poultry Pig farming
Pilcuan viejo	Agricultural	Fruit trees Custard apple Bean Onion Tomato
Silimag	Agricultural	Coffee Lima Orange Guava Custard apple Lemon Plantain Avocado

Source: GEOCOL CONSULTORES S.A., 2017.

None of the paths studied recorded mining, oil and industrial and/or traditional activities, except for the Silimag rural district, where craft activity is recorded with the production of baskets made with the leaf of Juco

5.3.4.10 Characteristics of the labor market.

5.3.4.10.1 Contadero.

Table 5.65 shows the behavior of the labor market in the thirteen rural districts of Contadero.

Table 5.65 Labor market of minor territorial units in Contadero.

Territorial Unit	Forms of work organization	Value of a day's work	Labor market problems	Reported employment	Activity with greater source of employment
Aldea de María	Family, two to three people per family	17 thousand pesos	People are not enrolled in the health regime as contributors, they all belong to the sisbén	N/D	Pea crop
El Capulí	Family, two to three people per family	20 thousand pesos	N/D	50%	Agriculture in the time of sowing and harvest.
El Culantro	Day's work	17 thousand pesos	N/D	0%	Everybody works in their land, there is no demand for additional labor, only in potato crops
El Juncal	Family (10%) Day's Work (90%)	15 thousand pesos	N/D	People come from the Iles and Quisnamuez rural districts to meet the labor supply demand	Poultry production, agriculture, mining and production of baskets.
El Manzano	Approximately 1 person per family works	12 - 15 thousand pesos	N/D	30%	Agricultural and Livestock
Ip Ospina Pérez	Day's work, approx. 4 people per family work	15 - 20 thousand pesos	People are not enrolled in the health regime as contributors, they all belong to the sisbén	40%	Agriculture - Livestock
Iscuzan	Day's work	17 thousand with food	Work depends on harvests, is not continuous	10% unemployment and 90% underemployment	Agriculture
La Providencia	Approx. 5 people per family work	20 thousand pesos	N/D	50%	Shops, tire change shops and service station
Las Cuevas	Family, two to three people per family work Laborers	16 thousand pesos	N/D	Underemployment and unemployment are reported but cannot be quantified	Agriculture, people work in their farms
Las Delicias	40 people in the entire rural district	15 thousand pesos	N/D	20%	Car wash, sheds and agriculture
San Andrés	Approx. 4 people per family work	18 thousand pesos	People are not enrolled in the health regime as contributors, they all belong to the sisbén	Underemployment and unemployment are reported but cannot be quantified	Agriculture - Livestock
San Francisco	Approx. 2 people per family work	16 thousand pesos	People from other places come to get a job	No unemployment is reported	Agriculture and mayor's office
San José De Quisnamuez	Approximately 1 person per family works	17 - 20 thousand	People are not enrolled in the health regime as	10%	Agriculture

Territorial Unit	Forms of work organization	Value of a day's work	Labor market problems	Reported employment	Activity with greater source of employment
		pesos with food	contributors, they all belong to the sisbén		

Source: GEOCOL CONSULTORES S.A., 2017.

The labor market revolves around the productive activities that take place in each of them, that is, that the labor places are concentrated mainly in agriculture and livestock.

A day's work ranges from 12 to 20 thousand pesos including food, in the El Manzano rural district, a day's work value is the lowest wage is recorded, 12 thousand pesos. There are no additional places to demand labor from nearby places, with the exception of the El Juncal rural district.

In the rural districts of San Francisco and El Culantro, an unemployment rate of 0% is reported; in the other rural districts there is unemployment, being the La Providencia rural district the highest rate with 50%.

5.3.4.10.2 Ilés.

The labor offers in Ilés rural districts are concentrated in the agricultural sector mainly, in Capulí there is demand for construction, commerce and tourism labor. In La Esperanza, where there is no activity in the primary sector, jobs are offered in the services sector, in the existing restaurants and car washes.

Table 5.66 shows the characteristics of the labor market for each of the rural districts

Table 5.66 Labor market of minor territorial units in Ilés.

Territorial Unit	Forms of work organization	Value of a day's work	Labor market problems	Reported employment	Activity with greater source of employment
Alto del Rey	Day's work	15 thousand pesos	Each one works in their land, there are no additional job offers	N/D	Agriculture
Capulí	Day's work, approx. 2 people per family work	15 thousand pesos in agro 25,000 pesos in construction	N/D	30%	Construction, agriculture, livestock, trade, tourism, services
El Porvenir	Day's work	15 thousand pesos	Not all people are employed	50%	Agriculture, recently in the construction of urban developments
El Rosario	Approx. 3 people per family work	17 thousand pesos	N/D	N/D	Agriculture
La Esperanza	Approx. 3 people per family work	15 - 17 thousand pesos	People from Cali, Bogotá and Cauca are coming to work	0%	Car wash - restaurants
Loma Alta	Day's work, approx. 2 people per family work	20 thousand pesos	N/D	N/D	Agriculture
Tablón Alto	Day's work	15 thousand pesos	In the rainy season, the labor demand is diminished.	N/D	Agriculture

Territorial Unit	Forms of work organization	Value of a day's work	Labor market problems	Reported employment	Activity with greater source of employment
Tablón Bajo	Day's work	12 thousand pesos	The labor demand is concentrated only in agriculture	N/D	Agriculture
Tamburán	Day's work	18 thousand pesos		20%	Agriculture
Urban	Day's work	17 thousand pesos	The labor demand increases at the time of potato harvesting	30%	Agriculture
Yarqui	Day's work, approx. 4 people per family work	20 thousand pesos	N/D	40 people	Agriculture

Source: GEOCOL CONSULTORES S.A., 2017.

A day's work value ranges from twelve thousand to 20 thousand, if it is the primary sector. In the El Tablón Bajo rural district is where the lowest value of the day's work is recorded, while Yarqui and Loma Alta offer the highest remuneration. In Capulí the value of a day's work for construction is 25 thousand pesos.

5.3.4.10.3 Imués.

Table 5.67 shows the behavior of the labor market in each of the smaller territorial units analyzed in the municipality of Imués.

Table 5.67 Labor market of minor territorial units in Imués.

Territorial Unit	Forms of work organization	Value of a day's work	Labor market problems	Reported employment	Activity with greater source of employment
La Recta Rural District	Family	20 - 30 thousand pesos	There is demand for labor but there is no offer because the neighboring population does not want to move to other places. In the rural district, there is no population looking for a job	An estimate of 20% of unemployed persons is recorded, as well as underemployment	Tourism
Pilcuan viejo	Laborers	\$12,000 in agriculture. 20-25 thousand pesos in construction	There are not enough job offers that cover the current demand on the rural district. People come from other places to get jobs that could be covered by the inhabitants	An estimated 50% unemployment is estimated among the economically active population	Informal sales generated by tourism
Silimag	Laborers	\$15,000	There is no job offer that allows the population to be located	According to the population, 99% are unemployed.	Masonry and agriculture

Source: GEOCOL CONSULTORES S.A., 2017.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

5.3.4.11 Productive Programs and Projects.

5.3.4.11.1 Contadero.

With the information recorded in the field, it is evident that there are no projects in execution or planned to increase and improve the production of the rural districts; only Izcuazan records the construction of the collection center, which will allow to have a central point to market at the internal and external level, agricultural production, which aims to reduce the number of intermediaries and increase the production profitability of the population.

5.3.4.11.2 Ilés.

Although it is generally recognized that the municipality of Ilés reports the greatest development and at the same time the greatest projection of growth in the rural districts analyzed, no program and / or productive project is reported, which promotes the development and growth thereof.

5.3.4.11.3 Imués.

According to the information captured in the field, it is possible to establish that only in the Pilcuan Viejo rural district has a production project related to the production of smaller species, where the aim is to implement poultry production.

5.3.4.12 Production chains.

5.3.4.12.1 Contadero.

According to the information gathered in the field it is possible to establish that the productive chains of the area of minor territorial units of Contadero are directly related to the municipality of Ipiales.

Agricultural, dairy and meat production are traded via intermediaries, who bring the products to the municipality of Ipiales.

The production is traditional; in some cases only work is done with preparation of the land by means of tractors and in San Francisco there is an irrigation district for the potato and pea crops.

5.3.4.12.2 Ilés.

The productive chain present in the rural district is precarious, there is no transformation of raw materials or agricultural production and livestock, except for cheese. The commercialization is carried out by means of intermediaries who are those who later sell this production to collection centers or to processors.

5.3.4.12.3 Imués.

There are no definite production chains in the three rural districts analyzed, evidencing a defined production and marketing system; a situation consistent with the fact that in these districts, there is an self consumption

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

economy, without technification. Additionally, production classified as surplus production is marketed in the same rural district without any added value.

5.3.4.13 Existing infrastructure.

5.3.4.13.1 Contadero.

There is no record of infrastructure to allow the development of productive activities, only the irrigation district in San Francisco and the collection center under construction in Izcuazaman, as already mentioned.

5.3.4.13.2 Iles.

According to the information collected in the field, there is no evidence of an infrastructure that allows the processing of agricultural and livestock production could add value thereto.

5.3.4.13.3 Imués.

At present, there is no existing infrastructure that allows the development of productive activities in a technological way, as already mentioned; in the territorial units of Imués there is no activity in the secondary sector and the production of the primary sector is developed in a very traditional way.

In development plans, there is no evidence of construction or implementation of some type of infrastructure that allows an improvement in the development of current activities.

5.3.4.14 Development Hubs.

There are no latent development hubs in the rural districts that allow the establishment in the short or medium term of a new productive activity or the improvement of the existing ones to allow the technification or the improvement of production

It is expected that with the execution of the project, an increase in commercial activity will be developed in the short term, covering the demand of the floating population that will be found there. Likewise, it is expected that in the medium term, better access to existing ones will be achieved to increase the trading of the current products in nearby places, thus improving the incomes of the families and, therefore, an improvement in their quality of life.

5.3.4.15 Commercial structure.

5.3.4.15.1 Contadero.

The commercial structure of the smaller territorial units of Contadero is focused on the existence of stores mainly, which are supplied in the municipality of Ipiales. In the La Providencia rural district, there are establishments providing services such as tire replacement shops and a service station, and in Las Delicias there are four car washes along the roadside, generating significant jobs for the population. See **Table 5.68** and **Photograph 5.13**.

Table 5.68 Commercial structure of minor territorial units in Contadero.

Territorial Unit	Existing infrastructure	No. of commercial establishments	Labor demand	Supply sites	Market Networks

5.3.4.15.2 Ilés.

The commercial activity in the rural districts under study in Ilés shows a trade with little development in the rural districts of El Rosario, Loma Alta, Tablón Alto, Tamburán and Urbano; no commercial establishments are recorded. In the other rural districts, the existence of stores is recorded, where food and different products of the family basket can be obtained; their most common place of supply is Ipiales.

Table 5.69 and Photograph 5.14 record and show the characteristics of the commercial structure of each one of the rural districts.

Table 5.69 Commercial structure of minor territorial units in Ilés.

According to the previous information it can be said that the La Esperanza rural district reports the greatest commercial activity with the existence not only of establishments of goods but also of Services such as tire replacement shops, restaurants and service stations. See **Photograph 5.15**.

Photograph 5.15 Commercial and service activity in the La Esperanza rural district.

Source: GEOCOL CONSULTORES S.A 2017.

5.3.4.15.3 Imués.

The commercial structure of the rural districts of Imués is represented by restaurants and service provision establishments, as evidenced in Table 5.70.

Table 5.70 Commercial structure of minor territorial units in Imués.

Territorial Unit	Existing infrastructure	No. of commercial establishments	Labor demand	Supply sites	Market Networks

5.3.4.17 Fishermen Census.

According to the information gathered in the field, it is possible to establish that there is no fishing activity in the smaller territorial units studied; therefore, what this item requires is not developed, according to terms of reference.

5.3.5 Cultural component.

The cultural component is developed below. For non-ethnic communities, factors related to settlement patterns, historical events, cultural symbols, traditional uses of natural resources and the environment will be taken into account.

For the ethnic communities present in the regional context of the project, factors referring to health, religion, education, traditional economic and cultural practices shall be described.

5.3.5.1 Non-ethnic communities.

Non-ethnic communities are population groups made up of people who voluntarily congregate in a territory because of their similarities and cultural preferences other than those identified as ethnic. **Invalid source specified..**

5.3.5.1.1 Settlement patterns and historical facts.

Generally speaking, and as previously mentioned herein, historically, the population was distributed according to the incidence of abiotic factors such as climate, topography, soil quality, water resources, etc., being these are essential for the development of domestic and productive activities that constitute the basis of food and subsistence; in addition, there are social factors, which include economic, political and cultural factors that also affect distribution and settlement patterns.

From the economic point of view, the population of the municipalities is concentrated in the sites of great agricultural and livestock activity, specifically Imues, Iles, Contadero. Ipiales delves around livestock and agriculture, but also subsists with minerals such as oil in the Churuyaco jungle, stone quarries and handicrafts in Las Lajas, gravel in Puente Viejo, clay in El Tejar.

On the other hand, the effect of the policy is based on the fact that, through governmental decision-making, the concentration of population in a given region or territory can be stimulated or not; they also allow the population to adapt or not to their forms of power.

Generally speaking, it may be affirmed that in the different municipalities, the first inhabitants who came to the territory, motivated for improving their living conditions, the mountains, climate, water sources, fertile land, which became important elements in the economy, family and social welfare. The prevailing and transversal economy in the population was always agriculture, which is still a constant as a means of subsistence. Likewise, barter as approach to a strategy of commercialization of products between pueblos is noticed.

Table 5.71 shows the relevant aspects of the settlement patterns of the municipalities of Ipiales, Contadero, Iles and Imues.

Table 5.71 Settlement patterns.

MAJOR TERRITORIAL UNIT	SETTLEMENT PATTERNS
IPIALES	<p>Historically, they are descendants from the Pastos culture, which geographically comes from the old town of Tuza (San Gabriel) in Ecuador; the highlands of Túquerres, Ipiales, Tulcán and areas surrounding the elevations of Cumbal, Chiles and Colimba. All the municipalities of the former Obando Province, populations located in the middle of the "Pastarán" (Guaitara or Carchi) river and, to the north, to the municipality of Yacuanquer", the cultural integrity of the territory, should be referred to as the "Great Territory Pasto - Karanqui". The foundation of Ipiales is not really documented; however there are several versions that point to Mercedarian parents with their evangelizing mission; in 1615, by means of a document, it was known that they informed to the king that the town of Ipiales was comprised of 12 houses with 23 people, with lands suitable for the sowing and a hermitage. After the foundation of Ipiales, until the Colombian independence of Colombia, it is said that there was an enthronement of the Spanish culture, through language, religion, the implementation of a productive system, social economic relations and territorial governance.</p> <p>On the other hand, the change of Ipiales gives rise to a revolution and, therefore, development. In the second half of the nineteenth century, new routes were opened for trade between the coast and the Mountain, the operation of the telegraph was presented, which implied the need for eucalyptus poles (In Ipiales in 1880 the sowing of this species began, proliferating its species at present, causing a great impact in soil and in water). In 1,872 there were 9 schools in the sovereign state of Cauca and 1 of them was located in Obando; in 1,886 the fathers of the Oratorium arrived.</p> <p>In recent history, there are events that affect the life of people; the construction of the San Luis airport (1940); the design and construction of the aqueduct system (1,945). In the early years of the twentieth century, factories and businesses were settled in Ipiales, representing the foundation of its current economic structure; some of these initiatives indicate the route of work and others are a benchmark to consider the reactivation with improved criteria: factories of buttons, stockings, textiles, coffee, soft drinks, are activities listed as business initiatives. In 1,930 the Ecuadorean citizen, Fernando Pérez Pallarez opened a textile and gas factory and a power plant in Las Lajas, among other companies, generating jobs and development.</p> <p>In the 1940s, Bavaria came to redirect the productive structure of the agricultural sector and in the south. A product such as barley that was not part of the agricultural supply becomes intensively cultivated. For 5 decades, the company works, demanding that product, influencing the behavior of other sectors, such as trade, transportation, services, etc. The implementation of the Neoliberal model allows the entry of barley and other agricultural products from countries with competitive advantages; local activity declines with the consequent closure of the company.</p> <p>In recent years, it is possible to refer to the fact that the local economy becomes similar to that inherited by the ancestors, especially based in the agricultural sector, the commercial sector, transport, micro industrial, micro business and crafts, tourism, services and informal economy. Invalid source specified.</p>
CONTADERO	<p>The first settlers of the municipality of Contadero were the Pastos, who occupied and the territory between San Gabriel (Ecuador) to the convergence of the Bobo and the Guaitara Rivers, to its mouth with the Patía river, including the area of Yacuanquer and leaks of Pasto. These aboriginal peoples according to JIJON and CAAMAÑO in the seventeenth century, were divided into the Pastos themselves, Barbacoas or Coayqueres, Muellamueses and Colimas. In the province of Obando, tombs have been found, where the pottery reflects their beliefs and customs.</p> <p>The organization of the Pastos was based on chiefdoms, where the Puerres, Pupiales, Túrreques, Cumbal, Mallama, Mallasquer, Cuaspud, stand out; it is known that there was a small indigenous settlement called Putisnán, which is now known as the Aldea de María. These indigenous communities were especially dedicated to agriculture, which they exchanged for gold and chaquiras; they worked with cotton and made blankets, knew about pottery, loom and rock engraving; they were respectful of nature. Invalid source specified.</p>

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

MAJOR TERRITORIAL UNIT	SETTLEMENT PATTERNS
	<p>In 1712, Jesuit Fathers are granted the lands through a land deed of donation. In 1868, presbyter Carlos Guerrero Chamorro obtains the permission to found the Contadero, buying from Dona Dominga, widow of Chamorro the property lot necessary to found the population, and on October 1, 1869 the foundation of Contadero is declared. On April 14, 1871 El Contadero was elevated to the category of district, by Ordinance number four of book 107, of the statistical yearbook of Popayán, belonging to the Province of Obando. In this year, the municipality of Obando erected the district of Contadero, annexing the district of Iles, in 1874 the same assembly of the old Cauca, segregated Iles and suppressed the district of Gualmatán that united it to El Contadero, later Gualmatán regained the category of district and El Contadero was added the sections of San Juan, Yanalá and Chaguaipa. In 1911, the Assembly of Nariño returned these sections to Ipiales, adding La Aldea de María to the district of Contadero. The name of Contadero is possibly derived from the activity carried out by the Jesuits to count cattle. The road from San Juan to Contadero was made with the support of the presbyter José Manuel Bravo and Don Leopoldo Mercado, owner of the flour industry at that time, and subsequently installed the postal services that communicated Ipiales, Contadero, Gualmatán and Iles. It was one of the first municipalities to have electric light because the flour industry built a dam on the Boquerón river to generate electric power for the factory's engines, which was exempt from taxes as long as energy was supplied for lighting the town. On the Cutipáz river, there were also 5 stone mills, of which there is only one in the Yaez rural district, used at that time to grind barley grains, Moroccan corn and capy corn. Gradually, El Contadero was populated, and it is confirmed that the families who arrived after the foundation were the Polo, Davila, Herrera, Jacome, Guerrero, Chamorro, Figueroa, Vallejo and Bravo. Indigenous surnames correspond to Chalapud, Cuayal, Quendies, Tulcaná, Palma, Ilisman, Guasachir and Guapucal. Invalid source specified.</p>
ILES	<p>The municipality was founded in 1,711 by an expedition heading to Popayán from Quito. The municipality takes name in memory of the Juan García Tulcazana Ilisman chief, being legally recognized at the Popayán governor's office. From 1,538 to 1,711, the south and the center of Nariño was dominated by the Quillacinga tribe, who with its primitive command systems, subjected these areas; therefore, it was called the "Providence of Quillacinga", a tribe that gave rise to other families that, with the passage of time, sought to become independent in search of suitable places to live, where the land could provide enough food for all. From the Royal Audience of Quito, an expedition to the "PROVIDENCE OF QUILLACINGA" (Northern Ecuadorian period) was authorized to normalize the ruling anarchy and preserve peace between tribes and communities: therefore, they tried to establish themselves in sites apart from each other and create a territorial jurisdiction in the establishment of the supremacy authority of Quito, which depended on The Royal Spanish crown, thus setting their domain therein, and imposing their primitive customs of Religion and of control. According to the oral tradition, in 1.787 a commission of Spaniards coming from Quito, arrived to the incipient Iles village, that only 30 or 40 huts, all in poor condition and a chapel, with an image of Our Lady.</p>
IMUES	<p>The municipality was founded in the sixteenth century, in 1572, according to the Departmental Statistical Plan of 1991-1992. It was founded by the Carlos Quiscalud de Imués chief, who settled with his family in the territory, as a strategic point for the visibility if attacked at some time by his enemies; the area had all basic supplies for sustenance, firewood, water, fertile land for agriculture. The main access road known as the old Bolívar road or royal road; was the main road or corridor of communication with the neighboring towns. With the arrival of other inhabitants of neighboring places, around the Guaitara River and called the Quillacingas, as the case of Guaitarilla, Ancuya, Consaca, Yacuanquer, Tangua, Samaniego, Funes, Contadero and others, the great family of the chiefdom of the time was created. Invalid source specified. In 1849, the municipality of Imues was considered a province, belonging to the municipality of Turreques and from that date was considered a municipality of the department of Nariño. IMUES, means HIDDEN WATER. At times of intense sun, the population used leather, which they used to climb up to the Cambutes hill near the Vocanas site, where there was a water spring, and that is where they performed their rituals to avoid the drought Invalid source specified.</p>

Source: GEOCOL CONSULTORES SA, 2017, based on information from the development plans of the municipalities.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

5.3.5.1.2 Cultural Symbols.

The most important cultural symbol of the region is the White and Black Carnival, this festival dates back to pre-Columbian times with dance and music.

The White and Black Carnival is derived from the fusion of multiple cultures and expressions, corresponding to the Andes, the Amazon and the culture of the Pacific. Celebrated for the first time in the 16th century in 1546, the dates of celebration have a purely indigenous origin as it coincides with the celebration of the Moon (Quilla), which is reminiscent of the rituals performed by the Pastos and the Quisquillas; agricultural cultures that, at the time of harvest, honored the moon with dances, and in other rituals they prayed to the sun, to protect their crops.

Another version of the first festival is that this takes place on the day of kings (January 6) of 1912, in a house of Pasto located in the Calle Real (currently Carrera 25); Don Ángel María López Zarama, famous tailor of the city, scatters dust with the perfume of a woman, among all those present saying "Vivan los Blanquitos! out loud. The colleagues of the master designer were first victims first and then became part of the game. Then everyone would have to go out and repeat the joke with the unprepared parishioners coming out of Mass in the San Juan Bautista Church, repeating that ¡Que Vivan los Negros y que Vivan los Blancos!, expression that under the custody of the Galeras, will be embedded forever in the essence of the Pastusos.

Las most representative national celebrations are those carried out in the city of Pasto; however, they are carried out the different municipalities of the region, as already mentioned.

The festivities usually begin on December 28 "the day of the innocent", being an ecological day through recreation sports; in previous years, it was known as the day of the Water, when people threw water to each other.

On December 31, the old-age parade takes place, which dates back to the 1930s. In this parade, national and local characters are seen; the day of the colonies is celebrated on January 2, where a parade takes place with various bands. January 3 is the march of youth, called "youth day or Carnavalito". It emphasizes the participation of children with a parade of small murgas and miniature carriages.

January 4 has been established as the prelude to our carnival. Through time and since 1928, this day is known as the parade of the Castañeda Family, who are said to have returned from a failed settlement, from putumayo. The tour is done on foot and in carts, carrying trunks, baskets, cigars, chairs, coffee makers and multiple farm animals.

On January 5, the "Black Day", is the celebration of the year in which the black communities asked the king of Spain a day of rest and freedom, which was granted on January 5, 1607 to celebrate this festivity. The white, mestizo tourist communities have joined the celebration by painting their face in black under the ritual of "pintica" in a crowded and popular party full of music and color.

January 6, the last day of the carnival, is the White Day, there is a parade of very colorful carriages, full of majesty, as shown in **Figure 5.27**.

Figure 5.27 Typical Carriage.

Source: History of the White and Black Carnival.

It is worth emphasizing that The White and Black festivals on September 30, 2009 were declared an "Intangible Cultural Heritage of Humanity" by the UNESCO committee.

The following describes the cultural activities and symbols for each of the territorial units studied. See Table 5.72.

Table 5.72 Cultural Symbols by Major Territorial Unit.

MAJOR TERRITORIAL UNIT	CULTURAL SYMBOLS
IPIALES	<p>In Ipiales, the Whites and Blacks Carnival is called The Multicolor Carnival of the Border since 2008, is a traditionalist event that takes place between January 2 to 6 every year. The festival is held with the following schedule:</p> <ul style="list-style-type: none"> ü December 28, the game of innocents and the cavalcade were held, ü December 31, the farewell of old years, ü January 2, the carnival of youth, ü January 3, the carnival of The province, ü January 4, the "carnavalito", ü January 5, the arrival of the Ipial family, black day, ü January 6, white day, parade of carriages, murgas, individual and couple costumes. <p>There is also the carnival of the ethnic group of the Pastos, festivals in the townships and rural districts of the municipality of Ipiales, which date back to distant times of celebration.</p> <p>These festivities highlight the religious traditions that are part of the cultural, family, economic, political and artistic traditions of the area. These traditions have been passed from generation to generation through oral traditions.</p> <p>In Ipiales, the population participates in turn in religious and patron saints acts, among which we can mention the feast of the Virgin of Las Lajas that is celebrated in September, the "passing by" of the Infant Jesus, the Immaculate Conception, St. Bartholomew, St. Peter Martyr, St. Philip Nery, St. Francis of Assisi, Immaculate Conception, Christ the Worker, Virgin of the Miraculous Medal, Lord of the Column, Virgin of the Carmen, Lord of the Great Power.</p>

MAJOR TERRITORIAL UNIT	CULTURAL SYMBOLS
	Finally in October the Obando Municipality day is celebrated. Invalid source specified.
CONTADERO	As in Ipiales, in El Contadero there are celebrations of religious nature, where the traditional traditions stand out. The black and white festival is held in the same way at the end of the year. In June, the festivities of the Sacred Heart of Jesus are celebrated, where an international dance meeting takes place, which over the years has been strengthened and institutionalized with the participation of several renowned national and international groups o from countries such as Peru, Ecuador, Bolivia and Argentina. In addition one of the most colorful expressions of these festivities, is related to the traditional procession of arcs.
ILES	At the end of the year, as in the majority of municipalities of Nariño, the Whites and Negros Carnival is celebrated, according to the tradition. There is the patronal party to "Our Lady of the Rosary of Iles" which is held on the first Sunday of October, begins with a fortnight period with the participation of neighborhoods, rural districts, neighbors, colonies and followers of Ecuador, leaving their alms as a token of appreciation for the favors and miracles received. The history of Our Lady of the Rosary goes back to the time when the image came from Central America, via Bogota - Pasto, brought by the Dominican community who intended to transfer it to Ecuador. The expedition was led by two Dominican friars who ordered to continue the march the day after arriving in the municipality, they walked three kilometers when a storm forced them to return, a situation that was repeated several times. Quasalpud, who ran the chapel at night, had a dream in the midst of which the Virgin said to him: "Do not be a fool, for here I am going to settle my great house." Situation that was commented to the friars. On the other hand, the "Latin American Dance Contest" is held in the municipality, with the participation of groups from Colombia, Ecuador, Peru and Bolivia. Invalid source specified.
IMUES	In the Municipality, each year, 13 activities are organized that revolve around religious and patron saint festivals characterized by artistic, cultural and folkloric activities, where such activities take place, including the Virgin Festival, child's day, peasant's day and veneration to the patrons of each rural district. The celebrations take place in the main square and sports venues. The Virgin Festivity is celebrated on May 29.

