Transforming landscapes for resilience and development in Zambia

Quick Facts

Countries	Zambia
Financial Institutions	World Bank (WB)
Status	Proposed
Bank Risk Rating	B
Voting Date	2019-03-18
Borrower	Government of Zambia
Sectors	Climate and Environment
Investment Type(s)	Loan
Investment Amount (USD)	\$ 75.00 million
Project Cost (USD)	\$ 75.00 million

Project Description

According to bank documents, the project objective is to improve natural resource management in the northern region of Zambia to support sustainable livelihoods, and in the event of an eligible crisis or emergency, to provide immediate and effective response to the eligible crisis or emergency.

The project has four components:

1. Institutional Development and Capacity Building for Landscape Restoration and Resilience (indicative amount US\$8 million). The aim of this component is to strengthen government institutions at the national, local and community level to develop and implement new approaches for sustainable natural resource management. This will be achieved by reviewing and updating certain policies, providing better information, and improving the development planning and budget process by mainstreaming climate risk and environmental considerations into development plans. This component will finance policy and regulatory reviews, province, district and ward level development planning, technical assistance (TA), workshops, and trainings.
2. Sustainable Landscape Management Practices (indicative amount US\$32.5 million). The component aims to improve the livelihoods and resilience of rural communities by improving the management of the rich natural resources base that rural communities are dependent upon through: (a) ecosystem based integrated natural resource management planning; (b) improved management of protected areas and protection of environmental services; and (c) diversification and increased sustainability of rural livelihoods.
3. Infrastructure for Resilience and Market Access (indicative amount US\$27 million IDA). Activities under this component aim at supporting and improving NRZ infrastructure in vulnerable areas that suffers from the lack of investments and is additionally adversely impacted by climatic changes. Such impacts include drastic changes in rain patterns resulting in floods and droughts, shortages in water, changes in wind patterns, lack of passable roads and damaged bridges leaving entire communities cut off from the basic services and goods during floods where durations are becoming extended. This increases the likelihood of lack of water and nutrition, diseases, livestock loss etc. In addition, this component will help identify ways to improve market access for primary producers who often lack opportunities and/or knowledge on the ways to make their produce accessible to the market.
4. Contingency Emergency Response Component (CERC) (Standardized). This contingency component can be triggered by a joint Government and World Bank agreement in case of an emergency. This component had been embedded in the project to finance early recovery and/or specific emergency works, goods, and services, in case of eligible emergencies/crises/disaster caused by natural or man-made hazard including public health crisis.

ACCOUNTABILITY MECHANISM OF WORLD BANK

The World Bank Inspection Panel is the independent complaint mechanism and fact-finding body for people who believe they are likely to be, or have been, adversely affected by a World Bank-financed project. If you submit a complaint to the Inspection Panel, they may investigate to assess whether the World Bank is following its own policies and procedures for preventing harm to people or the environment. You can contact the Inspection Panel or submit a complaint by emailing ipanel@worldbank.org. You can learn more about the Inspection Panel and how to file a complaint at: <http://ewebapps.worldbank.org/apps/ip/Pages/Home.aspx>.
