## Project Description

The proposed project consists of a subordinated debt loan of up to US\$20 million to Banco Interamericano de Finanzas (BanBif), a bank catering to Small and Medium Enterprises (SMEs) in Peru. The project is expected to support BanBif's solvency base in light of the rapid growth achieved during the last years. The project aims to increase access to finance and private sector development, generate employment, and improve environmental and social standards (E&S). This project is one in a series of investments by the IFC into BanBif.

Given that most of the portfolio is of low to medium E&S risk and consists of lending to retail banking and to medium enterprises, the project has been categorized as FI-2 in accordance with IFC's Sustainability Policy. The overall portfolio risk includes a limited number of business activities that have potential limited adverse environmental and social risks or impacts that are few in number, generally site specific, largely reversible and readily addressed through mitigation measures. For this project BanBif will be required to screen sub loans against the IFC FI Exclusion List (except for retail and mortgages), national laws and regulations and the IFC Performance Standards.