5.3.5.2 Non-ethnic communities present in the ADI.

When referring about the Nariño culture, a combination of expressions of three human groups that survived the Spanish cultural extermination is referred to: indigenous, black and mestizo or serranos and that produces a diverse, multi and pluricultural territory; the Indians are divided into two groups: Cuaiques: located on the border with Ecuador, of low stature and peculiar physical characteristics. Blacks, who are found mainly on the Pacific coast, they are basically characterized by their joviality, their main urban centers are Tumaco, Barbacoas and Guapy.

Finally, mestizos or serranos - the population group that is settled in the internal part of the department and represents approximately 70% of the total population, within its main characteristics are those of being enterprising and cheerful people, respectful of their customs and traditions, it is important to emphasize their sense of belonging, especially to their family environment. This population group corresponds to the communities settled in the ADI of the Rumichaca - Pasto Divided Highway Project, San Juan Pedregal Segment, which preserve their customs and uses of the environment in accordance with the culture of the Nariño mountain, as will be described next below.

With respect to sites of cultural interest in the rural districts of ADI, according to the rural district specifications, although not all minor territorial units show that they have some type of cultural identification of their own and / or sites of cultural and / or scenic interest, **Table 5.73** describes these places and / or customs in the ADI.

Table 5.73 Places of cultural interest in the ADI.

major territorial unit	minor territorial unit	cultural identification
Contadero	Isquazan	Dance, patronal parties, hill
	Los Manzanos	Capilla del Niño Jesús
	San Francisco	The point known as Bellavista has three crosses from where you can see the whole municipality
	Culantro and Las Delicias	Piedra de los monos
	La Cueva	Rocks with petroglyphs
	San José de Quisnamuez	Houses of approximately 100
	Las Delicias	Nacederos
Iles	La Esperanza	Borojó Restaurant
	El Porvenir	Bosque El infiernillo
	La Esperanza	Groot of the Las Lajas Virgin and Humeadora Cascade
	Urban	La Chorrera water fountain
	Tablón Alto and Tablón Bajo	Las Lomas Viewpoint
	Capulí	Guitarra River Canyon
Imues	La Recta Rural District	Cross, spas and cockpits

Source: GEOCOL CONSULTORES S.A., 2017.

It is important to mention in the case of the Pilcuan La Recta rural district, the existence of the cockpit attracts population of Peru and Ecuador to make bets there, as well, the El Infiernillo Forest of the Porvenir rural district, municipality of Iles, which was fell to develop mining activities.

Along these lines, it was found that some of the smaller territorial units have patron saints they venerate as community, mainly including, among these the Virgin of The Lajas, Child Jesus, Child Jesus de Silamag, Jesus Christ of Prague in El Culantro, Los Manzanos, the Virgin of the Rosary or La Charito in Capulí de Iles, Lord of Good Hope of Pilcuan La Recta in Imues and the Virgin of the Carmen in Las Delicias de Contadero.

Among the most renowned festivities or celebrations in the smaller territorial units, it is important to emphasize, that these are in general, related to the strong catholic tradition of the area; although there are some Protestant groups, the population is mostly Catholic and this means that among the most outstanding celebrations are the Lord of good death, those of the baby Jesus who are mainly in December, Virgin of the

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Rosary in October in the case of the El Rosario de Iles unit; also those of the Lord of the Good Hope of Pilcuan La Recta in Imues, the carnivals in January of Pilcuan Viejo inde Imues and Capulí de Iles, the Virgin of the Holy Rosary patron of the pregnant women from October 1 to 6, also in Capulí de Iles and in general, the December festivities and Easter.

With respect to the gastronomy, is the typical food from Nariño, taking into account that in general, the communities report among their typical dishes the Guinea Pig, Stuffed Pork (Lechona), Corn (mazamorra), hen, champus, chicha, "tostado" and "fanesca"; likewise, the myths and legends of the zone are associated with such things as the pact with the devil, the ghost of the headless, the chained, the widow, the Elf, the giant serpent that eats people (Pilcuan La Recta in Imues), the old one, the shadow on horseback in the creek (Capulí de Iles).

Regarding the community customs, it was found that the main means for the resolution of conflicts, corresponds to the dialogue, resorting to the municipal and / or police authorities. On the other side, the market days are Monday and Saturday in Contadero and Sunday in Iles and Imues. While enquiring about the perpetuated customs, we may mention the use of herbs and medicinal plants, cooking mazamorra and, in the particular case of the La Cueva de Contadero rural district, the history of the cave named after it is conveyed from generation to generation.

In the case of sports and dances, among the most popular are soccer, basketball and volleyball as practices for the use of free time; in the rural district Pilcuan La Recta de Imues, there is a typical dance group, while in Tablón Bajo de Iles, the Chaza's team stands out in the rural district. The latter, is an ancestral sport known as "pastuso tennis" which implies using a rubber ball and a wooden racket (called bombo) (see **Photograph 5.17**), where the purpose of the game is to throw the ball, striking it with the hand or with the racket, so that it falls within the rival field trying not to return it. Chaza is considered the autochthonous sport of the department of Nariño, it was created by the natives who inhabited the area in the 15th century in the present Colombian-Ecuadorian border. It has a great resemblance to tennis, because it is practiced on a rectangular terrain delimited by lines and divided by a line drawn on the floor that serves as a network; however, this is disputed between two teams of 4 players each. (See **Photograph 5.18**).

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

To conclude, in terms of the use and management of the environment, domestic forestry is one of the main anthropic activities of the communities of the ADI, followed by fishing in nearby bodies of water for self-consumption.

5.3.5.3 Ethnic communities.

5.3.6 Archaeological component.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

5.3.7 Political-Organizational Component.

The Political-Organizational component allows to show the aspects related to the organization, the decision-making, the presence of actors and institutions that represent the political relationship and the present organizational dynamics at the municipal level, presenting the political and organizational characteristics of the major and minor territorial units at all levels and instances involved in the decision-making. According to Samuel Phillips (1968) a political system corresponds to a series of institutions identified by a legal regime, with participation and exercise of political power through institutions and acts of government¹. The organizational structures of the territorial units identified for the Influence Area (AI) of the "Environmental impact assessment for the Rumichaca - Pasto divided highway project, San Juan - Pedregal Segment" are described below.

5.3.7.1 Political - Administrative Aspects.

According to Samuel Phillips Huntington, a political scientist and professor of political science at Harvard University, the political system is a set of institutions that have certain formal expressions that are identifiable in the legal regime, in relation to a certain level of participation that manifests itself in empirically observable behaviors that exert political power through the institutions and acts of government. The political aspects are understood as those characteristics that make it possible the exercise power in municipalities and territorial units identified.

In this sense, at the municipal level, the administrations of Ipiales, Contadero, Iles and Imues have different secretariats and dependencies, each with a role defined aimed at meeting the needs of the population through programs and projects that allow them to fulfill their social objectives. The organizational, administrative and political structure aspects of the municipalities that constitute the major territorial units for the present project are presented below.

5.3.7.1.1 Structure of Local Power - Major Territorial Units.

To be clear about the organizational dynamics of the communities of interest, it is necessary to analyze the existing power structures in the territorial units of the area of influence, taking as reference to the author Max Weber, who states that any structure of power determines how the power itself is distributed in the social group and determines power as the "possibility" that an individual or several of them have to do their own will in a common action even with the opposition of other individuals in the action³³³. The structure of power from the institutional level is constituted by the municipal administration of Ipiales, Contadero, Iles and Imues, the municipal council, the representatives of the control entities as the legal representatives, oversight entities, among others.

- **Municipal administration.**

Municipalities of Colombia are governed by a democratic system based on the processes of administrative decentralization generated since the proclamation of the 1991 Constitution. They are governed by a Mayor (executive power), a Council (legislative power) and have inspections and Court (Judicial power).

³³³ Max Weber, Economy and Society, Part One: Theory of Sociological Categories, Universidad de California, California, 1978. Enquired in March 2017.

In the Municipalities of Ipiales, Contadero, Illes and Imues, in accordance with the Municipal Development Plans, the administrative structure components establish the links with government structures, the flow of economic resources and the administrative authorities, as well as the patterns of supervision, approval and political decision. Hence, the branches of power in the municipalities are governed by a democratic system based on the processes of administrative decentralization generated since the proclamation of the 1991 Constitution. In general, they are governed by a Mayor (executive power), a Council (legislative power) and there are secretariats aimed at designing, adopting plans and programs in the aspects identified as determining factors in the responsible development of a population.

The Mayor, as executive body of each municipality with its respective mayor as director and representative, is elected by popular vote for a cycle of four (4) years and works in conjunction with the Municipal Council, legislative power body of the entity, which serves for period equal to that of the executive. Among the main functions of the municipalities are the formulation of institutional policies and adoption of plans, programs and projects, as well as the coordination, supervision and control of policies, plans, programs and projects.

The main functions of the municipal government are:

- ü Interpret the sovereign will of its inhabitants, within the framework of the Constitution and Law.
- ü Solve the unsatisfied health, education, environmental sanitation, drinking water, public services, housing, recreation and sports need, with special emphasis on the care of children, women, the elderly and the disabled.
- ü To ensure the preservation of the municipal territory and its natural resources, so that they serve and benefit the inhabitants of the Municipality, ensuring the progress of the territorial entity, without prejudice to interventions that for the purpose of its exploitation, uses, distribution and consumption, are provided by law.

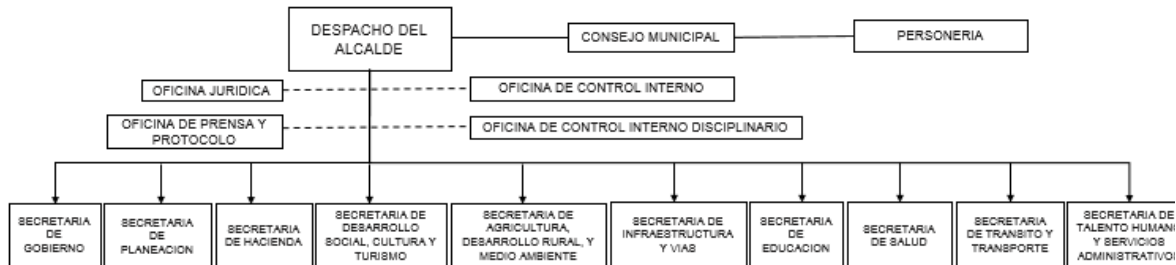

The Municipal Council, for its part, issues mandatory agreements in its territorial jurisdiction and its functions include to approve the projects of the mayors, ensure the preservation and defense of cultural heritage, dictate the organic rules of the budget and issue the annual budget of income and expenses.

The departmental secretariats must establish policies, objectives and strategies focused on the sustainable development of their municipality, through the study and implementation of the Development Plans and the Basic Territorial Planning. *Police inspections and courts* of municipalities are mainly located in the municipal centers and are responsible for dealing with matters within their competence in the entire municipal jurisdiction, including the town center and the townships. **Table 5.74** shows the organizational charts and details of each of the structures of the municipal administration of the Major Territorial Units of Ipiales, Contadero, Illes and Imues.

Table 5.74 General organization chart - Municipal administrations - Major territorial units - Area of influence of the Project "Rumichaca - Pasto, San Juan - Pedregal Segment".

Major territorial unit

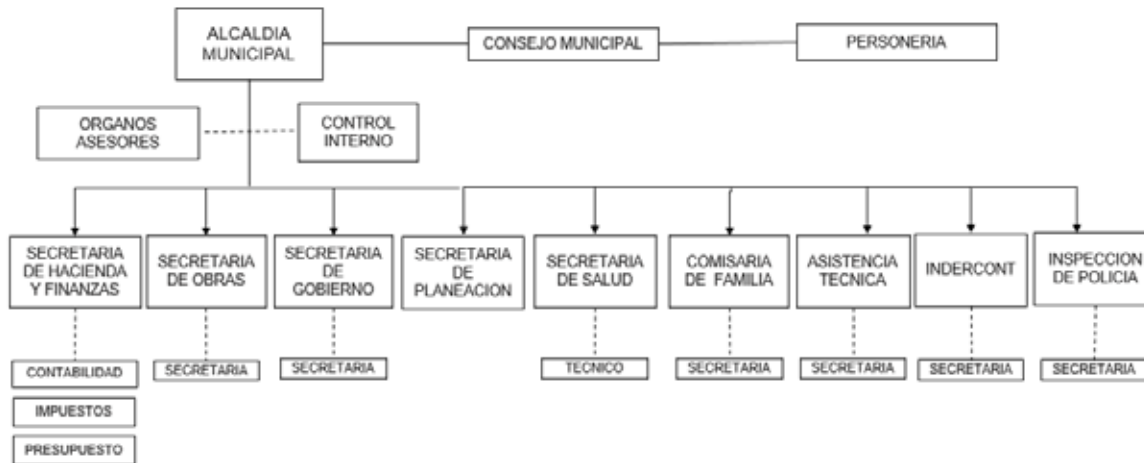

IPIALES

The municipality of Ipiales, as fundamental entity of the Political-Administrative Division of the State, is responsible for ensuring the provision of public utilities under the terms determined by law, constructing works that demand local progress, ordering the development of its territory, promoting community participation, social and cultural improvement of its inhabitants and fulfilling the other functions assigned by the constitution and laws. The municipal administration of Ipiales is currently organized in ten (10) secretariats, which are responsible for the main processes of municipal management³³⁴. In particular, the municipality of Ipiales has a social development secretariat and a human talent and administrative services secretariat. Likewise, it has the support of a legal office, internal control offices and press and protocol office³³⁵.

MAJOR TERRITORIAL UNIT

CONTADERO

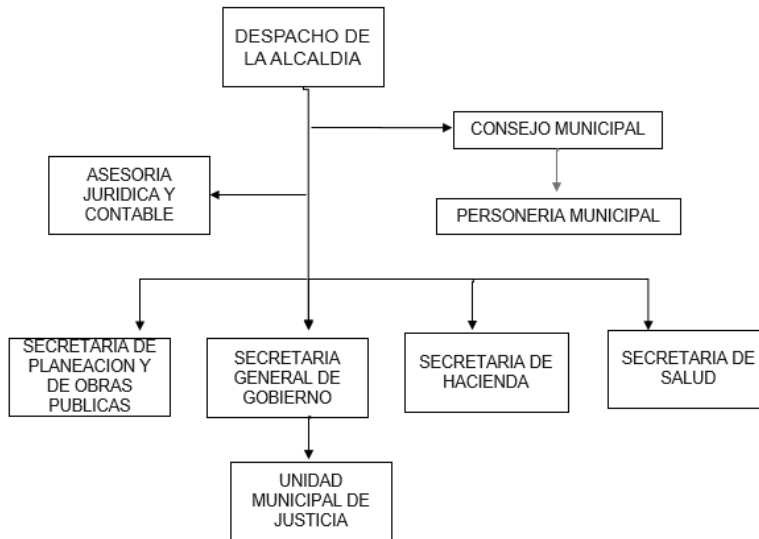

The main objective of the Contadero Mayor's Office is to coordinate and promote the management processes of cooperation and international relations with medium- and long-term goals that contribute to the integral development and strengthening of the city-region. With thirteen (13) dependencies, the municipal administration structure of Contadero, in particular, has an office of advisory

³³⁴ Agreement No. 028 of December 2013 "Which sets out the administrative structure of the Ipiales Municipality Mayor's Office and provides for the functions of the divisions. Enquired in March 2017.

bodies and internal control, as well as INDERCONT, as a unit responsible for coordinating, planning and implementing programs aimed at the promotion of sports, recreation, leisure time and culture in the community³³⁶.

MAJOR TERRITORIAL UNIT

ILES

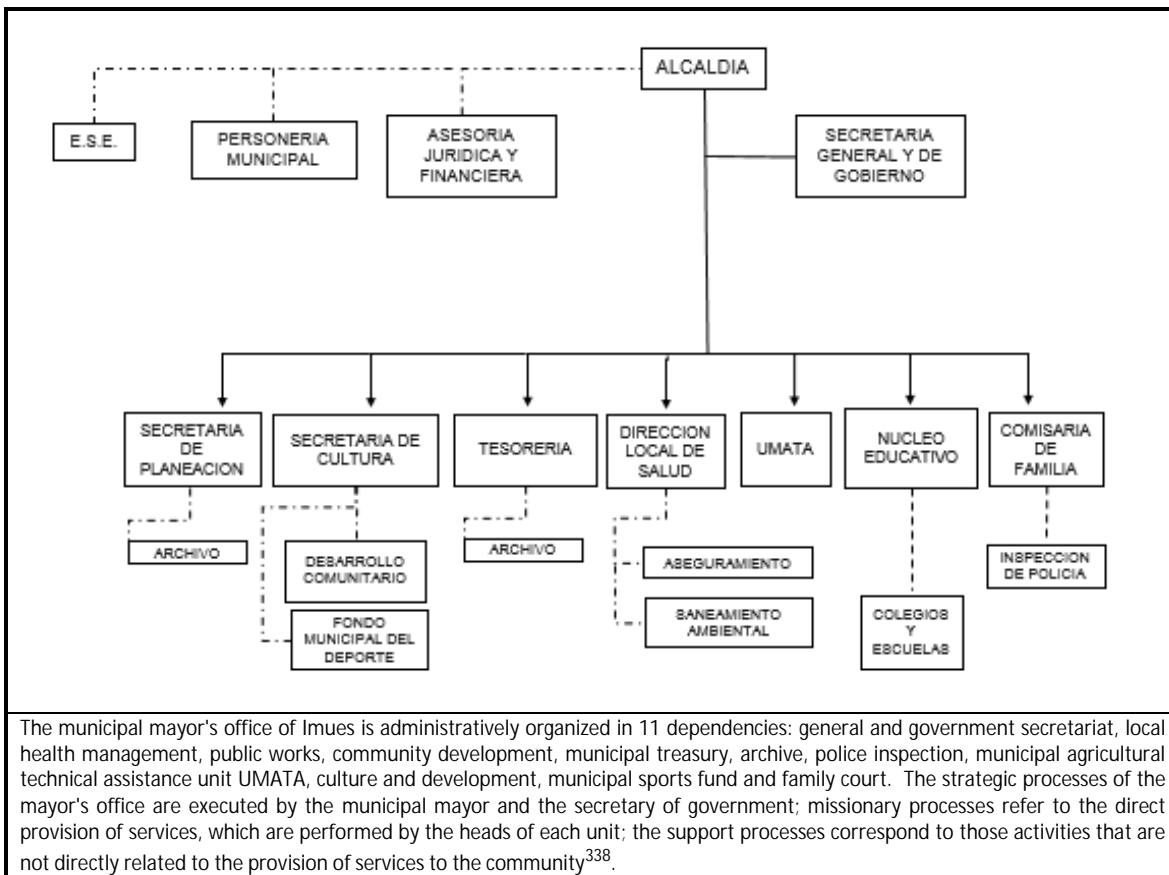

The Illes municipal mayor's office is organized in nine (9) dependencies: Municipal council, municipal representative, legal and accounting advice, and the secretariats of planning, government, finance and health. Finally, the Municipal Justice Unit. The strategic processes of the mayor's office are executed by the municipal mayor and with the support of each of the dependencies, as appropriate³³⁷.

Source: Municipal Development Plans - Major territorial units of the project and other documents. 2017.

As to the civil society, other entities or institutions of a non-governmental nature, resulting from social organization, from the national, regional, departmental and local levels, which have achieved a space for discussion and decision-making about matters of municipal interest. Development organizations and / or productive activities belong to this group: farmers, livestock breeders, transporters, educators, students, merchants, citizen surveys and other groups or grassroots organizations such as Community Action meetings. Likewise, aid groups have emerged as a form of solidarity vis-à-vis the reality that the municipalities live in, while in some cases the lack of care and provision of basic services is evident.

5.3.7.1.3 Mechanisms of Citizen Participation

The central concern of an authentic democracy is to ensure that all members of society have a real and equal opportunity to participate in collective decisions. Thus, when our Constitution establishes from its first article that Colombia is a democratic and participatory Republic, the challenge and the commitment to promote citizen participation in all spaces of social life are assumed.³⁵¹

The mechanisms of citizen participation are a series of tools established in the 1991 Constitution to ensure and encourage the mobilization of the Colombian population. All individuals in our society with the capacity to vote have the right to enforce the use of participation mechanisms to ensure their participation in decision-making and the resolution of problems affecting the common good. The objective of the citizen participation

³⁵¹ Mechanisms of Citizen Participation. Central Bank. Cultural Activity. http://www.banrepcultural.org/blaavirtual/ayudadetareas/politica/mecanismos_participacion_ciudadana. Enquired in March 2017.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

mechanisms is to provide guarantees and benefits so that the Colombian people can influence changes within the judicial, executive and legislative systems³⁵².

The municipalities of the area of influence have different mechanisms of participation that protect their rights in case of a breach. According to Law 134 of 1994³⁵³, the following mechanisms of citizen participation are presented:

Regulates: The popular, legislative, regulatory initiative, the referendum, the popular consultation of a national, departmental, district, municipal and local order; the revocation of the mandate, the plebiscite and the open town council.

Popular initiative: It is the political right of a group of citizens to present draft agreements to municipal councils and resolution drafts to the local boards and other resolutions of the corporations of the territorial entities, according to their regulating laws, as the case may be, so that they can be debated and later approved, modified or denied by the corresponding public corporation.

Referendum: It is the call that is made to the people to approve or reject a bill of law or to repeal or approve a norm already in force. The referendum can be national, regional, departmental, district, municipal or local.

Repeal of the mandate: It is a political right, by means of which the citizens terminate the mandate that they have conferred to a governor or a mayor.

The Plebiscite: It is the pronouncement of the people summoned by the President of the Republic, whereby he supports or rejects a certain decision of the Executive.

Popular Consultation: Is the institution by which, a general question on a matter of national, departmental, municipal, district or local relevance is submitted by the President of the Republic, the governor or the mayor, as the case may be, for the consideration of the town so that it is formally pronounced in this respect. In all cases, the people's decision is mandatory.

Open Town Council: This is the public meeting of the district, municipal or local administrative councils, where the inhabitants can participate directly in order to discuss matters of interest to the community.

In addition to these mechanisms, there are other forms of citizen participation, whether in the political, economic, social, cultural, university, trade union, or union life of a country.

ü Trade unions and associations.

Trade unions are groups of people and / Or institutions that seek a common purpose and share the same interests; For this reason, associations can be found focused on specific causes, products, ideas or economic sectors.

On the other hand, associations are groups of people constituted to carry out a collective activity in a stable, democratically organized, non-profit and independent manner, At least formally of the State, the political parties and the companies. They are regulated by Law 1/2002 of March 22, Regulating the Right of Association.

³⁵² Mechanisms of Citizen Participation. Central Bank. Cultural Activity. http://www.banrepcultural.org/blaavirtual/ayudadetareas/politica/mecanismos_participacion_ciudadana. Enquired in March 2017.

³⁵³ Law 134 of May 31, 1994. Which sets out norms on citizen participation mechanisms for the Colombian Congress. Enquired in March 2017.

The fundamental characteristics of the associations are the following:

- ü Group of people.
- ü Common objectives and / or activities.
- ü Democratic functioning.
- ü Independent.

Based on the above, the different associations and associations existing in the major territorial units of the project are presented below. It is important to point out that the information found in the different official documents and other municipalities is scarce. However, the information found will be described and analyzed accordingly. See **Table 5.77**.

Table 5.77 Trade associations and associations in the larger territorial units of the project.

Ipiales
<p>Asociación de Limitados Físicos de Ipiales (Asolifi)</p> <p>Organization charged with overseeing and respecting the rights of persons who have any physical limitations (disability or special abilities), as well as in charge of physical and psychological rehabilitation and counseling of these issues to family members, friends, people who want to know about the subject³⁵⁴.</p> <p>The above indicates that the municipality cares about and watches over people with physical limitations, a positive aspect for families, because in many cases, it becomes a challenge because of the lack of knowledge and adequate information that can lead to internal conflicts of coexistence.</p>
<p>Asociación de Cabildos Indígenas de Ipiales</p> <p>The association of indigenous councils has as its mission to promote the effective implementation of fundamental and collective rights of communities belonging to indigenous populations located in the municipality of Ipiales³⁵⁵.</p> <p>Indigenous associations are created by indigenous people with the aim of promoting the integral development of communities, implementing plans, actions, processes of construction of regulations to protect their rights, customs, and cultural values, legal rights, among others. Also the elaboration and execution of projects aimed at the improvement of the quality of life of all.</p>
<p>Asociación Usuarios Sanitas</p> <p>Since November 2008, the Sanitas Users Association has been developing initiatives to ensure the quality of the health service, the protection and defense of users' rights and their community participation. The Sanitas Users Association has the following governing bodies: The General Assembly, the Board of Directors and the Executive Director. All members of the Board of Directors are appointed for a period of two years, elected by the General Assembly. Being part of the Sanitas Users Association gives the benefit to its affiliates to be able to exercise the citizen's right to participate and contribute to exercise social control towards the services provided by the health entities of the Sanitas Organization, ensuring their quality and opportunity³⁵⁶.</p>

GEO-002-17-114-EAM			Version 0.	May 2017

Health in Colombia is a source of criticism on the part of the users, due to the deficiency in the service, the high costs and the little coverage of the medical personnel who qualify the attention as timely; however, in the municipality of Ipales, the association is created in order to blur the actions that are usually lived daily with health. Positive aspect for the population that is part of the association.

