Project Description

According to bank's website, the approved project aims to support a range of interventions across selected value chains, including among others, policy reforms, fertilizer regulation strengthening and public investments (aggregation of small holders and connecting them to processors/off takers/aggregators, public good investments across the value chain) for greater private sector participation, seed and fertilizer quality assurance systems, support to produce and supply early generation materials for maize, rice and cocoa, the adoption of modern technologies like certified seeds and climate-smart technologies. Component 1 (US\$9 million) aims to enhance productivity and climate resilience of smallholders in target value chains by scaling successful approaches from SCADeP and FSRP (notably cocoa, rice, and onions). Component 2 (US\$21.5 million) will enhance value addition and market access for smallholders by tackling weak market linkages and fragmented production through stronger aggregation, reduced transaction costs, and improved food safety/traceability and international standards compliance. Component 3 (US\$6.5 million) aims to build a digital agriculture ecosystem in Sierra Leone by strengthening digital public infrastructure and expanding access to finance for farmers, producer organizations, and agribusinesses.
