Project Description

According to the IFC, the project consists of a Basel III compliant Tier 2 (B3T2) subordinated loan to Standard Bank Group Limited to support the growth of renewable energy and affordable housing assets of the Standard Bank of South Africa in South Africa.

Increased availability of Climate finance: The Project will support access to climate finance, leveraging SBSA's market position and substantial reach. The growth in the climate finance portfolio is expected to increase the supply of renewable energy in the local market, thereby reducing GHG emissions.

Increased access to housing finance. The Project will contribute to increased access to affordable housing finance in South Africa. South Africa is rapidly urbanizing, and an estimated 26% of the urban population lives in informal housing areas. The Project will increase the supply of finance to the affordable housing segment in the country, with a focus on women home buyers.

Early Warning System Project Analysis

As stated by the IFC, the Project's portfolio risk is considered medium as the renewable energy assets to be financed by IFC are not expected to have significant environmental and social (E&S) risks or impacts; therefore, the Project has been categorized as FI-2 in accordance with IFC's Sustainability Policy.