CONTADERO

Information provided by the Mayor's Office: and recognized in benefit of the community.³⁵⁷

Comité Técnico de Administración Sisben

Its fundamental objective is to coordinate the actions of the dependencies of the Municipality included with the project. The committee is made up of a delegate of the Mayor, who must preside it, by technicians of the social secretariats and planning of the Municipality and has the following functions: 1. Define and approve a plan according to the resources and situation of public order in the Municipality, the means and strategy for the collection of information. 2. Evaluate and follow up on compliance with the Sisben implementation and updating process, in accordance with that established by the DNP. 3. Coordinate the actions of the different municipal units and identify the human resource required to establish support areas. 4. Ensure that the technical and material resources required for the operation of the Sisben are obtained in a timely and adequate manner. Adopting measures to make this operation more efficient and transparent. 5. Receive and analyze the progress reports and programmatic compliance of the administrator of Sisben on coverage, quality control of information and status of each of the stages, and if necessary, issue recommendations to improve the operation. 6. Support the local planning process, providing criteria and information that allows the entities executing social programs to focus their action; implementation of new social programs to improve the living conditions of the population of scarce resources, according to the diagnoses and profiles offered by Sisben³⁵⁸.

Asociación de Usuarios Emssanar

The Emssanar Users Association's primary purpose is to ensure that the beneficiaries of the Subsidized Health Regime are respected their rights and are given a good service in the different IPS attached to the service network of the different EPS-³⁵⁹.

Asociación ALDEFRUT

The ALDEFRUT Association focuses economically on the production and marketing of fruit products³⁶⁰. In general, fruit associations aim at the integral development of producers, that is, knowing techniques that improve the production, management of resources, and places of commercialization. All this accumulation of elements generates an improvement in the region at economic and family level, because sustainable production provides stability to the families that live out of this market.

Asociación Fresya

The Fresya Association identified in the municipality of Contadero does not have detailed information; however, it is economically identified as an association that grows and produces strawberries for commercialization.

GEO-002-17-114-EAM			Version 0.	May 2017

Like the ALDEFRUT fruit association, the population associated with Fresya plans to improve their knowledge, production techniques and marketing in order to open a door to the region with the cultivation of this fruit, to demonstrate that production is sustainable in a region where the fertility of the land prevails, and the thriving spirit of a territory.

Asociación El Campo Vive y Asociación Reviviendo El Campo

• Communal action in the area of influence.

Communal Action in Colombia is framed in Law 742 of 2002, which describes the roles and responsibilities of the Community Action Boards. According to Article 6 Law 743 of 2002, it is a social, organized, autonomous and supportive expression of civil society, whose purpose is to promote the integrated and sustainable development built from the exercise of participatory democracy in the management of community development; this in turn is classified as follows:

- ü First, community housing boards and communal action boards .
- ü Second, the board associations either of the territorial units, when the municipality experiences the division, or the urban sector.
- ü Third, the departmental federations.
- ü Fourth, the national confederation of community action boards, which is the maximum within the communal structure and its only seat is Bogota.

³⁶¹ Municipal Development Plan "With equity and social commitment, living with dignity is possible" 2016-2019. Enquired in March 2017.

The characteristics that define each of these organizations are described below:

Community Action Board: It is a civic, social and community non-profit, solidary organization of social management, with legal capacity and its own and variable equity, willingly integrated by the residents of a place that combine efforts and resources to ensure integral, sustainable and sustainable human development based on the exercise of participatory democracy. It is a first-level organization.

Community Housing Board: It is a non-profit civic organization, made up of families who meet for the purpose of furthering housing improvement or construction programs of social interest, which are constituted by self-construction, and can be formed with 10 families onwards. It is a first-level organization.

Community action board association: It is a second-level community organization having the same legal nature of communal action boards and is constituted with first-level community organizations: Community Action Boards and community housing boards of their founding jurisdiction and those that later become affiliated. (Article 8 Law 743 of 2002). Its core objective is the strengthening of first-level community organizations, which can be established in the communes, in the municipalities.

National Confederation of community action boards: It is the communal organism of highest degree in the communal structure, having the same Legal nature of community action boards and is established with third-level agencies; its objective is to strengthen all communal organizations in the country.

Taking into account the previous definitions, we proceeded to identify the organizations present in the area of influence of the project, which are characterized by being of two types: communal action boards and board associations.

In the municipality of Ipiales, given its political-administrative division, there are xxx community action boards; the municipality of Contadero has 27 active community action boards, as well as the municipality of Iles and Imues with 23 and 32 active community action boards. Likewise, a board association is in place for each one of the territorial units. Each of the JACs is organized into work committees according to different areas such as health, housing, sport, among others. They are all duly legalized with their respective Resolution and Legal Status³⁶². See Table 5.78.

The Communal Action Boards are first-level organizations whose mission is to be managers of development in their communities, through the channeling of the different needs they have with the municipal authority as the head of a municipality. These needs are simplified in projects that are generally included in the local government proposals, i.e. in the public policies of a territory; however the JACs experienced difficulties in terms of technology knowledge and management, which limits their ability to formulate projects and plan the development of their communities.

For the development of projects, community organizations play an important role taking into account that JACs concentrate decision-making processes and represent the interests of the communities; they are the channel between companies and the community.

5.3.7.2 Institutional presence and community organization

5.3.7.2.1 Institutional presence.

The institutional presence, identified through social and municipal actors and organizations present within the area of influence, reveals the existence of social welfare services, which are achieved through community management and have been strengthened with municipal and departmental institutional support.

In the major territorial units of the project, the administration at the municipal level is present, in addition to the development of departmental and national government programs. Likewise, aid groups have emerged as a form of solidarity with the reality of the municipalities, among the most important are:

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

5.3.7.2.2 Relief agencies.

The municipalities have different relief agencies for disaster prevention and attention, which include the following:

- **Volunteer Firefighters.**

In the municipality of Ipiales, there is the Ipiales Volunteer Firefighting Corps (See **Photograph 5.19**), a relief organization in service for more than 45 years and with a rescue team and paramedics trained to handle emergencies³⁶³. For its part, the Municipality of Contadero does not have its own Fire Service; however within the projects of the Municipal Mayor's Office, the contracting the provision of services of the Voluntary Fire Department of Ipiales takes place³⁶⁴. Finally, for the Municipalities of Iles and Imues, there is no information about fire brigades or special groups for disaster care, so it is assumed that they rely on the group of the Municipality of Ipiales; an aspect that can be critical in the event of an emergency that may arise.

Photograph 5.19 Voluntary Firemen Group, Municipality of Ipiales.

Source: <http://ipitimes.com/comunicando69.htm>.

- **Civil Defence.**

For the four municipalities, the coverage applies of the Nariño Sectional Civil Defence applies, which was founded on April 25, 1970, and which begins with 24 Civil Defense organizations. The Municipality of Ipiales currently has more than 5,000 active volunteer leaders and more than 90% coverage throughout the department of Nariño³⁶⁵. (See **Photograph 5.20**).

- **Red Cross.**

With presence in the Municipality of Ipiales (See **Photograph 5.21**). Support is generated to nearby municipalities. The mission of the Colombian Red Cross, Municipal Unit of Ipiales is to prevent and alleviate, in any circumstance in which it is their duty to intervene, the suffering and lack of protection of those affected by occasional contingencies, with absolute impartiality, without discrimination on grounds of nationality, race, sex, religion, language, social status or political opinion; to protect the life and health of individuals and their dignity as human beings, in particular in times of armed conflict and other emergency situations; to contribute, in accordance with its mission and objectives, to the promotion of health, social welfare and disease prevention; to encourage volunteer work and the availability of service by members of the Movement, as well as a universal sense of solidarity towards those in need of protection and assistance; to promote and defend Human Rights, International Humanitarian Law and the Fundamental Principles of the International Red Cross Movement.

5.3.7.2.3 State entities in programs.

Institutional presence in the rural area is fundamental for integral development of the population in need of educational, cultural, housing, public services, economic development among others. Communities heavily rely on the support of the local government to develop their programs and projects aimed at improving the quality of life and thus fostering a territory of peace and prosperity.

The institutional presence of the larger territorial units of the project in relation to its rural districts, as proposals for territorial development:

- Ipiales.

According to the Municipal Development Plan³⁶⁶ and the Ministry of Labor, the following programs are presented for the development of the Municipality of Ipiales (Table 5.79):

Table 5.79 Institutional Presence of the Municipality of Ipiales.

PROGRAM	DESCRIPTION
National Technical Assistance Program for the Strengthening of Employment, Entrepreneurship and Income Generation Policies in the Regional and Local environment	All territorial entities have a set of resources (economic, human, institutional and cultural) that constitute the potential of endogenous development of an area. Thus, in each municipality, there is a certain productive structure, labor market, entrepreneurship, natural resources, social, cultural and political structure, which can serve as the basis to articulate its economic growth and improvement of the standard of living of the population. The assistance and strengthening program aims to generate an

³⁶⁶ Municipal Development Plan "Ipiales, Capital of the South". 2016-2019

PROGRAM	DESCRIPTION
	updated diagnosis to identify the strengths and weaknesses of the municipality in the economic environment ³⁶⁷ .

• **Community organization.**

In all the minor territorial units of the project, Community Action Boards are constituted, recognized according to Law 743/5 June 2002. Community action is a joint and organized social expression of civil society whose purpose is to promote comprehensive, sustainable, and supportable development based on the exercise of participatory democracy, in the management of community development. See **Annex 13. Social**.

The Community Action Board (JAC) is a civic, social and community non-profit, supportive organization of social management, with legal capacity and its own and equity, willingly integrated by the residents of a place that combine efforts and resources to ensure integral, sustainable and sustainable development based on the participatory democracy.

For smaller territorial units, the following JACs are available (See **Table 5.83**):

Table 5.83 Community Action Boards of the ADI.

As for the institutions present in the area, we highlight the Families in Action program, the municipal UMATA with trainings, the mayor's offices, ICBF, CORPONARIÑO and particularly in the Los Manzanos rural district, agricultural associations for a productive project of pea supported by CORPOICA and in San Francisco de Contadero the SENA with occasional courses for the community in general.

5.3.7.3 Political - Administrative Aspects.

5.3.8 Development trends.

The Department of Nariño focuses its "Nariño, Corazón del Mundo" Development Plan on the New Government model, which is conceived as a model of social and institutional mobilization, oriented to the construction of scenarios for good living based on the collective definition of agreements based on common purposes in a context of democratic coexistence and social justice against diversity, focusing on three conceptual pillars to be known: Open Government, Social Innovation and Collaborative Economy, which in turn are articulated to the objectives of sustainable development.

Open Government refers to promoting transparency in public management based on the complete, truthful and sufficient availability of information, so that citizens can take an active part in public decisions and, thus, strengthen citizen participation, promote social control and co-responsibility, as indispensable actions to increase citizens' confidence in their institutions.

Social Innovation seeks to develop processes of intelligence and collective learning aimed at generating novel solutions to relevant problems based on respect for diversity and the promotion of high-impact initiatives at a lower cost and promotes new capacities in the territories to improve living conditions.

Collaborative Economics is conceived as a social form of organization to access goods, public and collective services that meet human needs without affecting the environmental sustainability and the socio-cultural organization of communities, based on solidarity, trust and voluntary participation of people to promote social equity in the territory.

Of these three pillars, seven strategic axes with a territorial approach are set out and structured, which were defined and took into account the bets of a new Government in environmental, social, economic and institutional matters; these axes are:

- § Peace, Security and Coexistence.
- § Equity and Social Inclusion.
- § Environmental Sustainability.
- § Comprehensive Development.
- § Infrastructure and Connectivity.
- § Governance.

Source: GEOCOL CONSULTORES SA based on the "Nariño Corazón del Mundo" Development Plan 2016 - 2019.

As it was observed in **Table 5.84**, the Development Plan of the Department of Nariño through the New Government model seeks to develop an articulated public management that generates international, national, regional and local alliances necessary to enhance the achievement of the strategic objectives to be achieved with the implementation thereof; likewise, support is observed in the following approaches:

- § Sustainable human development
- § Differential Population
- § Intercultural territory
- § Peace building
- § Multilevel governance
- § Gender focus

This allows us to direct the development of the Department around the person and articulated to the different human dimensions, working the development as a whole and achieving a clear direction that will allow Nariño to overcome the social, economic, cultural and environmental gaps.

5.3.8.1 Development trends in the Municipality of Ipiales.

The analysis of this component starts from the urban, economic, quality of life, environmental, safety and institutional dimensions, where the Development Plan is projected to cover the needs of the municipality.

These programs respond to the development model known as "Human Development" established by Noble Economy Amartya Sen in 1998 and that is the basis of the annual analyzes of the United Nations Organization - UN to know the development index of the nations. Sen's premise is based on the instrumental freedoms, which, according to the author, would be the following:

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

- Policies
- Economic services
- Social opportunities
- Transparency guarantees
- Protective safety

The Development Plan of the Municipality of Ipiales, based on this model, focuses its programs on the maximization of these freedoms taking into account that "The lack of fundamental freedoms is directly related to economic poverty, which deprives individuals of the necessary freedom to satisfy hunger, nutrition, remedy treatable diseases, dignified dress, housing " ³⁷² and as these increase, the quality of life of the inhabitants of the municipality increases, this is how the following programs are designed, aimed at reducing the development gaps in the municipality:

Virtuous Culture, Ipiales Plays Fair.

It includes the design of components to intervene, the dissemination of messages and contents, training processes, reading promotion, artistic activities, carnivals, parties and the like, formation and organization of society, through multiple means, such as artistic manifestations, cultural mingas, political formation, recreational sport, among others, which are made visible in daily life from the greeting, the concept of the public good, basic social justice, the example of the performance of government officials who inspire respect, neatness, authority, thereby regaining the dignity of servants.

Healthy and Educated Society.

Although the municipality reports a low margin of decentralization in health and education, the municipality is betting on this program towards actions that can correct what the current models have not achieved, in two perspectives: eradicate the components of multidimensional poverty and promote development, with the elimination of illiteracy through a social mobilization that reaches the identified people.

Likewise, through alternative educational systems or in cooperation with groups of traditional teachers, the municipality seeks with this program to enter into the excellence of education for development. To achieve this goal, it seeks to encompass three fields of action: overcome inertial resistance of the current educational system, to promote pilot projects, and to implement successful models. There will also be actions, investments, that allow the enjoyment of health services, education, recreation, recreational and competitive sports. It also promotes and supports access to housing, in conjunction with national programs.

Security to Banish Fear.

The security program includes two components: the maximum deployment of police action, in collaboration with the army and other law enforcement agencies in Ipiales, and the organization and citizen protection to combat fear; it is expected to get to know the neighbors, alarms and surveillance and communication systems. To such end, support will be provided with information, training and community organization to prevent the occurrence of crimes against the individual and the property, while it is expected to implement solidarity protection in harmony with the authorities.

Women, Children, and Family, sustenance of the Virtuous Society

³⁷² SEN, Amartya. Development and Freedom. Page 19, Editorial Planeta year 2000

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

This program is expected to develop actions and investments to ensure the rights of these population groups in coordination with national policies and programs, across the different programs of the development plan.

Prosperity for a Good Living

Escalation will be promoted by training people, for the incorporation of labor, especially young people, promoting the search of sources of work in association with the departments of departmental and national government, especially the SENA Ministry of Labor.

Likewise, this program is also expected to boost business ventures that guarantee food security, articulated with business motivation, alliances, that multiply income generation in marketing or transformation, thus generating more new sources of employment, which brings with it the reduction of poverty and greater wealth. Innovation, new technologies, science and general actions will be fostered to promote creativity and the application of knowledge.

Capital Del Sur, A Sustainable Territory With Public Space for Social Rapprochement

It seeks to increase efficiency in the use of space and public services, generate conservation and recovery of environmental areas that are determinants of sustainability that allow for dynamic balances, depending on the carrying capacity determined by technological progress, in the urban and rural sectors.

Infrastructure for Competitiveness, Innovation and Technology

This program refers to the execution of projects and works that offer an environment conducive to investment, so that Ipiales becomes attractive to local and foreign capital. Also, emphasis will be placed on urban and rural roads, new water sources, water supply systems, wastewater assessment, waste collection and management, refrigeration, exhibition center, irrigation, agroindustrial transformation, internet and telecommunications.

Citizen Participation and Monitoring for Transparency

The community will be informed, trained and organized about the legal and technical components that allow it to monitor the correct investment of public money. At the same time, there will be the existence of forums for concerted action by organized social groups such as youth, indigenous people, merchants, civic, communal and similar leaders who are regulated by law or are constituted as legitimate instances of dialogue and agreements.

Modern Institutions for the Achievement of Results

The Municipal Mayor of Ipiales will have to be the example of efficiency, effectiveness and effectiveness, to incorporate all the tools that provide administrative and technological advances, whose successful results are demonstrated at national or global levels. Likewise, it also includes private companies and social organizations in all manifestations that will be favored, encouraged, motivated towards the implementation of processes that will lead to modernization through restructuring, adaptation and strengthening.

Indigenous Territory and Ancestral Customs

Given the existence of objectives in the life plans and in the municipal development plan, its alignment and supplementation is pertinent, which allows to achieve the ideal result with the optimization of resources.

Cooperation, Concurrence and Development Promotion Coordination

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

It is essential to unify the action of government departments of the departmental and national order, which implement plans, programs, projects, actions or investments at the municipal level, in order to optimize resources and achieve joint results

On the other hand, with the non-governmental organizations, the Communal Action Boards and in general the civil society, it will be possible to realize agreements where they involve actions and resources for investments or joint projects, under the mandate of "all put", through the different mechanisms Legal, from the mingas to the public-private alliances. To consolidate its border position, it will be integrated with international investment, promoting the construction of equipment of international benefit, such as convention centers, services, integration and promotion.

According to what was stated in the list immediately above, the municipal administration focuses Social Development towards a multi-dimensional approach by expanding the opportunities of its inhabitants, focusing on the person and not on the economy, the first being the axis of all activity, which, having its instrumental freedoms, translates into an increase in the economy that will eventually lead to the purchasing power of the population and, consequently, to an improvement in the quality of life.

5.3.8.2 Development trends in the Municipality of Contadero.

The Contadero Municipal Development Plan *"Let's Work Together for the Rescue and Progress of El Contadero 2016-2019"*, Part of the National Development Plan *"All for a New Country 2014-2018"* and the Nariño Development Plan, *"Heart of the World 2016-2019"*, so that the investment lines and management of the public sector are adjusted to the territorial ones for the management and achievement of resources, just as public policies and economic development are consistent with those of the next level, overcoming gaps from the territory to the national setting, with the same objectives and the same effort; this is how four major dimensions of development are given, which will serve as the basis to leverage the municipality as presented below in **Table 5.85**:

Table 5.85 Dimensions, Sectors and Strategic Programs of the DDP of the Municipality of Contadero.

DIMENSION	STRATEGIC OBJECTIVE	SECTOR	PROGRAM
Social Development	Generate conditions of equity, equality and social welfare with a population focus that allows better conditions of life, education, health, culture and citizen peace.	Quality education for peace and prosperity	Education with relevance and excellence
		Health and social equity	Comprehensive health care
		Drinking water and basic sanitation	Aqueduct and Sewer
			Services other than Aqueduct and Sewer
		Recreation and Sports	Sport Program for Peace
		Cultural Sector	Cultural and intangible heritage
		Equity and social inclusion for peace	Comprehensive care for early childhood, childhood and adolescence
			Women and Gender Equity
Elderly			
Attention of people with diverse functional capacity			
		Victims of conflict

		Justice and security	Citizen Security and Coexistence
		Endowment	Improvement of services to the community
		Institutional and community strengthening	Improvement of institutional performance and citizen participation
			Community development

Source: GEOCOL CONSULTORES SA, based on the Development Plan "Let's Work Together for the Rescue and Progress of El Contadero" 2016-2019.

As can be seen in **Table 5.85**, although the Development Plan has clear lines of action, in this case called dimensions, the sectors and programs are associated mainly to strengthen municipalities, which, although necessary, is not based on a clear development model that allows, not only to meet needs, but also to increase the quality of life of the "contadereños" through plans, programs and projects that are sustainable over time.

5.3.8.3 Development trends in the Municipality of Iles.

According to the information contained in the Municipal Development Plan document, the dimensions of the Municipal Development Plan are linked to the different programs of the National Development Plan " *All for a New Country* "2014-2018, Departmental Development Plan" *Nariño Heart of the World* "2016-2019, Sustainable Development Objectives, Life Plan of the Iles Indigenous Reserve; and other policies that apply and Human Rights, for which, has structured its plan according to the following dimensions, sectors and programs (See **Table 5.86**):

Table 5.86 Structure of the Development Plan of the Municipality of Iles.

DIMENSION	SECTOR	PROGRAM
Sociocultural	Education	§ From zero to forever
		§ Educational quality

Source: GEOCOL CONSULTORES, based on the Municipal Development Plan "With equity and Social Commitment, Living with Dignity is Possible" 2016-2019.

Although the Development Plan shows some lines of action that seek an approximation to the Sustainable Development Objectives, which are related, meaning that the success of one affects the one of others, in developing the document, it is observed that the different Programs established to achieve them, focus on addressing needs, which are actions of great importance but are formulated independently and not interrelated among them, which is the modality whereby an improvement in the quality of life of people is achieved.

From the above, it can be concluded that the municipality of Iles does not have a clear development model that allows it to identify processes aimed at maximizing the social opportunities of people and, which may be translated into an improvement of the local economy.

5.3.8.4 Development trends in the Municipality of Iles.

According to the Municipal Development Plan, Imues presents the following programs, according to work dimensions established under a joint work between administration and community, where they prioritized their needs perceived and established the different lines of action presented in Table 5.87.

Table 5.87 Dimensions and Strategic Programs of the DDP of the Municipality of Imues.

DIMENSION	SUBDIMENSION	PROGRAM	PROGRAM PURPOSE
Social	Education	In class studying	Implement a comprehensive public education policy in the municipality of IMUES
		Incentives and training to improve educational performance	Improve students' educational performance on saber 11 test
		Delivery of educational aid to poor student population of the municipality of Imues	Achieve educational coverage of 100% of the primary school age population
		Tic'S another reason to learn	Greater coverage in the use of ICT-S to understand global knowledge and access to new learning opportunities.
		The university: possibility for development	Promote access to higher education for young people and adults with minimal socio-economic conditions.
	Health	"I Care, Improve My Health Quality"	Implement a public policy of integral health self-care in the municipality of IMUES.
		Drinking Water - urban aqueducts	Preventive maintenance of the Urban Aqueduct conduit network
		Drinking Water - rural aqueducts	Studies carried out to identify new sources of supply for human consumption in the long term.
	Sports	Sport is for everyone now	Improve the living conditions of young boys and girls, adolescents and elder population.
		Imues Sports Inclusive - disability	Improve the living conditions of people with disabilities.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

DIMENSION	SUBDIMENSION	PROGRAM	PROGRAM PURPOSE
			Social inclusion
		With the opportunity to practice sports and recreation, a better quality of life is achieved	Adapt the sports scenarios of the municipality
	Cultural	Imues a municipality that rescues the cultural, artistic traditions of the peasant and the indigenous community.	Maintain the processes and activities related to the promotion, fostering and dissemination of the cultural and artistic heritage of the municipality; stimulating and supporting the organization and strengthening of the sector, especially indigenous knowledge and ancestral thinking.
		Cultural activity for the re-encounter of the ancestral and social identity	Strengthen municipal cultural meetings through dance, art exhibitions, music, theater and literature, and indigenous thought.
		Cultural fostering with infrastructure	Adapt physical spaces in the rural area for cultural development.
		Strengthening of artistic training schools	Strengthen artistic training schools together with educational institutions and indigenous authority.
	Housing	It is possible to live with dignity in my home	Improve housing in the rural and urban sector, leading to a reduction of the qualitative deficit Building new housing in the urban and rural sector
Economic	Entrepreneurship, tourism and sustainable development	Entrepreneurship, tourism and sustainable development	Support entrepreneurship actions focused on tourism and sustainable development. Support, create and consolidate all forms of productive association in the urban and rural sector, enhancing human talent.
	Agriculture	The Country-side: option of life and social development with peace	Strengthen agricultural producers for a more competitive field. Strengthen agricultural producers for a more competitive field.
	Transport	Communication means and infrastructure for a better future	Maintain appropriate tertiary roads with their respective periodic maintenance Maintain urban road network in suitable conditions Intermunicipal communication routes in adequate state for better connectivity
Institutional	Institutional Strengthening	Institutional Strengthening	Hold the municipal assembly, four pedagogic meetings, and good government office formation.
	Good governance	C.A.M with human talent of quality at the service of all.	Strengthen the training of Human Talent and the entity's information and communication system. Strengthen human institutional talent
	Justice and security	Imues focuses on citizen security solidarity and responsible for all	
Environmental	Risk management	Risk: an opportunity for a better healthy environment for the future	Implement actions to mitigate potential risks from flooding and mass removal Update Risk Management Plan Managing support for agricultural producers affected by climatic events

Source: GEOCOL CONSULTORES based on the Municipal Development Plan 2016-2019 "Imues for a Better Future".

The Municipal Development Plan does not show a clear tendency towards which it is focused, although its text provides that part of the Imueseña community, the programs and projects are focused on improving

processes and / or meeting the needs in the different dimensions that make up the society, without observing a model of development that allows the municipality to direct its actions towards the maximization of social, economic and cultural opportunities in the midst of a healthy environment.

