Project Description

According to the Bank’s website, the knowledge and support technical assistance (TA) will improve the capacity of the public and private sector in developing member countries (DMCs) to apply adaptation metrics in developing adaptation plans and linking these to public and private sources of finance. The TA will deliver two outputs to improve the capacity of public and private sector actors to apply adaptation metrics to support investment planning, namely: (i) evidence base on adaptation metrics expanded, and (ii) tools to apply adaptation metrics developed.

This TA will collate evolving evidence on adaptation metrics and support design and learning dialogues to improve the knowledge and tools available to public and private sector actors for investment in adaptation. It will add value by supporting DMCs efforts to move from adaptation planning to implementation. It will also contribute to ADB efforts to align and scale-up investment in climate adaptation by supporting upstream planning, the corporate results framework, and future work on Task Force for Climate-Related Financial Disclosures reporting.
