### Project Description

According to the GCF, this programme will strengthen climate resilience in The Bahamas' water sector by enhancing governance and capacity building, and by deploying climate-resilient infrastructure across remote Family Islands to ensure sustainable freshwater management and protection.

Key activities include providing technical assistance to strengthen the national policy, legislation, and regulatory environment, and to improve national water resources data and information for decision-making and planning; and investments in wellfields and water supply infrastructure and operations in the six Family Islands.