5.3.8.5 Development Trends in the Smaller Territorial Units.

Just as municipal development plans focus on addressing the needs of social infrastructure, in minor territorial units, the generality is to bet on these same constructive activities, as can be seen in **Table 5.88**:

Table 5.88 JAC projects in minor territorial units.

major territorial unit	minor territorial unit	projects
Contadero	Aldea María	Paving of the access road
	Capuli	Improvement of aqueduct and access road
	Culantro	Improvement of aqueduct Rehabilitation of the court roof Community house construction
	El Juncal	Enclosure and improvement of the school floor Sewer maintenance
	Isquazan	At the time of the information collection they were not managing projects

major territorial unit	minor territorial unit	projects
	La Cueva	Road repair Improvement of aqueduct
	Los Manzanos	Management for the aqueduct and the road
	Ospina Pérez	Improvement of road and school
	Rosal de San Francisco	Adequacy of roads and enclosure of the court for the chaza game.
	San Francisco	Construction of the coliseum Green zone in the chapel

major territorial unit	minor territorial unit	projects
	San Andres	Improvement of aqueduct
	San José de Quisnamuez	Improvement of aqueduct, roads and cellular signal
	Las Delicias	Construction and / or improvement of the court, communal room, chapel, medical clinic, irrigation system, and nursing home
	Providencia	No information

major territorial unit	minor territorial unit	projects
lles	Alto del Rey	Community house construction
	El Rosario	Road repair Housing upgrade Recreational space construction
	El Yarqui	Adequacy of the court
	La Esperanza	Adequacy of the court Improvement of the aqueduct tank
	Porvenir	Improvement of roads, sewage and multiple-sport court

major territorial unit	minor territorial unit	projects
	Tablón Alto	Irrigation system
	Tamburan	Road repair
	Urban	Construction of aqueduct
	Capuli	Conditioning of the electric power distribution system
	Loma Alta	Remodeling of the aqueduct Paving 100 meters of road Community house and court construction
	Tablón Viejo	Aqueduct distribution networks

major territorial unit	minor territorial unit	projects
Imues	La Recta Rural District	Expansion of the community room Sewage
	Pilcuan Viejo	Sports center Sewage
	Silamag	Irrigation system in association with 4 more rural districts

Source: GEOCOL CONSULTORES S.A. 2017.

According to the situations that have been evidenced throughout the document and reflected in the table immediately above, the minor territorial units of the Rumichaca - Pasto Divided Highway Project, San Juan - Pedregal Segment do not clearly present a development trend due to the limitations reflected in the quality of life of its inhabitants, the lack of public services and access to social services, which are necessary to overcome their vulnerabilities and bet on a real development and not only the construction of social infrastructure.

5.3.9 Information of population to compensate.

From the design defined for the execution of the project under study, it is possible to establish the possible allocation to five hundred social units - US, non-ethnic , distributed as shown in Table 5.89.

Table 5.89 Non-ethnic social units identified in the affected area

MUNICIPALITY	RURAL DISTRICT	SOCIAL UNITS
Contadero	Urban center	5
	Aldea la Maria	28
	El capuli	15
	Culantro	37
	San Francisco	26
	Ospina Perez	22
	Las Cuevas	20
	San Andres	15
	San Jose de Quiznamuez	21
Iles	El Capuli	3
	El Porvenir	70
	La Esperanza	2
	Tablón Alto	17
	Tablón Bajo	12
	Tamburan	4
Imues	Urban	22
	Picuan la recta	104
	Picuan viejo	77
TOTAL		500

Source: GEOCOL CONSULTORES. S.A., 2017.

Due to the above, the socioeconomic characteristics are surveyed in each of the social unit properties, taking into account the requirements of current regulations, ANI Resolution 077 of 2012, which defines the requirements and provides for the socioeconomic conditions of the human groups affected by the execution of the project.

In this context, the consultancy carries out a rapprochement with the population located on the premises required for the execution of the project, drawing up the census and diagnosis of the US (phase corresponding to the consulting team), identifying in the first instance if its housing conditions, possession and vulnerability identify them as persons or social units susceptible of being resettled. It also establishes the convenience or need to provide accompaniment and to implement management measures in order to prevent and mitigate the impacts generated by non-voluntary displacement.

5.3.9.1 Municipality of Contadero.

- Municipal center.

Type of access to housing: Unpaved road		Property type: Housing			
Origin: Of this Municipality		Residence time: More than 20 years			
FAMILY INFORMATION					
Name	Age	Relationship	School education	Occupation	Income
Gloria del Socorro Yama	58	Head of Household	Baccalaureate	Housewife	-
José Yama	55	Brother	Bachelor Degree Incomplete	Road Maintenance	\$ 730,000
Bryan Narváez	30	Son	Baccalaureate	Worker	\$ 380,000
Angel Yama	95	Father	Incomplete Primary	-	\$ 90,000
Family Type: Nuclear		Number of Families: 1		Population group: Peasants	
Floating population: No		Time of permanence: NA			
POPULATION					
Births: 0		Deaths: 0		Women of childbearing age: 0	
Disabilities: No					
Prevalent Diseases: Respiratory			Causes: Environment		
Forced displacement: No					
Has the family considered changing homes?: No					
Where would you move in case the project requires it?: San Juan, another rural district of the municipality					
Production relations: The head of household is remunerated with money for his work, his employment relationship is up to date and does not form an active part of some form of community work in the area					
Property: The family unit owns the property and has public deed, identifies the surface unit as square meter (m2), the topographic characteristics of the property are flat and the square meter unit in the area is estimated at 2 million					
The total area of the property is 420 m2 and in the last 5 years, no part of it has been sold or transferred					
PRODUCTION					
In the house, there are no agricultural activities currently carried out					
CHARACTERISTICS OF THE HOUSING					
House endowment: 4 bedrooms, 2 kitchens, 1 bathroom, and 1 laundry room					
Housing services: In the house, there is no fixed telephone service, nor natural gas. The services that the house has are sewer, aqueduct, electric power, propane gas and television. Firewood is temporarily used for food cooking					
Constructive features: The walls are made of plastered wall, floors are made of cement and wood, the ceiling is covered with clay tiles					
Water discharge: Wastewater is discharged through the sewage system					
COMMUNITY INVOLVEMENT					
The relationship between the family group and neighbors is good, strengthened ties of solidarity are evidenced; no family member belongs to any community organization					
Membership of community organizations: None					
Support from an organization: Mayor's Office - Senior Citizen					
Main problems in the rural district: Housing					
A family member attends school: No					
Where to go for medical care: Health Center - Sacred Heart of Jesus					
Type of coverage: None					
Water use: The water resource for human and domestic consumption and is obtained through the municipal aqueduct. In the house, there is no livestock and farming activity at present					
Waste Management: There is no classification of solid waste, its final disposal is in charge of the collection company which passes by 1 time per week					
COMMERCIAL ACTIVITY					
NA					
COMMENTS					
NA					
ANALYSIS					
The home, given its location on the urban center, has no significant vulnerability, since it has almost all public and social services. Furthermore, there are several sources of income that guarantee the satisfaction of needs. On the other hand, there is receptivity to the activities prepared for the project.

COMMERCIAL ACTIVITY
The owner of the commercial establishment is Blanca Yama, named after "Sara Ester", and is registered at the Chamber of Commerce for its legal operation; its main business is the sale of clothing and its operation ranges from 1 to 5 years
COMMENTS
NA
ANALYSIS
The vulnerability level of the home is low, as it is located on the urban center; housing conditions and public and private services are acceptable. It is suggested that if a transfer process takes place, the fact that the household has a school-age minor should be considered.

ANALYSIS
The home, given its location on the urban center, has almost all public and social services. However, they express that the permanent or stable employment options relationship are scarce, which in some cases does not guarantee the possibility of covering family expenses. On the other hand, there is receptivity to the project activities.

Production relations: The head of the household does not have any employment relationship with the rest of the community; land is cultivated independently.					
Property: The interviewee has the public deed of the property; declares not to be aware of the total property surface; explains that the land is flat and does not know the value of a hectare of land.					

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

The owner says he does not know the extent of the land, he states that he has not sold part of it in the last 5 years, and does not know the value of a hectare of land.
PRODUCTION
The agricultural production is for personal consumption; no machinery is used, nor do they receive technical advice in agricultural procedures, their crops are free of fungicides.
CHARACTERISTICS OF THE HOUSING
House endowment: 2 bedrooms, 1 kitchen, 1 bathroom, 1 living room, 1 laundry room
Housing services: In the house, there is no sewer service, fixed telephony, as well as propane gas and natural gas. The services in the house include aqueduct, electric power and television. The property uses a wood stove as energy to cook.
Constructive features: The walls are in bahareque, the floors are in cement, the ceiling is covered with clay tiles.
Water discharge: The sewage is disposed of in a septic tank.
COMMUNITY INVOLVEMENT
The relationship of the family group with the neighbors is considered bad, there are no strengthened ties with the community, no member actively belongs to any community organization in the area.
Membership of community organizations: None
Support from an organization: Support for the Elderly population.
Main problems in the rural district: Roads, education, sewage, solid waste collection and employment
A family member attends school: NA
Where to go for medical care: Health Center - Sagrado Corazón de Jesús.
Type of coverage: None.
Water use: The water resource for human, domestic and agricultural consumption is obtained from the rural district aqueduct; the farm has potato and corn crops.
Waste Management: The housing members classify solid waste generated, mainly organic for the purpose of composting, the other wastes are incinerated.
COMMERCIAL ACTIVITY
NA
COMMENTS
ANALYSIS
The group presents average levels of vulnerability due, in the first instance, to the age group to which the head of household belongs (older adult) and second, to the lack of some public services within the rural district and the property; even though there is no resistance regarding the project, the level of ownership is high considering that the family has lived in the property for more than 20 years. Therefore, levels of assertiveness are suggested within subsequent procedures.

GEO-002-17-114-EAM			Version 0.	May 2017

Disabilities: Yes, the elderly woman has a limitation in her lower limbs which prevents natural movement and becomes dependent on the other family members.	
Prevalent Diseases: None	Causes: NA
Forced displacement: NA	
Has the family considered changing homes?: No	
Where would you move in case the project requires it?: NA	
Production relations: The head of the household is remunerated with money for his work, is permanently engaged in his work and does not belong to any form of community work in the area.	
Property: The family has a public deed of the property, the surface unit of the property is the hectare; the topography of the property is undulated, and states that the value per hectare is in the range of 60 to 70 million pesos. The owner states that the property has 2 hectares, and in the last 5 years he has not sold part of it.	
PRODUCTION	
The agricultural production is for personal consumption and to be sold to intermediaries; no machinery is used, nor do they receive technical advice in agricultural procedures, they use inputs for their crops, such as compost and pesticides.	
CHARACTERISTICS OF THE HOUSING	
House endowment: 4 bedrooms, 1 kitchen, 1 bathroom, 1 living room, 1 laundry room	
Housing services: In the house, there is no sewer service, fixed telephony, as well as natural gas. The services in the house include aqueduct, electric power, propane gas and television. The property uses a wood stove as energy to cook, temporarily.	
Constructive features: The walls are in plastered walls, the floors are in cement, the ceiling is covered with clay tiles.	
Water discharge: The sewage is disposed of in a septic tank.	
COMMUNITY INVOLVEMENT	
The relationship of the family group with the neighbors is considered good, there are strengthened ties with the neighbors, no member actively belongs to any community organization in the area.	
Membership of community organizations: None	
Support from an organization: Support for the Elderly population.	
Main problems in the rural district: Roads, aqueduct, sewage, solid waste collection and employment.	
A family member attends school: Yes, Institución Educativa San Carlos - Cantadero, is located in the municipal center, he attends school through school transportation and the travelling time from the housing to the institution is less than 15 minutes.	
Where to go for medical care: Health Center - Sagrado Corazón de Jesús.	
Type of coverage: Subsidized, EPS Emsanar.	
Water use: The water resource for human, domestic and livestock consumption is obtained through the municipal aqueduct. The farm has potato and pea crops; livestock activities are also carried out such as cattle and pig breeding.	
Waste Management: Organic and inorganic waste is classified in the house; their final disposal is made through burial and incineration.	
COMMERCIAL ACTIVITY	
NA	
COMMENTS	
ANALYSIS	
The services available in the house do not satisfy the its needs completely; however, because of its proximity to the municipal center, the home has a medium sensitivity level; in addition, the house in this farm has tenants of economically active age who, in the future, will potentially sustain any economic and spatial changes. Finally, household income is fixed and comes from various sources, making it less vulnerable in terms of support.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

The constructive characteristics of the house show high sensitivity due to the coating made on the roof, in addition to the lack of some public services. On the other hand, although the head of household is not yet part of the elderly age group, he is only a few years away from the economically active age; therefore, assertiveness is suggested to contribute to an easy adaptation to change .

GENERAL INFORMATION					
Interviewee Emperatriz Chilama		Form 015-AM-006		Photograph (See Social Annex) X: Y: item 035-315	
Type of access to housing: Unpaved road			Property type: Housing		
Origin: Capuli Rural District			Residence time: From 1 to 5 years

COMMENTS
ANALYSIS
The household, since it is composed of 1 elder member, presents a high level of sensitivity due to the differential treatment that must be taken into account therefor. On the other hand, given the low levels of attachment to the farm and to improve the living conditions regarding access to health and greater possibilities of relationship with their relatives, there is no resistance to a resettlement process.

Water use: The water resource for human, domestic and livestock consumption is obtained through the Rural district aqueduct.
Waste Management: Waste is classified in the house; their final disposal is made through incineration.
COMMERCIAL ACTIVITY
NA
COMMENTS
The daughter monetarily supports the parents, since they do not have a stable job at present.
ANALYSIS
Being a household composed of an elder couple without a stable job, it implies a medium degree of sensitivity; however, there is access to almost all public services, except for sewerage and disposal of solid waste. For these reasons, economic, labor and space conditions should be taken into consideration when moving to the home.

COMMENTS
ANALYSIS
Being a household comprised of an older adult woman, a degree of high sensitivity is noticed which should be taken into account if her transfer is required. In addition, although there is no reluctance to change the place of residence, it is possible that in a resettlement process, the high levels of attachment are evidenced as they have never experienced a change of dwelling.

COMMENTS
ANALYSIS
Although the household has not taken into account the possibility to change their place of residence, according to the origin and the amount of time living there, it is inferred that the levels of attachment are minimal. However, there is income within the family earned by the head of household, but are unstable, and this could be used in the future as grounds for a possible transfer, especially because they are looking after a 4 year old child who requires support.

Main problems in the rural district: Routes, health, sewerage and employment.
A family member attends school: Yes, Institución Educativa San Carlos, located in the municipal center of Contadero; the means of transport is provided by the school, which takes less than 15 minutes from the place of residence to the educational institution.
Where to go for medical care: Contadero Health Center.
Type of coverage: Subsidized, EPS Emsanar.
Water use: The water resource for human, domestic and livestock consumption is obtained through the municipal aqueduct. The farm has temporary potato and pea crops, along with livestock activities such as chickens and / or hens and guinea pigs.
Waste Management: Residue classification is done in the housing; there is a collection site, which is visited by the collection company of Contadero once a year.
COMMERCIAL ACTIVITY
NA
COMMENTS
ANALYSIS
Although their sensitivity level is medium due to the deficiencies with respect to the provision of public and social services within the rural district, the proximity to the municipal center is an advantage for the satisfaction thereof. In addition to this, there is no evidence of any resistance to the achievement of the project, which would contribute in the future to the possible transfer without problems.

COMMENTS		
ANALYSIS		
The home has a medium level of sensitivity, as the public and social services in place do not fully meet the basic needs; however, due to the proximity of the rural district to the municipal center, some of these services can be covered. Likewise, the economic conditions are somewhat unstable because the existing labor linkage on a per-day-basis, which could facilitate a more effective transfer process, without inconveniences.

A family member attends school: No					
Where to go for medical care: Contadero Health Center.					
Type of coverage: Subsidized, Sisbén.					
Water use: The water resource for human and domestic consumption is obtained from a nearby stream which crosses through the property of Benjo Chavez, which charges a moderate annual fee of \$ 25,000. The farm does not have agricultural or livestock activities.					
Waste Management: No waste classification is made in the dwelling; when necessary, its final disposal comprises incineration, burying or open-pit disposal.					
COMMERCIAL ACTIVITY					
NA					
COMMENTS					
ANALYSIS					
There is a high vulnerability level, as public services are almost absent in the property. For this reason, special attention is given to guaranteeing them when a resettlement process occurs. Lastly, consideration should be given to adapting to the changes that the household member has, since this person has always lived on the rural district and on the land in question.

COMMENTS

ANALYSIS

Because it is a household comprised of five members belonging to the elderly, special care must be taken since, in principle, the levels of attachment to the territory will be high which, could generate some inconveniences when carrying out a transfer process. Likewise, access of the health service is recommended, which has been identified by the interviewee as the main problem in the rural district where they live.

GENERAL INFORMATION					
Interviewee Eleazar Gentil Vallejo Coral		Form 015-AM-024		Photograph (See Social Annex) X: Y: item 122

Main problems in the rural district: Health
A family member attends school: No
Where to go for medical care: Contadero Health Center
Type of coverage: Subsidized, EPS Proinsalud
Water use: The water resource for human, domestic, livestock and farming consumption is obtained through the rural district aqueduct. The farm has seasonal potato, corn, pea and bean crops; there are also livestock activities carried out, such as the raising of chicken and / or hen, and guinea pigs.
Waste Management: Solid waste is separated in the house, where the inorganic is incinerated, and plastics and containers of chemicals are disposed of through the collecting company from the municipality, which goes to the property every 3 months; the remaining residues are organic waste, which are used as fertilizer.
COMMERCIAL ACTIVITY
NA
COMMENTS
ANALYSIS
The household's vulnerability level is medium due to lack of public and social service provision; however, although the household is composed of two elder members, they are still active in traditional rural activities that ensure a minimum income for their sustenance. It is suggested that in case of relocation, they should be guaranteed the execution of traditional activities, as well as access to public and social services (mainly health).

COMMENTS
ANALYSIS
There is a high level of vulnerability, as this household is composed of two elder adults, with no stable income or income related to any productive activity. In addition, the public and social services they provide do not meet the basic needs, which warrants more assertiveness and guarantees for optimal conditions of quality of life in the case of a transfer of residence.

COMMENTS
ANALYSIS
The home reports deficiencies in public and social services in the property and the rural district, generating a medium sensitivity level; in addition to this, the household members are deeply rooted to the urban district, as they have always lived there. Therefore, special care is advised when carrying out a transfer process, as the process seeks for an improvement in living conditions and access to public and social services that guarantee the harmonious development both parents and children between 5 and 1 and a half years of age, who are part of the household, and that the household is allowed to continue with the traditional activities that have so far sustained them.

COMMENTS
ANALYSIS
Household vulnerability is average, as the public and social services within the rural district and the property cannot manage to guarantee an acceptable level of quality of life. It should be noted that they are willing to relocate, provided that the living conditions are improved. In addition, it is important to take into account that such process should not interrupt the production activities they traditionally have developed as a means of identification with the territory and of income.

COMMENTS
The route assigned for operation on the rural district, which collects the special waste such as containers of chemicals (fungicides or pesticides) takes place every 6 months.
ANALYSIS
Given the lack of some public and social services, medium sensitivity levels are reported, however, willingness is evident with respect to the possibility of a resettlement process, which would be positive in a relocation process. Likewise, they expect to be guaranteed an improvement in the services previously mentioned, and on the working conditions.

COMMENTS
ANALYSIS
Since this household includes members who had to face a situation of displacement, the levels of sensitivity increase due to the impact derived from this event. Particular care is taken in this case, because, although it is evident that the family has not lived there for a long time, they have already managed to establish themselves in that rural district. Therefore, if any transfer process is required, the satisfaction of the basic needs and the stability necessary to live in dignity must be guaranteed. Likewise, the productive activities in which the household is framed should be considered, in order not to intervene with this identity feature that has been preserved despite the event of displacement faced.

POPULATION		
Births: 0	Deaths: 0	Women of childbearing age: 0
Disabilities: Yes, Maria Beatriz Valenzuela, she has limitations in the lower limbs.		
Prevalent Diseases: Respiratory		Causes: Environment
Forced displacement: No		
Has the family considered changing homes?: No		
Where would you move in case the project requires it?: Does not know, does not answer		
Production relations: The head of household exchanges products for work; this person is temporarily engaged with work, and no member participates in any forms of community work.		
Property: The family affirms to own the property and has a public deed; they did not identify the unit surface of the land, the topography of the land is flat and there is no knowledge of the value of a hectare in the area.		
The owners do not know the total area of their land, but state that no part of it has been sold or transferred in the last 5 years.		
PRODUCTION		
There is no agricultural activity on the farm today.		
CHARACTERISTICS OF THE HOUSING		
House endowment: 4 bedrooms, 1 kitchen, 1 bathroom, 1 laundry and 1 living room		
Housing services: In the house, there is no sewer service, fixed telephony, as well as natural gas. The services in the house include aqueduct, electric power, propane gas and television.		
Constructive features: The walls are made of mud, floors are in cement and board in other areas of the house, the roof is coated with mud tiles.		
Water discharge: The sewage is disposed of in a septic tank.		
COMMUNITY INVOLVEMENT		
The relationship of the family unit with the neighbors is considered good, there are strengthened ties of solidarity and neighborhood; the head of household, Enrique Chilama is an active part of the Community Action Board.		
Membership of community organizations: Enrique Chilama belongs to the Community Action Board, and holds the position of Vice President.		
Support from an organization: None		
Main problems in the rural district: Sewage		
A family member attends school: No		
Where to go for medical care: Health Center - Contadero		
Type of coverage: Subsidized, EPS Mallamas and Emssanar		
Water use: The water resource for human, domestic and livestock consumption is obtained through the municipal aqueduct. In the farm there is no agricultural activity, on the other hand, it does have livestock activity with guinea pig breeding.		
Waste Management: Solid waste separation is carried out in the house; the organic residues are used as fertilizer and the inorganics are incinerated.		
COMMERCIAL ACTIVITY		
There is a commercial activity undertaken in the property, named Granero, which belongs to Maria Beatriz Valenzuela; it has operated from 1 to 5 years and its main activity is the sale of food; the establishment has a health record for its adequate operation.		
COMMENTS		
ANALYSIS		
As this is a household comprised of two elder adults, there is a medium-high sensitivity level, which is additional to the lack of some public services that the rural district and the property do not enjoy. For its part, a high level of attachment is noticed, given the time of permanence within the rural district and the active participation of the head of household in the Community Action Board.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

The home has a low-medium sensitivity level mainly due to the lack of some public and social services within the rural district and the property. The above, alluding to the presence of a minor within the home. There is no evidence of a great deal of landholding, which would prove to be an advantage in the event of a residential relocation process.

COMMENTS
ANALYSIS
The sensitivity of the home is low-medium due to deficiencies in the public and social services of the rural district and the property. There is no evidence of great roots in the territory, however, in case of a transfer process, it is suggested to guarantee the satisfaction of basic needs. On the other hand, the educational level of the head of household and his partner implies an advantage, as this ensures access to better possibilities in the labor life.

COMMENTS
ANALYSIS
The sensitivity of the home is considered low; however, the property and the rural district presents some shortcomings at the level of public services. On the other hand, in the case of a resettlement process, the satisfaction of these services should be guaranteed, as well as the possibility of achieving the traditional activities that common to them.

GEO-002-17-114-EAM			Version 0.	May 2017

ANALYSIS
The household has most of the public services necessary to satisfy the basic needs; however, there is no job stability for the head of household who performs in traditional production tasks. For its part, there is some resistance to the project or the possibility of a transfer process, a factor to be taken into account if necessary.

ANALYSIS
The household presents average sensitivity levels, since the head of household is an older adult and does not have stable income and the farm does not have production processes that guarantee the income necessary to meet basic needs. In addition, the daughter of the head of household has a disability that has limited her in cognitive and work processes.

COMMENTS
ANALYSIS
Being a family belonging to an ethnic (indigenous) minority, if necessary, the engagement must have a differential approach and, if the project is to be carried out, some intervention must be carried out according to the parameters demanded by the current legislation. It is also important to ensure propensity for improvement over living conditions.

COMMENTS
ANALYSIS
Should a type of intervention within the property be considered, and because it is a home belonging to an ethnic (indigenous) minority, the management should be differential and consistent with current legislation. Likewise, it is necessary to improve the conditions of quality of life, as there is overcrowding in the household, as well as deficiencies at the public and social service level.

COMMENTS
ANALYSIS
The sensitivity level of the household is low and although an older adult lives there, there is income available for maintenance, in addition to the current production processes within the property. Some shortcomings are evident in the level of public and social services, which should be remedied in case of intervention of the property by the project.

COMMENTS	
ANALYSIS	
In general terms, the only person in the property does not have major shortcomings, except for some public and social services and receives a monthly economic income. However, the person is part of an ethnic (indigenous) minority, which should be taken into account in case of intervening the land for the achievement of the project activities, emphasizing the current legal requirements for any work of intervention.

COMMENTS
ANALYSIS
This house is highly sensitive, since in the first instance, they are part of an indigenous community; apart from that, the head of household is a single mother with 3 children, two of whom are in school age. Therefore, if required to intervene the property, a differential approach should be carried out, in accordance with legal parameters, aiming to guarantee the satisfaction of basic needs and the improvement of the conditions of quality of life.

Waste Management: Does not classify waste; waste is buried and burned as part of the management.
COMMERCIAL ACTIVITY
NA
COMMENTS
Owner of the property: Jesús Figueroa Cell Phone: 3146795467 El Cujaco Rural District
ANALYSIS
The home has a degree of sensitivity, because it belongs to an indigenous community; therefore, it is worth taking this into consideration in case of property intervention. Therefore, it is suggested to implement a different management approach, in accordance with the current legal parameters.

COMMENTS	
ANALYSIS	
There is overcrowding in the household, in addition to the unstable income of the members who work. There are agricultural production processes commercialized and used as a source of self-consumption. If a resettlement process is required, it is important to bear in mind that the household has 2 children who are still of school age.

COMMENTS					
ANALYSIS					
The degree of sensitivity of the home is, average because it is a home belonging to an ethnic community, so the management must be differential and in accordance with current regulations. Likewise, it is important to note that there is a child under 2 years. On the other hand, although the family has always lived there, receptivity is expressed for a possible resettlement process.

