## Project Description

According to IFC website, the project consists in an up to US\$8.5 million equity investment in the Series B equity funding round in Bankfacil, an online marketplace and lender based in Brazil that offers secured loans to individuals, funded by banks and institutional investors. The loans are originated online, processed in an efficient back office, and then sold to banks and investors. The project has the following development impacts:

1. Access to a wider range of financial products:KF offers Brazilian consumers the ability to access credit at rates lower than would otherwise be available, due to the use of collateral (home and auto) in a country where most consumer debt is unsecured, as well as through operational efficiencies by using technology.
2. Development of a new product and asset class: BKF is creating a new investment product for institutional investors, who can now purchase auto equity loan receivables and home equity loan receivables through a securitization structure.
