## Project Description

The objective of this TC is to contribute to the development of a technological platform that based on machine learning allows linking the interests and demands of people and organizations. In other words, it aims at designing a technological platform called "Intelligent Labor Retraining" or RELINT (in Spanish), based on a data intelligence model that allows companies and individuals to be guided in the process of retraining. On the one hand, supporting companies in a digital transformation process by introducing reskilling, upskilling and outplacement mechanisms and, on the other hand, allowing workers to improve their skills for a new type of company or to start a new labor route . This is done by linking interests, experience and employability potential with the demand that the market is requesting for new skills derived from the ongoing digital transformation.

### ACCOUNTABILITY MECHANISM OF IADB

The Independent Consultation and Investigation Mechanism (MICI) is the independent complaint mechanism and fact-finding body for people who have been or are likely to be adversely affected by an Inter-American Development Bank (IDB) or Inter-American Investment Corporation (IIC)-funded project. If you submit a complaint to MICI, they may assist you in addressing the problems you raised through a dispute-resolution process with those implementing the project and/or through an investigation to assess whether the IDB or IIC is following its own policies for preventing or mitigating harm to people or the environment. You can submit a complaint by sending an email to [MICI@iadb.org](mailto:MICI@iadb.org). You can learn more about the MICI and how to file a complaint at <http://www.iadb.org/en/mici/mici,1752.html> (in English) or <http://www.iadb.org/es/mici/mici,1752.html> (Spanish).
