#### **People Affected By This Project**

The Project is expected to have the following development impact:

Project outcomes:

- (i) Stakeholders effects: increased access to finance for approximately 300 cargo transporters that lack the collateral to finance more efficient, safer vehicles and (a) direct impact on their costs and quality of service; (b) indirect impact on local communities through lower goods' prices;
- (ii) Environmental and/or social effects with GHG emission savings resulting from scrapping and replacement of 300 old trucks. Contribution to Market Creation:

Competitiveness: Through competition channel effects, the project is expected to motivate other cargo transport firms to seek to renew their fleets to become more efficient and reduce their costs. IFC also expects the project, underpinned by an improved policy and operating context for the transport sector (market-enabling channel), to eventually also spur other private-sector banks to enter this market in future, without IFC's help, and finance additional transporters seeking to renew their truck fleets.