NA
COMMENTS
ANALYSIS
A vulnerability factor is reported in the home, considering that the only member is an older adult with no stable income. On the other hand, there is no reluctance to the project; there are good neighbor relations that may have possibly given rise to attachment to the territory in which such person lives.

GEO-002-17-114-EAM			Version 0.	May 2017

ANALYSIS
The home reports a medium-high sensitivity level, due to the fact that there are some public and social services in place, but there are still gaps therein. On the other hand, certain reluctance to the project is noticed, which must be considered when making an intervention; the latter could be justified in the levels of attachment to the area and the identity patterns that have been spatially and generationally structured.

COMMENTS
ANALYSIS
The home is made up of two older adults, which implies a level of vulnerability that must be taken into account in the event of a transfer process, as access to public and social services is suggested to ensure improvement in the conditions of quality of life. However, they are currently receiving benefits from the "Elderly Program".

COMMENTS
ANALYSIS
<p>This household has a medium level of vulnerability, since it has nearly all public services for the satisfaction of basic needs; in addition to the fact that several household members contribute with income. On the other hand, they are part of an indigenous population group that deserves a different treatment.</p> <p>It should be noted that the household is against the works inherent to the project due to the potential negative impacts that could take place at the environmental level; therefore, special care is required in a dialogue process, if the case so requires.</p>

COMMENTS

ANALYSIS

According to the economic and spatial characteristics of the farm and the house, the level of sensitivity is low; however, it is worth noting that there are two minor members still in school age, so it is important to pursue an improvement in the quality of life of these children and the household in general.

COMMENTS
ANALYSIS
The economic and spatial conditions of the household, although they are not optimal, manage to satisfy almost completely the basic needs. On the other hand, it must be taken into account that it is a home belonging to an ethnic (indigenous) minority, so an assertive, differential management must be provided according to the expressed needs. The project is positively received.

COMMENTS
ANALYSIS
If a resettlement process is necessary, the household is highly resilient, and that will contribute to an easy adaptation to the possible changes. In general, although they do not have all public and social services, there is a low level of sensitivity. Finally, it must be taken into account that within the household there is a 2-year old member.

NA

COMMENTS

ANALYSIS

Being a household composed of a family belonging to an ethnic minority, differential treatment is suggested, consistent with cultural precepts. On the other hand, it implies a medium sensitivity because, in addition to the deficiencies at the public and social services level, this is a single woman who sustains her daughter and her home.

COMMENTS
ANALYSIS
Although several of the inhabitants of the farm may work and earn their income, the vulnerability is medium-high due to the overcrowding conditions of the households, and also the presence of child under 3 years. Similarly, if a resettlement process is carried out, it should also be taken into account that the members of the farm are part of an ethnic (indigenous) minority, so a differential management must be maintained and in accordance with the cultural parameters thereof.

COMMENTS
ANALYSIS

The level of sensitivity is medium due to the deficiencies noticed at the public and social services level. It is worth highlighting that the family had to face a displacement process, which is a factor that must be taken into account in case a transfer process. However, although there is no evidence of resistance to the project, it is important to ensure possibilities for improving quality of life conditions.

COMMENTS
ANALYSIS
<p>The level of vulnerability to the household is high due to several factors: First of all, the services within the property are almost nil; likewise, this is a family that had to face a recent displacement process, and are still adapting to the rural district and the property. For these reasons, it is important that if a transfer process is carried out, access to public and social services will be guaranteed, as well as a monitoring of living conditions and, above all, the satisfaction of the basic needs of children under two years of age, who are part of the family.</p>

COMMENTS
ANALYSIS
The household on the property belongs to an ethnic (indigenous) minority, which is important when having a dialogue and engagement with a differential approach. The household has almost all public and social services; however, there are still gaps. On the other hand, a position of resistance to the project is not evident.

COMMENTS

ANALYSIS
Although not all the public and social services are available, the conditions of vulnerability are low, as the head of household receives income that can sustain the needs. No position of resistance is evidenced, but there is certain level of attachment to the rural district territory, where they currently live.

COMMENTS
ANALYSIS
The level of vulnerability is high; first, because the household is comprised of a family belonging to an ethnic minority; in addition, there are two children who cannot read or write, apart from the overcrowding condition they live in. It is suggested to pay special attention to the household, as it presents many shortcomings regarding the living conditions.

COMMENTS
ANALYSIS
Being a family belonging to an ethnic (indigenous) minority, the engagement must be made with a differential approach. There are deficiencies at the level of public and social services, but those who are there, can solve some of the basic needs. Furthermore, despite the productive developments, income is not stable or permanent.

COMMENTS
ANALYSIS
The level of sensitivity for the household is medium, since the only member belongs to an ethnic (indigenous) minority and is an adult. For his part, he has consolidated solidarity relationships through the minga, which generates strong ties of interaction with the community in general. Therefore, it is suggested that in case of a transfer process, the factors mentioned above should be taken into account.

PRODUCTION
Agricultural production is for sale and for consumption, it is sold to Intermediaries; no machinery is used for production, they do not receive technical advice.
CHARACTERISTICS OF THE HOUSING
House endowment: Two bedrooms, a kitchen, a bathroom and a laundry room.
Housing services: Aqueduct, Electric Power, Propane Gas and Television.
Constructive features: In the house, the walls are made of Bahareque, adobe, mud; the floors are made of bare soil, the ceiling is made of Clay tile and has electric energy service; the company name is unknown.
Water discharge: Latrine
COMMUNITY INVOLVEMENT
The relationship with the neighbors is good, the weakest ties are those of neighborhood, family and solidarity.
Membership of community organizations: None
Support from an organization: None
Main problems in the rural district: Roads, sewerage and employment.
A family member attends school: NA
Where do they go for medical care: Health Center, Sagrado Corazón de Jesús.
Type of coverage: None
Water use: For domestic consumption; it is obtained from the Rural District Aqueduct El Culantro for livestock (chicken 10, pigs 2, horses 3, guinea pigs 20), and agricultural purposes (potato, peas).
Waste Management: Solid waste is burned and used as organic fertilizer as part of the management process.
COMMERCIAL ACTIVITY
NA

COMMENTS
Mr. José Agustín did not sign the survey.
ANALYSIS
The home belongs to an ethnic (indigenous) community; therefore, a differential approach should be used. Likewise, there are production relationships that represent some income, which manage to meet some basic needs, but there are still deficiencies in the effective provision of public and social services.

COMMENTS
ANALYSIS
The family belongs to an ethnic (indigenous) minority, which is why an engagement with a differential approach is convenient. In addition, there are overcrowding conditions in the household, as well as deficiencies at the level of public and social services. On the other hand, the income is unstable, and 3 minors depend from it, two of them are of school age.

COMMENTS
ANALYSIS
The household is comprised of two older adults who belong to an ethnic (indigenous) minority. There is a strong interaction with the community through the Minga, which has surely strengthened the roots to the territory and its dynamics. Furthermore, there are several deficiencies at the public and social services level, which is why it is imperative that a resettlement process be followed to take into account these conditions that affect the household.

COMMENTS
ANALYSIS
The home has an average sensitivity, as this is a home belonging to an ethnic (indigenous) minority, there is overcrowding and there are two children of school age. The above factors must be taken into account in the event of a resettlement process.

COMMENTS
ANALYSIS
The household belongs to an ethnic (indigenous) minority; they have unstable incomes and without any productive process inside the property. In addition, the home has two minors of school age, so it is

suggested to pay special attention to it in case of a transfer process, since access to public services and social services (especially education) must be guaranteed.

COMMENTS

ANALYSIS

The household belongs to an ethnic minority and has a minor with cognitive delay, who needs to be taken into account. Household income is unstable and there are advanced productive developments for marketing and self-consumption. Therefore, should a relocation process be required, it is necessary to ensure that territorial and spatial conditions are adequate for the achievement of traditional and cultural dynamics.

Births: 0	Deaths: 1	Women of childbearing age: 1
Disabilities: No.		
Prevalent diseases: respiratory.		Causes: Environmental and labor.
Forced displacement: Yes, the owners of the property are a family made up of 7 people, of which 3 are in Ecuador due to their displacement from San Francisco (threat) and the other 3, while the survey was conducted, they were visiting them.		
Has the family considered changing homes?: No.		
Where would you move in case the project requires it?: To a land in the same rural district.		
Production relations: The head of household receives money in exchange for services and maintains a per-day type relationship.		
Property: The interviewee is the property caretaker; he states that square meter is the land surface measure used; the land has sloped topography. Does not report price of a hectare of land.		
Complete if you are the owner, otherwise write, N / A Indicates that the property area is 1 hectare. In the last 5 years no land has been sold.		
Production		
The agricultural production is sold and consumed. The commercialization channel is through the collection center in Ipiales. In order to produce, they use machinery (tractor and animal traction), they receive technical advice from UMATA and from stores in Contadero. They apply insecticides to their products. No information is reported about which crops are grown on the farm. There are no animals on the property.		
Characteristics of the housing		
House endowment: The house has 3 bedrooms, 1 kitchen, 1 bathroom, and 1 laundry room		
Housing services: The home services include aqueduct, electric power and propane gas. There is no sewage, landline, natural gas or television.		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Constructive features: The roof is made of clay tiles; walls are made of bahareque, adobe, clay and floors are in bare soil.
Water discharge: The sewage is disposed of in a septic tank.
Community involvement
They affirm to have a good relationship with the neighbors, thus achieving strong solidarity ties. Affirms that the works carried out by community organizations are good.
Membership of community organizations: No.
Support from an organization: Yes, from CorpoNariño. 700 alders were provided to plant and an ecological stove.
Main problems in the rural district: None reported
A family member attends school: No.
Where to go for medical care: To the municipal hospital of Ipiales if it is serious, otherwise they attend the health center in Contadero.
Type of coverage: Subsidized, EPS: EMSSANAR.
Water use: The water for human and domestic consumption is obtained from the rural district aqueduct.
Waste Management: Solid waste is classified, its final disposal is through the delivery every six months for UMATA management. Others are mixed with lime for composting.
Commercial Activity
NA
Observations
Analysis

The household shows some sensitivity as it has been the victim of forced displacement, now they are in the process of adaptation, but they express receptivity regarding the activities of the project and the possibility of a resettlement process. It is suggested to guarantee a territory where they can accomplish the traditional activities that are currently boosting their economy.

Births: 1	Deaths: 1	Women of childbearing age: 1
Disabilities: No.		
Prevalent Diseases: None reported		Causes: None reported
Forced displacement: No.		
Has the family considered changing homes?: No.		
Where would you move in case the project requires it?: He does not know, but would prefer a rural area.		
<p>Production relations:</p> <p>Working family members receive money in exchange for their services. They do not report the type of relationship they maintain.</p> <p>They participate in the group "cooperativa de galpones"</p>		
<p>Property:</p> <p>The interviewee is the owner of the property and has a public deed; he states that hectare is the surface measure of the land; the land has a flat topography. Unknown price per hectare of land in the area.</p>		
<p>Complete if you are the owner, otherwise write, N / A</p> <p>The property area is 600 square meters. In the last 5 years no land has been sold.</p>		
Production		
<p>The agricultural production is sold and consumed. The marketing channel is through intermediaries.</p> <p>Machinery (tractor) is used to produce; technical advice is received from UMATA and CORPONARIÑO. Inputs are used in products (fertilizers, fungicides and insecticides)</p> <p>The farm has 7 chickens, 3 turkeys, 1 pig and 1 guinea pig, in addition to potato and pea crops.</p>		
Characteristics of the housing		
House endowment: The house has 3 bedrooms, 2 kitchens, 1 bathroom, 1 living room and 1 laundry room		
Housing services: The home services include aqueduct, electric power, propane gas and television services. There is no sewage, landline, or natural gas.		
Constructive features: The roof is made of clay tiles; walls are made of bahareque, adobe, clay and block-brick; floors are made of tiles.		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Water discharge: The sewage is disposed of in a septic tank.
Community involvement
They affirm to have a good relationship with the neighbors, thus achieving strong neighborhood and solidarity ties. Affirms that the works carried out by community organizations are good.
Membership of community organizations: Yes, to the aqueduct management board and the irrigation cooperative. The head of the household's son-in-law is the vice-president of the community action board.
Support from an organization: Yes, from Ecopetrol, which provided them with an ecological stove.
Main problems in the rural district: Education, sewage, solid waste collection and employment
A family member attends school: Yes, to the Gualmatan social promotion technical educational institution located in the municipality of Gualmatan; the student uses motorcycle transport in a time that ranges between 15 and 20 minutes.
Where to go for medical care: Health Center - Sagrado Corazón de Jesús.
Type of coverage: Subsidized, EPS: EMSSANAR.
Water use: The water for human and domestic consumption is obtained from the rural district aqueduct.
Waste Management: Solid wastes are not classified; inorganic material was burned and organic was used as fertilizer as part of the final disposal.
Commercial Activity
NA
Observations
The interview indicates that the interviewee does not want to feel displaced with the project and, if relocated, relocation should be in the same path.
Analysis

Average access to public and social services is reported; therefore, shortcomings are still evident. Likewise, the working members of the household have fixed incomes that contribute to satisfy the needs; there is also evidence of the handling of productive processes for commercialization and self consumption. Therefore, it is important that if a resettlement process is required, these factors should be taken into account and to ensure the possibility to improve the quality of life conditions.

Water discharge: The sewage is disposed of in a septic tank.
Community involvement
They affirm to have a good relationship with the neighbors, thus achieving strong ties with the neighbors. Affirms that the works carried out by community organizations are good.
Membership of community organizations: No.
Support from an organization: Yes, the children by the department of social prosperity (families in action).
Main problems in the rural district: Roads, sewage, solid waste collection, employment and recreation.
A family member attends school: Yes, to the educational institution Juan XXII, located in a municipality different from their place of residence. The student uses motorcycle transport and it takes between 30 minutes and 1 hour to the site.
Where to go for medical care: A drugstore in Contadero.
Type of coverage: Subsidized, EPS: EMSSANAR.
Water use: The water for human and domestic consumption is obtained from the rural district aqueduct.
Waste Management: Solid wastes are classified; inorganic material was burned and organic was used as fertilizer as part of the final disposal.
Commercial Activity
NA
Observations
Analysis
The household reports productive processes within the farm for marketing only, in addition to the income received by the head of household. There are two minors in the household, who must be paid special attention and, although they have some public and social services, there are still deficiencies in the provision thereof. Therefore, in the event of a relocation process, it is important that these conditions be rethought and to ensure the satisfaction of basic needs and the improvement of living conditions .

Support from an organization: Yes, by the municipal mayor's office, through the elderly program.
Main problems in the rural district: Roads, education, sewage, solid waste collection and employment
A family member attends school: No.
Where to go for medical care: Health Center - Sagrado Corazón de Jesús.
Type of coverage: Subsidized, EPS: EMSSANAR.
Water use: The water for human and domestic consumption is obtained from the rural district aqueduct and for livestock use fro the Citipas creek.
Waste Management: Solid wastes are classified; inorganic material was burned and organic was used as fertilizer as part of the final disposal.
Commercial Activity
NA
Observations
Analysis
The sensitivity degree of the household is low, there are productive processes within the farm and the head of household reports income for services. It is important to bear in mind that a strong attachment to the area can be evidenced, since this family has always lived there, a factor to be considered in the event of a resettlement process.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Births: 0	Deaths: 0	Women of childbearing age: 2
Disabilities: Yes, the interviewee's wife had one of her legs amputated.		
Prevalent Diseases: None reported		Causes: None reported
Forced displacement: No.		
Has the family considered changing homes?: No.		
Where would you move in case the project requires it?: Does not know, does not answer.		
<p>Production relations:</p> <p>The head of household receives a subsidy thanks to the elderly program; \$ 90,000 every two months. The daughter receives money in return for her services and maintains a per-day employment relationship.</p> <p>There is no participation in community work in the area.</p>		
<p>Property:</p> <p>The interviewee is the owner of the property and has a public deed; he states that hectare is the surface measure of the land; the land has an undulated, sloped and flat topography. No information provided in terms of the price for the hectare of land.</p>		
<p>Complete if you are the owner, otherwise write, N / A</p> <p>The property area is 1 1/2 hectares. In the last 5 years no land has been sold.</p>		
Production		
<p>The agricultural production is for consumption.</p> <p>No machinery is used for production; no technical advice is received from any institution. Inputs are used in products, such as fungicides and fertilizers.</p> <p>The farm has 10 chickens, 1 cattle head, and 6 guinea pigs, as well as potato, pea and bean crops.</p>		
Characteristics of the housing		
House endowment: The house has 1 bedroom, 1 kitchen, 1 bathroom, 1 living room and 1 laundry room		
<p>Housing services: The home services include aqueduct, electric power, propane gas and television services.</p> <p>There is no sewage, landline, or natural gas.</p>		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Constructive features: The roof is made of clay tiles and eternit; walls are made of clay and floors are in cement.
Water discharge: The sewage is disposed of in a septic tank.
Community involvement
They affirm to have a regular relationship with the neighbors, thus achieving strong ties with the neighbors. Affirm that the works carried out by community organizations are good.
Membership of community organizations: No.
Support from an organization: No.
Main problems in the rural district: Roads, education, sewage, solid waste collection, employment and recreation.
A family member attends school: Yes, to the educational institution San Carlos, located in the municipal center of contadero. The student walks to school and it takes approximately 15 minutes or less to the site.
Where to go for medical care: Health Center - Sagrado Corazón de Jesús.
Type of coverage: Subsidized, EPS: EMSSANAR.
Water use: The water for human and domestic consumption is obtained from the rural district aqueduct.
Waste Management: Solid wastes are classified; inorganic material was burned and organic was used as fertilizer as part of the final disposal.
Commercial Activity
NA
Observations
Analysis
The household includes two children of school age and a disabled woman. Within the property, there are productive activities available for commercialization and self-consumption, which contribute to addressing basic needs. There are overcrowding conditions; a factor that must be considered in case of a resettlement process.

GEO-002-17-114-EAM			Version 0.	May 2017

Births: 0	Deaths: 0	Women of childbearing age: 0
Disabilities: No.		
Prevalent Diseases: None reported		Causes: None reported
Forced displacement: No.		
Has the family considered changing homes?: No.		
Where would you move in case the project requires it?: Does not know, does not answer.		
<p>Production relations:</p> <p>The family members receive money in exchange for their services and maintain a permanent (wife) and daily (head of household) employment relationship.</p> <p>There is no participation in community work in the area.</p>		
<p>Property:</p> <p>The interviewee is the caretaker of the property, does not know the measurement of the surface of the land; the area has a flat topography. No information provided in terms of the price for the hectare of land.</p>		
Production		
<p>The agricultural production is sold. The marketing channel is through intermediaries.</p> <p>No machinery is used for production; no technical advice is received from any institution.</p> <p>In the farm there are lettuce and pea crops, but these do not belong to the interviewee, they belong to the owner of the property.</p>		
Characteristics of the housing		
House endowment: The house has 1 bedroom, 1 kitchen, 1 bathroom, 1 living room and 1 laundry room		
Housing services: The home services include aqueduct, electric power, propane gas and television services. There is no sewage, landline, or natural gas.		
Constructive features: The roof is made of clay tiles; walls are made of clay; floors are made of tiles.		
Water discharge: The sewage is disposed of in a septic tank.		
Community involvement		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

They affirm to have a good relationship with the neighbors, thus achieving strong ties with the neighbors.
Membership of community organizations: No.
Support from an organization: None.
Main problems in the rural district: Roads, education, health, sewage, solid waste collection, employment and recreation.
A family member attends school: No.
Where to go for medical care: Health Center - Sagrado Corazón de Jesús.
Type of coverage: Subsidized, EPS: COMFAMILIAR.
Water use: The water for human and domestic consumption is obtained from the rural district aqueduct.
Waste Management: Solid wastes are not classified; they are burned as part of the final disposal.
Commercial Activity
NA
Observations
Analysis
The household has almost all public and social services, although they report a certain difficulties in the provision of some of these. There is economic stability within the home, since the two members have permanent jobs, in addition to the productive activities developed in the farm that contribute to generate the sustenance for the satisfaction of basic needs.

Water use: The water for human and domestic consumption is obtained from the rural district aqueduct.
Waste Management: Solid wastes are classified; inorganic material was burned and organic was used as fertilizer as part of the final disposal.
Commercial Activity
NA
Observations
Analysis
There are two older adults in the house, who still receive income from the provision of their services. In addition, there are productive activities within the farm that contribute to the generation of income for their maintenance. Regarding services, there are major shortcomings, as only electric power and aqueduct are available.

Forced displacement: No.		
Has the family considered changing homes?: No.		
Where would you move in case the project requires it?: To a land in the same rural district.		
<p>Production relations:</p> <p>The head of household receives money in return for services and maintains a per-day employment relationship.</p> <p>There is no participation in community work in the area through the minga.</p>		
<p>Property:</p> <p>The interviewee is the owner of the property and has a public deed; he states that square meter is the surface measure used; the land has a flat topography. No information provided in terms of the price for the hectare of land.</p>		
<p>Complete if you are the owner, otherwise write, N / A</p> <p>The property area is 19 square meters wide by 30 square meters long. In the last 5 years no land has been sold.</p>		
Production		
<p>The agricultural production is purely used for consumption.</p> <p>The farm has mango, guava, avocado, orange and lemon crops.</p> <p>To produce, they do not use machinery, do not receive technical advice from any institution and do not apply inputs to their products such as fungicides, fertilizer, etc.</p> <p>The farm has 20 guinea pigs, as well as maize crops.</p>		
Characteristics of the housing		
House endowment: The house has 4 bedrooms, 1 kitchen, 1 bathroom, 1 living room and 1 laundry room		

Housing services: The home services include aqueduct, electric power and television services. There is no sewage, landline, propane gas or natural gas. They cook using firewood.
Constructive features: The roof is made of clay tile; walls are made of clay and floors are in bare soil.
Water discharge: The sewage is disposed of in a septic tank.
Community involvement
They affirm to have a good relationship with the neighbors, thus achieving strong ties with the neighbors. Affirms that the works carried out by community organizations should be regulated.
Membership of community organizations: No.
Support from an organization: Yes, the son, Department of Social Prosperity (Families in action)
Main problems in the rural district: Roads, sewage, solid waste collection, employment and recreation.
A family member attends school: No.
Where to go for medical care: Health Center - Sagrado Corazón de Jesús.
Type of coverage: Subsidized, EPS: EMSSANAR.
Water use: The water for human and domestic consumption is obtained from the rural district aqueduct.
Waste Management: Solid wastes are classified; they are buried as part of the final disposal.
Commercial Activity
NA
Observations
Analysis
Since this household has members belonging to an indigenous community, management must be carried out with a differential approach and governed by current regulations. There is receptivity to the possibility of a transfer which is positive for the project, provided that access to public and social services that contribute to the improvement of living conditions is guaranteed.

Water use: The water for human and domestic consumption is obtained from the rural district aqueduct.
Waste Management: Solid wastes are classified; they are buried as part of the final disposal.
Commercial Activity
NA
Observations
Analysis
The household presents a low level of sensitivity, since there are income and productive processes within the property. It is worth noting that there are two minors, one of them still in school age. For its part, public and social services are not fully provided and failures are associated with the operation or the deficiencies themselves.

Waste Management: Solid wastes are classified; organic material is buried and inorganic material is burned.
Commercial Activity
NA
Observations
Analysis
The home is comprised of an ethnic (Afro-descendant) community which must be considered, since the management must be different and in accordance with the current regulations. Likewise, a position of resistance to the project and to the possibility of transfer is expressed, so that an assertive dialogue must be taken into account and should be ready for the achievement of its activities and culture.

Forced displacement: No.		
Has the family considered changing homes?: No.		
Where would you move in case the project requires it?: to another municipality: Pasto.		
<p>Production relations:</p> <p>The working family members receive money in exchange for their services and maintain a daily employment relationship.</p> <p>There is no participation in community work in the area through the minga.</p>		
<p>Property:</p> <p>The interviewee is the owner of the property and has a public deed; he states that square meter is the surface measure used; the land has a flat topography. Indicates a price of \$ 120,000,000 for the hectare of land.</p>		
<p>Complete if you are the owner, otherwise write, N / A</p> <p>The property area is 1/4 of a hectare. In the last 5 years no land has been sold.</p>		
Production		
<p>The agricultural production is purely used for consumption.</p> <p>Machinery (leased tractor) is used for production. Technical advice is received from UMATA and CORPONARIÑO. Inputs are used in products (fungicides and fertilizer).</p> <p>The farm has 6 cattle heads, as well as potato and pea crops.</p>		
Characteristics of the housing		
House endowment: The house has 2 bedrooms, 1 kitchen, 1 bathroom, 1 living room and 1 laundry room		
Housing services: The home services include aqueduct, electric power, propane gas and television services. There is no sewage, landline, or natural gas.		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Constructive features: The ceiling is made of wood, the walls are made of clay, the floors are in tile.
Water discharge: The sewage is disposed of in a septic tank.
Community involvement
They affirm to have a good relationship with the neighbors, thus achieving strong ties with the neighbors. Affirm that the works carried out by community organizations are good.
Membership of community organizations: No.
Support from an organization: Yes, by the municipal mayor's office, thanks to the program for the elderly.
Main problems in the rural district: Roads, education, sewage, and solid waste collection
A family member attends school: No.
Where to go for medical care: Health center, does not report which.
Type of coverage: Subsidized, EPS: EMSSANAR.
Water use: The water for human and domestic consumption is obtained from the rural district aqueduct.
Waste Management: Solid waste is classified; its final disposal implies the use of organic as fertilizer and delivery of plastics of fungicides every 3 months to the collection company.
Commercial Activity
NA
Observations
Analysis
The home has an older adult; there is stable income and productive activities that manage to meet the basic needs. On the other hand, there is receptivity to the possibility of a transfer, which could be positive for the achievement of the project.

Water use: The water for human and domestic consumption is obtained from the rural district aqueduct.
Waste Management: Solid wastes are classified; inorganic material was burned and organic was used as fertilizer as part of the final disposal.
Commercial Activity
NA
Observations
Analysis
There are two important factors to consider in the household. The first is that there is an older adult within the same and the second is that there is a strong position of resistance to the resettlement possibility; so it is suggested to reach an agreement through dialogue to benefit and ensure improvement in the quality of life of household members.

