Project Description

As stated by the ADB, the proposed project will initiate and contribute to the transformation of the Kiribati energy sector to one that is low-carbon and adapted to growing climate and natural hazards. It will do this by installing the innovative, climate-adapted and efficient floating PV (FPV) for power generation and for services and benefits beyond electricity.

The project will indicatively install 4 megawatts (MW) FPV, 3 megavolt-ampere (MVA) /5 megawatt-hour (MWh) BESS, and 33 kilovolt (kV) underground transmission network on Betio, as well as 5 MW FPV, 4 MVA/xx MWh BESS, and 33 kV underground transmission network in Bikenibeu, including all related grid integration and control systems. Adaptive low-carbon productive uses of energy infrastructure installed. The FPV systems will be designed to integrate priority sustainable value-added end-uses to maximize the use of daytime solar energy. The project will also indicatively install productive uses of energy infrastructure such as (i) a water storage, treatment, and distribution system, (ii) an agriculture/aquaculture pilot project (iii) electric vehicle and charging station, and (iv) coastal protection and disaster risk reduction measures. The project will also include institutional capacity strengthening.
