Project Description

As stated by the IADB, the objective of this Technical Cooperation is to provide tools to improve the planning and integrated management of water resources in Paraguay, for which the implementation of a water resources management system based on the HydroBID simulation suite will be supported. The information generated by the models will be fed into a geographic information system that will provide data on the quality and quantity of water resources to generate the necessary information (supply/demand) for the formulation of the National Water Resources Plan, a tool that will enable water and territorial planning and decision-making at both the basin and sub-basin levels.

ACCOUNTABILITY MECHANISM OF IADB

The Independent Consultation and Investigation Mechanism (MICI) is the independent complaint mechanism and fact-finding body for people who have been or are likely to be adversely affected by an Inter-American Development Bank (IDB) or Inter-American Investment Corporation (IIC)-funded project. If you submit a complaint to MICI, they may assist you in addressing the problems you raised through a dispute-resolution process with those implementing the project and/or through an investigation to assess whether the IDB or IIC is following its own policies for preventing or mitigating harm to people or the environment. You can submit a complaint by sending an email to MICI@iadb.org. You can learn more about the MICI and how to file a complaint at <http://www.iadb.org/en/mici/mici,1752.html> (in English) or <http://www.iadb.org/es/mici/mici,1752.html> (Spanish).