Community involvement
They affirm to have a good relationship with the neighbors, thus achieving strong ties with the neighbors. Affirm that the works carried out by community organizations are good.
Membership of community organizations: None.
Support from an organization: Yes, the Department of Social Prosperity (Families in action)
Main problems in the rural district: Roads, education, health, aqueduct, sewage, solid waste collection and employment.
A family member attends school: Yes, to the educational institution San Carlos, located in the municipal center of contadero. The student uses school transport and it takes approximately 15 minutes to the site.
Where to go for medical care: Health Center - Sagrado Corazón de Jesús.
Type of coverage: Subsidized, EPS: COMFAMILIAR, and MALLAMAS.
Water use: The water for human and domestic consumption is obtained from the rural district aqueduct.
Waste Management: Solid wastes are classified; inorganic material was burned and organic was used as fertilizer as part of the final disposal.
Commercial Activity
NA
Observations
Analysis
Although the household does not have all the basic services, there are good working conditions, in addition to the productive activities in the property that manage to support some needs. There seems to be receptiveness to the resettlement possibility, so if a transfer is required, the suggestion is to guarantee access to services especially to education, since a member of the household is a minor who is still in school age.

They affirm to have a good relationship with the neighbors, thus achieving strong ties with the neighbors. Affirm that the works carried out by community organizations are good.
Membership of community organizations: None.
Support from an organization: Yes, by the municipal mayor's office, thanks to the program for the elderly.
Main problems in the rural district: Roads, aqueduct, sewage, solid waste collection and employment.
A family member attends school: No.
Where to go for medical care: Health Center in Contadero
Type of coverage: Subsidized, EPS: EMSSANAR.
Water use: The water for human and domestic consumption is obtained from the rural district aqueduct.
Waste Management: Solid wastes are nor classified; they are buried as part of the final disposal.
Commercial Activity
NA
Observations
Two older adults and one child. The support of the house includes the contribution of all the children, who express that due to the age, their parents cannot work.
Analysis
At home, there are two older adults who do not receive any income. There is evidence of a resistance position regarding the resettlement possibility; therefore, it is suggested to follow dialog and agreement processes to ensure satisfaction of basic needs, as well as the propensity for improvement in quality of life conditions.

- Ospina Pérez

Forced displacement: No		
Has the family considered changing homes?: No		
Where would you move in case the project requires it?: To this rural district		
Production relations: The head of household is remunerated with cash for his work, his employment relationship is daily and is not an active part of some form of community work in the area		
Property: Affirms to own the property but does not have a public deed, square meter (m ²) is the surface unit used, the topographic characteristics of the property are (sic), and there is no knowledge of the area unit cost.		
There is no knowledge of the total area of the property and in the last 5 years, no part of it has been sold or transferred		
Production		
In the house, there are no agricultural activities currently carried out		
Characteristics of the housing		
House endowment: 2 bedrooms, 1 kitchens, 1 bathroom, and 1 laundry room		
Housing services: In the house, there is no sewer service, fixed telephony, as well as natural gas and propane. The services in the house include aqueduct, electric power and television. Firewood is provisionally used.		
Constructive features: The walls are made of block and brick; the floors are in bare soil, the ceiling is covered with clay tiles.		
Water discharge: The sewage is disposed of in a septic tank.		
Community involvement		
The relationship of the family group with the neighbors is good, there are strengthened ties of solidarity; no family member belongs to any community organization.		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Membership of community organizations: None
Support from an organization: None
Main problems in the rural district: Roads and solid waste collection.
A family member attends school: No
Where to go for medical care: Health Center - Contadero
Type of coverage: None
Water use: The water resource for human, domestic and livestock consumption and is obtained through the municipal aqueduct. In the house there is livestock activity with chicken and / or hen and cattle breeding
Waste Management: No solid waste classification is made; final disposal includes incineration
Commercial Activity
NA
Observations
NA
Analysis
The level of sensitivity is medium since, although some public services are provided, there are still gaps. It is worth noting that the only member of the household does not have a fixed income, nor a job stability to meet basic needs; therefore, it is important to reconsider these factors in the event of a resettlement process.

A family member attends school: No
Where to go for medical care: Health Center - Contadero
Type of coverage: None
Water use: The water resource for human, domestic and livestock consumption and is obtained through the municipal aqueduct. The farm manages livestock activity with chicken, pig, cattle, horses and guinea pigs breeding
Waste Management: No solid waste classification is made; final disposal includes incineration and organic matter is buried.
Commercial Activity
NA
Observations
NA
Analysis
The sensitivity of the household is average, since the income received by the members is not steady and there is a minor (early childhood) therein. There are public and social services, but there are still gaps. Although a neutral position is perceived in relation to the activities of the project, if a transfer process is required, dialogue should be assertive, given the significant level attachment to the area perceived.

GEO-002-17-114-EAM			Version 0.	May 2017

Main problems in the rural district: Roads, recreation and housing
A family member attends school: Escuela San Andrés, which is located in another rural district; the person normally walks to school for a period of approximately 30 minutes to 1 hour.
Where to go for medical care: Health Center - Contadero
Type of coverage: None
Water use: The means for obtaining water for domestic and human use is not specified
Waste Management: No solid waste classification is made; final disposal includes incineration.
Commercial Activity
NA
Observations
NA
Analysis
The provision of public and social services and income are unstable, in addition to the fact that no productive activity is carried out within the property. For this reason, it is important to take into account these factors, because in case of a transfer, it is important to ensure road condition improvement.

Support from an organization: None
Main problems in the rural district: Aqueduct and there is no union in the rural district
A family member attends school: Educational Institution José Antonio Galán, which is located in the municipal center; school transport is the means used to get there, which takes between 30 minutes and 1 hour
Where to go for medical care: Municipal Hospital - Ipiales
Type of coverage: None
Water use: The water resource for human and domestic consumption is obtained through the rural district aqueduct Ospina Pérez. In the property, no livestock and farming activities are carried out.
Waste Management: No solid waste classification is made in the property; final disposal includes incineration
Commercial Activity
The owner of the commercial establishment is Silvio Marcano, the place is called "Confecciones Marcano"; it does not have the legal records for its operation, its main economic activity is the garment-making and has operated for approximately 1 to 5 years
Observations
NA
Analysis
The income of the head of household is unstable and no productive activities within the property are reported. Good interaction relations with the community are not evidenced; factor that could make it easier for them to leave the territory; however, should a transfer process take place, bear in mind that the family includes 3 minors in school age .

Observations
NA
Analysis
The home is made up of two older adults who have strengthened their community relations through the Minga. Given their advanced age, they are no longer working, nor do they develop any kind of productive activity within the farm. Therefore, in case of a resettlement process, it is important to take these conditions into account.

Housing services: The house has no sewer, fixed telephone service, nor natural gas at present. The services in the house include aqueduct, electric power, propane gas and television.		
Constructive features: The walls are made of block and brick, floors are in cement and bare soil; the ceiling is covered in clay tiles		
Water discharge: Wastewater is discharged through the sewage system		
Community involvement		
The relationship of the family group with the neighbors is considered good, there are strengthened family and neighborhood ties; no family member belongs to any community organization.		
Membership of community organizations: None		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Support from an organization: None
Main problems in the rural district: Sewage and solid waste collection.
A family member attends school: Institución Educativa José Antonio Galán, which is located in another municipality; students use school transportation and the approximate time is between 15 to 30 minutes
Where to go for medical care: Health Center - Sagrado Corazón de Jesús
Type of coverage: None
Water use: The water resource for human and domestic consumption is obtained through the rural district aqueduct. The farm also has livestock and farming activity with the breeding of chicken, pigs, cattle, and one horse; in turn, there are seasonal potato and pea crops; these productive activities in the farm depend on the aqueduct and a cistern located in the property.
Waste Management: No solid waste classification is made in the property; final disposal includes incineration
Commercial Activity
NA
Observations
NA
Analysis
There are shortcomings in the provision of public and social services in the property and the rural district, which generates a degree of sensitivity. An assertive dialogue should be held, if a transfer process is required because, although there is no evidence of a resistance position, the household has lived for more than 20 years in the village and has never contemplated mobilizing from there.

GEO-002-17-114-EAM			Version 0.	May 2017

Main problems in the rural district: Education and Sewer
A family member attends school: Institución Educativa Ospina Pérez, which is located on the rural district; transportation is by motorcycle and travel time is 15 to 30 minutes
Where to go for medical care: Health Center - Sagrado Corazón de Jesús
Type of coverage: None
Water use: The water resource for human and domestic consumption is obtained through the stream (name not specified). The farm also has livestock and farming activity with seasonal potato crops and the breeding of chicken and guinea pigs; these productive activities in the farm also depend on the rural district aqueduct.
Waste Management: No solid waste classification is made in the property; final disposal includes residue burial
Commercial Activity
NA
Observations
NA
Analysis
The house does not have the right conditions to live because the roof is covered with cloth, especially with the presence of two infants. In addition to this, the education service is reported as one of the main shortcomings, which is important to take into account in case of a transfer process.

Support from an organization: Mayor's Office - Senior Citizen
Main problems in the rural district: Roads, sewage and solid waste collection
A family member attends school: No
Where to go for medical care: Health Center - Sagrado Corazón de Jesús
Type of coverage: None
Water use: It is not specified or indicated how the water resource is obtained for human and domestic consumption. The water resource for human and domestic consumption is obtained through the rural district aqueduct; in the farm there are no agricultural activities at present.
Waste Management: No solid waste classification is made in the property; final disposal includes residue burning
Commercial Activity
NA
Observations
NA
Analysis
The household is comprised of an older adult who does not have any type of job relationship due to his advanced age and currently receives support from the Mayor's Senior Citizens program. Likewise, no type of productive activity is reported in the property. Although a neutral position on the project is observed, it suggests that if a transfer process takes place, the preference is to do it on the same rural district.

- Las Cuevas

Housing services: aqueduct, electric power, propane gas and television		
Constructive features: The walls are made of adobe, bahareque mud, the floors are in bare soil, the ceiling is covered with Eternit.		
Water discharge: sewage and septic tank		
Community involvement		
The relationship with neighbors is good, the strongest ties are economic and solidarity.		
Membership to community organizations: No		
Support from an organization: No		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Main shortcomings in the rural district; education, sewerage and employment
A family member attends school: NA
Where do they go for medical care: Health Center in Contadero
Type of coverage:
Water use: for domestic consumption, rural district aqueduct; rain water for livestock purposes
Waste Management: Waste is not classified; open air
Commercial Activity
NA
Observations
Analysis
The household has an average sensitivity, since the household is part of an indigenous community, so the respective management must be carried out with a differential approach and in accordance with the directions of the current regulations.

Births: No	Deaths: No	Women of childbearing age: No
Disabilities: No		
Prevailing diseases: Intestinal, gastritis.		Causes: hereditary
Forced displacement: No		
Has the family considered changing homes?: No		
Where would you move in case the project requires it?: From this rural district		
Production relations: They are paid in cash each day, and no community work is made		
Property: Owner without a property title; Square meter is the land area used; the terrain has a sloped topography; the value per m ² NA		
If owner, please complete		
The property has an area of 54m ² , it has not been sold in the last 5 years		
Production		
Agricultural production: NA because it has no crops		
Characteristics of the housing		
House endowment: 2 bedrooms, 1 kitchen, 1 bathroom, 1 laundry area		
Housing services: aqueduct, electric power, propane gas and television.		
Constructive features: The walls are made of bahareque, adobe, mud; the floor is in bare soil, the ceiling is made of Zinc.		
Water discharge: septic tank		
Community involvement		
The relationship with the neighbors is good, the strongest ties are those of neighborhood.		
Community organization involvement: None		
Support from an organization: No		

Main shortcomings in the rural district; roads and health
A family member attends school: No
Where do they seek medical care: Corazón de Jesús Health Center
Type of coverage:
Water use: For domestic and livestock consumption, it is obtained from the rural district aqueduct.
Waste Management: Yes, they burn them
Commercial Activity
NA
Observations
Analysis
The members of the household belong to an ethnic community (indigenous), so if a transfer process takes place, a different type of management should be maintained, according to the current regulations and guaranteeing the satisfaction of the vital needs of the household.

Housing services: Among the services available are aqueduct, electric power, propane gas and television		
Constructive features: The walls are in block, brick; the floors are in cement, the roof in eternit		
Water discharge: The sewage is disposed of in a septic tank.		
Community involvement		
The family relationship with the neighbors is good, the strongest ties are those of solidarity.		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Membership of community organizations: None
Support from an organization: None
Main problems in the rural district: Roads, health, sewage, solid waste collection, and recreation.
A family member attends school: NA
Where do they go for medical care: Health center
Type of coverage: NA
Water use: Water for domestic consumption is obtained from the rural district aqueduct, water for livestock use is obtained from the rural district aqueduct; there are 6 chicken and hens, one pig, 6 heads of cattle and 20 guinea pigs; there are potato, corn and pea crops in the farm.
Waste Management: Solid wastes are not classified; they are burned as part of the final disposal.
Commercial Activity
NA
Observations
Analysis
In the farm there are productive activities that contribute to solve the basic needs, in addition to the remuneration of the head of household received for the services provided. Should a transfer process be required, assertiveness in the dialogue and ensuring the satisfaction of the basic needs is recommended.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Main problems in the rural district: Roads and Sewerage
A family member attends school: No
Where to go for medical care: Health center in Iles
Type of coverage: NA
Water use: For domestic consumption, it is obtained from the rural district aqueduct, and likewise for livestock.
Waste Management: They do not calcify solid waste; they burn them or bury them.
Commercial Activity
NA
Observations
Analysis
The home is receptive to the possibility of carrying out a transfer process. It has income from the services rendered, although there is no permanent relationship. Finally, although there are deficiencies at the public and social services level, the degree of sensitivity of the home and housing is low.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Births: 0	Deaths: 0	Women of childbearing age: 1
Disabilities: No		
Prevalent Diseases: Flu		Causes: Environment
Forced displacement: No		
Has the family considered changing homes?: No		
Where would you move in case the project requires it?: To another municipality		
Production relations: The family of the household is paid in cash, they have no community work in the zone and they have no working engagement.		
Property: Owner with public deed, the unit of surface is hectare.		
The area of the property is 1 hectare and no land has been sold in the last 5 years.		
Production		
NA		
Characteristics of the housing		
House endowment: 1 bedroom, 1 kitchen, 1 bathroom, 1 living room and 1 laundry area		
Housing services: Aqueduct, electric power, propane gas, television.		
Constructive features: Walls in blocks, brick, cement floor, eternit roof.		
Water discharge: Septic tank		
Community involvement		
The relationship with the neighbors is good, the strongest ties with the neighbors of the rural district are solidarity.		
Membership of community organizations: None		
Support from an organization: Municipal Mayor's Office		

Main problems in the rural district: Roads and Sewerage
A family member attends school: No
Where to go for medical care: Health Center, Contadero
Type of coverage: NA
Water use: For domestic consumption, it is obtained from the rural district aqueduct, and likewise for livestock.
Waste Management: Solid waste is not calcified.
Commercial Activity
NA
Observations
Analysis
Should a transfer process be required, it is recommended to have a differential approach in the engagement, since the family belongs to an ethnic community. Likewise, it is important to bear in mind that there is a minor in the home (early childhood) whose basic needs must be satisfied. On the other hand, the family expresses willingness with respect to the activities of the project.

Community involvement		
The relationship with the neighbors is good, the strongest ties with the neighbors of the rural district are solidarity.		
Membership of community organizations: None		
Support from an organization: Municipal Mayor's Office		

Main problems in the rural district: Roads, sewage, solid waste collection, employment, recreation and housing.
A family member attends school: Yes (no more information)
Where to go for medical care: Health Center, Contadero
Type of coverage: NA
Water use: For domestic use, water is obtained from the rural district aqueduct; for livestock use: NA.
Waste Management: They do not calcify solid waste; they bury them.
Commercial Activity
NA
Observations
Analysis
The household and the rural district report some deficiencies in the provision of public and social services, in addition to this, although the head of household receives income, these are not stable. On the other hand, the housing conditions are decent and do not represent some degree of vulnerability.

GEO-002-17-114-EAM			Version 0.	May 2017

Analysis

The home is composed of an older adult who still renders services, he also develops productive activities on his property. This has a medium level of sensitivity due to the deficiencies at the public and social services level reported there; so in case of a transfer process, it is important to satisfy basic needs.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Analysis

The home has a high degree of vulnerability given its overcrowding conditions in the first place, in addition to the precarious housing characteristics that are not considered suitable for an large family of 7 members. Also, it is worth noting that in the family, there are 4 minors of school age. Therefore, should a resettlement process be required, these characteristics should be taken into account and management shall be conducive to improving quality of life conditions and easy access to basic services (social and public).

The only member of the household is an older adult who does not have stable income, nor does he develop activities within the property. For its part, a position of resistance is noticed against a possibility of transfer. In the face of these circumstances, it is important that if a resettlement process is required, an assertive dialogue is put in place, guaranteeing the improvement of living conditions.

<p>Type of coverage: No response</p>
<p>Water use: Water for human and domestic consumption is obtained from a rural district aqueduct for agricultural purposes such as potatoes and peas, for an annual value of \$ 10,000 pesos</p>
<p>Waste Management: Solid wastes are not classified; they are burned as part of the final disposal thereof.</p>
<p>Commercial Activity</p>
<p>NA</p>
<p>Observations</p>

Analysis

The home has a medium degree of sensitivity since there are two children in school age. Likewise, deficiencies are reported at the public and social service level, which should be taken into account in the event of a project resettlement process.

Births: None	Deaths: None	Women of childbearing age: One
Disabilities: No		
Prevalent Diseases: NA		Causes: NA
Forced displacement: NO		
Has the family considered changing homes?: NA		
Where would you move in case the project requires it?: In another rural district of the municipality. which one: Funel		
Production relations: They are paid in cash; there i no permanent working relationship, nor do they work in a community association.		
Property: Caretaker; hectare is the land surface used; the land has a sloped and flat topography.		
The land has an area of 3 hectares; no land has been sold in the last 5 years.		
Production		
The agricultural production is for consumption, and is sold to intermediaries; a Guadaira is used, as well as a threshing machine; crops are cultivated on a traditional way, they do not receive technical advice from vendors. The feedstock used includes insecticides, fungicide, herbicides, fertilizers and others.		
Characteristics of the housing		
House endowment: 3 bedrooms, 2 bathrooms, 2 kitchens, 1 living room and 2 laundry areas		
Housing services: Aqueduct, Electric Power, Propane Gas and Television.		
Constructive features: The walls are made of: Bahareque, Adobe and Mud; the floors are made of: Tile, Brick, Synthetic Material and ceilings are made of: Clay tile, wood (beam).		
Water discharge: Septic Tank.		
Community involvement		
The relationship with neighbors is good; the strongest ties are those of neighborhood, solidarity and family.		
Community organization involvement - which one and position: Yes, Indigenous Council- believes that the work of these organizations is good.		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Support from an organization: Department of Social Prosperity (Families in Action)
Main problems in the rural district: Roads, Health, Sewage, Solid Waste Collection, Recreation, Housing and Housing Project.
A family member attends school: Yes, I.E del Norte (Iles), IE of the Municipality (Junes) in the rural district and in another municipality, Junes; they walk or ride a motorcycle: how long?: 15 to 30 minutes.
Where to go for medical care: Municipal hospital and health center, Funes C.S. and Capulí
Type of coverage: Subsidized, EPS, Emsanar.
Water use: For domestic consumption, it is obtained from the Capulí farm creek for livestock purposes: 2 chickens / hens, 5 heads of cattle, 15 guinea pigs and 3 rabbits; and agricultural: tree tomato, Banana, Corn, Onion, coriander and Fruit trees.
Waste Management: Is waste classified or not: No, they are burned.
Commercial Activity
Observations
Owner: Cristian Peña Herrera (Ipiales) Cellphone. 3103587412.
Analysis
The household has a low-medium level of vulnerability since the farm has almost all public services. Furthermore, the head of household has a permanent type of employment, which guarantees basic income for family support. On the other hand, there is willingness with respect to the technical considerations of the project. Finally, since this is a home belonging to an ethnic minority, a differential approach must be taken into account.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

A family member attends school: NA
Where do they go for medical care: NA
Type of coverage: NA
Water use: Spring, used for agriculture: Corn, Peas and Onion.
Waste Management: Managed on the open air.
Commercial Activity
Observations
They do not sleep there; they cook here and they keep the elements and products of the crops; but they live in el Porvenir. Owner: Adelberto Zambrano, from Ipiales. Cell phone number: 315 8872636.
Analysis
Although there is no evidence of significant property and family information, it can be inferred that the general conditions of the household are arranged to suit the needs. However, there are some shortcomings at the public and social service level. Assertiveness is suggested in the consultations to be carried out in case of resettlement, as they belong to a minority ethnic group, which deserves a differential treatment, according to their cultural precepts.

Porvenir

NA
Observations
They only come on weekends, they are from the municipality of Ipiales.
Analysis
According to the information recorded, it is evident that the dwelling is used only on weekends, so it is concluded that there are no arguments to be included in a resettlement plan. The acquisition of the

property will be done taking into account the current regulations and the compensation will be recognized according to Resolution 545 of 2008 of Inco (Today ANI).

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

According to the information recorded, there is no evidence of any degree of vulnerability of the family. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

<p>Water discharge: The sewage is disposed of in a septic tank.</p>
Community involvement
The relationship with the neighbors is good, the strongest ties are those of neighborhood.
<p>Community organization involvement: None</p>
<p>Support from an organization: None</p>
<p>Main problems in the rural district: The Roads and other (information); to keep them informed of what is going to be done, for the benefit of the rural district</p>
<p>A family member attends school: Yes, Institución Educativa El Capuli, located in another rural district - north zone, students walk for 15 to 30 minutes to get there</p>
<p>Where do they go for medical care: Health center in Iles and EIPS</p>
<p>Type of coverage: no information is mentioned</p>
<p>Water use: For domestic consumption; it is obtained from the rural district aqueduct; an annual fee of \$30,000 pesos is paid for livestock and agricultural purposes NA</p>
<p>Waste Management: Classifies waste: no, they are Buried and / or burned</p>
Commercial Activity
NA
Observations
Regarding question 68, "they do not seek improvement for the most needy, but are related to those who are closer friends"

Analysis

According to the information recorded, there is no evidence of any degree of vulnerability of the family. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested for both the resident social unit and the productive social unit.

It is worth noting that there is a degree of vulnerability for the hearing impairment condition of Mr. Nelson Beltran; situation that requires accompaniment, guaranteeing support to find a location in better conditions than the current ones, and which may prevent health deterioration; In addition to ensuring easy access and displacement to medical monitoring sites.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

According to the information recorded, there is no evidence of any degree of vulnerability of the family. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested.

It is worth noting that there is a degree of vulnerability for advanced age of of Mr. Manuel Antonio Pass; situation that requires accompaniment, guaranteeing support to find a location in better conditions than the current ones, and which may prevent health deterioration.

Waste Management: Classifies waste: yes, The management given is their disposal with the cleaning service
Commercial Activity
NA
Observations
Analysis

According to the information recorded, there is no evidence of any degree of vulnerability of the family. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested for both the resident social unit and the productive social unit.

It is worth noting that there is a degree of vulnerability for the hearing impairment condition of Mr. José Lucero; situation that requires accompaniment, guaranteeing support to find a location in better conditions than the current ones, and which may prevent health deterioration; In addition to ensuring easy access and displacement to medical monitoring sites.

Waste Management:

Classifies waste: Yes, management: they are transferred to Pasto so that the waste collection service can pick them up there

Commercial Activity

NA

Observations

They live in Pasto, come to Porvenir only on weekends. Both children are at the university

Analysis

According to the information recorded, it is evident that the dwelling is used only on weekends, so it is concluded that there are no arguments to be included in a resettlement plan. The acquisition of the property will be done taking into account the current regulations and the compensation will be recognized according to Resolution 545 of 2008 of Inco (Today ANI).

Has the family considered changing homes?: No		
Where would you move in case the project requires it?: In the same property and in this path		
Production relations: The household residents are paid in cash; labor relationship is on a per-day-basis and are not engaged from a labor perspective to the rest of the community.		
Property: The interviewee, who is the owner through public deed, states that the square meter is the land area measurement and the land has a sloped topography; the value of the hectare in the area is \$25,000,000		
If owner, please complete The property has an area of 25x20 m.		
Production		
Agricultural production is for consumption, and is sold to Intermediaries,		
Characteristics of the housing		
House endowment: The house has 2 bedrooms, 1 kitchen, 1 bathroom, and 1 laundry area		
Housing services: Aqueduct, Electric Power, Propane Gas and Television.		
Constructive features: The walls are made of Block and Brick, the floors are in Cement, and eternit roofs.		
Water discharge: The sewage is disposed of in a septic tank.		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Community involvement
The family relationship with neighbors is Good, the most strengthened tie is the neighborhood one; no family member belongs to any community organization in the area
Membership of community organizations: None
Support from an organization: Yes, Municipal Mayor's Office
Main problems in the rural district: Sewerage and Housing
A family member attends school: N.A.
Where do they go for medical care: Health center in Iles E.S.E
Type of coverage: None
Water use: From the Municipal Aqueduct.
Waste Management: Solid waste is burned.
Commercial Activity
NA
Observations
Currently they have crops of: coffee, plantain, corn, orange, avocado and tangerine
Analysis
The home has a perceptible level of resistance, probably due to the situation of displacement that had to be faced by the year 2000; also according to the information collected, the arrival of the family to the rural district and the property is very recent. Therefore, it is suggested that in the event of a resettlement process, assertive and careful consultation with the members of the household is carried out. Although there are deficiencies at the public and social service level, the sensitivity is not high.

