### Project Description

The development objective of the Emergency Resilient Recovery Project for Mozambique is to restore the functionality of critical infrastructure in a resilient manner in the disaster-affected provinces; and to improve the Government of Mozambique's capacity to respond promptly and effectively to an eligible crisis or emergency. The parent project is World Bank MZ - Emergency Resilient Recovery Project for the Northern and Central (P156559).

The additional financing is design to address drought prevention and mitigation through resilient infrastructure rehabilitation and development, as well as food security interventions in the affected area. The ongoing Emergency Resilient Recovery Project for the Northern and Central Regions (ERRP) is well placed to support the activities proposed for the additional financing, due to its two-pronged design, to address emergency response and resilient infrastructure rehabilitation and development.

The Project will be implemented in selected drought-affected areas in the Central and South regions. The selection of priority geographic areas for food assistance will be finalized upon project implementation given the emergency nature of the Project.
