Project Description

According to the Bank's website, the objective of this project is to enhance the financial and environmental performance of solid waste management in Seychelles.

Early Warning System Project Analysis

The environmental and social risk rating is considered Moderate as the impacts associated with the activities that will be supported are not anticipated to lead to any significant long-term, adverse or irreversible environmental risks or impacts.

The environmental and social risks and impacts associated with the project are considered to be site specific and predictable, at this stage, and will be further assessed during project implementation. It is anticipated that the environmental and social risk management at the landfill site is likely to be enhanced through the interventions proposed under Component 1.

At this stage it is not expected that the Project will need to acquire land to build waste recovery facility as there is available space at the Landfill and this space is owned by the Land authority. Nevertheless, the Land will be screened to confirm its status, including the potential presence of informal occupants.