GEO-002-17-114-EAM			Version 0.	May 2017

Community involvement
The family relationship with neighbors is good, the most strengthened ties are the solidarity ones; no family member belongs to any community organization in the area
Membership of community organizations: NA
Support from an organization: None
Main problems in the rural district: Roads, Health, Aqueduct, Sewage and Solid Waste Collection.
A family member attends school: Yes, Jose Antonio Galan, Iles
Where do they go for medical care: Health center in Iles
Type of coverage: None
Water use: Water is obtained from the Well
Waste Management: Solid waste is burned, Organic Fertilizer.
Commercial Activity
Water for livestock use is obtained from the well of the farm, where the following animals are found: 30 hens; 1 pig, 4 heads of cattle and 20 guinea pigs. They also have crops such as: Potato, Corn, Peas, Beans and Onions.
Observations
Analysis
According to the economic and spatial characteristics, the sensitivity is medium-low, but in the case of a family belonging to an ethnic (indigenous) minority, special attention is drawn to a differentiated treatment according to its cultural parameters. Finally, a good level of receptivity to the project's own activities or to a possible resettlement process is expressed; therefore, it is suggested that in case of this situation, access to public and social services and an optimum territory for the achievement of the traditional activities of their ethnic group should be ensured.

Tablón Alto

Support from an organization: NA
Main problems in the rural district: Health and employment
A family member attends school: Yes, Institución Educativa José Antonio Galán, located in the Ilés municipal center; students use school transportation and travel for approximately 15 to 30 minutes to attend school
Where do they go for medical care: Municipal Hospital of Ilés
Type of coverage: Subsidized - Emssanar
Water use: For the domestic and livestock consumption; it is obtained from the El Ciruelo rural district aqueduct; an annual fee of \$ 7800 pesos is paid; for livestock (breeding of 10 chickens, 1 pig, 2 heads of cattle, 2 horses) and agricultural (maize, temporary crop) purposes
Waste Management: Classifies waste: yes, they are managed in a way that the organic ones are buried and the inorganic ones are burned
Commercial Activity
NA
Observations

Analysis
It is worth noting that the household has two school-age children, so, if a transfer is required, their needs must be taken into account.. On the other hand, some deficiencies in the public and social services are reported, which imply a degree of vulnerability.

GEO-002-17-114-EAM			Version 0.	May 2017

The family has a house nearby that, at the moment, is not being inhabited. 3 ha with land title in the name of the son.

The water of the aqueduct is scarce in the summer, in winter there is service, with low flow.

Analysis

The household has income from the work done by the head of household, and by the productive activities carried out on the farm. It is worth noting that the household has a school-age child; so it is suggested that in case of resettlement, access to social services is guaranteed.

Water discharge: The sewage is disposed of in a septic tank.
Community involvement
The relationship with the neighbors is good, the strongest ties are those of neighborhood.
Community organization involvement: None
Support from an organization: Municipal Mayor's Office
Main problems in the rural district: Sewage, employment, recreation (court) and solid waste collection
A family member attends school: No
Where do they go for medical care: Municipal Hospital of Iles
Type of coverage: Subsidized - Emssanar, comfamiliar
Water use: For the domestic and livestock consumption, it is obtained from the villanueva rural district aqueduct; a five-year fee of \$ 360,000 pesos is paid; for livestock purposes, it also takes water from sheds (for the breeding of 10 chickens, 2 pigs, 6 heads of cattle, 1 horse, 8 guinea pigs, 2 geese) and agricultural (potato, corn, peas, beans and onions, temporary crops) purposes
Waste Management: Classifies waste: no, they are handled like when plastic is burned
Commercial Activity
NA
Observations

The owner sells the potato production in the house, but is not considered as a commercial activity, as the sale is made only in the season.

The house has an events room attached to the house by a parking lot.

The house has a shed.

Analysis

The household is made up of three senior members who receive income mainly from the productive activities carried out on the property. It is assumed that there is a high degree of attachment for the time of permanence in the rural district; however it is suggested to assertively manage the process, aiming at the improvement of living conditions.

Owner Sandra Quintaz- Tablón Alto

Analysis

The home has a high degree of vulnerability, because it has two underage members who must be guaranteed the satisfaction of their needs. On the other hand, the family shows receptivity regarding the transfer possibility by the project.

GEO-002-17-114-EAM			Version 0.	May 2017

Production
The agricultural production is for consumption and sale through intermediaries and the market place in Cali; it is cultivated in a traditional way, they use a thresher; receive technical advice from the UMATA, apply inputs to their crops (fertilizers, fungicides, developments)
Characteristics of the housing
House endowment: The house has 3 bedrooms, 1 kitchen, 1 bathroom, 1 living room and 1 laundry area
Housing services: There is no access to sewage, natural gas or fixed telephony; the services available include aqueduct, electricity, propane gas, mobile telephony and television.
Constructive features: The walls are made of (block and brick), the floors are in cement, the roof is in eternit.
Water discharge: The sewage is disposed of in a septic tank.
Community involvement
The relationship with the neighbors is good, the strongest ties are those of solidarity.
Community organization involvement: Association of gooseberry crops, the work of this organization is not considered optimum
Support from an organization: From ICBF
Main problems in the rural district: Sewage, roads, education, health, solid waste collection, employment, recreation and housing.
A family member attends school: No
Where do they go for medical care: Municipal Hospital of Iles and drugstore

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Type of coverage: Subsidized - Emssanar
Water use: For the domestic consumption, there is the la tigrera rural district aqueduct; the service payment is \$ 700,000 every fortnight; for livestock purposes, it is taken from streams (15 chickens, 10 heads of cattle, 100 guinea pigs) and agricultural (maize, gooseberry, fruit trees, onions, which are temporary crops). Refer to the observations
Waste Management: Classifies waste: no, they are handled in such a way that some burn it and others use it as fertilizer; clarifies that a car passes to collect the fungicides cans.
Commercial Activity
NA
Observations
In the neighboring property (partnership with the owner of the property Mr. Tomas Andrade- Tablón Alto), there are onion crops (20,000 seeds) and corn (1ha) It has in a surrounding yard, another 20,000 seeds of onion Alejandro Dávila has a bee culture to obtain pollen and is commercialized in Pasto
Analysis
There are multiple shortcomings with regard to the provision of public and private services and should be taken into account in the event of a resettlement process. The household reports the development of productive activities in its property; so it is important that if transferred, it can be achieved by avoiding the affectation to economic traditions.

Mr. Giraldo Davila has a property 800 meters from the house where he grows 3 jars (300,000 seeds) of onion, equivalent to 1 hectare

Analysis

It is a traditionally peasant household that depends on the income that comes with the development of its crops. For its part, there is a school age member who is still deserves more attention. Finally, there are shortcomings in the provision of public and social services.

GEO-002-17-114-EAM			Version 0.	May 2017

Analysis
The household presents a high degree of vulnerability, since it is a large family including two older adults and three school-age children. In addition, the home is overcrowded and with no provision for public and social services. It is important that, in the event of a resettlement process, these conditions be taken into account, and to ensure the improvement of quality of life conditions and the satisfaction of basic needs.

GEO-002-17-114-EAM			Version 0.	May 2017

Type of coverage: Subsidized - Emsanar
Water use: For domestic consumption; it is obtained from the rural district aqueduct; a monthly fee of \$5,000 pesos is paid; no information provided for livestock and agricultural purposes
Waste Management: Waste classified: yes, they are burned and buried.
Commercial Activity
NA
Observations
Analysis
The family has an average vulnerability, as there is a school-age minor; furthermore, overcrowding conditions are reported and deficiencies in the provision of public and private services. Therefore, in the event of a transfer process, it is important to consider such conditions, and to ensure the improvement of quality of life conditions.

GEO-002-17-114-EAM			Version 0.	May 2017

Water use:

For domestic consumption, it is obtained from the rural district aqueduct; A five-year installment of \$ 5,000 pesos is paid; For livestock (breeding of 15 chickens, 5 heads of cattle) and agricultural (maize and bean, seasonal crops) purposes

Waste Management:

Waste classified: yes, they are burned and buried.

Commercial Activity

Mrs. Zoila Mallama has a shop; it has no name, nor records for its operation, nor employees; time in business from 10 to 20 years, daily attention to the public; no information is reported on the value of monthly earnings, or who benefits from it

Observations

Analysis

The home has a degree of vulnerability since within the household includes two older adults who have a commercial establishment in their property, but it has no record of operation. On the other hand, it is a traditionally agricultural home and depends on income per crop.

GEO-002-17-114-EAM			Version 0.	May 2017

Analysis

There are some shortcomings at the public and social service level. In addition, residential conditions are not at all apt for an extended 8-member home, as there are overcrowded conditions. It is therefore suggested that in case of a resettlement process, these conditions should be taken into account for their improvement.

The household has a medium degree of vulnerability, given the presence two elderly people with temporary employment relationships. Likewise, the home has good housing conditions but with many deficiencies at the level of public and social services. In the event of a transfer process, it is important to consider such characteristics, and to ensure the improvement of quality of life conditions.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Analysis

The household is comprised of two senior adults who still receive remuneration for the services rendered, apart from the productive activities on the property. On the other hand, there are many deficiencies reported regarding public and social services. Therefore, it is suggested that if a transfer process is considered, such aspects must be taken into account.

Type of coverage: No response
Water use: Water for human and domestic consumption is obtained from the Maco rural district aqueduct for livestock and agricultural purposes, such as coffee, bean, and sweet onion
Waste Management: Solid wastes are not classified; they are burned as part of the final disposal thereof.
Commercial Activity
NA
Observations

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Analysis

The household is large and shows degrees of attachment to the area; however, there is willingness to the possibility of a transfer process. Therefore, it is suggested that in case of resettlement by the project, the activities carried out on the site should be taken into account and an area should be granted where these traditional activities can be achieved.

General Information

Interviewee José Ignacio Armas	Form 015TB012	Photography 206 X: Y:

The household reports a medium degree of vulnerability since the only member is an older adult woman who does not have an employment relationship nor does she develop productive or commercial activities. Therefore, in the event of a transfer process, it is important to consider such conditions, and to ensure the improvement of quality of life conditions.

NA
Observations
Analysis
The household has a medium sensitivity level, as the services provided of public and social character present failures and are not reported in their entirety. In addition, there is a minor in the household (early childhood) that requires greater attention in the event of a resettlement process by the project.

Observations
Analysis
The home belongs to an indigenous community, so in the engagement process, a differential approach must be applied, in accordance with the guidelines given in the current regulations. In addition to this, in the home there are two minors (early childhood) who deserve more attention to ensure the satisfaction of basic needs.

Observations
Analysis
The household presents a level of sensitivity associated with labor and economic instability; on the other hand, the household members have considered a transfer process. Therefore, it is important, in case of a resettlement process, to consider strategies to ensure the satisfaction of basic needs, especially where there are two children who need more attention.

Water discharge: Septic tank
Community involvement
The family relationship with neighbors is average, the most strengthened tie is neighborhood; no family member belongs to any community organization in the area
Community organization involvement: NA
Support from an organization: Municipal Mayor's Office
Main problems in the rural district: Roads, sewerage and employment
A family member attends school: Yes, the Institución Educativa José Antonio Galán is located in the municipal head; the school transport takes less than 15 minutes
Where do they go for medical care: Health center in Iles
Type of coverage:
Water use: Water for human, domestic and livestock consumption is obtained from the urban district aqueduct; the farm has animals
Waste Management: The final disposal is by using it as organic fertilizer, and also burned; there is no information on residue classification
Commercial Activity
NA
Observations

Analysis
The household presents a considerable degree of vulnerability since it is made up of 7 members, three of whom are minors, and the head of household is an older adult. Likewise, no type of productive activities are reported in the property. Therefore, it is important to consider these conditions, if a transfer process is considered.

Observations
Analysis
The home has two school-age children; therefore, should a resettlement process take place, it is important to ensure the satisfaction of their basic needs. Likewise, due to the residence time in the area, there seems to be high attachment to the territory, which must be managed through assertive dialogue.

Support from an organization: Umata
Main shortcomings in the rural district: sewage
A family member attends school: No
Where do they go for medical care: Imues health center, comfamiliar subsidized
Type of coverage:
Water use: for domestic and livestock consumption, it is obtained from the municipal aqueduct.
Waste Management: Classifies waste, which is collected by Emas twice a week
Commercial Activity
Sale of fruits and vegetables under the name of Rosalba, it has no records, and has been active for more than 20 years
Observations
Analysis
The dwelling is inhabited by two elderly ladies whose health is deteriorated; they are vulnerable people who must receive support at the time of transfer, taking into account their mobility conditions. When presenting themselves as owners and with good housing conditions, they are not likely to be resettled. The real estate acquisition would be under the modality of property purchase, as set out in current regulations; compensation may be paid in this process, according to Resolution 545 of 2008 of Inco (today ANI).

GEO-002-17-114-EAM			Version 0.	May 2017

Water use:

Water for human, domestic and livestock consumption is obtained from the urban district aqueduct; the farm has coffee, plantain and fruit trees.

Waste Management:

Solid waste is classified and collected by EMAS twice a week

Commercial Activity

Observations

The property has a space for the Club Gallístico Panamericana, which is leased on weekends, but different people rent this space

Analysis

The family nucleus composed of two brothers, there is a degree of vulnerability, because Mr. Alfredo Burbano presents behavior problems and today, no income is recorded, despite being a civil engineer; the household income is reported only by Mrs. Nancy. The above requires accompaniment at the time of the transfer and given the possible inconveniences that this may generate in Mr. Alfredo. The accompaniment could be focused on the transfer to the city of Pasto, as they manifested during the interview. In spite of the foregoing, it is not considered that the family unit is susceptible to be resettled; accompanied must be provided, and the property acquisition process must be followed, considering the pertinent compensation factors and the value defined in the appraisal.

<p>Type of coverage: None</p>

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Water use: Water for human, domestic consumption is obtained from the water spring; there is one pig in the farm
Waste Management: Solid waste is not classified; it is collected by EMAS's collection service twice a week
Commercial Activity
NA
Observations
Analysis
The family unit is not considered a vulnerable family, its members have studies which allow access to better job opportunities. The family today records income of one minimum monthly legal salary; however this condition may change at the time family members, other than the head of household, can contribute. Given their ownership, it guarantees the process of property acquisition and recognition of social compensation in a process of voluntary alienation. Due accompaniment is suggested at the time of the house transfer

<p>Water use:</p> <p>Water for human and domestic consumption is obtained from the urban district aqueduct; the farm has an avocado, mango and lemon crop</p>
<p>Waste Management:</p> <p>Solid waste is classified and collected by EMAS twice a week; they are also burned</p>
Commercial Activity
NA
Observations
Analysis
<p>According to the information reported by the interviewed person, a degree of vulnerability is evidenced by being a displaced person, with little education training and in an advanced age. The lady does not hold title of property and only resides in the property as caretaker and cannot be classified as improvement beneficiary. For the above, during the property acquisition process, it is suggested to pay the pertinent compensation, according to current regulations. Likewise, accompaniment must be provided in the transfer process guaranteeing better housing conditions, where physical integrity is not jeopardized due to natural issues.</p>

Waste Management:

Solid waste is classified and collected by EMAS twice a week

Commercial Activity

Observations

The house is constantly leased for people who are sick, as recommended by the doctor.

\$250,000

The lady currently has health problems, she is not allowed to work, she is in constant medical monitoring

Analysis

According to the information registered, there is a degree of vulnerability of Mrs. Elsa for her health condition, a situation that classifies it as a case that requires accompaniment, guaranteeing support to find a location in better conditions than the current ones, and which may prevent current health deterioration; in addition to ensuring easy access and displacement to medical monitoring sites. It should be noted that at the time of the housing acquisition, values must be established and recognized with respect to the basic social factors reestablishment.

Water use:

The water for human and domestic consumption is obtained from the spring at pnt 308, fruit tree crops are maintained in the property

Waste Management:

Solid waste is not classified; it is collected by EMAS twice a week

Commercial Activity

Observations

Analysis

According to the information registered, there is a degree of vulnerability of Mrs. Lida for her health condition, a situation that classifies it as a case that requires accompaniment, guaranteeing support to find a location in better conditions than the current ones, and which may prevent current health deterioration; in addition to ensuring easy access and displacement to medical monitoring sites. It should be noted that at the time of the housing acquisition, values must be established and recognized with respect to the basic social factors reestablishment.

<p>Waste Management: Solid waste is classified and collected by the waste collection service</p>

Commercial Activity
Observations
Analysis
The dwelling is inhabited by two elderly persons (spouses) whose health is deteriorated; they are vulnerable people who must receive support at the time of transfer. When presenting themselves as owners and with good housing conditions, they are not likely to be resettled. The real estate acquisition would be under the modality of property purchase, as set out in current regulations; compensation may be paid in this process, according to Resolution 545 of 2008 of Inco (today ANI).

GEO-002-17-114-EAM			Version 0.	May 2017

Births: 0	Deaths: 1	Women of childbearing age: 0
Disabilities: Yes, the grandmother, backbone impairment		
Prevalent Diseases: Thyroid and hypertension	Causes: Inherited	
Forced displacement: No		
Has the family considered changing homes?: No		
Where would you move in case the project requires it?: In Pasto		
Production relations: The head of household is paid in cash, in exchange for services on a permanent basis and, at times, receives in kind; is linked, from a labor perspective, to the rest of the community when there are works at the school through mingas.		
Property: The interviewee is the owner with public deed, states that square meter is the land area measurement and the land has a flat topography; the value of the hectare in the area is more than \$500,000 per m ²		
If owner, complete this information, otherwise, N / A delete the box There is no information on the property area, and it is not clear if in the last 5 years, the land has been sold.		
Production		
The agricultural production of the farm is used for consumption and sale to the intermediaries, also in the stand or they are taken to Tuquerres or Ipiales. The pump is used fumigate and a coffee threshing; technical advice is received from CORPONARIÑO for fruit trees; they use feedstock, such as: Chemical and organic fertilizer		
Characteristics of the housing		
House endowment: The house has 3 bedrooms, 1 kitchen, 3 bathrooms, 1 living room and 1 laundry area		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Housing services:

There is access to aqueduct, sewage, electric power, propane gas and television.

Constructive features:

The walls are in block, brick, floors are in tile, brick, synthetic material, cement and roof in concrete plate

Water discharge:

The sewage is disposed of directly into the sewage system

Community involvement

The family relationship with neighbors is good, the most strengthened ties are the neighborhood, economic and solidarity ones; no family member belongs to any community organization in the area

Community organization involvement:

BRAYAN CAMILO CHAVEZ TOVAR AUDITOR of the Community Action Board

Support from an organization:

Department of Social Prosperity (Families in action)

Main problems in the rural district:

Sewerage, lack of irrigation system

A family member attends school:

No

Where do they go for medical care:

Municipal Hospital in Pasto

Type of coverage: Subsidized by the son, Emssanar and contributory by the mother in Proinsalud

Water use:

The water for human and domestic consumption is obtained from the Iles rural district aqueduct, and the property has fruit trees.

Waste Management:

Solid waste is not classified and collected by the waste collection service twice a week

Commercial Activity

It has been selling food in the last 5 to 10 years with monthly earnings of \$ 100 000; the business has no legal documents

Observations

Analysis

According to the information recorded, it is possible to conclude that the family has a strong level of attachment to their place of residence and they have a slight degree of vulnerability due to the conditions of the grandmother; however, this is not an impediment for them to think of a possible transfer to a different place; in this case, the city of Pasto. At the time of the transfer, it must be taken into account that part of the income that the family reports are generated by the sale of surpluses in the crops they have in the farm. The family is not susceptible to be resettled, and accompaniment is recommended at the time of the property acquisition, as defined in current regulations.

Commercial Activity

Observations

Jose Canchala (caretaker) 3117149980, 3137375653

Analysis

According to the information registered, the house is used for recreational and rest purposes by the owners during the weekends and vacations. Therefore, it is established that there are no conditions of vulnerability for the family. A person remains in the house, who takes care and depends economically on this activity. Due to the above, it is concluded that there are no conditions that lead to resettlement; it is recommended to apply the pertinent compensation recognition according to Inco Resolution 545 of 2008 (Today ANI).

Commercial Activity

Observations

Analysis

According to the information reported, it is possible to show a degree of vulnerability in the inhabitants of the dwelling, since they are older adults, where the lady experiences difficulties in her mobilization. For the previous situation, it is necessary to accompany the transfer and location of the new housing, guaranteeing a location in better conditions than the current one, and allowing the health status of these people not to be affected; apart from guaranteeing access and easy movement to medical control sites. It should be noted that at the time of the housing acquisition, values must be established and recognized with respect to the basic social factors reestablishment.

As owners, they cannot be considered in a resettlement plan.

Waste Management:

Solid waste is classified; it is collected by the waste mayor's office collection service once a week

Commercial Activity

Observations

Homeowners in the deed: Ema Ortega, Jesus Ortega and Cristian Ortega, Mariela Ortega

Analysis

According to the information recorded, it is concluded that the family does not meet conditions to be included in a resettlement plan, despite the fact that the income of the family with less than two monthly minimum legal salaries, and the visually impairment of the head of the household. Accompaniment is recommended to guarantee, within the housing acquisition process, a transfer to a home that allows to ensure, at least, the current housing conditions and transfers, especially to the educational institution where the daughter is enrolled. The compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested.

GEO-002-17-114-EAM			Version 0.	May 2017

Waste Management:

Solid waste is classified and collected by EMAS twice a week

Commercial Activity

Asadero de cuyes Sur Andino, Miriam del Carmen Pascuas; it has no legal documents and has operated from 10 to 20 years ago; it has 3 employees and monthly earnings are \$ 500,000, which benefits both mother and daughter

Observations

The technical specification is done with the owner who stays occasionally, but there is an employee on the estate

Analysis

Due to the conditions and characteristics of the property, the non-existence of vulnerability of the people who live in it is identified; so the recognition of the pertinent compensations is suggested, according to Resolution 545 of 2008 of Inco (Today ANI) .

Water use: The water for human and domestic consumption is obtained from the SAN FRANCISO rural district aqueduct.
Waste Management: The solid waste is classified and its final disposal is through the delivery 2 times per week to be managed by the collection company
Commercial Activity
NA
Observations
Analysis

According to the information recorded, it is possible to conclude that the family does not have conditions that qualify them as a population that can be resettled, because they are not in vulnerable conditions and own the area and construction where they live. At the time of the transfer, it must be taken into account that part of the income that the family reports are generated by the sale of surpluses in the crops they have in the farm. Accompaniment is recommended to guarantee, within the housing acquisition process, a transfer to a home that allows to ensure, at least, the current housing conditions and transfers, especially to the educational institution. The compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested.

GEO-002-17-114-EAM			Version 0.	May 2017

Community involvement
Indicates to have an indifferent relationship with the neighbors because he just came to live in the farm.
Membership of community organizations: No.
Support from an organization: No.
Main problems in the rural district: Health.
A family member attends school: Institución Educativa Nuestra Señora de Lourdes, located in the municipality of Santa Cruz, Guayanes. Students live in Santa Cruz.
Where to go for medical care: Municipal Hospital of Ipiales
Type of coverage: Subsidized. EPS Comfamiliar.
Water use: The water for human and domestic consumption is obtained from the PILCUAN rural district aqueduct.
Waste Management: The solid waste is classified and its final disposal is through the delivery to be managed by the collection company
Commercial Activity
NA
Observations
The owner of the land is Mrs. Luz Marina Quiroz. The property has two apartments. One of them is where Jose Enrique lives and the other is empty.
Analysis
According to the information recorded, it is possible to conclude that the family has a strong level of attachment to their place of residence and they have a slight degree of vulnerability due to the conditions of the father. The family pays rent as residents and they are not eligible for inclusion in a resettlement program. It is recommended to accompany during the transfer, to ensure their location in better conditions than the current ones, preventing the deterioration of the state of health. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested.

NA
Observations

In the yard, they have a site for vermicompost = natural fertilizer

The owner has a property located at (pnt 275) Calle 5 2 - 31 with property title next to her residence (ft 0671)

Analysis

According to the information registered, there is a degree of vulnerability of the person with hearing and mobility problems; a situation that classifies this as a case that requires accompaniment, guaranteeing support to find a location with better conditions than the current one, and which may prevent current health deterioration; in addition to ensuring easy access and displacement to medical monitoring sites. It should be noted that at the time of the housing acquisition, values must be established, recognizing the basic social factors and those that are applicable according to Inco Resolution 545 of 2008 (Today ANI).

However, the family group does not meet the conditions to be included in a resettlement program.

GEO-002-17-114-EAM			Version 0.	May 2017

Robinson Lucano	36	Son	Finished Bachelor	Construction	600.000
Family Type: Nuclear		Number of Families: 1		Population group: Indigenous and Turmequés	
Floating population: 2			Time of permanence: From 1 to 3 months		
Population					

Births: 0	Deaths: 0	Women of childbearing age: 0
Disabilities: None		
Prevalent Diseases: Thyroid, Facial paralysis and Hypertension		Causes: Inherited
Forced displacement: NA		
Has the family considered changing homes?: No		
Where would you move in case the project requires it?: Pilucan La Recta Rural District		
Production relations: The head of household is paid in cash, in exchange for services; labor relationship is on a per-day-basis and is not linked from a labor perspective to the rest of the community.		
Property: The interviewee is the owner of the property without a property title; he states that square meter is the surface measure used; the land has a flat topography.		
In the last 5 years no land has been sold.		
Production		
NA		
Characteristics of the housing		
House endowment: The house has 5 bedrooms, 3 kitchens, 3 bathrooms, 2 living rooms and 3 laundry areas		
Housing services: There is no fixed telephone and natural gas; the services available include aqueduct, electricity, sewer, propane gas, and television		
Constructive features: The walls are made of brick, the roof is made of a concrete plate and floors in cement		
Water discharge: The sewage is disposed of in the sewage system		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Community involvement
The family relationship with the neighbors is good, their most strengthened ties are the neighborhood ones.
Community organization involvement: Asociación Camino de los Incas with the position of vice president
Support from an organization: Mayor's Office and Elderly Subsidy
Main problems in the rural district: Sewerage, public lighting, aids for the elderly and community hall
A family member attends school: None
Where do they go for medical care: Health center in Funes
Type of coverage: Mallamas
Water use: Water for human and domestic consumption is obtained from the Iles rural district aqueduct for agricultural crops such as coffee, avocado, tangerine, banana, guavasteen, lemon, mango and passion fruit for a monthly value of \$3,000 pesos
Waste Management: Solid wastes are classified; they are burned as part of the final disposal and the organic ones are used as fertilizer.
Commercial Activity
NA
Observations
Use: A property for raising animals for sale; the family lives out of the sale of meat on the road
Analysis

According to the information recorded, it is possible to conclude that the family has a strong level of attachment to their place of residence and they have a slight degree of vulnerability due to the health conditions of the older adult.

It should be noted that at the time of the housing acquisition, values must be established, recognizing the basic social factors and those that are applicable according to Inco Resolution 545 of 2008 (Today ANI).

The family group does not meet the conditions to be included in a resettlement program.

Community involvement
The family relationship with neighbors is good, the most strengthened tie is the economic and neighborhood ones; no family member belongs to any community organization in the area
Community organization involvement: None
Support from an organization: None
Main problems in the rural district: Health
A family member attends school: Institución Educativa del Sur de Capulí, municipality of Iles, located in another rural district; students use school transportation and travel for approximately 30 minutes to 1 hour
Where do they go for medical care: Municipal hospital of Ipiales, specialist in Pasto (Rheumatologist)
Type of coverage: Cafesalud and Nueva EPS
Water use: Water for human and domestic consumption is obtained from the rural district aqueduct for agricultural purposes, such as coffee, tree tomato, banana, avocado, orange, tangerine and guava for an annual value of \$36,000 pesos
Waste Management: Solid waste is classified; its final disposal is through the waste collection service.
Commercial Activity
NA
Observations
The house is inhabited by Mrs. Irma, her youngest daughter and her granddaughter; it is owned by her two older daughters

Analysis

According to the information recorded, it is possible to conclude that the family has a strong level of attachment to their place of residence and they have a slight degree of vulnerability due to the conditions of Mrs. Imelda. At the time of the transfer, it must be taken into account that part of the income that the family reports are generated by the sale of surpluses in the crops they have in the farm. The family is not susceptible to be resettled, and accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested.

Births: 0	Deaths: 0	Women of childbearing age: 1
Disabilities: None		
Prevalent Diseases: None		Causes: NA
Forced displacement: No		
Has the family considered changing homes?: No		
Where would you move in case the project requires it?: NA		
<p>Production relations:</p> <p>The household family is paid in cash, they have community work in the area, such as Minga, and they have a per-day working engagement.</p>		
<p>Property: Owners with public deed, the property has a square meter area, the property topography is flat and the hectare cost is \$ 2,000,000.</p>		
NA		
Production		
Production is agricultural for sale and for consumption; no machinery is used, or technical advice; pesticides are used as feedstock.		
Characteristics of the housing		
House endowment: 2 bedrooms, 1 bathroom, 1 laundry		
Housing services: Water, electricity, propane gas, television.		
Constructive features: Walls in block and brick, tile, bare soil and cement floor, eternit and zinc roof.		
Water discharge: Sewage.		
Community involvement		
The relationship with the neighbors is indifferent, the strongest ties are with the neighbors of the rural district.		
Membership of community organizations: None		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Support from an organization: Mayor's Office (Senior Citizen)
Main problems in the rural district: Routes and sewerage
A family member attends school: None
Where to go for medical care: Municipal hospital and health center
Type of coverage: Subsidized (Mallamas-Emsanar)
Water use: For domestic use, water is obtained from the rural district aqueduct; for livestock use: NA.
Waste Management: Solid waste is classified and are later picked up by the waste collection service (Emas)
Commercial Activity
NA
Observations
<p>The man interviewed has adapted a kitchen in the room.</p> <p>There is a bed in the coal deposit.</p> <p>6 people live in the house, although it only has two beds (observation), single beds. Neighbors say that the man lives alone.</p>
Analysis
<p>A first opinion is given on a family that, according to the information recorded, has no family vulnerability. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested.</p> <p>However, with the information of the neighbors, one perceives that they stay in the property as residents; it is not clear if a ren payment is made, or if they are there to improve it.</p> <p>Failing to identify the true conditions of the family nucleus, it is not possible to issue any concept about the possibility to include them in a resettlement program.</p>

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Support from an organization: None
Main problems in the rural district: Sewerage, recreation, maintenance of electrical energy.
A family member attends school: If you are attending the IE Norte de Iles, you will be traveling by private vehicle, the journey is between 15 and 30 minutes.
Where to go for medical care: Health center in Funes or Ipiales
Type of coverage: Contributory (Proinsalud)
Water use: For domestic consumption, water is obtained from the rural district aqueduct, Acueducto y Alcantarillado Pilcuan for livestock use: NA.
Waste Management: Solid waste is not classified; it is collected by EMAS's collection service twice a week
Commercial Activity
NA
Observations
In the house there is an apartment, which is for rent.
Analysis
According to the information recorded, it is evident that the dwelling is used only on weekends, so it is concluded that there are no arguments to be included in a resettlement plan. The acquisition of the property will be done taking into account the current regulations and the compensation will be recognized according to Resolution 545 of 2008 of Inco (Today ANI). For the residents of the apartment that is being rented, the compensation to be made according to Resolution 545 of 2008 of the Inco (Today ANI) is suggested.

Where would you move in case the project requires it?: To this rural district		
Production relations: The household family is paid in cash, they have community work in the zone as Minga and there is a permanent working engagement.		
Property: Are tenants, their rent lease is \$150,000; the unit surface area is hectare; topography is flat.		
NA		
Production		
NA		
Characteristics of the housing		
House endowment: 1 bedroom, 1 kitchen, 2 bathrooms, and 1 laundry area		
Housing services: Aqueduct, sewage, electric power, propane gas, and television.		
Constructive features: The walls are in block and brick, the floor is made of tile, brick, synthetic material and the roof is made of Eternit		
Water discharge: Sewage.		
Community involvement		
The relationship with the neighbors is good; the strongest ties with the neighbors of the rural district are economic.		
Membership of community organizations: Community Action Board		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Support from an organization: Community Home
Main problems in the rural district: Education, health, employment.
A family member attends school: Yes, he / she attends the El Norte-Iles, located in another municipality; school transport is used and the route takes less than 15 minutes.
Where to go for medical care: Municipal Hospital - IpiALES
Type of coverage: Subsidized (Comfamiliar)
Water use: For domestic consumption, water is obtained from the Silamay rural district aqueduct; for livestock use: NA.
Waste Management: Solid waste is classified; it is collected by EMAS's collection service twice a week
Commercial Activity
The owner is Yulieth Camacho, the establishment is called "Paula.net", it has a RUT registry, and has operated for the last 7 years; works every day from 8am to 10pm, works as stationery, phone booths, internet and video games; it has no employees; earnings reach \$ 900,000 and the family group benefits from this income.
Observations
The property belongs to Mr. Daniel Chamarro.
Analysis
According to the information registered, the inhabitants of the dwelling are residents (tenants) and are not eligible to be included in a resettlement program; compensations that may accrue should be paid, according to Resolution 545 of 2008 of the Inco (Today ANI).

Main problems in the rural district: No response
A family member attends school: No
Where to go for medical care: Municipal hospital, health center, Ipiales civil hospital, departmental hospital in Pasto.
Type of coverage: Subsidized, (Emsanar).
Water use: For domestic consumption, water is obtained from the Silamay rural district aqueduct; for livestock use: NA.
Waste Management: Solid waste is not classified; it is collected by EMAS's collection service twice a week
Commercial Activity
NA
Observations
The owner of the house is a senior citizen. They live out of the charity of neighbors. Government aid is also provided (senior citizen); \$ 80,000 every two months.
Analysis
According to the information registered, there is a degree of vulnerability of Mrs. Enriqueta for her health condition, a situation that classifies it as a case that requires accompaniment, guaranteeing support to find a location in better conditions than the current ones, and which may prevent current health deterioration; in addition to ensuring easy access and displacement to medical monitoring sites, and to also allow for support to the closest persons (neighbors). It should be noted that at the time of the housing acquisition, values must be established and recognized with respect to the basic social factors reestablishment.

GEO-002-17-114-EAM			Version 0.	May 2017

Main problems in the rural district: Education and health
A family member attends school: Yes, he / she attends the Institución Educativa Norte de Iles located in another municipality; school transport is used and the route takes less from 15 to 30 minutes.
Where to go for medical care: Municipal hospital or Ipiales or Pasto or Pilcuan Viejo Health Center
Type of coverage: Subsidized, (Emsanar).
Water use: For domestic consumption, water is obtained from the Administration Boar rural district aqueduct for livestock use: NA.
Waste Management: Solid waste is not classified and collected by the user's Association that administers the public services of aqueduct, sewage and waste in the urban area of Imues-Nariño "Asuaspim", twice a week
Commercial Activity
The owners are Mario Quiscualtud and María Estrada, the establishment is called "Super Carnes Pilcuan" with RUT registration; created 5 to 10 years ago; works every day from 7am to 9pm, operates as a grocery store, has no employees; Earnings are \$ 2,000.00 and two people benefit from income.
Observations
I hope this area is not affected.
Analysis
According to the information recorded, it is possible to conclude that the family has a strong level of attachment to their place of residence and they have a slight degree of vulnerability due to the conditions of the Mr. Mario Quiscualtud. At the time of the transfer it is important to consider that the income that the family reports are derived from the commercial activity carried out in the "Super Carnes Pilcuan" business. The family is not susceptible to be resettled, and accompaniment is recommended at the time of the property acquisition, as defined in current regulations.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Support from an organization: NA
Main problems in the rural district: Health
A family member attends school: No
Where to go for medical care: Municipal Hospital- Civil hospital of Ipiales
Type of coverage: NA
Water use: For domestic consumption, water is obtained from the Silamay rural district aqueduct; for livestock use: NA.
Waste Management: Does not classify solid waste and does not know who picks it up, 2 times per week
Commercial Activity
NA
Observations
The children provide for sustenance.
Analysis
According to the information recorded, there is no evidence vulnerability for the family to benefit from a resettlement program. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested.

Support from an organization: NA
Main problems in the rural district: Education (no children), Solid waste collection (sometimes they do not attend)
A family member attends school: No
Where to go for medical care: Municipal Hospital- Civil hospital of Ipiales
Type of coverage: Subsidized and contributory (Mallamas and army)
Water use: For domestic consumption, water is obtained from the Aqueduct and Sewage of Pilcuan la Recta; for livestock use: NA.
Waste Management: Solid waste is classified; it is collected by EMAS's collection service twice a week, or they are buried.
Commercial Activity
NA
Observations
Analysis
According to the information registered, there is a degree of vulnerability of Mrs. Blanca Rosas for her health condition, a situation that classifies it as a case that requires accompaniment, guaranteeing support to find a location in better conditions than the current ones, and which may prevent current health deterioration; in addition to ensuring easy access and displacement to medical monitoring sites. It should be noted that at the time of the housing acquisition, values must be established, recognizing the basic social factors, according to Inco Resolution 545 of 2008 (Today ANI).

Water discharge: The sewage is disposed of in the sewage system
Community involvement
They affirm to have a good relationship with the neighbors, thus achieving strong solidarity and neighborhood ties. Affirms that the works carried out by community organizations are good.
Membership of community organizations: None
Support from an organization: Department of Social Prosperity (Families in action)
Main problems in the rural district: Education and health.
A family member attends school: Institución Educativa del Norte de Iles, located in the municipality of Capulí; students use school transportation and travel for approximately 15 minutes to attend school
Where do they go for medical care: Health Center, Pilcuan viejo
Type of coverage: Subsidized. EPS Emssanar
Water use: The water for human and domestic consumption is obtained from the rural district aqueduct for livestock and agricultural purposes. The farm has a coffee crop and tree tomato; 50 chickens, 20 pigs and 7 rabbits.
Waste Management: The solid waste is classified; its final disposal is the delivery to the waste collection service for management; the organic one is selected and used as fertilizer, others are burned.
Commercial Activity
NA
Observations
Analysis

According to the information recorded, it is possible to conclude that the family has a strong level of attachment to their place of residence.

According to the information recorded, there is no evidence vulnerability for the family to benefit from a resettlement program. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested.

At the time of the transfer, it must be taken into account that part of the income that the family reports are generated by the sale of surplus. The family is not susceptible to be resettled, and accompaniment is recommended at the time of the property acquisition, as defined in current regulations.

Main problems in the rural district: Health.
A family member attends school: No
Where do they go for medical care: Health center in Imues
Type of coverage: Subsidized. EPS Comfamiliar
Water use: Water for human and domestic consumption is obtained from the hill.
Waste Management: Solid wastes are classified; they are buried, burned and spread in the river as part of the final disposal.
Commercial Activity
NA
Observations
Analysis
According to the information recorded, it is possible to conclude that the family has a certain level of attachment to their place of residence and they have a certain degree of vulnerability due to the conditions of Mr. Harold Ortega; however, this is not an impediment for them to think of a possible transfer to a different place; in this case, the city of Pasto, given its better labor and life quality opportunities.

The family is not susceptible of being resettled for being the owners; it is recommended to provide support upon property acquisition, as defined in the current regulations, and in the process of succession that is pending to leave the property in the name of the inhabitants.

Support is required, ensuring a location to a place with better conditions than the current ones, and allowing the health status of these people not to be deteriorated; apart from guaranteeing access and easy movement to medical control sites.

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

The most strengthened ties are the neighborhood ones; no family member belongs to any community organization in the area, and believe that the work of these organizations are good.
Membership of community organizations: No.
Support from an organization: None
Main problems in the rural district: Roads and health.
A family member attends school: No
Where do they go for medical care: Private service in Pasto.
Type of coverage: Health service provided by private providers.
Water use: The water for human and domestic consumption is obtained from the rural district aqueduct.
Waste Management: The solid waste is classified and its final disposal is through the delivery, to be managed by the collection company, EMAS
Commercial Activity
NA
Observations
Analysis
According to the information recorded, there is no evidence vulnerability for the family to benefit from a resettlement program. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested.
According to the information registered, there is a degree of vulnerability of Mrs. Waldina Arteaga for her health condition, a situation that classifies it as a case that requires accompaniment, guaranteeing support to find a location in better conditions than the current ones, and which may prevent current health deterioration; in addition to ensuring easy access and displacement to medical monitoring sites.

Property: The interviewee is the owner of the property and has a public deed; he states that square meter is the surface measure used; the land topography is not reported. The equivalent indicated in square meters for the land area is 350 square meters, indicating a price per hectare of \$ 1,000.0000.		
Complete if you are the owner, otherwise write, N / A The interviewee reports that the area of the property is 350 square meters and in the last 5 years, no part of the property has been sold.		
Production		
The agricultural production is purely used for consumption. To produce, they do not use any type of machinery, do not receive technical advice from any entity. The farm has lemon, mango, coffee, guava, avocado and feijoa crops.		
Characteristics of the housing		
House endowment: The house has 3 bedrooms, 1 kitchen, 2 bathrooms, 1 living room and 1 laundry room		
Housing services: The home services include aqueduct, sewage, electric power, television and propane gas services. There is no landline, or natural gas.		
Constructive features: The roof is made of concrete plate; walls are made brick; floors are in tile.		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Water discharge: The sewage is disposed of in a septic tank.
Community involvement
The strongest bonds of the family are the neighborhood and solidarity ones, maintaining a good relationship with the neighbors. Affirms that the works carried out by community organizations are good.
Membership of community organizations: No.
Support from an organization: None
Main problems in the rural district: Aqueduct and sewer
A family member attends school: No.
Where to go for medical care: Municipal Hospital of Ipiales
Type of coverage: Subsidized.
Water use: The water for human and domestic consumption is obtained from the rural district aqueduct and for livestock use, from the rainwater
Waste Management: Solid waste is classified. No information is reported on the final disposal that they give to said waste.
Commercial Activity
NA
Observations
Analysis
According to the information recorded, there is no evidence vulnerability for the family to benefit from a resettlement program. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested.

Observations
Analysis

According to the information recorded, it is possible to conclude that the family has a strong level of attachment to their place of residence and they have a slight degree of vulnerability due to the old age of the head of household.

Accompaniment is recommended to guarantee, within the housing acquisition process, a transfer to a home that allows to ensure, at least, the current housing conditions and transfers, to ensure access and easy movement to medical control sites.

At the time of the transfer, it must be taken into account that part of the income that the family reports are generated by the sale of surpluses in the crops they have in the farm.

According to the above, it is concluded that there are no conditions that allow the family to become part of a resettlement program. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested.

Property: The interviewee is the owner with public deed; the interviewee states that square meter is the land area measurement and the land has a flat topography; the value of the hectare in the area starts at \$350,000 per square meter		
Complete if you are the owner, otherwise write, N / A The property area is 1750 square meters and no part of it has been sold in the last 5 years.		
Production		
The production is for sale and consumption; it sold in the Pilcuan stands; the machinery used is a coffee grinder and no technical advice is received; feedstock such as fucicide is used.		
Characteristics of the housing		
House endowment: The house has 4 bedrooms, 2 kitchens, 2 bathrooms, and 2 laundry areas		
Housing services: There is no access to fixed telephony, sewage and natural gas; the services available include aqueduct, electricity, propane gas and television.		
Constructive features: The walls are in block and brick, the floors are made of tile, brick, synthetic material and the roof is made of concrete plate.		
Water discharge: The sewage is disposed of in the sewage system		
Community involvement		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

The family relationship with the neighbors is good, their most strengthened ties are the neighborhood and family ones.
Community organization involvement: None
Support from an organization: SISBEN
Main problems in the rural district: Health and Sewerage
A family member attends school: NA
Where do they go for medical care: Pilcuan Health Center
Type of coverage: The family has subsidized and contributory coverage
Water use: The water for domestic consumption is obtained from the rural district aqueduct; water for livestock use is obtained from the aqueduct for two pigs; in the farm there are coffee, tree tomato, mango, tangerine, orange, avocado, banana and passion fruit trees
Waste Management: The solid waste is not classified, its final disposal is by means of the collection by the waste collection service twice per week
Commercial Activity
The owner of the establishment is Eder Bonilla; the establishment has no name and no operation registry, it has operated within the range of 1 to 5 years; at the moment it is not in operation, and its main activity is the sale of foodstuffs
Observations
Analysis

According to the information recorded, there is no evidence of any degree of vulnerability of the family. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested for both the resident social unit and the productive social unit.

It is worth noting that there is a degree of vulnerability for the hearing impairment condition of Mr. Héctor Bonilla; situation that requires accompaniment, guaranteeing support to find a location in better conditions than the current ones, and which may prevent health deterioration; in addition to ensuring easy access and displacement to medical monitoring sites.

Analysis

According to the information recorded, there is no evidence of any degree of vulnerability of the family. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested for both the resident social unit and the productive social unit.

Main problems in the rural district: NA
A family member attends school: NA
Where do they go for medical care: Health center
Type of coverage: The family has subsidized coverage
Water use: Water for domestic consumption is obtained from the rural district aqueduct; for livestock use, it is obtained from the aqueduct; the property has 60 chickens and 10 guinea pigs; there are orange, chirimoya, papaya, avocado and guava trees in the farm.
Waste Management: The solid waste is classified, its final disposal is by means of the collection by the waste collection service of the mayor's office, twice per week
Commercial Activity
NA
Observations
Analysis

According to the information recorded, there is no evidence of any degree of vulnerability of the family, although they do not have title deeds, their quality of land improvers and holders certify them as such. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested for both the resident social unit and the productive social unit.

In addition to the above described treatment, the current situation of Mrs. Lucrecia should be examined and she must be able to access the resettlement program given her condition of vulnerability due to age, income and lack of title to the property where she lives.

Commercial Activity
NA
Observations
Analysis
According to the information recorded, there is no evidence of any degree of vulnerability of the family. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested for both the resident social unit and the productive social unit.

NA
Observations
There are two houses in the property, one is where the caretaker lives and the other one for the owners, when they go on the weekends. In the other house, there are 5 bedrooms, 7 bathrooms, 1 kitchen and 1 living room. GPS spot E00955487 N00604890.
Analysis
According to the information registered, the inhabitants of the dwelling are residents (caretakers) and are not eligible to be included in a resettlement program; compensations that may accrue should be paid, according to Resolution 545 of 2008 Of the Inco (Today ANI). Landowners only use the property on weekends, so it is concluded that there are no arguments to be included in a resettlement plan. The acquisition of the property will be done taking into account the current regulations and the compensation will be recognized according to Resolution 545 of 2008 of Inco (Today ANI).

NA
Observations
<ul style="list-style-type: none"> • Owner Serafin Ramo (Pasto), 3122078922 (Jorge Ibarra, neighbor) • The land has two houses, one of the owner who visits only once a year and the other house is where the caretaker and his family live.
Analysis
<p>According to the information registered, the inhabitants of the dwelling are residents and are not eligible to be included in a resettlement program; compensations that may accrue should be paid, according to Resolution 545 of 2008 Of the Inco (Today ANI).</p> <p>According to the information recorded, it is evident that the dwelling of the owners is used occasionally during the year, so it is concluded that there are no arguments to be included in a resettlement plan. The acquisition of the property will be done taking into account the current regulations and the compensation will be recognized according to Resolution 545 of 2008 of Inco (Today ANI).</p>

Production relations: Housing members are paid in cash, they have a job paid on a permanent basis; no family member works in the Cuadrilla community association.		
Property: Owner with public deed, Hectare is the land area; the terrain has a flat and sloped topography.		
Complete if you are the owner, otherwise write, N / A The land has an area of 4 hectares; no land has been sold in the last 5 years.		
Production		
NA		
Characteristics of the housing		
House endowment: One bedroom, a kitchen, a bathroom and a laundry room.		
Housing services: Aqueduct, Electric Power, Propane Gas and Television.		
Constructive features: In the house, the walls are made of Block, Brick; the floors are made of bare soil, the ceiling is made of Zinc and has electric energy; the name of the company is not known.		
Water discharge: Septic tank		
Community involvement		
The relationship with the neighbors is good, the strongest bonds are those of family.		
Membership of community organizations: None		
Support from an organization: Department of Social Prosperity (Families in action)		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Main problems in the rural district: Roads, Health, Education, Aqueduct, Sewage, Solid Waste Collection, Employment, Recreation and Housing.
A family member attends school: Yes, Institución Educativa Jesús del Gran Poder, located in another rural district; students use school transportation and the journey from the house to the education institution is less than 15 minutes.
Where do they go for medical care: Municipal hospital, Ipiales, Health Center, Pilcuán Viejo
Type of coverage: Subsidized, Emssanar - Mallamas
Water use: For domestic use, it is obtained from the Silamag Rural District Aqueduct and covers livestock purposes - 10 chickens.
Waste Management: Waste is not classified and solid residues are subsequently burned.
Commercial Activity
NA
Observations
<ul style="list-style-type: none"> • Shaira Rosero - 4 - Granddaughter • Andrés Tovar - 28 - Son in law - PI - Various Trades - \$ 300,000 • The house is located 6 meters from the plot.
Analysis
According to the information recorded, there is no evidence of any degree of vulnerability of the family. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested for both the resident social unit and the productive social unit.

Community involvement		
The relationship between the family group and neighbors is average, strengthened neighborhood and solidarity ties are evidenced; no family member belongs to any community organization		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Community organization involvement: None
Support from an organization: None
Main problems in the rural district: Education, educational infrastructure and recreation (multi-sports center, community hall and leisure areas)
A family member attends school: No
Where to go for medical care: Municipal Hospital - Pasto, Ipiales
Type of coverage: Contributory, as beneficiaries of the Military Forces
Water use: The water resource for human, domestic and agricultural consumption is obtained through the rural district aqueduct. In the house there are fruit trees.
Waste Management: There is no classification of solid waste, its final disposal is in made by the waste collection company, which normally picks up 2 times per week at the property. Residues of organic characteristics are used as fertilizer
Commercial Activity
The owner of the establishment is Jesus Benavides and Magdalena Chávez, the site is called Granero La Palmera; at present, there is no operation registry, but it is underway with the Chamber of Commerce; its main economic activity is the sale of foodstuffs, and has operating as such for more than 20 years.
Observations
In the house, there are 2 rooms under construction
Analysis
According to the information recorded, there is no evidence of any degree of vulnerability of the family. Accompaniment is recommended at the time of the property acquisition, as defined in current regulations. Likewise, the recognition of the compensation to be made according to Resolution 545 of 2008 of the Inco (currently ANI) is suggested for both the resident social unit and the productive social unit.

Production relations: The head of household is remunerated with money for his work, he has a temporary employment relationship and is not an active part of some form of community work in the area		
Property: The family unit is a tenant in the property, they do not identify the unit of measure of surface, the land has a flat and sloped topography, they do not know the price of a hectare of land in the area		
Production		
In the house, there are no agricultural activities currently carried out		
Characteristics of the housing		
House endowment: 2 bedrooms, 1 kitchen, 1 bathroom, and 1 laundry room		
Housing services: In the house, there is no sewer service, fixed telephony, as well as natural gas. The services in the house include aqueduct, electric power, propane gas and television.		
Constructive features: The walls are made in block and brick, floors are in cement, the ceiling is covered with concrete plate.		
Water discharge: Wastewater is disposed of directly into the river		
Community involvement		
The relationship between the family group and neighbors is good, strengthened bonds of economy, family, solidarity and neighborhood are evidenced; no family member belongs to any community organization		
Community organization involvement: None		
Support from an organization: None		

			ENVIRONMENTAL IMPACT ASSESSMENT FOR THE RUMICHACA - PASTO DIVIDED HIGHWAY PROJECT, SAN JUAN - PEDREGAL SEGMENT, CONCESSION AGREEMENT UNDER APP SCHEME No. 15 OF 2015	
GEO-002-17-114-EAM			Version 0.	May 2017

Main problems in the rural district: Health
A family member attends school: Centro Educativo Pilcuán Viejo, the institution is located in the rural district, the means to reach the institution is walking, and the traveling time is less than 15 minutes
Where to go for medical care: Health center in Ipiales
Type of coverage: None
Water use: The water resource for human, domestic and livestock consumption is obtained through the rural district aqueduct. In the house there is livestock activity with chicken breeding, at present
Waste Management: There is no classification of solid waste, its final disposal is in charge of the collection company, which normally picks up 2 times per week
Commercial Activity
NA
Observations
NA
Analysis
According to the information registered, the inhabitants of the dwelling are residents (tenants) and are not eligible to be included in a resettlement program; compensations that may accrue should be paid, according to Resolution 545 of 2008 of the Inco (Today ANI).
